The Saskatchewan Legislature extended, Dec. 31, the time within which certain branch lines, being built under sec. 6, chap. 3, of the statutes of 1908-9 may be completed. Another act has been passed declaring that a line from Craven, on the Craven branch of the Qu'Appelle, Long Lake and Saskatchewan Ry., northerly, west of Last Mountain Lake to the C.N.R. between Adam's Ferry and Brancepeth, about 40 miles, mentioned in the deed of trust dated Mar. 18, 1909, shall be replaced by a line to be built from Craven northeasterly and northerly for 40 miles.

The Saskatchewan Legislature incorporated the Canadian Northern Saskatchewan Ry. Co., of which F. H. Phippen, K.C., A. J. Reid, K.C., G. G. Ruel, R. H. M. Temple, and S. P. Biggs, Toronto, are named provisional directors, to build the lines mentioned in our last issue. The company may issue bonds for \$30,000 a mile in respect of lines south of the North Saskatchewan River, and for \$40,000 a mile in respect of lines north of the same river. Another act has been passed, under which the pro-

vincial Government aids in the building of these lines by guaranteeing the principal and interest of the company's bonds for \$13,000 a mile. The money raised is to be held in trust by the Government and paid out as the work on the several lines proceed upon the certificate on the order of the provincial Minister of Railways. Construction is to be gone on with this year and all the lines are to be completed by Dec. 31, 1914.

We are officially advised that the construction programme for this year covers a large mileage in Saskatchewan and Alberta. Starting from Radville, on the extension from Maryfield, a line to Moose Jaw, Sask., 86 miles, was put under contract last year. This will be finished this year. About five miles of grading has to be completed at the Moose Jaw end. The Cowan Construction Co. has the contract. An agreement has been reached with the Moose Jaw city council as to the entrance into the city, and at a recent meeting at which the agreement was finally settled it was stated that the extension would be in operation into the city by Aug. 1, and that the station and other buildings would be completed by July 1.

Beyond Radville the Maryfield extension is being operated to Bengough, and we are advised that it will probably be extended further west in the direction of Lethbridge this year. No contract has yet been let.

The line from Saskatoon, Sask., through the Goose Lake country, which is now operated to Alsask, will be continued westerly.

The Thunderhill branch, which is in operation from Swan River, Man., to Preeceville, Sask., will be extended for 30 miles. No contract has yet been let.

The line from Prince Albert to Battleford, Sask., is being operated to Blaine Lake, 64 miles, and is to be completed this year. Some work has to be finished on the mileage put under contract last year, but no contract has been let for this year's work.

The branch from Vegreville to Calgary, which is now being operated to Drumheller, will be completed by the Northern Construction Co.

It is proposed to start construction at Manson, Alta., 11 miles north of Drumheller, on a line 130 miles easterly to meet the extension of the line from Saskatoon, being built westerly through the Goose Lake country. The contract for grading this 130 miles has not yet been let.

A line is projected from Calgary to Macleod, Alta., on which it is possible some grading will be done this year, but no contract has been let. A contract was let in 1911 to the Cowan Construction Co. for grading about 35 miles southwesterly from Macleod, and this is to be finished up this year.

From Warden, Alta., about four miles south of Stettler, on the Vegreville-Calgary line, a line is under construction to the Brazeau River coal fields, 170 miles. The Northern Construction Co. will complete the grading started last year, and complete the whole line this season.

On the line to Athabasca Landing, Alta., about 10 miles of track have yet to be laid. This will be done as early as possible. The Northern Construction Co. has the contract.

On the main transcontinental line track has been laid to the Pembina River, Alta., and here a large bridge is being built, which it is expected to have completed in May. As soon as the bridge is finished tracklaying will be resumed and carried on to the Macleod River, 63 miles. Another large bridge has to be erected at this point, which it is expected will be completed by Sept., when track laying will be carried to the end of the grading at present completed, 166 miles from St. Albert. It is expected that grading will have been com-

pleted to the Yellowhead Pass, about 250 miles from St. Albert, Alta., by the end of the year, and that track will also be laid. The contract for this section of the line is held by the Cowan Construction Co. and the Northern Construction Co.

The revised route map of the C.N.R.'s projected line from Edmonton to Red Deer, Alta., which has recently been approved by the Minister of Railways, starts from Strathcona, and keeping west of the C.P.R. Calgary and Edmonton Ry., finally crosses it at Lacombe, and joins up with the surveys of the Canadian Northern Western Ry. near Red Deer river. Crossing the river a few miles south the line passes through Red Deer, and keeping between the C.P.R. C. and E. Ry. and the G.T. Pacific Ry., enters Calgary from the southeast on the same right of way as a line now under construction from the east.

The House of Commons has under consideration a bill amending the act of 1910 guaranteeing Canadian Northern Alberta Ry. securities in respect of 150 miles of line westerly from St. Albert.

Canadian Northern Pacific Ry.—The Premier, in answer to questions in the British Columbia Legislature, stated recently that bonds for £1,438,356 were issued by the company, Nov. 18, 1911, which had been guaranteed by the Government; the security deposited with the Government consisted of 5,000 fully paid up shares of the Canadian Northern Ry., of the value of \$500,000. The company had not made any application for any land grant under the schedule.

The British Columbia Legislature has passed an act providing for the extension of the C.N.P.R. lines. It is provided that the company shall build 150 miles from the 100th milepost on the Vancouver Island line authorized to be built under the agreement confirmed by chap. 3 of the statutes of 1910, to the east coast of the island, as arranged by order-in-council of Jan. 27; from Kamloops to Vernon, and Lumby; from Vernon to Kelowna via Long Lake; and from Vernon to the east arm of Okanagan Lake, opposite Okanagan Landing. These latter lines will have a total length of 145 miles, and were approved by order-in-council Jan. 26. The province agrees to guarantee the company's bonds in respect of these mileages for \$35,000 a mile. Construction of these lines is to be started within six months, and they are to be completed within three years of the passing of the act.

T. G. Holt, Executive Agent, and T. H. White, Chief Engineer, completed a trip of inspection over the line under construction from Port Mann as far as Kamloops, B.C., Mar. 12, and are reported to have said that everything is well forward. Satisfactory progress is being made with the driving of the 2,080 ft. tunnel at Yale, which is expected to be completed in Sept. (Mar., pg. 137.)

Recent Quebec Legislation.

In the Quebec Legislature, Mar. 14, the following acts affecting transportation and allied interests were assented to:—

ENGINEERS' CLUB OF MONTREAL.—Amending act of incorporation.

MONTREAL ST. RY. MUTUAL BENEFIT Association.—Amending charter.

RAT RIVER RY.—Incorporation.
ST. CHARLES AND HURON RIVER RY.—Incorporation.

SHERBROOKE RY. AND POWER Co.—Amending act of incorporation.

Bever, Peacock and Co., locomotive builders, Manchester, Eng., have been licensed by the Quebec Government to deal with immovable property in the province for any operations it has a right to carry on under the British charter.

Pacific Great Eastern Railway

The British Columbia Legislature has incorporated a company with this title to build the following railways:—From Vancouver to North Vancouver, thence along the margin of Howe Sound, and the general course of the Squamish River, and continuing northeasterly to Lillooet, on the Fraser River; along the bank of the Fraser River to a junction with the Grand Trunk Pacific Ry. at Fort George, about 450 miles; and such other lines as may be authorized to be built from time to time by order-in-council. The provisional directors are: T. Foley, St. Paul, Minn.; P. Welch, Spokane, Wash.; J. W. Stewart, D. McLeod, Vancouver; V. W. Smith, Hazelton, B.C.; D'A. Tate, Winnipeg, Man.

Another act has been passed confirming agreements made between the Government and Foley, Welch and Stewart for the building of the line, and between Foley, Welch and Stewart and the G.T. Pacific Ry. and the G.T.P. Branch Lines Co., as to the interchange of traffic and as to the terms upon which control of the line may be obtained. The province agrees to guarantee the bonds issued in respect of the construction of the line to the extent of \$35,000 a mile, at 4% for 30 years, taking a mortgage of the line, exclusive of terminals, but including buildings, equipment and rolling stock. The money raised by the sale of such securities is to be held in trust by the Government and paid out from time to time during the progress of construction, upon the certificate of an officer to be appointed. Construction is to be started within three months after the signing of the trust deed securing the mortgage, but not later than July 1, within 10 miles of Vancouver, and there has to be expended an amount equal to the cost of 75 miles within a year; an amount equal to the cost of 175 miles during the next year, and the balance during the third year, so that the whole line shall be fully completed by July 1, 1915. The contractors agree to provide adequate terminal facilities in Vancouver, and are given permission to use any bridge other than their own in crossing Burrard Inlet. The Government grants a free right of way 100 ft. wide through any crown lands, land for stations, sidings, yards, etc., from any vacant crown lands, and exempts the railway and all its property from taxation until July 1, 1926. The railway is not at any time to be declared to be a work for the general advantage of Canada.

The second agreement confirmed by the act provides for the use by the P.G.E. Ry. of the G.T. Pacific Ry. terminals at Fort George; the general interchange of traffic between the two companies; the preference of the Canadian Express Co. and the G.T. Pacific Telegraph Co. to carry on their business over the line, provided the rates are as favorable as those offered by any other company; the exclusive right to operate sleeping cars over the line, provided the P.G.E. Ry. does not operate its own cars; and a provision that the G.T.P. Ry. shall have an option for 60 days to acquire the controlling interest in the P.G.E. Ry. after having received notice that a proposition for its purchase has been received by Foley, Welch and Stewart.

The valuation for taxation purposes of the Michigan Central Rd. property in St. Thomas, Ont., has been fixed at \$450,000.

Prof. H. O. Keay, McGill University, read a paper on technical education and the operating department of a railway before the Canadian Railway Club in Montreal, March 12.

National Transcontinental Railway Construction.

The Dominion Parliament has passed three acts affecting the National Transcontinental Railway. The first extends the time limit for the building of the Western Division, which is being built by the G.T. Pacific Ry. Co. under agreement. The second provides for the payment of such sums as may be necessary to meet the difference between par and the amount at which the guaranteed bonds sold, under the Imperial Privy Council's decision on an interpretation of the meaning of the word "implement" in the supplemental agreement of 1904. The third provides for the placing of the control of construction of the Eastern Division under one commissioner instead of four, with the title of "The Commissioners of the Transcontinental Railway."

Replying to questions in the House of Commons, Mar. 4, the Minister of Railways stated that F. P. Gutelius, M. Can. Soc. C.E., and G. L. Staunton, K.C., are to receive \$65 a day and reasonable expenses while engaged in investigating the National Transcontinental Railway affairs. Mr. Gutelius will be in no way connected with the C.P.R. during the period he is employed by the Government.

On Mar. 13 the Minister stated that car repair shops were being built at Winnipeg and a site was being prepared at Quebec for the National Transcontinental Ry. repair shops. To the question, "Are such repair shops intended to be for the use and benefit of the G.T. Pacific and the G.T. Ry.?" he answered "Yes."

The Minister of Public Works, the Minister of Railways, the Postmaster General and representatives of the marine interests have arranged a conference to be held at an early date, with reference to the terminal facilities for the railway in Quebec. It is desired that the waterfront property at present held by the Richelieu and Ontario Navigation Co. be acquired by the Government, but up to the present the company will not entertain the proposition.

Grand Trunk Pacific Railway Construction

Main Line.—Press reports state that it is proposed to add immediately at least five miles of sidings and spur tracks at Wainwright, Alta., and that sites are being acquired for the erection of warehouses.

The company has acquired lands between Namayo and Kinistino Streets, Edmonton, Alta., for yard purposes. The yard will have 10 pairs of tracks, with three wagon roadways. Plans have been submitted to the city authorities for a freight shed 52 by 400 ft. fronting on Elizabeth St. It will be of frame covered with zinc sheeting, with a felt and gravel roof, on concrete pedestals.

E. J. Chamberlin, V.P. and G.M., is reported as stating that owing to the fact that there has been no snow in some parts of the foothills and the Yellowhead Pass, and too much in others, the work of getting in supplies for the building of the line to the Fraser River in B.C. has been hindered. There is considerable rock cutting to be done on the lines between the present rail head and the river, but it is expected to have the track laid to that point by June 1.

It is reported that the first steel bridge in British Columbia on the line from the east crossing the Fraser at mileage 29 has been completed. It is 500 ft. long and the rail level is .75 ft. above high water.

A good deal of grading has been done from Tete Jaune Cache towards Fort George, B.C. It is reported that sub-contracts have been let for grading both

easterly and westerly from Fort George, near which point it is expected that the last spike will be driven.

The section of the line under construction easterly from Prince Rupert, B.C., to Aldermere is well advanced to completion. Track has been laid to 18 miles from the crossing of the Skeena River below Hazelton, and it is expected that it will be laid to the river early in April. This will take the rails to 170 miles from Prince Rupert. The piers for the bridge have been completed and it is expected that the bridge will be completed early in June. Grading has been practically completed to Aldermere, and it is expected to have track laid to that point by the fall. Owing to the advanced state of construction to this point, the headquarters of C.E. Van Arsdol, Division Engineer, are to be moved further east and a camp is being prepared for the construction offices near Bulkeley Summit. Sub-contracts are reported to have been let for grading from Aldermere to Burns Lake as follows:—Aldermere easterly eight miles, Jno. Bostrom; next 10 miles, Freeburg and Stone; next four miles, D. McLeod; next 17 miles, Sheedy and Smith; next 10 miles, I. Albi; ten miles west of Bulkeley Summit, D. Ross; five miles east of Bulkeley Summit, J. McLeod; next 10 miles, A. L. McHugh; next 10 miles, D. Stewart; 14 miles along Burns Lake and eastward, D. A. Rankin and Co.

Terminal Work at Prince Rupert.—Contracts are reported to have been let for the excavation work on the site of the dry dock terminals and hotel in Prince Rupert, B.C. The station is to be built on the site of the present town hall. The present hotel—the Prince Rupert Inn—is being removed to Centre St. and this site will be used for yard purposes.

G.T.P. Branch Lines.—We are officially advised that the company is not considering the building of a branch line from Napadogan to Fredericton, N.B., 45 miles, as stated in press reports.

The construction for the current year includes the completion of the branch from Harte to Brandon, Man., 24 miles.

In connection with the guarantee of bonds of lines of the G.T.P. Branch Lines Co. in Saskatchewan the Provincial Legislature has extended the time within which such lines are to be completed to Dec. 31, 1912. Another act has been passed providing for the issue of guaranteed bonds or other securities for \$13,000 a mile, under the provisions of Sec. 9, chap. 4, of the statutes of 1908-09. The securities to be guaranteed under this act are in respect to additional lines to be built under order-in-council, which are to be completed by Dec. 31, 1914. Under this legislation contracts were let in 1911 for the building of several lines, certain of which it is expected to have completed by the end of the current year. These are:—

Regina boundary branch, from Regina southeasterly, 155 miles, J. D. McArthur, contractor, Winnipeg. In connection with this line the Board of Railway Commissioners has approved revised location plans from mileage 17.02 to 91.13.

Regina to Moose Jaw, 40 miles, Rigby, Hyland and Plummer, contractors.

Moose Jaw northwesterly, 40 miles, J. D. McArthur, contractor.

Prince Albert branch, to complete from 67 miles out of Young to Prince Albert, 54.5 miles, J. D. McArthur, contractor.

Battleford branch from Oban to Battleford, 48 miles, J. D. McArthur, contractor.

Cutknife branch, from Battleford, westerly, 50 miles, J. D. McArthur, contractor.

Biggar-Calgary branch, from Biggar, Sask., southwesterly to Calgary, Alta., 104 miles, Foley Bros., Welch and Stewart, contractors. The schedule of the act passed by the Saskatchewan Le-

gisature this year provides for the guaranteeing of bonds to be issued for this line for 50 miles, in addition to the 50 miles already built, and also provides for a guarantee of bonds for this or any other of the lines already guaranteed for further extensions not exceeding 40 miles in any case. For the section of this line in Alberta, an extension of time for construction has been granted by the Alberta Legislature.

The Grand Trunk Pacific Saskatchewan Ry. Co. has been incorporated by the Saskatchewan Legislature, with E. J. Chamberlin, G. W. Caye, W. Le B. Ross, D'Arcy Tate and H. H. Hansard, Winnipeg, as provisional directors. It is authorized to build the following railways: From tp. 9 or 10, range 13, west of the second meridian through Weyburn, thence southwesterly and westerly to the western boundary of the province in tps. 2 to 5; from tp. 16, range 19, southwesterly to a junction with the first mentioned line; from Saskatoon westerly and northwesterly to Battleford; from near Watrous southwesterly to Swift Current and thence to the International boundary between ranges 23 and 30 west of the third meridian; from Melville northerly, northwesterly and westerly to Watrous; from Saskatoon southeasterly and southerly to Regina; from tp. 36, range 8, west of the third meridian, southwesterly and westerly to a junction with the G.T.P. Branch Lines Co.'s Biggar-Calgary branch; and such other lines within the province as may be authorized from time to time by order-in-council. Another act has been passed authorizing the Government to guarantee the company's bonds up to \$13,000 a mile in respect of these lines. The proceeds of the sale of the guaranteed bonds shall be paid into a special account and paid out as the work proceeds upon the certificate of the provincial Minister of Railways. Part of the mileage has to be built during the current year and all the lines have to be completed by Dec. 31, 1914. The lines referred to will total 205 miles, and the act provides that the guarantee may be added to bonds to be issued in respect of the extension of any one of them for a further distance of 40 miles.

The Alberta Legislature has extended the time for the construction of lines authorized under previous legislation, for which contracts have been entered into either with the G.T.P. Branch Lines Co. or other subsidiary companies. The lines, for which contracts were let last year, or which are included in the construction programme for the current year, are as follows:—

Tofield-Calgary branch, completion of the branch involving 95 miles of construction, J. D. McArthur, contractor.

Calgary to Lethbridge, 111 miles. Tenders are reported to be under consideration.

Alberta Coal branch, completion of branch involving 25 miles of construction, Foley Bros., Welch and Stewart, contractors.

The act passed at the Alberta Legislature's recent session also provides for the guarantee of bonds for the building of a line from an unnamed point on the G.T.P. Ry. southerly for 58 miles to open up additional coal fields.

The G.T.P. steamship dock at Vancouver, B.C., which was opened for traffic Feb. 27, is fully described in a separate article in the Marine Department on another page of this issue.

Telegraph Lines.—Particulars of construction to date and the programme for this year are given on another page.

A New York press report states that the Howe Sound and Northern Ry. has been acquired in the interests of this company, the purchase price being \$375,000. The line runs from Newport northward through the Squamish River Valley for about seven miles.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Ainsley Coal Co.—We are officially advised that the company's collieries are about four miles out of Medicine Hat, Alta., and that they are being developed so as to be able to produce 1,000 tons daily. The company proposes to sell coal to the city council and to manufacturers for power production at \$1.50 a ton, and in return for this concession the city is to build a spur line from the C.P.R. within the city limits to the city boundary, nearest to the collieries, about three miles. The cost of the spur is estimated at \$25,000. (Mar., pg. 120.)

Argenteuil Ry.—Application is being made to the Quebec Legislature to incorporate a company with this title to build a railway to be operated by steam, electricity or other power from the boundary between Harrington and Grenville tps. to the canal at Grenville, Que. The provisional directors are:—C. Laurin, C. Wilson, J. A. Laurin, J. Cooper, J. G. Thompson, Montreal. (Mar., pg. 120.)

Atlantic, Quebec and Western Ry.—A meeting of the shareholders of the Quebec Oriental Ry. will be held in London, Eng., April 16, to elect directors, transact other general business and approve an agreement with the A.Q. and W. Ry. Co. for the erection of joint shops at New Carlisle, Que., and for granting the A.Q. and W. Ry. running rights over the Q.O. Ry. This latter railway is the old Atlantic and Lake Superior Ry. (Dec., 1911, pg. 1137.)

Burrard Inlet Tunnel and Bridge Co.—The plans for the proposed bridge across the Second Narrows of Burrard Inlet are being prepared in London, Eng., and are expected to be completed for submission to the Board of Railway Commissioners for approval early in May. The company has been advised that the Railways Department insists that the opening span be 250 ft. wide, consequently a double leaf, instead of a single leaf bascule, as originally proposed, will be provided. The bridge will be of the Warren truss type, with a total length of 1,550 ft., concrete piers and abutments. It will provide accommodation for a single steam railway track, a 39 ft. roadway for general traffic, on which will be laid a double track for electric cars, and an 8 ft. sidewalk. The approaches will be wide enough to enable double tracks to be laid for steam traffic. The estimated cost is \$2,125,000.

In a report to the municipalities interested the company states that the capital stock issued is held as follows:—District of North Vancouver, \$250,000; city of Vancouver, \$200,000; city of North Vancouver, \$100,000; Burnaby district, \$50,000; the six directors, L. Bond, J. P. Fell, J. C. Keith, E. W. McLean, E. Mahon, and J. Y. McNaught, 25 shares of \$100 each. The provincial Government had voted \$400,000 in aid of the bridge, and the Dominion Government voted \$200,000 to the Vancouver, Westminster and Yukon Ry. towards the building of a bridge. An arrangement had been made with the V.W. and Y. Ry. for the joint building of the bridge. Application had been made to the Dominion Government for an increase of the subsidy to \$500,000. The bridge will be used by the Pacific Great Eastern Ry. and by other railways which may desire an entrance into North Vancouver. (Mar., pg. 120.)

Canadian Central and Labrador Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from Winnipeg northeasterly to south of Hamilton River on the boundary of Quebec and Labrador, with branch lines to the National Transcontinental Railway

at the Quebec-Ontario boundary, to Montreal; and from near James Bay, Que., to Port Nelson, on Hudson Bay. Smith and Johnston, Ottawa, are solicitors for applicants.

Central Ry. of Canada.—We are officially advised that surveys have been made for a line from St. Eustache, Que., to South Indian Jct., Ont., and the present intention of the general contractors, C. J. Wills and Sons, is to build 20 miles of line in Quebec, and 20 miles in Ontario this year. None of the work has as yet been put in the hands of subcontractors. Contracts have been placed for 100,000 ties, to be delivered by June 30, and it is expected to place orders for steel rails at an early date.

Press reports state that the company has completed, ready for submission to the Board of Railway Commissioners, plans for a station and terminals in the eastern part of Montreal; that a contract has been let for the building of the line from Montreal to Ottawa, and that the work will be started in the spring.

Chicago, Milwaukee and St. Paul Ry.—W. B. Dixon, Assistant General Passenger Agent, is quoted as stating that the company is not, either directly or indirectly, purchasing land for terminal purposes in Winnipeg. The company has not, he adds, for the present, any intention of going into Winnipeg over its own line, whatever it may eventually do. (Mar., pg. 120.)

Dominion Atlantic Ry.—The Board of Railway Commissioners has approved of location plans for the projected North Mountain branch from Lakeville to Weston, N.S., 10 miles.

The work for repairing, strengthening and renewing the bridges is being proceeded with. The work is being done under the superintendence of — Ripley, a C.P.R. engineer. (Mar., pg. 120.)

Edmonton, Dunvegan and British Columbia Ry.—The legislation guaranteeing bonds for \$20,000 a mile for a line from Edmonton to Dunvegan, Alta., 350 miles, has been passed by the Alberta Legislature. Other acts giving the company powers to enter into agreements and confirming an agreement with the G.T.P. Ry. in respect of the interchange of traffic were also passed. In an interview at Edmonton, Mar. 11, the Premier said construction work will be pushed forward with all speed, and it is expected that steel will be laid on the section from Edmonton to the Athabasca River, 100 miles, this year. The Board of Railway Commissioners has approved of location plans for the route for the first 30 miles, through tps. 53 to 56, ranges 24 to 26, west of the 4th meridian. (Mar., pg. 120.)

Elkhorn Northern Ry.—The Manitoba Legislature is being asked to extend the time within which the line from Elkhorn northerly, authorized to be built by chap. 92 of the statutes of 1910, may be built. (Dec., 1910, pg. 1013.)

Esquimaux and Nanaimo Ry.—The British Columbia Legislature has confirmed an agreement made between the Government, the E. and N. Ry., and the C.P.R., dated Feb. 17, which sets forth that the company desires to lease its line to the C.P.R., and the Government declares that such lease shall not affect the exemption from taxation of the company's lands. In consideration of this the company agrees to pay on June 30 annually, 1½ cents an acre in respect of such of the lands mentioned in sec. 3, chap. 14, 47 Vict., as shall remain vested in the company, and therefore exempt from taxation; and shall by Dec. 31, 1915, build an extension of its line from the present northerly terminus to Courtenay. (Mar., pg. 120.)

Fredericton and Grand Lake Coal and Ry. Co.—We were officially advised recently that no contract has been let for the building of this projected railway, from Minto to Fredericton, N.B.

Later press reports state that a contract for building the first section of this projected railway has been let to A. E. Trites, of Salisbury, N.B., and that work will be started at once.

Reference was made to the projected building of the line in the speech from the throne at the opening of the N.B. Legislature, Mar. 7, and it was also intimated that legislation would be introduced providing for the leasing of the railway when built to the C.P.R., and also for the operation by the same company of the New Brunswick Coal and Ry. Co.'s line, now operated by a provincial Government commission. This line runs from Norton on the Intercolonial Ry. to the coalfields at Minto, and the projected F. and G.L.C. and Ry. Co.'s line will run from Minto to Gibson, where it will connect with the C.P.R. line. (Feb., pg. 67.)

Hudson Bay and Pacific Ry.—Press reports from Prince Albert, Sask., Mar. 10, state it is anticipated that an early start will be made with the building of this line from Prince Albert to Fort Churchill. The report adds that a construction company has been organized in London, Eng., to build the line, and that the contract for the building of terminal wharves, etc., on Hudson Bay, has been let to Pethick Bros., Plymouth, Eng. (June, 1911, pg. 505.)

Intercolonial Ry.—The speech from the throne at the opening of the Nova Scotia Legislature said the Federal Government had assumed the responsibility of providing branch railways in the Halifax, Guysboro and Victoria counties, and that financial provision had been made by Parliament for their construction.

It is reported from Ottawa that plans are being matured for the development of the line, and that they will take a definite shape after the adjournment of Parliament. One of the propositions under consideration is said to be for a general reduction of gradients on the whole line, and the other involves the building of a second track from Moncton to Halifax.

Press reports state that M. P. and J. T. Davis have sublet a portion of the contract for the building of a line from Dartmouth to Dean's Settlements, N.S., to Cavicchi and Pagano, Halifax. (Mar., pg. 120.)

Kaslo and Slocan Ry.—We are officially advised that this railway has been transferred to the British Columbia Government, and is being turned over under an agreement to the C.P.R. The line extends from Kaslo to Sandon, B.C., 28 miles, connecting at Sandon with the Nakusp and Slocan Ry., operated under lease from the B.C. Government by the C.P.R. The line is to be standardized, and the work is to be completed by Dec. 31, 1913. (Mar., pg. 121.)

Kettle Valley Lines.—The British Columbia Legislature has confirmed an agreement between the provincial Government and the Kettle Valley Ry., under which the province agrees to subsidize a railway from the Coldwater River, about 25 miles south of Merritt, to the north bank of the Fraser River, near Hope, at the rate of \$10,000 a mile; and to pay \$200,000 towards the construction of a steel bridge for railway and general traffic across the Fraser River at Hope. It is specified that the route shall be via the Coldwater and Coquihalla river valleys, and that the line to be subsidized shall not exceed 50 miles. Construction of the line and bridge is to be started by July 1, and the whole work is to be completed by July 1, 1915. A further provision stipulates that the subsidies are not to be paid until the company provides for the building of a line

from Hope to New Westminster and Vancouver, or has entered into a contract with some railway running into these two cities for the running of through freight and passenger trains from all points on the K.V. Ry. to and from New Westminster and Vancouver.

In connection with the building of the line mentioned above, it is reported that the location plans approved by the Government show a line starting at mileage 25 on the line completed south from Merritt in the Nicola Valley, and extending 10 miles up the Coldwater Valley to the summit, on a maximum gradient of 1%. West of the summit the location follows the Coquihalla River for 35 miles to the Fraser River. The maximum gradient on this section is 2.2% against eastbound traffic. Construction will be heavy on both sides of the summit, as there will be much rock cutting and several tunnels. At the Fraser River a bridge is to be built which will give connection with the C.P.R.

On the main line between Midway and Merritt, 260 miles, grading has been completed on 85 miles, and steel has been laid on 65 miles. A considerable amount of grading has been done at other points, and is being pushed forward as rapidly as the heavy character of the work will permit. It is expected to have the line completed through from Midway to Merritt by the end of 1913.

The B.C. Legislature has ratified a bylaw of the municipality of Penticton, granting aid to the company in connection with its construction in the town.

Camson, Shindahl and Co. have a sub-contract for a five mile section of the line westerly from Penticton.

The Board of Railway Commissioners has approved location plans from mileage 28 to 52 from Hope. B.C. (Mar., pg. 121.)

Lindsay and Minden Ry.—The provisional directors named in the application to the Ontario Legislature for the incorporation of a company with this title are: J. H. Delamere, M. Brown, J. J. Mortimer, Minden, Ont.; J. W. Wood, Lindsay, Ont.; S. F. Stinson, J. M. Delamere, Toronto. It is proposed to build a steam or electric line from Lindsay to Mountain Lake, and to operate vessels on Mountain Lake. (Mar., pg. 121.)

Michigan Central Rd.—The Board of Railway Commissioners has authorized the operation of trains across the new drawbridge over the Welland canal, just east of Welland station, Ont. (Feb., pg. 68.)

Midland Terminal Ry.—The Ontario Legislature is being asked to extend the time within which the lines authorized to be built by sec. 2, chap. 105 of the statutes of 1903 may be built, and to authorize the building of a line from the waterfront at Midland, south and southeasterly, to a junction with the G.T.R. at Coldwater, Ont. T. Gibson, Midland, Ont., is solicitor for applicants.

Moncton and Buctouche Ry.—We are officially advised that the press reports as to a proposed car ferry between Richibucto, N.B., and Prince Edward Island, are rather premature in so far as the construction of the extension of the line from Richibucto to Richibucto Head is concerned, as the extension proposed is contingent on the route which will be adopted by the Dominion Government for the operation of a car ferry between the Island and the mainland. It is claimed that the water route between Richibucto Head, N.B., and West Point, P.E.I., is more free from ice, and the most feasible and practicable route on which a ferry service could be operated daily during the winter, and it is said that this route may be selected by the Dominion Government. In that event of the construction of the proposed extension to Richibucto Head, 17 miles, will

be proceeded with; wharves will be built on both sides of the straits, and a standard gauge line built to connect with the Prince Edward Island Ry., either at Coleman or O'Leary's. E. G. Evans, Hampton, N.B., under whose supervision soundings and surveys have been made in the vicinity of Richibucto Head, will be the engineer in charge of the work, if construction is gone on with.

We are inclined to the opinion that any railway construction which will be undertaken on Prince Edward Island will be by the Dominion Government, and there appears to be no doubt that the car ferry service will be established and operated by the Government Railways system. (Mar., pg. 121.)

Montreal Central Terminal Ry.—The Railway Committee of the House of Commons, was informed Mar. 7, that the company's application for an act amending its powers would not be further proceeded with. (Dec., 1911, pg. 1139.)

Montreal Transcontinental Ry.—The Dominion Parliament has under consideration a bill providing for the incorporation of a company with this title, to build a railway from Montreal northerly or northwesterly to connect with the National Transcontinental Railway near Grand Lake Victoria, or at any other point in the vicinity of Migiskin River, Que., and thence to Hannah Bay, in James Bay, Ont. The provisional directors are: J. A. Vallancourt, J. E. Vanier, T. Bastien, E. Gobier, G. E. Drummond, F. L. Wanklyn, N. Curry, Montreal; F. V. Vanier, C. E. Laflamme, R. Deschambault, St. Jerome, Que.

Nerepis and Long Island Ry.—The New Brunswick Legislature is being asked to incorporate a company with this title to build a line from the C.P.R. near Welsford to a connection with the St. John River Valley Ry. between Hampstead and Gagetown. Press reports state that a route with a gradient not exceeding 1% has been surveyed, and that in addition to tapping a rich agricultural country, some iron ore deposits at Koot Hill will be opened up.

New Brunswick Coal and Ry. Co.—See Frederick and Grand Lake Coal and Ry. Co. (Sept., 1911, pg. 855.)

North Shore Ry.—Press reports state that H. J. Von Hagen is endeavoring to arrange for the extension of the line now terminating at Adamsville, N.B., to Snowshoe Lake, on the National Transcontinental Railway. He is quoted as having stated at Beersville, that consideration was being given to a proposal to extend the line from Beersville to Chebucto Head. (Sept., 1908, pg. 618.)

Pacific and Peace River Ry.—It is reported from Edmonton, Alta., that the Pacific and Peace River Railway Development Co. is being organized in France, with a capital of \$5,000,000, to build this projected railway. The P. and P.R. Ry. Co. is authorized to build a line of 480 miles from Bella Coola, on the Pacific coast, through the Pine River Pass to Dunvegan, Alta. (Jan., pg. 23.)

Prince Edward and Hastings County Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from Trenton, Ont., to Gardenville, to Belleville, to Frankfort, and back to Trenton, with branch lines to Picton, Ferry Point, West Point, Black River, and Indian Point. The provisional directors are: G. M. Farrington, T. Walsley, Picton, Ont.; W. H. Gough, Bloomfield, Ont.; W. P. Niles, Wellington, Ont.; H. Dempsey, Albury, Ont.

Prince Edward Island Ry.—It is reported that two routes for the proposed carferry service are under consideration, one between Cape West Point and Richibucto, N.B., referred to elsewhere in this department, under the heading of Moncton and Buctouche Ry., and the other between Cape Traverse and Cape Tor-

mentine. Other routes were suggested but it is said none of them offered the same freedom from ice as the two referred to. (Mar., pg. 121.)

Quebec and Saguenay Ry.—The Quebec Legislature has extended the time for the building of this projected railway, and authorized it to amalgamate, if, so desired, with the Quebec Eastern Ry. (Mar., pg. 121.)

Quebec Eastern Ry.—We are officially advised that this company's charter, together with the line of the Lotbiniere and Megantic Ry., which it is proposed to incorporate as a part of the projected through line from Sherbrooke to Quebec, has been acquired by Sir Rodolph Forget and J. N. Greenshields of Montreal, who represent the controlling force in the Quebec Railway, Light, Heat and Power Co. and its subsidiary, the Quebec and Saguenay Ry. The sale covers the railway 30 miles long, with rolling stock and all other equipment. The new owners have engineers in the field locating the route to connect up the present Lotbiniere and Megantic Ry., with Sherbrooke on the one hand and Quebec on the other. (Dec., 1911, pg. 1139.)

Reid Newfoundland Ry.—At the opening of the Newfoundland Legislature recently the speech from the throne referred to the opening of the Bonavista branch line, the partial construction of two others, which it is hoped will be completed by the end of this year, and the expectation that work on the other three branches provided for in the construction programme of 1910 will be started early in 1913. (Mar., pg. 121.)

St. John and Quebec Ry.—The speech from the throne at the opening of the New Brunswick Legislature, Mar. 7, referred to the signing of a contract Dec. 12, 1911, with the St. J. and Q. Ry. Co. for the building of the railway along the St. John River valley. The contract calls for the completion of the portion of the line between Centreville and Gagetown by Nov. 1, 1913, and for the completion of the whole line by Nov., 1915. An agreement to lease and operate the railway has been entered into with the Dominion Government, which will be presented for ratification. The Dominion Government agrees to guarantee the bonds for the erection of three large steel bridges on the line, and will pay the provincial Government 40% of the gross earnings of the line during the first 15 years of its operation.

Negotiations are reported to be practically concluded with the Woodstock town council for the location of divisional terminals there. The town will purchase the trotting park and the land used by the Agricultural Society as a site for the terminals and car shops, etc., which it is hoped will also be established. The town council is seeking legislation necessary to acquire the land. (Mar., pg. 121.)

Saskatoon Transfer Ry.—The Saskatchewan Legislature has incorporated a company with this title to build a line to connect up the various lines of railway centering in Saskatoon. It is proposed that the lines to be built shall be operated by either steam or electricity, or both. C. J. Alexander, Saskatoon, is one of the promoters.

South East Kootenay Ry.—The British Columbia Legislature has extended the time within which this projected line may be built. (Jan., pg. 23.)

Southampton Ry.—Press reports state that a line is well advanced in construction between Millville and Temperance Hill, N.B., 6.5 miles, and that an additional six miles is to be built to carry the line to the Southampton end of the Pokioik bridge. Some track is reported to have been laid, and it is stated that arrangements are being made for the operation of the line by the C.P.R. J. K. Pinder, M.P.P., is president of the

company. Millville is a station on the C.P.R. Fredericton-Edmundston line, and Southampton is on the St. John River.

Since the preceding paragraph was put into type, we have been officially advised that the line has been completed for 6.5 miles from the junction with the C.P.R., about one mile east of Millville. It is intended that it be operated by the C.P.R., but it is probable that it will be some time before it is opened for traffic, as it has not been approved by the Board of Railway Commissioners.

Temiskaming and Northern Ontario Ry.—In connection with the rearrangement of the boundaries of Ontario and Manitoba, on the shores of Hudson Bay, it has been arranged that a strip of territory five miles wide from the new boundary of Ontario to Port Nelson is granted to Ontario for the purpose of building an extension of the T. and N.O. Ry., from the present terminus at Cochrane, and that for terminal purposes at Port Nelson, a frontage of 10 miles on Hudson Bay and Nelson River, with a depth of half a mile, and including the river bed, etc., is set apart in the area granted to Manitoba. If the terminus of the Hudson Bay railway is fixed at Fort Churchill, provision is made for the granting to Ontario of a right of way 200 ft. wide, so that the T. and N.O. Ry. may be connected with it, and the Dominion Government agrees to grant running rights over the Hudson Bay Ry. The five mile wide strip, while remaining territorially with Manitoba is to be made free of taxation.

A contract for the complete construction (other than steel bridges) of the branch from Earlton to Elk Lake, about 30 miles, ready for the ties and rails, has been let to McCaffery and McQuiggen, Toronto, the work to be completed by Sept. 1. It is reported that track will be laid this year. The maximum gradient will be 6-10ths of 1%. McCaffery and McQuiggen's contract will probably amount to about \$200,000.

Toronto, Hamilton and Buffalo Ry.—Press reports from Hamilton, Ont., state that plans are being prepared for a rearrangement of the company's entrance into that city. The proposition, it is said, includes the widening of the tunnel 250 ft. to the north from the western limits to McNab St., to divert the tracks south at McNab St., crossing James St. midway between Hunter St. and Augusta St., and joining the present right of way at Ferguson Ave. The tracks are to be depressed from the mouth of the tunnel to Ferguson Ave. A new station, it is stated, will be built on the site of the present one, and carried south across Hunter St. and the depressed tracks. (Mar., pg. 122.)

Union Pacific Ry.—T. C. Shotwell, in a recent article, states that the port of Vancouver is the key to the Pacific west situation. The U.P. Rd. through one of its subsidiary lines is said to be planning to reach that port, and he adds that in order to obtain outbound cargoes for its steamships will be compelled to extend its lines from Vancouver through the Yellowhead Pass into the Peace River district.

Winnipegosis and Northern Ry.—Application is being made to the Manitoba Legislature to incorporate a company with this title to build a railway from the Porcupine Mountains district, near Steep Rock River, to Dawson Bay, on the west shore of Lake Winnipegosis, and crossing the Canadian Northern Ry. near Mafeking station. Macdonald, Haggart, Sullivan and Tarr, Winnipeg, are solicitors for the applicants, and McGregor and Young of Winnipeg are among the provisional directors.

D. W. CAMPBELL, local manager, Elder Dempster Co., returned to Montreal, Mar. 2, from England.

Grand Trunk Railway Betterments, Construction Etc.

Southern New England Ry.—Articles of incorporation of the S.N.E. Ry. Co. have been filed in New Hampshire, the company being authorized to build from Lebanon to Concord and along the Merrimack River to the New Hampshire-Massachusetts state line. The section of the line in Massachusetts has already been approved by the State Railway Commissioners. E. H. Fitzhugh, President, submitted the plans to the legislative committee on railroads at Boston, Mass., Mar. 6, and stated that the road-bed would be prepared for a double track line, but it was only proposed to lay a single track at present. It was also proposed to build a belt line to connect the proposed sections of the line north and south of Boston and to reach the necessary terminals and docks.

The company is reported to have let a contract for the erection of 57 steel bridges on the line in Massachusetts and Rhode Island. The principal bridges will be a 1,250 ft. viaduct at Monson, Mass.; a 570 ft. bridge, 120 ft. high, at Palmer, Mass.; and a 480 ft. viaduct 60 ft. high at Melville Heights.

Bridge at Portland, Me.—A new bridge at the entrance to the company's terminals at Portland, Me., is being built. It is a 225 ft. drawbridge on concrete piers.

Lachine Canal Swing Bridge.—The Board of Railway Commissioners has authorized the rebuilding of the company's swing bridge across the Lachine canal at Montreal.

Montreal Track Elevation.—The Board of Railway Commissioners has decided in connection with the plans for the elevation of the G.T.R. tracks in Montreal, that none of the existing streets from the western limits of the city to Bonaventure station can be closed unless with the city's consent. The question of whether the tracks shall be supported by a viaduct with stone or concrete walls, or by a sloping embankment was discussed. The whole of the plans will be taken into consideration by the Commissioners. The question of the apportionment of the cost is to be dealt with later. The total cost of the work is estimated at \$3,800,000, towards which the city has offered to pay \$2,000,000, but the company asks that the city also pay 50% of the consequential damages.

West Toronto-Weston Second Track.—We are officially advised that it has not been definitely decided that a second track is to be built between West Toronto and Weston, on the Toronto-Port Huron line during this year.

Humber River Bridge.—The erection of the new four track bridge over the Humber River, near Toronto, is being gone on with. This forms part of the grade revision work in progress between Parkdale and Mimico.

Burlington Bay.—Press reports state that the company is acquiring water front lots on Burlington Bay, in the vicinity of Hamilton, Ont., on which to erect a large grain elevator.

Hamilton Yards, Etc.—Vice President Kelley, Superintendent Gillen and the company's engineer recently spent some time in Hamilton and vicinity inspecting the company's property, and it is reported that arrangements are being made to lay out a large new yard in the vicinity of Stony Creek to relieve the congestion in the Hamilton yards.

D. E. Galloway, Assistant to the President, is reported as having said, Mar. 13, that fruit sheds might be erected at Stoney Creek, Ont., but that there was no truth in the report that the work

now done at the Ferguson Ave. yards, Hamilton, was to be transferred to yards to be laid out at Stoney Creek.

Holmedale Switch, Brantford.—The Board of Railway Commissioners has authorized the G.T.R. to build a branch line through the Holmedale district, Brantford, Ont., across the hydraulic canal and the Grand River to its Brantford and Tillsonburg branch, and to close certain streets. This order carries out the terms of an agreement with the city council made some time ago.

Automatic Block Signalling.—It is reported that orders are being placed for the installation of automatic block signals on the line between Toronto and Niagara Falls, and from Hamilton to Lynden, Ont.

Plans are now being made to instal an automatic block signalling system between Toronto and Niagara Falls, and also between Hamilton and Lynden Jct., where the main lines diverge to Harrisburg and Brantford. The G.T.R. is also planning to instal this system on the 26th district in Indiana.

London, Ont., Improvements.—Local officials state that there is no probability of any improvements being made at London, Ont., this year. The mayor stated, Mar. 6, that while he had not received any information from Montreal he understood that plans were being prepared for very important changes, and that part of the work would be put in hand within a reasonable time.

Bay City, Mich.—A contract is reported to have been let for the erection of a bridge across the river at Bay City, Mich., to bring the G.T.R. more into the centre of the city than it is at present. The plans show a structure of five spans, of 150 ft. each, and two draw spans of 250 ft. each, resting on concrete piers and abutments. (Mar., pg. 138.)

Great Northern Railway Lines in Canada.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—The Board of Railway Commissioners has authorized the opening for traffic of the extension of the line from Princeton to Coalmount, B.C., 13 miles. The plans for the extension of the line from Princeton to near Merritt are reported to be practically complete, and press reports state it is expected that construction will be gone on with during this year. It is said that for the present the company will not build an independent line from near Merritt to Hope, but will make an arrangement with the Kettle Valley Ry. to operate over the line it is to build between these points under the new contract with the British Columbia Government, and will then make connection with the Canadian Northern Pacific Ry. and run over that company's line to near Chilliwack, where it will run over its own line into New Westminster, Vancouver and the United States.

Vancouver Terminals.—Contracts are under consideration for the moving of about 100,000 cubic yards of earth near Grove Crescent. This is the first piece of work to be undertaken on False Creek. The entire work of reclamation and construction will require the moving of between 3,000,000 and 4,000,000 cubic yards of material. Part of the material required for the filling will be taken from the cuts, but large quantities will have to be brought from elsewhere. When the terminal construction is completed it is probable that the Northern Pacific Ry. will be given running rights into the city.

Rapid progress is being made with the construction of the new pier, near the B.C. Sugar Refinery, and it is expected to have it ready this year. Clarke and Co., Seattle, are the contractors. (Mar., pg. 122.)

New Railway Subsidies by Dominion Government.

The Minister of Railways moved resolutions in the House of Commons, Mar. 21, granting aid for the construction of railways. The first resolution provides for the aiding of the Temiskaming and Northern Ontario Ry., out of the Consolidated Revenue Fund, under such conditions as the Governor-in-council deems expedient, not exceeding \$6,400 a mile, in respect of the following lines:—From North Bay to Cochrane, not exceeding 252.8 miles; Englehart to Charlton, 7.8 miles; Cobalt to Kerr Lake, 3.9 miles; Iroquois Falls to Timmins, 33.16 miles; Nipissing Jct. to North Bay, 2.18 miles.

The second resolution provides for the granting of aid for the construction of the following lines, at \$3,200 a mile—increasing to \$6,400 in proportion to the cost in excess of \$15,000 a mile:—

NOVA SCOTIA.

From Liverpool, via Milton to Caledonia, N.S., not exceeding 30 miles. (Renewal of subsidy granted in 1907.)

Great Northern Mining and Ry. Co.—From Little River to Eastern Harbor, not exceeding three miles.

NEW BRUNSWICK.

From St. John to Grand Falls, exclusive of a bridge across the Kennebecasis River at Perry Point, and two across the St. John River at Mistake and Andover respectively, not exceeding 228 miles. (Renewal of subsidy granted in 1910.)

From Albert Mines to Moncton, not exceeding 22 miles.

Fredericton and Grand Lake Coal and Ry. Co.—From near Gibson to Minto, with a branch line to Marysville, not exceeding 35 miles.

Southampton Ry.—From Millville to Pokioik Bridge on the St. John River, not exceeding 13 miles.

Northern New Brunswick and Seaboard Ry.—From Austin Brook to the Intercolonial Ry., and thence to Bathurst harbor, not exceeding 26 miles.

North Shore Ry.—From Adamsville to the National Transcontinental Railway, not exceeding 20 miles; from Beersville to Richibucto Head, not exceeding 20 miles.

QUEBEC.

From St. Agathe des Montes towards Howard tp., not exceeding 15 miles. (Revote of subsidy granted in 1908.)

From Montreal to mileage 837 west of Moncton, on the National Transcontinental Ry., not exceeding 200 miles. (In lieu of subsidy voted in 1910.)

From mileage 837 National Transcontinental Railway, west of Moncton, to the mouth of Nottaway River, not exceeding 300 miles.

L'Avenir and Melbourne Ry.—From Melbourne to Drummondville, not exceeding 23 miles. (Renewal of subsidy granted in 1910.)

Ha Ha Bay Ry.—From St. Mathias to Ha Ha Bay, not exceeding 20 miles; from Labrosse Jct. to the Saguenau River, not exceeding five miles; from La Terrieri Jct. northerly to Lake Kenogami, not exceeding 12 miles; from near Bagotville to St. Alexis, not exceeding three miles. (In lieu of a 40 mile subsidy granted in 1910.)

Interprovincial and James Bay Ry.—From near Temiskaming to the Des Quinge River, not exceeding 50 miles. (Renewal of subsidy voted in 1906.)

Canadian Northern Quebec Ry.—From near Arundel to Preston and Hartwell tps., not exceeding 30 miles. (Renewal of subsidy voted in 1910.)

Quebec and Saguenay Ry.—From St. Joachim northeasterly, not exceeding 62.8 miles; from mileage 62.8 from St. Joachim towards Seven Islands, 107.2 miles. (In lieu of subsidies for 170 miles voted in 1910.)

Quebec Central Ry.—From St. George to St. Sabine, 1.34 miles; from St. Sa-

bine (mileage 31.34 from St. George), to Dionne tp., not exceeding 50 miles.

Canada and Gulf Terminal Ry.—From Matane easterly to Gaspé Basin, not exceeding 200 miles.

Grand Lake and Bell River Ry.—From Bell River to Rabbit Lake, Pontiac county, not exceeding 45 miles.

St. Charles and Huron River Ry.—From Indian Lorette to Stoneham, not exceeding 7.5 miles.

ONTARIO.

Algoma Central and Hudson Bay Ry.—From Sault Ste. Marie to between White and Dalton stations on the C.P.R., not exceeding 200 miles; from Michipicoten Harbor towards the C.P.R., not exceeding 25 miles; from the C.P.R. towards the National Transcontinental Ry., not exceeding 50 miles. (In lieu of subsidies voted for 270 miles voted in 1910.) From the end of the 50 miles last mentioned to the National Transcontinental Ry., not exceeding 65 miles.

Algoma Eastern Ry.—From the Sudbury-Little Current line westerly towards the Algoma Central and Hudson Bay Ry., not exceeding 76 miles; from Sudbury northerly, not exceeding 30 miles. (In lieu of subsidy for 106 miles voted in 1910.)

Tillsonburg, Lake Erie and Pacific Ry.—From Ingersoll to Stratford, or to between Berlin and Stratford, not exceeding 35 miles. (Revote of subsidy granted in 1907.)

Lac Seul, Rat Portage and Keewatin Ry.—From Kenora to the National Transcontinental Ry., not exceeding 22 miles. (Revote of subsidy voted in 1910.)

Toronto, Lindsay and Pembroke Ry.—From Golden Lake to Bancroft, not exceeding 51 miles. (Revote of subsidy granted 1910.)

Simcoe, Grey and Bruce Ry.—From Orillia towards Kincardine, not exceeding 50 miles.

Rainy River Radial Ry.—From Fort Frances to the mouth of Little Grassy River, not exceeding 50 miles.

Lake Erie and Northern Ry.—From Galt to Port Dover, not exceeding 58 miles; from Paris to Ayr, not exceeding 10 miles.

Bruce Mines and Algoma Ry.—From Rock Lake Mine towards the C.P.R. Transcontinental line, not exceeding 50 miles.

MANITOBA.

Canadian Pacific Ry.—From Teulon to Icelandic River, not exceeding 35 miles. (Revote of subsidy granted in 1906.)

Manitoba and North Western Ry.—From Hamiota to Birtle, not exceeding 30 miles.

Grand Trunk Pacific Ry.—From Harte to Brandon, not exceeding 25 miles.

ALBERTA.

Alberta Pacific Ry.—From Cardston towards Calgary, not exceeding 100 miles.

Calgary and Fernie Ry.—From Calgary, Alta., to Fernie, B.C., not exceeding 100 miles.

BRITISH COLUMBIA.

Vancouver, Westminster and Yukon Ry.—From Vancouver via Second Narrows of Burrard Inlet, northerly for 100 miles. (In lieu of subsidy voted in 1908.)

Kootenay Central Ry.—From Golden via Windermere and Fort Steele to Jukeson, not exceeding 175 miles; from near Calthness to the International boundary, not exceeding 25 miles. (In lieu of a 200 subsidy voted in 1910.)

Kettle Valley Ry.—From Grand Forks for 50 miles along the North Fork of Kettle River. (Revote of subsidy voted in 1908.) From Penticton to the International boundary, not exceeding 50 miles.

Esquimalt and Nanaimo Ry.—From Wellington to Alberni, not exceeding 60 miles; from McBride Jct. to Sandwich, not exceeding 45 miles; from Sandwich to Campbell River, not exceeding 38

miles. (In lieu of subsidy for 143 miles voted in 1907.)

Burrard Inlet Tunnel and Bridge Co.—From Eburne to mouth of Seymour Creek, not exceeding 10 miles; from Seymour Creek to Deep Cove, not exceeding five miles; from Seymour Creek to Horse Shoe Bay, not exceeding 14 miles; from Pender St., Vancouver, to North Vancouver, not exceeding three miles.

Caribou, Barkerville and Willow River Ry.—From Eagle Lake to Barkerville, not exceeding 87 miles.

Naas and Skeena Rivers Ry.—From Nasoga Gulf towards the Skeena River, near Groundhog Mountain, not exceeding 100 miles.

From near Campbell River, on the Esquimalt and Nanaimo Ry., towards Fort George, on the G.T. Pacific Ry., not exceeding 100 miles. (In lieu of subsidy voted in 1908.)

Another resolution provides for the granting of a subsidy of \$12,000 a mile to the Canadian Northern Pacific Ry. for building a railway from the Yellowhead Pass to Vancouver and the mouth of the Fraser River, 525 miles.

The Governor-in-Council is, under the resolution, authorized to grant aid towards the construction of bridges as follows:—

VANCOUVER, WESTMINSTER AND YUKON Ry.—Towards erection and completion of railway bridge across Burrard Inlet, \$350,000. (In lieu of subsidy voted in 1908.)

KETTLE VALLEY Ry.—Towards erection and completion of railway bridge across Fraser River at Hope, B.C., not exceeding \$250,000.

CARIBOU, BARKERVILLE AND WILLOW River Ry.—Towards erection of 20 railway bridges, 25% of the total amount expended, not exceeding \$95,000.

CANADIAN PACIFIC Ry.—Towards erection of bridge across the Saskatchewan River at Outlook, Sask., 15% of cost, not to exceed \$115,000. As lessees of Calgary and Edmonton Ry., 15% of cost of construction of bridge across Saskatchewan River, connecting Strathcona and Edmonton, Alta., not exceeding \$126,000.

GRAND TRUNK PACIFIC Ry.—Towards erection of bridge across Assiniboine River at Brandon, Man., 15% of cost, not to exceed \$20,000.

A further resolution provides for guaranteeing the bonds of a bridge company for \$1,000,000, and interest on the same for the following bridges on the line along the St. John River Valley, proposed to be built by the St. John and Quebec Ry. under contract between the Dominion and New Brunswick Governments, and to be operated under lease by the Intercolonial Ry., viz., across the St. John River at Andover; across the St. John River at Mistake, and across the Kennebecasis River at Perry Point, all in New Brunswick.

Railway Lands Patented.—Letters patent were issued during Jan. in respect of railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary and Edmonton Ry.	6.14
Canadian Pacific Ry.	1,684.62
Grand Trunk Pacific Ry.	206.61
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	959.00
Total	2,856.37

The Quebec Bridge Wreck.—The recent attempt to revive the discussion of the cause of the Quebec bridge wreck by ascribing it to dynamiters is altogether foolish and without any foundation of fact. The bridge fell because its details were improperly designed. The web plates of which the bottom compression member was composed were insufficiently latticed together and the latticing tore asunder, permitting the posts to crumple up under a load less than it was intended to carry, and drop the whole bridge into the river.

Reclaiming of Scrap Material at Railway Shops.

By E. J. McVeigh, Storekeeper, G.T.R., Ottawa.

This matter has come to the front lately stronger than ever before, and is being very carefully considered by railway officials, and the more they consider it, the less simple it appears. Some roads claim to have done wonderful things along this line, but we should be slow to accept their statements at their face value without proof.

In attempting to deal with the question of reclaiming scrap material at our railway works, we are confronted with so many conflicting elements, that we almost despair of laying down rules that, followed out, would be of general benefit. But one thing we must carefully avoid, and that is, not to be carried away by our enthusiasm, either in theory or practice. We may very easily waste, or lose, more than we save by going at a thing of this kind blindly.

Then in laying down general rules, or giving our own experience as an object lesson, we must keep in mind the fact that what might be good policy for one road might be the reverse for another, and that local conditions govern to an extent here, as in so many other matters in connection with our railways.

For instance, a small railway buying all of its metals in the open market, and selling all of its scrap in like manner, might, with advantage, go further in reclaiming scrap than could a large system operating its own rolling mills, grey casting foundries, brass foundry, etc., etc. The reason will be plain enough. The small road pays an average price of \$2.15 per 100 lbs. for its wrought iron. It sells its no. 1 wrought scrap for 50 cents per 100 lbs., difference \$1.65 per 100 lbs. The large system turns out from its own mills, wrought iron at \$1.35 per 100 lbs., turning in no. 1 wrought scrap at 50 cents; difference 75 cents. This leaves 90 cents per 100 lbs. that the small road might spend to advantage in reclaiming scrap, over and above what the larger system could do. The same thing holds good with cast and brass scrap, to a greater or less extent. The figures used are merely by way of illustration.

But there are other elements beside apparent cash value to be considered. We know that iron and steel deteriorate with age and use, and we must be very careful in selecting a piece of scrap to use in replacing a locomotive part. It would be poor economy, indeed, to save 50 cents worth of new material, and cause an engine failure by so doing. Nor could we feel much satisfaction in saving a few cents by cutting and re-threading a few old car bolts, and have a set of draught timber pull out, because there was no life in the old bolts, and they broke. The re-setting of old coupler springs does not seem to cost much, but do we get good service from them afterward? It may seem that the answer to this would be that it depended on the skill of the man who reset them; but this is not always the case by any means. The age of the steel in the spring has much to do with it, and here again we must, or should, select with care the material we will spend money on in reclaiming, rather than buy new. It is very easy to make mistakes in this matter, and quite frequently, when we think we are accomplishing most, is when we may be wasting money instead of saving it.

Some years ago it occurred to me, that we might effect a considerable saving by reclaiming a portion of the plucked air brake hose. I found that hose pulled apart, broke close to the nipple end, leaving the greater portion apparently as good as new. Two of these cut to proper length and joined

with a small malleable coupling, would give us a new hose. The saving would be—one new hose, \$1.10, less coupling, clamps and labor, 18 cents, net saving 92 cents. This repeated fifty to one hundred times a day looked very good, and as a matter of fact many of our railways were soon following this practice, and you could see hose so "reclaimed" in every railway yard in America. You do not see so many today. Why? Because I found, and no doubt others did also, that a hose pulled apart, while it might look good, was, in fact, worthless, the stretching having destroyed it, and instead of saving money we had been wasting it.

Another example, I found at one time that the track cold sets turned out of the shops were useless, a dozen of them would not cut one rail. The trouble was that a smart foreman had conceived the idea of using scrap steel tires in making up these sets, and he was tickled all over at the thought of how much new steel he was saving, while, as a matter of fact, he was wasting 75 cents on each cold set he turned out. "A little knowledge is a dangerous thing," and nowhere more so than in the reclaiming of scrap.

Then if we are going to save our scrap on the chance that it may be useful, how far are we to go with it? Will we rescue from the scrap bin each day, or each week, only such material as we know can be at once turned back into use, or shall we save all that we think may by any chance be found useful some day? If we follow the latter plan how long would we be accumulating a mass of material representing a sum of money, the interest of which would more than balance any small saving we might effect by the use of the small portion we found use for, and what about the extra room required, and the labor expended?

In this age of rapid change and advance in railway equipment, one of the problems we face is the rapid accumulation of obsolete material, and scrap, and nice judgment is often required in dealing with it. Naturally, we want to keep it down in quantity for appearance sake, and we want to get out of it as early as possible, all that it is worth in cash. On the other hand, we know that some of this material may be found of use some time, but what portion of it? It is the old problem of the fellow who made up his mind he would believe one-half that his friend told him, then he was confronted with the question of which half, and there he stuck. Personally, after many years wrestling with the problem, and making some hits and some misses, I have come to the conclusion that about as good a plan to follow as any is this: Let each shop, car and locomotive, collect its scrap in set of scrap bins, as close to shop as possible. Allow your men free access to these bins, and encourage them to use from them each day as far as advisable. Dispose of scrap by sale not less than four times in the year, and when loading, hold out only such pieces as you think may be used at once, and let remainder go. If what you have thrown back at one loading is found still on hand at the next, send it away, and repeat the process.

[Mr. McVeigh's paper opens up a very interesting and important question. We would be glad to hear from any of our readers in regard to it and to receive their experience and suggestions.—Editor.]

Planer Clamp for Switch Points.—The planer clamp for switch points at the Canadian Steel Foundries, Point St. Charles plant, Montreal, which was described and illustrated in our Feb. issue, was invented by G. D. Smith, General Superintendent of the company's plants. Through a misunderstanding of facts he was not given the credit he deserves in this connection.

Mainly About Transportation People.

C. R. HOSMER, director, C.P.R., has left Montreal for a European trip.

Mrs. Strevel, wife of G. H. STREVEL, railway contractor, Winnipeg, died there, Feb. 26.

LORD STRATHCONA has given \$25,000 towards the erection of a hospital in Strathcona, Alta.

SIR THOS. G. SHAUGHNESSY, President, C.P.R., returned to Montreal, Mar. 9, from Nashville, Tenn.

HON. J. S. HENDRIE has been re-elected Chairman of the Railway Committee of the Ontario Legislature.

C. M. HAYS, President, G.T.R. and G.T. Pacific Ry., left Montreal for England, via New York, Mar. 12.

J. H. GORDON, travelling freight agent, C.P.R., Winnipeg, Man., died there Mar. 7, from typhoid fever, aged 28.

A. R. MACDONNELL, contractor, Montreal, who died in England in July, 1911, left an estate valued at \$1,095,790.

J. H. MARBLE, a lawyer, of California, has been appointed Secretary of the U.S. Interstate Commerce Commission.

CAPT. J. W. TROUP, Manager, B.C. Coast Service, C.P.R., returned to Victoria, B.C., Mar. 4, from a short holiday in California.

H. W. MITCHELL, ticket agent, Canadian Northern Ontario Ry., Port Hope, Ont., has joined the Canadian Ticket Agents' Association.

Mrs. Hobson, wife of JOSEPH HOBSON, M. Can. Soc. C.E., Consulting Engineer, G.T.R., Hamilton, Ont., died there Mar. 23, aged 79.

MAJOR R. W. LEONARD, Chairman National Transcontinental Ry. Commission, has been elected a director of the Toronto General Trusts Corporation.

H. E. GRANT was presented with, a gold watch fob by the British Columbia Electric Ry.'s sales staff, Mar. 4, on his leaving Vancouver for California.

W. D. TRUMP, General Superintendent, Pere Marquette Rd., Detroit, Mich., has resigned after 30 years service, and will take a long holiday after April 1.

J. E. LAUGHLIN, for many years station agent for the G.T.R. and Wabash Rd., at Windsor, Ont., has resigned, and expects to move to California early in April.

H. P. DURDEN, General Agent, American-Hawaiian Steamship Co., Los Angeles, Cal., who died in San Diego, Cal., recently, was a native of Hamilton, Ont.

A. R. MANN, of the Northern Construction Co., which has large contracts on the Canadian Northern Ry., left Winnipeg, with his family, to reside in Vancouver.

G. M. HIGGERSON, Chief Dispatcher, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., was presented with a gun by his associates recently, on his leaving for the west.

SIR WM. WHYTE and A. M. NANTON, of Winnipeg, are mentioned as probable members of the Hudson's Bay Co.'s Canadian board, which, it is said, will be established shortly.

LIEUT.-COL. E. W. RATHBUN, President, Rathbun Co., which owns the Oshawa Ry. and the Thousand Islands Ry., has been elected President of the Dominion Artillery Association.

F. W. DOTY, President of the Doty Engine Works, Goderich, Ont., and formerly owner of the Doty Ferry Co., plying between Toronto and the Island, died at Goderich, Feb. 27.

T. GUILDFORD SMITH, M. Am. Soc. C.E., Manager of Sales for various subsidiary companies of the United States Steel Corporation, at Buffalo, N.Y., died there, from apoplexy, recently.

JNO. CORBETT, formerly General For-

eign Freight Agent, C.P.R., and now in the marine and general insurance business, returned to Montreal, from a trip to Great Britain, Mar. 12.

W. STITT, General Passenger Agent, C.P.R. Eastern Lines, and G. H. HAM, of the C.P.R. headquarters staff, Montreal, were at the immigration conference at Fredericton, N.B., Mar. 8.

THE HON. JOSIAH WOOD, Senator, Sackville, N.B., President and General Manager, New Brunswick and Prince Edward Island Ry., has been appointed Lieutenant Governor of New Brunswick.

GEORGE BURY, Vice President and General Manager, C.P.R. Western Lines, and J. OBORNE, General Superintendent, British Columbia Division, C.P.R., were guests of the Vancouver Board of Trade, Feb. 24.

W. B. KEMP, heretofore chief clerk, District Freight Agent's office, C.N.R., Saskatoon, Sask., has resigned to enter private business with C. R. Hill, who recently resigned the position of District Freight Agent there.

F. P. Gutelius, M. Can. Soc. C.E., who has been appointed one of the commissioners to investigate National Transcontinental Railway matters.

J. W. STEWART, of Foley, Welch and Stewart, railway contractors, expects to return to Vancouver early in April. He is at present in Pasadena, Cal., and is reported to be rapidly gaining strength after his recent severe illness.

Mrs. F. L. CLERGUE, who died in New York, Mar. 1, was widow of the late Joseph Clergue, who was associated with the initiation of the industries at Sault Ste. Marie, Ont., and Mich., now owned by the Lake Superior Corporation.

T. H. ALLEN, who died in Ottawa, Mar. 1, aged 73, was confidential secretary to Andrew Onderdonk, when the latter had a contract from the Dominion Government for building a portion of the C.P.R. in British Columbia, in the late seventies.

B. C. GESNER, the Galena Signal Oil Co.'s expert in the Maritime Provinces, has been granted the Imperial service medal in consideration of 26½ years service on the Intercolonial Ry. as locomotive engineer, air brake demonstrator and instructor.

J. F. STEVENS, M. Am. Soc. C.E., former Chief Engineer of the Panama Canal and more recently President of the Oregon Trunk Ry. and other railways of the Hill system in Oregon, is now President of the Jno. F. Stevens Construction Co., New York City.

G. ATTWOOD, Chief Engineer, Hudson Bay and Pacific Ry., Prince Albert, Sask., died in London, Eng., Feb. 9. He was one of the engineers engaged in the construction of the cable and telegraph line projected from London, Eng., via Behring Strait, through Canada, to the United States.

J. N. LEITCH, B.A. Sc., youngest son of Jas. Leitch, K.C., Chairman of the Ontario Railway and Municipal Board, died in Toronto, March 24, aged 25, of pleuropneumonia. In the summer of 1910 he was engaged in the erection of steel bridges on the Temiskaming and Northern Ontario Ry.

V. SAUCEDO, A.M. Am. Soc. C.E., has resigned the position of Chief Engineer of the Monterey (Mexico) Water Works and Sewer Co., and of the Monterey Railway, Light and Power Co., of which Sir Wm. Mackenzie is President, to enter private practice in engineering in Monterey.

J. K. SAVAGE, Chief Dispatcher, C.P.R., Brandon, Man., was presented with two leather arm chairs by the conductors and trainmen, a smoking cabinet by the telegraphers, and some silverware by the general staff, on his leaving there, Feb. 23, to take up his new duties as Superintendent at Regina, Sask.

JNO. McLEOD and Mrs. McLeod, who have resided in Winnipeg since 1879, celebrated their golden wedding Mar. 4. Before moving west Mr. McLeod was engaged in lumbering and railway contracting, and in the latter capacity built sections of the Quebec Central Ry., and of the old International Ry. (now merged in the C.P.R.)

G. A. JOYCE, formerly city ticket agent, C.P.R., at Woodstock, Ont., died suddenly from heart failure, in Chicago, Ill., March 3, aged 58. He had been connected with the C.P.R. as train dispatcher, yardmaster at West Toronto, and for seven years as ticket agent at Woodstock, and resigned some time ago to enter private business.

JNO. S. METCALF, President of the John S. Metcalf Co., Ltd., engineers and constructors of grain elevators, wharves, power plants, freight sheds, etc., Montreal and Chicago, died at his home at Evanston, Ill., Mar. 5, after several months' illness. He was born near Sherbrooke, Que., in 1847 and went to the United States when quite a young man.

W. J. HARVIE, A. Am. Inst. E.E., Chief Engineer of the Syracuse Rapid Transit Ry., Syracuse, N.Y., has been appointed Railway Manager of the operating department of J. G. White and Co., New York City, succeeding J. N. Shannahan, resigned to become Vice President and General Manager of the Newport News and Old Point Ry. and Electric Co., Newport News, Va.

W. A. MATHER, who has been appointed acting Superintendent, District 1, Manitoba Division, Kenora, Ont., was born at Oshawa, Ont., Sept. 12, 1886, and entered C.P.R. service, in the construction department, May, 1903, where he remained until Dec., 1910, when he was appointed Resident Engineer, District 2, Manitoba Division, Winnipeg, which position he held to the date of his present appointment.

W. T. DANIEL, whose appointment as Resident Engineer, District 2, Saskatchewan Division, C.P.R., Regina, was announced in our last issue, was born Sept. 10, 1886, and entered C.P.R. service, in the Engineering Department, May, 1909. In June, 1911, he was appointed assistant engineer of construction of the

Broad St. subway, Regina, Sask., which position he held to the date of the present appointment, Feb. 12.

W. C. NUNN, who died in Toronto Mar. 8, aged 76, was born in Yorkshire, England, and came to Canada in 1886, entering the G.T.R. service, in which he was agent at Whitby, Port Hope, Trenton and Belleville. He was captain of a G.T.R. company during the Fenian raid. He patented a railway signal, and subsequently went into the railway supply business, and at the time of his death was connected with the Convertible Car Co.

J. L. P. O'HANLY, civil engineer, Ottawa, Ont., died there, Mar. 22, aged 85. He had been an engineer on the Intercolonial Ry., Canadian Pacific Ry., director of the Ottawa and Gatineau Valley Ry., and Ontario commissioner in the Ontario-Quebec boundary survey in 1872. In 1881 he was on the western boundary survey of Manitoba, and reported also on the effect of the Chicago drainage canal on the level of the Great Lakes.

F. E. WARREN, who has been appointed Division Car Foreman, Ontario Division, C.P.R., West Toronto, and whose portrait appears in this issue, was born at Chelsea, Que., Aug. 29, 1872, and entered C.P.R. service, Dec. 10, 1897, since when he has been, to Dec. 1, 1902, Carpenter at Farnham, Que.; Dec. 1, 1902, to Dec. 1, 1905, charge hand at Farnham, Que.; Dec. 1, 1905, to Oct. 1, 1909, Assistant Foreman, Farnham, Que.; Oct. 1, 1909, to Mar. 11, 1912, Car Foreman at Hochelaga, Que.

S. KING, who about a year ago resigned the superintendency of the Canadian Car and Foundry Co.'s plant at Turcot, Montreal, and went to Europe for an extended trip, is now living in London, Ont. At present he is acting as one of the three commissioners who are appraising the Intercolonial and Prince Edward Island Railways' rolling stock, his colleagues being T. Williams, ex-Treasurer, I.R.C., who is the chairman of the commission, and W. Aird, ex-Master Mechanic, G.T.R. shops, Montreal.

C. K. HOWARD, whose appointment as Right of Way Agent, St. John and Quebec Ry., Fredericton, N.B., was announced in our last issue, was born at St. Andrews, N.B., Aug. 28, 1877, and entered C.P.R. service, Apr., 1894, since when he has been, to Mar., 1910, successively, operator, agent at Greenville Jct., Brownville Jct., McAdam Jct., and Fredericton, and Travelling Freight Agent, Atlantic Division, St. John; Mar., 1910, to date of present appointment, Jan. 15, Superintendent, Aroostook Valley Rd., Presque Isle, Me.

D. McDONALD, whose appointment as Superintendent, Montreal and St. Flavie District, Intercolonial Ry., Levis, Que., was announced in our last issue, and whose portrait appears in this issue, was born at Ste. Hyacinthe, Que., Feb. 28, 1862, and entered Intercolonial Ry. service in 1880, since when he has been, to 1882, night agent and operator, Ste. Anne, Que.; 1882 to 1885, operator at Ste. Flavie, Que.; subsequently, to Jan., 1912, joint ticket agent, I.R.C., G.T.R., and Quebec Central Ry., Levis, Que. He is the youngest brother of the late A. R. McDonald, who was a superintendent on the I.R.C. from 1879 to 1897.

J. M. MACRAE, who has been appointed District Freight Agent, Canadian Northern Ry., Saskatoon, Sask., was born at Stornoway, Scotland, July 31, 1884, and prior to coming to Canada, was connected with the coasting steamship service connecting with railways in Great Britain; from Aug., 1906, to Mar., 1907, clerk and stenographer, Audit Department, C.N.R., Winnipeg; Mar., 1907, to Feb., 1911, successively, stenographer, tariff clerk, assistant chief clerk, rates

and claims, and chief clerk, Freight Traffic Department, C.P.R., Winnipeg; Mar., 1911, to Feb., 1912, Traffic Manager, Imperial Oil Co., Winnipeg.

S. B. WASS, A.M. Can. Soc. C.E., who

P264
A. S. Dawson, B.A. Sc., M. Can. Soc. C.E., Chief Engineer, Department of Natural Resources, Canadian Pacific Ry.

has been appointed Assistant Chief Engineer, St. John and Quebec Ry., Fredericton, N.B., was born in Perth county, Ont., July 11, 1880, and graduated from the Faculty of Applied Science, Toronto University, in 1903. He has been, in

P265
D. McDonald, Superintendent, Montreal and Ste. Flavie District, Intercolonial Railway.

1904, draughtsman, Toronto and York Radial Ry.; 1905 to 1906, Resident Engineer, same road; 1906 to 1907, Resident Engineer on Construction, C.P.R. Walkerton Branch; 1907 to 1908, Assist-

ant to Division Engineer, same road; 1908 to 1910, Chief Engineer, Aroostook Valley Rd.; 1910 to Feb., 1912, assistant to Division Engineer, C.P.R., Montreal, in charge of location.

G. HODGE, whose appointment as General Superintendent, Eastern Division, C.P.R., Montreal, was announced in our last issue, was born there, Oct. 2, 1874, and entered C.P.R. service, Mar. 24, 1890, since when he has been, to Aug. 8, 1890, junior clerk, Passenger Traffic Department; Aug. 8, 1890, to Apr., 1892, junior clerk, Vice President's office, Apr., 1892, to Jan., 1896, secretary to Vice President; Jan., 1896, to Feb., 1907, chief clerk to Vice President; Feb., 1907, to June, 1908, Superintendent, Montreal Terminals; June, 1908, to Mar., 1911, Superintendent, District 3, Eastern Division, Montreal; Mar., 1911, to Feb., 1912, Superintendent, District 2, Ontario Division, London.

C. R. HILL, who recently resigned the position of District Freight Agent, Saskatoon, Sask., to take up business as real estate and investment broker, there, entered railway service with the G.T.R. in 1900, in the local freight department, Toronto, and subsequently was in the offices of the Superintendent, Terminal Superintendent and Master of Bridges and Buildings, there. From Sept., 1902, to Apr., 1906, he was stenographer in the Traffic Manager's office, C.N.R., Winnipeg; Apr., 1906, to 1907, Travelling Freight Agent, same road, Winnipeg; 1907 to Nov., 1908, Travelling Freight Agent, same road, Saskatoon, Sask.; Nov., 1908, to May 1, 1910, Contracting Freight Agent, same road, Regina, Sask., and May, 1910, to Feb., 1912, District Freight Agent, same road, Saskatoon, Sask.

F. L. WANKLYN, who has been appointed General Executive Assistant, C.P.R., Montreal, was born at Buenos Ayres, Argentine, Feb. 25, 1860, and educated at Marlborough College, Wilts, Eng. He was articled to C. Savie, C.E., of the Manchester, Sheffield and Lincolnshire Ry. (now Great Central Ry.), and served an apprenticeship in the locomotive works at Gorton, Manchester, Eng., and was subsequently resident engineer, Lombardy Road Ry., Milan, Italy. He came to Canada, Jan. 1, 1881, and has been Assistant Locomotive Superintendent, G.T.R., Manager, G.T.R. locomotive works, Manager, Toronto Ry., General Manager and Vice President, Montreal St. Ry., and Vice President, Dominion Coal Co., until its amalgamation with the Dominion Iron and Steel Co. He was elected a member of the Montreal board of control, Feb. 1, 1910, resigning Mar. 1, 1912, on his present appointment.

A. S. COOK, who has been appointed Inspecting Engineer, National Transcontinental Ry., Ottawa, Ont., was born at Penobscus, N.B., Nov. 20, 1873. His first engineering appointment was in 1899, as engineer in charge of construction of various parts of the Dominion Iron and Steel Co.'s plant at Sydney, N.S., where he remained until 1901, returning there for some months in 1902. He was, during 1901, on surveys for Nova Scotia Eastern Ry., and special survey work for the city of Sydney; 1901 to 1902, construction surveys and in charge of office, Cape Breton Ry.; 1902 to 1903, in charge of location and construction of electric street railway, Cape Breton Electric Co., at North Sydney, Sydney Mines and Glace Bay; 1903, Divisional Engineer, Chateaugay and Northern Ry., Quebec; 1904 to 1907, Resident Engineer, Dominion Power and Transmission Co., in charge of extension of hydraulic power plant, St. Catharines, Ont.; in winter seasons of 1906 and 1907, in charge of surveys, plans, etc., Buffalo, Niagara and Toronto Ry. proposed line from Niagara-on-the-Lake and St. Catharines to Fort Erie; 1907 to 1908, on design and construction of Coniagas smelter, Thor-

old, Ont.; Sept., 1908, to Jan., 1911, in charge of design and construction of hydraulic power plant, etc., for Merriton paper mills, Ont.; Jan. to Nov., 1911, Resident Engineer in charge of extensions, Dominion Power and Transmission Co. at St. Catharines, Ont.

Gas-Electric Motor Car for Quebec and Lake St. John Railway.

The Q. and L. St. J. Ry. has recently ordered from the General Electric Co., Schenectady, N.Y., a gas-electric car to be operated between Quebec and Lake St. Joseph, where the company has a summer hotel. While this will be the first of its kind in Canada, there have been several of like construction on United States lines, their peculiar field of adaptability being on branch steam lines where the volume of traffic does not warrant a frequent train service. It is stated that the total cost of operation and maintenance of these cars only runs up to from 18 to 20c. per mile.

These gas-electric cars are independent train units, self-contained in every particular. The power is derived from a gasoline engine, direct-connected to a generator in the cab of the car. This electric power is transmitted to electric

Fredericton and Grand Lake Coal and Railway Co.

The Fredericton and Grand Lake Coal and Ry. Co. was incorporated by the New Brunswick Legislature in 1910, with A. R. Slipp, H. P. Timmerman, C. F. Chestnut, H. W. Woods, A. B. Wilmot, D. K. Hazen and P. Glasier as provisional directors, to build a line from the Intercolonial Ry. near Gibson to Minto, to connect there with the New Brunswick Coal and Ry. Co.'s line from Norton. The company was given very general powers for developing the country along the line; was authorized to acquire the New Brunswick Coal and Railway Co.'s line and to make agreements for running rights with the C.P.R., the Fredericton and St. Marys Bridge Ry., the Intercolonial Ry., and with any other railway that may build to a connection with the National Transcontinental Ry. The company was also authorized to build a line from its line in the parish of St. Marys to Marysville, and such other branches as might be necessary for the development of the country through which the line passes.

In 1911 the Legislature passed an act, which became effective April 13, 1911, having for its object the granting of further aid for the development of the coal areas in the counties of Queens and Sunbury. The act provided that a rail-

the F. and G. L. Coal and Ry. Co. and the Provincial Government with a view to the construction of the line mentioned. During the progress of the negotiations Sir Thos. Tait secured control of the company, and after some time the negotiations were brought to a successful issue, arrangements having been made for the variation of the terms mentioned in the act of 1911, in several directions.

The Legislature has under consideration a Government measure amending the act of 1911, in accordance with the terms agreed upon in the negotiations. The important alterations are that the starting point of the line shall be Gibson, on the Intercolonial Ry., instead of Gibson on the C.P.R.; that the line is to be leased by the C.P.R. or other company for 999 years; that the New Brunswick Coal and Ry. Co.'s line is to be leased for a similar period, instead of for 99 years; and that 50,000 tons of coal are to be purchased every year for 10 years, instead of 100,000 tons a year for some period to be agreed upon. The other provisions which are amended deal with the manner in which the guaranteed bonds shall be issued, and the funds produced reach the company.

Deraiment on Curves is discussed in a paper by Arthur Rogers published by the Institution of Civil Engineers, in which the author reaches the conclusion

Diagram of Gas-Electric Motor Car for Quebec and Lake St. John Railway.

motors on the two axles of the truck under the cab, there being no direct mechanical drive. This truck carries from 65 to 70 per cent. of the car weight, ensuring ample adhesion. The car is operated from the forward or cab end through a controller. Motors, control and generator comprise the complete electric drive, making a simpler arrangement than a mechanical drive.

The car is divided into four compartments: passenger, smoking, baggage and cab. The general particulars are:—

Length over couplers	58 ft. 11 $\frac{1}{2}$ ins.
Length over platform	57 ft. 7 $\frac{3}{4}$ ins.
Length, body	53 ft. 11 $\frac{1}{2}$ ins.
Length, passenger compartment	25 ft. 6 ins.
Length, smoking compartment	9 ft. 11 ins.
Length, baggage compartment	6 ft.
Length, cab	11 ft. 11 ins.
Width, over all	10 ft. 4 $\frac{1}{4}$ ins.
Width, inside	9 ft. 6 $\frac{1}{2}$ ins.
Height, over all	14 ft. 3-16 ins.
Height, roof	12 ft. 7 $\frac{3}{4}$ ins.
Height, coupler	2 ft. 10 $\frac{1}{2}$ ins.
Height, floor	4 ft. 2-16 ins.
Wheel base, car	41 ft. 1 in.
Wheel base, driving truck	6 ft. 6 ins.
Wheel base, trailing truck	6 ft.
Wheels, diameter	33 ins.
Car weight	40.5 tons
Seating capacity	76

The car on delivery is to be run from Toronto to Trenton, Ont., out of which point it is to operate for some time prior to being sent down to the Quebec-St. Joseph service.

way should be built from the C.P.R. at Gibson to Minto, connecting there with the New Brunswick Coal and Ry. Co.'s line, and that the Government would guarantee the bonds of any company building such a line to the amount of \$15,000 a mile. A first mortgage of the railway, buildings and rolling stock was to be given to the Government as security for the bonds, and no guarantee of the bonds of any company was to be entered into unless the Dominion Government provided a subsidy on the usual conditions, up to \$6,400 a mile; until a contract had been entered into with the C.P.R. or some other railway for the base of the line for 99 years, at a rental, payable to the province to satisfy the interest and redemption fund of the bonds, of 40% of the gross earnings of the line; that the company leases from the province for 99 years at a rental of 50% of the net earnings the New Brunswick Coal and Ry. Co.'s line, which extends from Norton on the Intercolonial Ry. to Minto; and to take for a period to be agreed upon 100,000 tons of coal mined in Queens and Sunbury counties. If the percentage of earnings of the two lines paid as rental to the Government was more than sufficient to pay the interest on the bonds, it was to be returned to the company building the line.

During 1911 negotiations were carried on between the provisional directors of

that a locomotive is likely to overturn at a critical velocity lower than that at which the overturning will be caused by centrifugal forces alone. He points out that under certain conditions, where centrifugal forces are likely to cause overturning at 71 miles an hour, the effect of the drawbar pull and of unbalanced forces in the locomotive is to make the curve dangerous at 53 miles, particularly if brakes are applied. He also concludes that superelevation should never begin on a tangent, since its effect is to set up a lateral swaying of the locomotive, which, on reaching a sharp curve at high speed, may reduce the adhesion between the inner wheels and rail enough to cause derailment.

The G.T.R. management is reported, according to a Montreal dispatch, to have decided to grant the railway telegraphers' request for extra pay for Sunday work.

The Safety Car Heating and Lighting Co., in its monthly pamphlet, gives details of its general car lighting equipment, especially such as is required for lighting dining cars.

A tracklaying record comes from Northern Nigeria, where, on the Baro Kano Ry., under British engineers, 6 $\frac{1}{2}$ miles of main track and 1,200 ft. of siding were laid with rails in one day.

Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Central and Hudson Bay Ry.—W. MILLS, Master Car Builder, having resigned, the duties are being performed by T. FRASER, Master Mechanic. Office, Sault Ste. Marie, Ont.

Canadian Northern Ry.—R. CROASBELL, heretofore General Advertising Agent, reporting to the General Traffic Manager, has been appointed in charge of publicity, reporting to the Third Vice President's office. Office, Toronto.

H. J. WHITESIDE, heretofore chief clerk in the General Advertising Department's advertising branch, has been appointed Advertising Agent, reporting to the General Traffic Manager. Office, Toronto.

On account of the resignation of A. SHIELDS, General Master Mechanic, Winnipeg, as reported in our last issue, to engage in private business, all communications intended for the General Master Mechanic are to be sent to S. J. HUNGERFORD, Superintendent of Rolling Stock.

J. M. MACRAE, heretofore Traffic Manager, Imperial Oil Co., Winnipeg, has been appointed District Freight Agent, C.N.R., Saskatoon, Sask., vice C. R. Hill, resigned to enter private business.

Canadian Pacific Ry.—F. L. WANKLYN, M. Can. Soc. C.S., has been appointed General Executive Assistant, with such duties as may be assigned to him by the President, from time to time. Office, Windsor St. Station, Montreal.

C. W. P. RAMSEY, heretofore Division Engineer of Construction, Montreal, has been appointed Engineer of Construction, Eastern Lines, reporting to the Vice President. Office, Montreal.

C. B. BROWN, heretofore Division Engineer of Construction, Montreal, has been appointed Principal Assistant Engineer, reporting to the Assistant Chief Engineer. Office, Montreal.

R. H. McDONALD, heretofore Assistant Locomotive Foreman, Outremont, Que., has been appointed acting Locomotive Foreman, there, vice A. A. Scott, transferred.

F. E. WARREN, heretofore Car Foreman, Hochelaga shops, Montreal, has been appointed Division Car Foreman, Ontario Division. Office, Toronto.

H. R. MATHESON, heretofore chief clerk, Passenger Department, Chicago, Ill., has been appointed, temporarily, chief clerk to District Passenger Agent, Toronto, vice J. J. Rose, resigned to enter the Robt. Reford Co.'s service.

J. W. ORROCK has been appointed Division Engineer, Lake Superior Division, vice F. Taylor, transferred. Office, North Bay, Ont.

W. A. MATHER, heretofore Resident Engineer, District 2, Manitoba Division, Winnipeg, has been appointed acting Superintendent, District 1, Manitoba Division, vice J. Brownlee, deceased. Office, Kenora, Ont.

H. E. HAANEL, heretofore Trainmaster, District 3, Manitoba Division, Brandon, has been appointed Trainmaster, District 1, Manitoba Division, vice J. D. Scott, resigned. Office, Kenora, Ont.

D. C. CHISHOLM has been appointed Resident Engineer, District 2, Manitoba Division, vice W. A. Mather, appointed acting Superintendent at Kenora. Office, Winnipeg.

G. F. MORRISON has been appointed Travelling Car Service Agent, Winnipeg, vice R. E. Merkley, appointed Trainmaster at Brandon, Man.

D. E. FISHER, heretofore storekeeper at Field, B.C., has been appointed foreman of the lower floor, Winnipeg shops.

R. E. MERKLEY, heretofore Travelling Car Service Agent, Western Lines, has been appointed Trainmaster, District 3, Manitoba Division, vice H. E. Haanel,

transferred to Kenora, Ont. Office, Brandon.

J. H. C. PERKIN, heretofore at Winnipeg, has been appointed storekeeper at Hardisty, Man., vice R. S. Aylan, transferred to Field, B.C.

JAS. WATSON has been appointed District Master Mechanic, Saskatoon, Sask., vice J. McAnany, transferred to Revelstoke, B.C.

W. McPHERSON has been appointed Locomotive Foreman, Moose Jaw, Sask., vice W. Jordan, resigned.

W. J. COLEMAN, heretofore locomotive engineer, has been appointed Locomotive Foreman, West Calgary Shops, Calgary, Alta., vice J. Doig, transferred to Red Deer, Alta.

The following appointments, some of which were reported in our last issue, have been made in connection with the recently formed Natural Resources Department:—

P. L. NAISMITH, heretofore General Manager, Alberta Ry. and Irrigation Co., has been appointed Manager, N.R.D. Office, Calgary, Alta.

T. HEENEY, heretofore Chief Account-

P266
F. L. Wanklyn, M. Can. Soc. C.E.,
General Executive Assistant, Canadian
Pacific Railway.

ant, Alberta and British Columbia Land Department, has been appointed Assistant Manager, N.R.D. Office, Calgary, Alta.

A. S. DAWSON, heretofore Chief Engineer, Irrigation Department, has been appointed Chief Engineer, N.R.D. Office, Calgary, Alta.

LEWIS STOCKETT, heretofore General Manager, Bankhead and Hosmer collieries, has been appointed General Superintendent, Coal Mining Branch, N.R.D. Office, Calgary, Alta.

ALLAN CAMERON, heretofore General Traffic Agent, C.P.R., New York, has been appointed Superintendent, Land Branch, N.R.D. Office, Calgary, Alta.

F. W. RUSSELL, heretofore chief clerk, General Land Department, has been appointed Land Agent for Manitoba, N.R.D. Office, Winnipeg, Man.

J. HART, heretofore Assistant British Columbia Land Commissioner, has been appointed British Columbia Land and Timber Agent, N.R.D. Office, Calgary, Alta.

J. L. DOUPE, heretofore Assistant Land Commissioner, Winnipeg, has been ap-

pointed General Townsite Agent, N.R.D. Office, Calgary, Alta.

W. J. GEROW, heretofore Land Inspector, has been appointed Land Agent for Saskatchewan, N.R.D. Office, Saskatoon, Sask.

L. A. LAMBERT has been appointed chief clerk, executive branch, N.R.D. Office, Calgary, Alta.

E. S. DOUGHTY, heretofore Land Agent, Alberta and Irrigation Lands Department, has been appointed Land Agent for Alberta, N.R.D. Office, Calgary, Alta.

W. J. ELLIOTT has been appointed Superintendent of Agriculture in charge of the agricultural section of the Land Branch, N.R.D. Office, Strathmore, Alta.

J. DOIG, heretofore locomotive foreman, West Calgary shops, Calgary, Alta., has been appointed Locomotive Foreman at Red Deer, Alta., vice F. McFarlane, who has returned to the shop as a fitter.

J. H. JACKSON has been appointed temporary Locomotive Foreman, Rogers Pass, B.C.

R. S. AYLAN, heretofore storekeeper at Hardisty, Man., has been appointed storekeeper at Field, B.C., vice D. E. Fisher, transferred to Winnipeg shops as foreman of lower floor.

J. McANANY, heretofore District Master Mechanic, Saskatoon, Sask., has been appointed District Master Mechanic, Revelstoke, B.C., vice E. E. Austin, resigned.

J. A. McDONALD, heretofore chief clerk to Assistant Passenger Traffic Manager, Winnipeg, has been appointed District Passenger Agent, Kootenay District, west of Kootenay Landing, and south of and including Arrowhead, B.C., vice W. J. Wells, resigned. Office, Nelson, B.C.

ALLAN CAMERON, heretofore General Traffic Agent, New York, having been appointed Superintendent, Land Branch, Department of Natural Resources, Calgary, Alta., as reported in our last issue, his former position has been abolished. Communications on passenger traffic are addressed to W. H. SNELL, Eastern Passenger Agent, and on freight traffic to W. F. STEVENSON, Eastern Freight Agent, New York.

Grand Trunk Pacific Ry.—F. E. CORRIGAN, heretofore Locomotive Foreman, Fitzhugh, Alta., has been appointed Locomotive Foreman, Rivers, Man.

F. LOZO, formerly Locomotive Foreman, G.T.P.R., Melville, Sask., has been appointed Locomotive Foreman, Fitzhugh, Alta., vice F. E. Corrigan, transferred.

J. MCGREEVY, formerly Roadmaster, C.P.R., Medicine Hat, Alta., has been appointed Roadmaster, Calgary branch, G.T.P.R., vice T. Johnson, Assistant Roadmaster, assigned to other duties. Office, Mirror, Alta.

Grand Trunk Ry.—J. HODGE, heretofore in special service, Middle Division, has been appointed Special Agent, Eastern Division, Montreal, vice A. C. Lanning, appointed chief clerk in Superintendent's office, Montreal.

F. W. BERGMAN, Manager, Chateau Laurier Hotel, Ottawa, has been appointed General Manager, G.T.R. and G.T.P.R. hotel systems. Office, Ottawa.

M. ADAMS, heretofore chief clerk, Freight Department, Toronto, has been appointed chief accountant, same department, there.

C. R. MORGAN, heretofore acting City Passenger and Ticket Agent, has been appointed City Passenger and Ticket Agent at Hamilton, Ont., succeeding his father, the late C. E. Morgan.

DEACON AND TROW have been appointed City Ticket Agents, Stratford, Ont.

A. H. KING, heretofore agent at Hensall, Ont., has been appointed agent at Ingersoll, Ont., vice S. J. Roy, appointed Travelling Auditor, Montreal, as announced in our last issue.

F. P. SIMPSON has been appointed

Resident Engineer at Detroit, Mich., vice T. T. Irving, promoted.

T. T. IRVING, heretofore Resident Engineer, Detroit, Mich., has been appointed Trainmaster, District 25 (C.S. and M.), and Districts 27 and 28, vice J. C. Talmage, resigned. Office, Durand, Mich.

Intercolonial Ry.—J. J. LEYDON, heretofore chief clerk, City Ticket Office, Halifax, N.S., has been appointed acting City Ticket Agent, there, vice H. A. Beck, resigned to enter the service of Cavicchi and Pagano, railway contractors.

National Transcontinental Ry.—A. S. COOK has been appointed Inspecting Engineer. Office, Ottawa, Ont.

E. P. GOODWIN has been appointed Inspecting Engineer for outside work.

New York Central and Hudson River Rd., Lake Shore and Michigan Southern Ry.—W. K. VANDERBILT, JR., heretofore Assistant to the Vice President, New York Central Lines, has been appointed Vice President, N.Y.C. and H.R.R., and L.S. and M.S.R. Office, New York City.

M. S. BARGER has been appointed Treasurer, for lines west of Buffalo, N.Y., vice C. F. Cox, deceased. Office, New York City.

Northern Pacific Ry.—TRACEY HOWARD, heretofore chief clerk, has been appointed District Passenger and Freight Agent, vice G. W. Hardisty, deceased. Office, Montreal.

Pennsylvania Rd.—The circular, relating to the appointment of C. B. BRODIE as Canadian Passenger Agent, Toronto, announcement of which was made in our last issue, is as follows:—"With a view of bestowing more direct care and attention upon passenger travel to and from points in Canada, it has been decided to establish a passenger agency for that purpose, and C. B. Brodie has been appointed Canadian Passenger Agent, with office at 911 Traders Bank Bldg., Toronto, reporting to B. P. Fraser, District Passenger Agent, at Buffalo, N.Y."

Pere Marquette Rd.—NEWMAN ERB, President, Minneapolis and St. Louis Rd., and Iowa Central Ry., has been appointed Chairman of the Executive Committee, P.M.R., with supervising control of the executive and administrative departments. Office, New York City.

G. C. CONN, heretofore Freight Traffic Manager, has been appointed Vice President, in charge of the Freight Department, vice A. Patriarche, resigned. Office, Detroit, Mich.

W. E. WOLFENDEN has been appointed General Passenger Agent, vice H. F. Moeller, resigned. Office, Detroit, Mich.

A. WARD, heretofore at Muskegon, Mich., has been appointed General Car Foreman at St. Thomas, Ont., vice H. T. O'Toole, transferred to his former position as Coach Foreman at Grand Rapids, Mich.

St. John and Quebec Ry.—S. B. WASS, A.M. Can. Soc. C.E., heretofore assistant to Division Engineer, C.P.R., Montreal, has been appointed Assistant Chief Engineer, St. J. and Q.R., as reported in our last issue. Office, Fredericton, N.B.

Toronto, Hamilton and Buffalo Ry.—W. J. WARNICK has been appointed Chief Dispatcher, vice G. M. Higginson, resigned. Office, Hamilton, Ont.

Western Representation on Board of Railway Commissioners.—The Minister of Railways stated in the House of Commons recently that the Government did not intend to create a western section of the Board. Two commissioners might be stationed in the west to deal with western matters, but there could not be two different boards, which might give conflicting judgments on the same matters.

The Canadian H. W. Johns-Manville Co., Ltd., has removed its Winnipeg office, storerooms, etc., to 89 Princess St. from 320 Main St., owing to increased business. M. C. Burgess is in charge.

Ry., West Toronto.

company's now outstanding mandatory securities.

Dominion Atlantic Ry.—Passenger earnings for Feb., \$28,700; freight earnings, \$53,300; total earnings, \$82,000,

against \$75,600 total earnings for Feb., 1911.

Lake Champlain and St. Lawrence Jet. Ry.—Following are the officers and directors for the current year: President, B. A. Kimball, Concord, N.H.; Vice President, W. J. Hobbs, Malden, Mass.; Secretary-Treasurer, H. Blodgett, St. Johnsbury, Vt.; other directors: W. M. Parker, Manchester, N.H.; G. M. Kimball, J. F. Webster, Concord, N.H.; L. Tuttle, Brookline, Mass. The line, which runs from Stanbridge to St. Guillaume Que., is leased to the C.P.R.

Maritime Coal, Ry. and Power Co.—A meeting of bondholders was called to be held in Montreal, Mar. 28, to pass resolutions assenting to certain proposed modifications of the rights of bondholders against the company, with the object of enabling the company to make a further issue of \$1,000,000 of bonds, and to authorize the making of the necessary supplementary trust deed.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—The usual semi-annual dividends of 3½% on preferred and common stocks, have been declared payable Apr. 15, to stockholders of record Mar. 22.

Ontario and Sault Ste. Marie Ry.—The annual meeting was held at Montreal, Mar. 20. The following officers and directors were re-elected for the current year:—President, C. M. Hays; Vice President, W. Wainwright; Secretary-Treasurer, F. Scott; other directors, M. M. Reynolds, W. H. Biggar, K.C., E. J. Chamberlin, R. S. Logan and Jos. Hobson.

Pere Marquette Rd.—It was announced in New York, Mar. 2, that J. P. Morgan and Co., will take up the \$650,000 equipment notes of the company now due, and that the Guaranty Trust Co. will purchase and hold them for six months.

Quebec Central Ry.—Gross earnings for Jan., \$79,668.08; expenses, \$67,499.19; net earnings, \$12,168.89, against \$64,726.17 gross earnings; \$56,910.84 expenses; \$7,815.33 net earnings, for Jan., 1911. Aggregate gross earnings for seven months ended Jan. 31, \$793,636.26; expenses, \$541,993.48; net earnings, \$251,642.78, against \$688,096.08 aggregate gross earnings; \$471,370.24 expenses; \$216,725.84 net earnings for same period 1910-11.

Toronto, Hamilton and Buffalo Ry.—At a special meeting of shareholders held in Hamilton, Ont., Feb. 29, an increase was authorized in the capital stock from \$2,500,000 to \$5,000,000.

Temiskaming and Northern Ontario Railway Report.

The report for the year ended Oct. 31, 1911, submitted in the Ontario Legislature recently, shows the following mileage:—Main line, North Bay to Cochrane, 252.8; branch lines, Charlton branch, 78; Kerr Lake, 3.9; Haileybury spur, 1.64; Porcupine branch, 28; total, 41.34 miles; yards and sidings, main and branch lines, 84.85; Liskeard spur, .64. Total mileage, 397.63.

Following is a condensed statement of revenue account for the year, compared with the previous year:—

	1911.	1910.
Revenue from transportation	\$1,708,249.02	\$1,522,020.05
Revenue other than transportation	72,715.81	69,831.97
Total operating revenue	1,780,964.83	1,591,852.02
Operating expenses	1,181,998.63	1,165,361.36
Net operating revenue	598,966.20	426,490.66
Ore royalties	17,060.56	31,762.92
	616,026.76	458,253.58
Hire of equipment, etc.	22,874.07	22,123.27
Total earnings	\$ 593,152.69	\$ 436,130.31
Paid Treasurer of Ontario	\$ 515,000.00	\$ 420,000.00

Express Companies Statistics to June 30, 1911.

Under an amendment to the Railway Act passed in 1911 the Railways and Canals Department has commenced the collection of statistics from express companies, Canadian and foreign, doing business in Canada. Returns were received from the following companies:—Canadian, Canadian Northern, Dominion, American, Great Northern, National, United States, and Wells Fargo, the forms used being those adopted by the U.S. Interstate Commerce Commission with some immaterial alterations.

The capitalization of distinctly Canadian companies was reported as follows:

Canadian Ex. Co.	\$1,705,200
Canadian Northern Ex. Co.	300,000
Dominion Ex. Co.	2,000,000

Total\$4,005,200
The amount realized in cash for the foregoing stock issue was reported to have been \$3,165,200. The cost of real property and equipment was \$2,109,566.33. This amount is made up of the following items, applicable to Canadian companies:—

Real estate used in operation	\$ 720,200.00
Buildings and fixtures	703,816.96
Horses	\$141,423.06
Vehicles	191,063.66
Other equipment	353,052.65
	685,539.37

Total\$2,109,566.33

The facts relating to U.S. companies have been eliminated from the statements of capital and cost of property, as it would be confusing to include them.

The total operating mileage in Canada on June 30 was as follows:—

Over steam roads	25,377.90
Over electric lines	213.81
Over steamboat lines	1,792.00
Over stage lines	146.00
Miscellaneous	55.75
	27,585.46

In addition, outside operations covered 16,778 miles. This applied chiefly to ocean going steamers. The operating mileage was distributed among the provinces as follows:—

New Brunswick	1,119.43
Nova Scotia	1,396.32
Prince Edward Island	298.10
Quebec	3,914.64
Ontario	9,938.20
Manitoba	3,339.04
Saskatchewan	3,034.43
Alberta	1,371.08
British Columbia	2,814.02
Yukon	59.48
Foreign	300.72
	27,585.46

The foregoing mileage was divided among the various companies as follows:

American Ex. Co.	1,252.43
Canadian Ex. Co.	7,230.31
Canadian Northern Ex. Co.	4,422.29
Dominion Ex. Co.	13,709.33
Great Northern Ex. Co.	575.40
United States Ex. Co.	224.84
Wells Fargo and Co.	90.70
National Ex. Co.	80.16
	27,585.46

Total 27,585.46

Right at the threshold of the work of gathering express statistics a difficulty arose with respect to U.S. companies operating in Canada. They did not, and could not, make an absolutely accurate separation of revenue and operating cost as between U.S. and Canadian business. A simple illustration will make the situation in that regard clear: A package is expressed from Ottawa to New York, the charges on which are say \$1. These charges might be prepaid or not. If prepaid, it would be manifestly misleading and unsound to credit \$1 to revenue in Canada, inasmuch as that sum provided for the carrying of the package over several hundreds of miles of line in the U.S. If, on the other hand, the charges were collected at the New York end, a certain proportion should be credited to revenue in Canada. What should that proportion be? After considering the whole matter, and having regard to the analogy in railway accounting, U.S. companies were in-

structed to report their earnings and operating expenses in Canada on the basis of the proportion which their mileage in Canada bore to their total mileage. That is to say, on the package to which reference has been made, the proportion of the \$1 received at either end which should be credited to Canada would be the proportion established on a mileage basis. The return of U.S. companies given in this report are in accordance with that ruling. It does not provide for an entirely accurate statement of facts, but it is the most practicable plan of accounting which could be adopted under the circumstances.

The gross receipts from operation for the year were \$9,913,018.31. From this was deducted \$4,553,861.43 as the cost of express privileges, leaving \$5,359,156.88 as the operating revenue for the year. The operating expenses were \$4,151,227.91, which was equal to 77.46% of the operating revenue. Deducting operating expenses from operating revenue, a net balance of \$1,207,928.97 is the result. To this should be added a net revenue of \$3,506.60 from outside operations, bringing the total up to \$1,211,435.57. So far as Canadian companies were concerned, the balance as between operating revenue and operating expenses was \$1,114,897.59. After deducting \$27,589.64 for taxes, which amount is slightly larger than the figures given in the balance sheet, and is taken from the taxation table, the remainder was equal to 27.14% on the capital liability. For Canadian companies, the ratio of operating expenses to operating revenue was 76.71%. After making deductions for taxes and dividends, the balance carried forward to profit and loss by all companies for the year was \$683,664.33.

The following balance sheet places the results of the year in convenient form for review:—

Gross receipts from operation	\$9,913,018.31
Less express privileges	4,553,861.43
Operating revenue	\$5,359,156.88
Operating expenses	4,151,227.91
Net operating revenue	\$1,207,928.97
Net revenue from outside operations	3,506.60
Other income	41.67
Total net revenue	\$1,211,477.24
Less taxes	\$ 19,695.78
Less dividends	481,624.32
Other deductions	26,492.81
	527,812.91

Balance for the year\$ 683,664.33

The charges for express privileges—chiefly the right to operate over certain railways—were equal to 45.93% of the gross revenue. For Canadian companies by themselves the cost of these operating rights was equal to 45.66% of the gross revenue.

The sources of revenue and the various amounts received were as follows:—

From transportation:	
Express revenue	\$9,590,907.99
Miscellaneous	53,796.73

Total\$9,644,704.72

Other than transportation:	
Money orders—domestic	\$181,395.28
Money orders—foreign	16,985.06
Travellers cheques—domestic	2,895.74
Travellers cheques—foreign	1,186.21
C.o.d. cheques	39,701.71
Other earnings	26,149.59
	268,313.59

Gross revenue\$9,913,018.31

The operating expenses, apart from the cost of express privileges, were distributed under the following heads:—	
Maintenance	\$ 32,721.75
Traffic expenses	104,307.20
Transportation expenses	3,871,901.69
General expenses	141,297.27

Total\$4,151,227.91

The details of the maintenance account are as follow:—

Superintendence	\$ 312.19
Buildings, fixtures and grounds	90.68
Office equipment	1,313.53

Horses	3,038.87
Vehicles—repairs	11,165.15
Vehicles—renewals	558.17
Stable equipment	2,218.01
Transportation equipment	547.73
Other expenses	87.23

Total\$33,721.75

Of the foregoing total amount, \$14,390.19 was not distributed into items.

Traffic expenses consisted of the following items:—

Superintendence	\$ 55,631.57
Outside agencies	4,162.55
Advertising	8,081.56
Traffic associations	3,700.66
Stationery and printing	12,859.38
Other expenses	13,532.00

Total\$104,307.20

Of this amount, \$6,339.48 was not distributed.

Transportation expenses were made up of the following details:—

Superintendence	\$1,202,406.59
Office employees	278,461.55
Commissions	357,009.65
Wagon employees	138,378.99
Office supplies and expenses	26,082.42
Rent of local offices	37,645.62
Stable employees	10,282.47
Stable supplies and expenses	441,178.43
Train employees	157,788.13
Train supplies and expenses	2,286.13
Transfer employees	2,345.36
Transfer expenses	59,711.74
Stationery and printing	97,592.79
Loss and damage—freight	76,840.97
Loss and damage—money	361.31
Damage to property	54.77
Injuries to persons	680.64
Other expenses	576.73

Total\$3,871,901.69

A total of \$364,270.09 was not distributed in the foregoing transportation expenses. The Dominion Express Company returned an aggregate of \$1,152,860.53 under the head of superintendence, which really included the salaries and wages of all classes of employees. An effort will be made to have this item adjusted, so that the value of comparison will not be lost in future reports.

The items constituting general expenses were as follows:—

Salaries and expenses of general officers	\$ 27,575.46
Salaries and expenses of clerks, etc.	50,438.05
General office supplies and expenses	14,779.04
Law expenses	2,199.99
Insurance	6,204.71
Pensions	6,006.11
Stationery and printing	2,950.72
Other expenses	576.83

Total\$141,297.27

Items are lacking in the above for \$30,566.46 of the total.

The business transacted by companies in financial paper is very large, and for the year was as follows:—

Financial Paper.	Number.	Amount
Money orders—domestic	2,789,691	43,361,803.54
“ “ foreign	87,245	2,255,980.16
Travellers' cheques, domestic	37,857	908,051.35
“ “ foreign	47,646	1,200,930.00
C. o. d. cheques		3,639,778.93
Telegraphic transfers		113,726.91
Letters of credit issued		156,921.01
Other forms		488,660.67
	2,962,439	52,165,852.57

Money orders were reported as being on sale at 4,628 offices throughout the Dominion.

The number of express offices in the Dominion was 2,720.

The total amount paid by companies in taxes for the year was \$32,869.25, distributed as follows:—

New Brunswick	\$ 468.31
Nova Scotia	316.12
Prince Edward Island	515.00
Quebec	11,683.34
Ontario	11,307.75
Manitoba	1,138.76
Saskatchewan	62.83
Alberta	869.39
British Columbia	1,131.17
Yukon	330.00
Foreign	2,256.82

The above statement is defective in that \$2,789.76 reported by the American Ex. Co. was not distributed. The difference between the total here and in

the balance sheet is due to the failure of the Dominion Ex. Co. to deduct taxes from income.

Following are returns of equipment owned on June 30, 1911:—

Equipment	Number.	Value.
Car safes, stationary.....	134	\$ 24,497.21
Double wagons, ...	98	32,811.43
Four wheel trucks, ...	1,917	53,737.72
Horses, ...	814	148,593.06
Messengers' safes.....	685	16,344.56
Messengers' packing trunks.....	1,085	15,688.34
Office furniture, ...		66,397.03
Office safes, ...	935	91,612.29
Single wagons, ...	681	115,113.54
Sleighs, ...	733	48,573.19
Stable equipment.....		27,956.21
All other equipment.....		71,803.37

The report of express companies operating in the United States for the year ended June 30, 1911, issued by the Interstate Commerce Commission, shows the Canadian Ex. Co. operating over 7,128.27 miles; the Canadian Northern Ex. Co. over 3,314.50 miles, and the Western Ex. Co. over 3,509.69 miles, against 7,794.27 miles, 3,129.62 miles and 3,456.39 miles, respectively, in the previous year. During the year the Canadian Ex. Co. issued \$199,200 additional shares.

Railway Rolling Stock Notes.

H. G. Beasley, Superintendent of the Esquimalt and Nanaimo Ry., is reported as having stated that it had been decided to use oil burning locomotives on the line to minimize the danger of forest fires.

The car body is to be very handsomely finished and replete in every detail. It is designed to run on the level at a speed as high as 50 miles an hour, running down to 17 miles an hour on a 2% grade.

The Minister of Railways stated in the House of Commons recently that the supplementary estimates will authorize expenditure for rolling stock for the Intercolonial Ry. amounting to practically the whole of the I.R.C.'s surplus.

The Intercolonial Ry. has ordered three vans to be built at its Moncton shops; two sleeping cars and one dining car from the Canadian Car and Foundry Co., and two sleeping cars and one dining car from the Pullman Co.

The C.P.R., between Feb. 14 and Mar. 14, ordered four wooden flat cars, eight stock cars, one horse car, three freight refrigerator cars, one box baggage car, one baggage and express car and two vans, at its Angus shops, Montreal, and one steam shovel in the United States.

Referring to the tenders which were recently invited by the Winnipeg board of control, for a steam locomotive and steam shovel for the operation of the gravel pit at Bird's Hill, we are officially advised that such a purchase has been abandoned, and that it is likely an electrical equipment will be installed instead.

The Algoma Central and Hudson Bay Ry. has ordered 70 Otis composite general service cars from the Hart-Otis Car Co., similar to those described and illustrated in our Dec., 1911, issue, making 195 of this type of car which the company has purchased. These cars, while having a carrying capacity of 110,000 lbs., are only 37,800 lbs. tare weight. They will be built by the Canadian Car and Foundry Co.

The Intercolonial Ry. has received the following additions to rolling stock since Jan. 19—two vans and nine platform cars from its Moncton shops; 195 box cars, 60,000 lbs. capacity and 20

platform cars, 80,000 lbs. capacity, from the Canadian Car and Foundry Co.; three 10-wheel passenger locomotives from the Canadian Locomotive Co., and 49 platform cars, 80,000 lbs. capacity, from the Nova Scotia Car Works.

O'Brien, Fowler and McDougall Bros., railway contractors, have ordered 20 Hart-Convertible ballast and construction cars, 40 tons capacity, 1912 design, from the Hart-Otis Car Co., which will be built by the Canadian Car and Foundry Co. Following are the chief dimensions:—

Capacity 30 tons
Length over end sills 32 ft.
Width over side sills 8 ft. 9 ins.
Height from rail to floor 4 ft. 1 1/4 ins.
Truck centres 23 ft. 8 ins.
Wheel base of truck 5 ft. 2 ins.

The C.P.R., between Feb. 14 and Mar. 14, received the following additions to rolling stock—four tourist cars, 22 colonist cars, two first class cars, eight baggage and express cars, one business car, 12 vans, two switching locomotives class U3, and one tank locomotive class T2, from its Angus shops, Montreal; 14 steel underframes for Lidgerwood unloaders, from the Canadian Car and Foundry Co.; two steam shovels from the Marion Co., and 691 steel frame box cars from the United States.

The Canadian Northern Ry., between Feb. 15 and Mar. 14, received the following additions to rolling stock—60 steel underframe flat cars and two cafe-parlor cars from the Canadian Car and Foundry Co.; 72 Hart convertible cars from the Hart-Otis Car Co.; 75 flat cars, 20 cabooses and four second class coaches from the Crossen Car Co.; 280 box cars from the Nova Scotia Car Works; 10 ten-wheel locomotives from the Montreal Locomotive Works; five switching locomotives from the Canadian Locomotive Co., and one consolidation locomotive from the Canada Foundry Co.

Following are chief dimensions of the 13 special Rodger double plough distributing cars which the C.P.R. has ordered from the Hart-Otis Co., and which will be built by the Canadian Car and Foundry Co.:—

Length over end sills 36 ft. 8 ins.
Width over side sills 8 ft. 10 ins.
Length inside as hoppers 20 ft. 10 ins.
Length inside as gondolas 34 ft. 8 ins.
Width inside 8 ft. 8 ins.
Width over all 10 ft. 2 1/2 ins.
Width at top 9 ft. 10 ins.
Height from rail to floor 4 ft. 4 1/4 ins.
Height from rail to top of car 8 ft. 1 3/4 ins.
Height inside 8 ft. 9 1/4 ins.
Truck centres 26 ft. 8 ins.
Wheel base of truck 5 ft. 4 ins.
Length of hopper door opening 16 ft. 8 1/4 ins.
Width of hopper door opening 2 ft.

Following are the chief details of the three six-wheel switching locomotives, which the Central Vermont Ry., has ordered from the Lima Locomotive and Machine Co., Lima, as mentioned, in our last issue:—

Cylinders 20 by 26 ins.
Driving wheels 56 ins.
Tires 3 1/2 by 5 1/2 ins.
Journals 9 1/2 by 12 ins.
Wheel base, engine 12 ft. 8 ins.
Wheel base, engine and tender 42 ft. 5 1/2 ins.
Weight in working order 145,250 lbs.
Weight, engine and tender 247,000 lbs.
Boiler, type Straight top, radial stayed
Boiler, diar. 66 ins.
Tubes, no. and diar. 264 2 ins.
Tubes, length 12 ft. 9 1/4 ins.
Firebox 98 1/2 by 40 ins.
Heating surface, firebox 148 sq. ft.
Heating surface, tubes 1,772 sq. ft.
Heating surface, total 1,920 sq. ft.
Grate area 27.3 sq. ft.
Tender, capacity, water 4,500 U.S. galls.
Tender capacity, coal 33 tons
Tender wheels 33 ins.
Journals 5 by 9 ins.
Brakes Westinghouse E.T. 4
Lubricator Detroit triple 22

A Canadian Society of Civil Engineers branch has been established at Victoria. B.C. F. C. Gamble, M. Can. Soc. C.E., Provincial Public Works Engineer, is Chairman, and R. W. MacIntyre, M. Can. Soc. C.E., is Secretary.

Grand Trunk Pacific Railway Telegraph Lines.

A. B. Smith, Manager of Telegraphs, is reported as having stated that an additional 830 miles of line will be strung this year as follows:—Main line, 250 miles; Winnipeg to International boundary, 135 miles; between Winnipeg and Moose Jaw, 100 miles; between Biggar and Calgary, 100 miles; between Biggar and Battleford, 50 miles; Cutknife branch, 50 miles; in the vicinity of Prince Albert, 45 miles; Calgary branch, 100 miles. He is also reported to have stated that 2,000 miles of pole line have already been built, upon which is strung 6,500 miles of wire, and that the present season's construction will bring the wire mileage to 10,000.

Examination Papers for Railway Employees.—The Board of Railway Commissioners has issued a circular to a number of railway companies calling attention to the fact that the order of Nov. 9, 1910, requiring the companies to file with the Board within 90 days thereafter a copy of each examination paper for the examinations required to be passed by employees has not been complied with and directing the companies to comply forthwith.

Lighting of Main Line Switches.—The Board of Railway Commissioners has issued a circular calling the attention of railway companies to the fact that on a number of lines where trains are run at night, main line switches are not being lighted; also to point out that the rules require night signals to be displayed from sunset to sunrise, and that when weather or other conditions obscure day signals, night signals must be used in addition.

Protection of Trestles Where Oil Burning Locomotives are Used.—The Board of Railway Commissioners passed the following order:—16066. Mar. 6. Re order 11446, Aug. 2, 1910, requiring railway companies subject to its jurisdiction to provide protection for wooden trestles therein specified. And re application of the Vancouver, Victoria and Eastern Ry. and Navigation Co. for exemption from complying with the requirements of said order. It is ordered that in territory where oil burning locomotives alone are used, the applicant company may discontinue the use of "zinc covering over caps and intersections," as required under said order.

The Railway World, Philadelphia, Pa., in dealing with the future of the Panama canal, and commenting on the proposed tolls, says: "British Columbia people say that in a few years they will be able to send 10,000,000 tons of wheat via the Panama canal. If the canal toll is 50c a ton, here is \$5,000,000 from Canadian wheat alone, when northwestern Canada is the wheat granary of Europe, which it now appears destined to be, and before many years have passed."

The principal event at the demonstration of the Canadian branch of the St. John's Ambulance Association at Ottawa, March 6, was the contest between five-men teams representing the eastern and western sections of the C.P.R. The Windsor station team, Montreal, had proved itself the champion in the contests among the classes on the eastern lines, and the Winnipeg shop team champion of the Western classes. The final contest went to the Western team by 480 to 456 points out of a possible of 600 points.

G. C. Hyatt, Vice President and General Manager, Bellingham Bay and British Columbia Ry., is reported to have stated in San Francisco, Cal., Mar. 15, that the line had not been sold to the Chicago, Milwaukee and Paget Sound Ry., as press reports stated, and that its transfer was not under consideration.

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place and not those on which the orders were issued:—

Demurrage on Cars Delayed in Delivery.

16048. Feb. 26.—Re application of Montreal Chamber of Commerce relative to delays in delivery of goods in cars, and requesting that the railway companies be compelled to pay demurrage on cars arriving in yards and not delivered within 24 hours. Upon hearing of application at Montreal in the presence of counsel for the Canadian Car Service Bureau, the C.P.R., the G.T.R. and the Canadian Northern Ontario Ry., no one appearing for the applicants, it is ordered that the application be dismissed.

Rate on Hardwood Lumber from Fort William.

16059. March 4.—Re application of Seaman, Kent Co., Ltd., of Fort William, Ont., complaining against the rate of 80c per 100 lbs. charged by the C.P.R. on hardwood lumber from Fort William to Vancouver, and applying for the rate of 45c per 100 lbs. charged by the railway company on rough cedar, fir, etc., from Vancouver to Fort William. It is ordered that the present rate of 80c per 100 lbs. charged by the C.P.R. on lumber from Port Arthur and Fort William to Vancouver be disallowed; and that the railway company within 30 days from the date of this order substitute in lieu thereof a rate of 55c per 100 lbs. on lumber (including flooring), in carloads of a minimum weight of 40,000 lbs.

Grain Rates for Almonte, Ont.

16057. Mar. 1.—Re application of Wyllie Milling Co. of Almonte, Ont., complaining that the C.P.R. discriminates against Almonte, and in favor of Renfrew, Eganville and Douglas, by carrying grain from Georgian Bay ports to Montreal, including milling-in-transit at the last named points, at a lower rate than to Montreal, including milling-in-transit at Almonte. Upon the notice to the C.P.R. to show cause why a maximum rate of 10½c. per 100 lbs. should not be charged on ex-lake grain from Kingston to Montreal, including milling stop-over at Almonte, and upon the hearing of the application in Ottawa, Oct. 17, 1911, and what was alleged; and upon the report of the Board's Chief Traffic Officer, it is ordered that the Kingston and Pembroke Ry. Co., jointly with the C.P.R., shall file a tariff within 30 days from the date of this order establishing a rate of 10½c. per 100 lbs. on ex-lake grain, in carloads, from Kingston to Montreal, including stop-over at Almonte for milling purposes. The application, in so far as it alleges discrimination against Almonte and in favor of Renfrew, Eganville, and Douglas, in the carriage of grain from the Georgian Bay ports to Montreal is dismissed.

Rates on Granite from Beebe Jct., Que.

16116. Mar. 13. Re application of Stanstead Granite Quarries Co., Ltd., under sec. 323 of the Railway Act, for an order disallowing that part of Tariff C.R.C. 1300 covering the rates on granite shipments from Beebe Jct., Que., to Montreal, Ottawa, Toronto, and other points, filed by the Boston and Maine Rd., effective Mar. 14, it is ordered that item 31 of the said tariff be disallowed; the company to have leave to apply, upon notice to complainants, for permission to reinstate in the said tariff the rates hereby disallowed.

White Pass and Yukon Route Rates.

The Board has given judgment in this case, but the formal order had not been issued when this page was sent to press. An order was made in Jan., 1911, after

a lengthy hearing at Vancouver, reducing the freight and passenger rates of the railway by a third, to go into effect on April 1. The company appealed to the late Government, and the operation of the new schedule was stayed by the Board. The appeal contained new evidence of decreased earnings and diminished traffic in 1910, and the case was re-opened by the Board. It is now found that if the cut previously ordered had gone into effect the company in 1910 would have defaulted to the extent of \$127,560.90 in the payment of interest on its bonds, and there would be nothing for the stockholders. The judgment states that while people should be protected from extortionate charges, it is of equal importance that the capital invested in transportation companies should be permitted to earn fair and reasonable dividends. The order of Jan., 1911, is rescinded. At the same time, the company is making substantial reductions. The case is not to be finally disposed of until the company at the end of its fiscal year has submitted statements showing the results of the new rates.

Discriminating in Town Tariffs.

At the Board's sitting in Ottawa, April 16, railway companies subject to its jurisdiction will be required to show cause why the existing discrimination between localities with reference to their town tariffs should not be removed, as far as possible, by widening the scope of their application.

Joint Tariffs in Canada.

At the Board's sitting in Ottawa, jurisdiction will be required to show cause why an order should not issue calling for the publication and filing of joint tariffs between points in Canada (where such have not already been published and filed) less than the combination of the local rates of the several companies to and from the junction point or points; also to state their views as to the extent to which the said local rates might be reduced on joint traffic.

NOTICE TO CONTRACTORS.

Tenders for a Sewer Diversion on Verandrye and Archibald Streets, St. Boniface, Man.

SEALED TENDERS addressed to the undersigned, and marked on the envelope "Tender for Sewer Diversion," will be received at the office of the Commissioners of the Transcontinental Railway at Ottawa until 12 o'clock noon of the fifteenth day of April, 1912, for the construction, in accordance with the plans and specifications of the Commissioners, of a reinforced concrete sewer at St. Boniface.

Plans, details and specifications may be seen and Forms of Tender may be obtained at the office of Mr. Gordon Grant, Chief Engineer, Ottawa, Ont., and Mr. A. G. Macfarlane, District Engineer, St. Boniface, Man.

Tenders must be made on the forms supplied by the Commissioners and must be signed and sealed by all the parties to the tender and witnessed, and be accompanied by an accepted cheque on a Chartered Bank of the Dominion of Canada, payable to the order of the Commissioners of the Transcontinental Railway, for a sum equal to ten per cent. (10 p.c.) of the amount of the tender.

The right is reserved to reject any or all tenders.

By order,

P. E. RYAN,
Secretary.

The Commissioners of the
Transcontinental Railway.

Dated at Ottawa this 22nd day of March, 1912.

Newspapers inserting this advertisement without authority from the Commissioners will not be paid for it.

The Railway to Hudson Bay.

Reports from Pas Mission, Sask., state that the last of the piers for the substructure of the bridge across the Saskatchewan River is about completed, and that preparations are being made for the erection of the superstructure, the steel for which is on the way. This work is being done by Mackenzie, Mann and Co.

The contractor for the grading of the line from the north side of the river to Split Lake, J. D. McArthur, had a conference with the Minister of Railways at Ottawa, Feb. 29. He stated that every effort would be made to get the 185 miles completed within a year. A subcontract has been let to McMillan Bros., who are establishing supply camps at points about ten miles apart, and have everything in readiness to go on with the work at the earliest possible moment.

It was reported in Ottawa, Mar. 8, that a further distance of 130 miles from Split Lake to the crossing of the Nelson River at Kettle Falls will shortly be put under contract. It is stated that the reports of the engineers show that whether Port Nelson or Fort Churchill is chosen as the terminus of the line, the route will be the same as far as Kettle Falls.

A survey party in charge of F. P. Moffatt has started over the route from Kettle Falls to Port Nelson, and another party under F. L. Lawledge left Pas Mission, Mar. 5, to go over the route from Kettle Falls to Fort Churchill. An expedition is being fitted out to make further explorations of the approaches to both ports, and when all three reports are in the Government will be able to make a final decision as to where the bay terminus will be located.

A report from J. Armstrong, Chief Engineer, presented in the House of Commons, Mar. 4, gives details of the season's survey work and shows that the line to Port Nelson will be 415 miles long and to Fort Churchill, 498 miles. The reports as to the conveniences of the two ports show that while both sides of the Nelson River are suitable for terminals, the available space at Fort Nelson is inadequate. The cost of constructing terminals at Port Nelson is estimated at \$2,205,000, and at Fort Churchill at \$2,625,000. Except for a natural breakwater at Fort Churchill the advantages are said to be all with Port Nelson, both as a terminus and from a navigation standpoint. (Mar., pg. 126.)

Douglas Fir for Car Building.—Our last issue contained some information on this subject from the Interior Department's Forestry Branch, and also opinions we elicited from N. Curry, President, Canadian Car and Foundry Co.; D. M. Campbell, General Manager, Preston Car and Coach Co., and R. W. Burnett, General Master Car Builder, C.P.R. G. R. Joughins, Superintendent of Motive Power and Rolling Stock, Intercolonial Ry., N.B., has since written us as follows:—"In regard to a comparison of the mechanical and physical properties of Douglas fir and yellow pine. We have been specifying Douglas fir for a number of years in the construction of freight cars, to be used as sills, side plates, ridge pole, purlins and sub-purlins; and on passenger cars to be used as sills, upper flooring and belt rails, with very satisfactory results. We have not as yet specified this wood for interior finish on passenger cars; it might, however, be suitable for the interior work on baggage, postal and even colonist cars, but it would hardly be a rich enough wood for day cars or sleeping cars."

Electric Railway Department

Jig for Boring and Facing Small Bearings in the Drill Press.

In the Halifax Electric Tramway Co.'s shops at Halifax, N.S., D. B. Logan, Foreman Machinist, has devised several ingenious little jigs for expediting the repair work on the cars of the company. Of these jigs, the one shown herewith is among the best.

Not having a specially designed journal boring machine, nor having a sufficient amount of work to warrant the installation of one, the brasses were originally bored in an engine lathe, being mounted in a temporary rig on the lathe carriage for the purpose; a boring bar between centres bored the brass to size. This inconvenient method of boring led to a consideration of the possibility of producing them on the drill press by the use of a properly constructed jig and tool. The result was the introduction of the outfit shown in the accompanying illustration.

The babbitt lined brass bearing is se-

tion, constituting as it does a universal joint. The taper shank is integral with a block of just such size as to fit loosely into the barrel of the boring bar. A $\frac{3}{8}$ -in. bolt through the bar diameter, passes through this block, the hole it passes through being about 1-16 in. larger in diameter than the bolt, giving a loose action. The socket end is thus free to sway through one plane on its carrying bolt, and through a small angle in a plane at right angles by reason of the loose fit on the cross bolt. This provides a universal joint motion, a feature that is essential in view of the fact that otherwise the chuck must be very carefully levelled on the drill table to give a correct alignment with regard to the spindle, should the boring bar be solid with its driving end. The bar with this construction is guided on the guide rod, the chuck being merely prevented from turning on the table, the flexibility of the boring bar taking up any incorrectness in original alignment.

The boring tool, screwed on the end of the boring bar, as indicated, is in form very similar to a milling cutter,

Jig for Boring and Facing Small Bearings in the Drill Press.

cured with a corresponding mate in a jig or chuck of the form and construction noted in the illustration. This consists of a cast iron base with a projecting sleeve, one half of which is a stationary jaw, forming part of the base, while the other part, or clamping jaw, is secured to the stationary jaw by bolts in the manner indicated. The two bearings are secured in place by tightening up the clamping jaw on the contained brasses, the bore of the chuck corresponding to the outside diameter of the journal brasses. Extending up through the clamp base, and concentric with the bore there is a $1\frac{1}{4}$ -in. guide rod, rising 6 ins. above the top of the clamp. The reasons for this rod will be apparent later.

The boring bar is shown to the right in the illustration. Its body consists of a 14-in. piece of 2-in. wrought-iron pipe, lined with babbitt through nearly its full length, giving an inside diameter of $1\frac{1}{4}$ ins. to make a snug working fit over the $1\frac{1}{4}$ -in. guide rod of the chuck. The drive from the upper end is one of the most noteworthy features of construc-

tion, having cutting teeth on its circumference. The usual feed of the drill carries this cutter down the guiding bar, boring out the babbitt lining of the journal bearing through its full length. At the completion of this operation, a facing tool is brought into play. The tool for the end facing is mounted on a small carriage, running on guides attached to the boring bar. This small carriage is moved along its guiding ways by a 5-16-in. screw with a ratchet wheel on its outer end, to give the necessary cross feed at each revolution.

Accurate work with rapidity of production has attended the use of this contrivance. It is now possible to completely machine a pair of brasses in 15 minutes, making a considerable reduction in operating periods.

B. L. Jones, of Buffalo, N.Y., General Manager, Lewiston and Youngstown Frontier Ry., has been elected Vice President of the company. He is also Treasurer and General Manager, Niagara Gorge Rd.

The Handling of Snow by Electric Railways.

SARNIA STREET RY.—H. W. Mills, Manager:—"We depend upon scrapers, with which our double truck cars are equipped, to keep our lines open during the winter. We have not missed a trip this winter, in spite of the fact that we have had a large quantity of snow at zero weather nearly all January, the thermometer going as low as 20° below."

WINNIPEG ELECTRIC RY.—Wilson Phillips, Superintendent:—"We have very little snow in this city; so far this winter we have had practically none. At present there is not enough snow on the streets for good sleighing. We have about 120 miles of single track laid and six snow sweepers; we have also a rotary plow. This was ordered a number of years ago when we had a very severe storm in March, but we have never had any necessity for using it since."

EDMONTON RADIAL RY.—R. Knight, Superintendent:—"The snow problem in this locality is much less difficult than in the case of roads in the eastern parts of the country. The snow in Edmonton is very dry and the snowfall is very light. The heaviest snow storm we have had to contend with this year occurred several weeks ago, when the fall amounted to from 6 to 8 ins. No difficulty is experienced in handling the snow with sweepers, of which the railway has two, one a single truck, and the other a double truck sweeper."

TORONTO AND YORK RADIAL RY.—C. L. Wilson, Assistant Manager:—"We are using a nose plough, having two double end equipments of this description. We also have a snow plough of the steam road type, equipped with motors and wings, and flanges, which has proved very satisfactory. We also use a rotary snow plough for severe conditions. The steam road snow ploughs have been used extensively on our road, and more than the rotary, on account of the speed at which the rotary works."

BERLIN AND WATERLOO ST. RY.—V. S. McIntyre, Superintendent:—"We manage to keep our lines open very well by the use of a sweeper which handles approximately $6\frac{1}{2}$ miles of track. Two men can operate this sweeper when out in country where there are no horses to look after, but through towns it is necessary to carry an extra man to hold horses, as the sweeper throws a big cloud of snow and invariably frightens horses. We use, on the average, about four sets of brooms per winter on this sweeper. These brooms cost us, installed, \$8.60 a set. In the towns of Berlin and Waterloo the snow is carted off the streets, on which we run, immediately after each snow storm. We pay one-fifth of the total cost for this cartage. At several places along our lines we erect snow fences. These fences are placed about 100 ft. away from track, and they help very much to keep the snow from drifting over the tracks. The total cost to us for removing and fighting snow last year was \$374.86. The sweeper we have would be of no use to open up a line that has 4 or 5 ft. of snow on it, but it will clear tracks which have up to 2 ft. of snow on them. We find the best way to keep our road open is to get the sweeper in operation as soon as a snow storm starts and keep it going until the storm is over. We have not been tied up at all so far this winter, although it has been the most severe we have had for some years."—Electric Traction Weekly.

Interurban Line from Sault Ste. Marie.

Press reports say that some people at Sault Ste. Marie, Mich., have completed arrangements for the construction of an interurban railway from Sault Ste. Marie to the "Snows" this year. The survey has been completed, a private right of way over the entire length of the route secured and sufficient capital to finance the deal practically assured. Application will be made to the railway commission for authority to incorporate with \$500,000 capital stock. While a small amount of outside capital has been subscribed the promoters announce the road will be controlled by local capital. Work on the new road will be started early this spring and will probably be completed late in the fall. The terminal of the route will be on Island 8 and a car ferry will be operated from that point 22 miles across Lake Huron to Cheboygan, connecting there with the Detroit and Mackinac Ry. for the south and east. Gasoline-electric cars will be used on the run and a locomotive and freight cars will handle the bulk of the heavier freight traffic at night. The new road will open up a section of the upper peninsula that has never known travel excepting by means of stages.

Winnipeg Electric Railway Company's Annual Report.

Following are extracts from the report for the year 1911, presented at the annual meeting recently:—

The net earnings were \$1,110,573.69, after providing for all operating expenses, taxes, the city's proportion of earnings, and other fixed charges. Out of these net earnings four quarterly dividends were paid, amounting to \$690,000, leaving a surplus of \$420,573.69, which has been transferred to the credit of profit and loss account, making a total credit to this account at Dec. 31, 1911, of \$1,616,773.25.

All the properties have been efficiently maintained. In accordance with the plan of extensions adopted at the last annual meeting, the following improvements and additions to the equipment and system have been made: 10.842 miles of track was laid as follows: 9.70 miles with 80 lb. rails with concrete foundation and asphalt pavement; and .981 miles of surface track. Thirty large double-truck closed motor cars with wide vestibules equipped with air brakes and all other modern appliances to insure safety of passengers and operators, were constructed in the company's Winnipeg shops and put in service, together with 2 double-truck open cars of latest modern design, and 1 motor flat car and 1 trail flat car for construction purposes; 1134 new poles were erected, and 216,424 lbs. of wire with 189 transformers put up, in extension of the light and power distribution system; 50,358 feet of new gas mains were laid, and 895 new gas services were installed in extension of the gas distribution system. The new 1,000,000 cubic feet gas holder was completed and put in operation. A new auxiliary steam plant of 12,000 h.p. capacity was constructed and is in operation, which gives a capacity of 20,000 h.p. of auxiliary steam plant to protect the company and its customers from any serious break-down at the hydraulic works.

WINNIPEG ELECTRIC RAILWAY COMPANY.		
	1911.	1910.
Gross receipts	\$3,829,749 67	\$3,284,741 83
Operating expenses ..	1,900,967 67	1,654,833 60
Operating expenses per cent. of earnings ..	49.64	50.39
Net earnings	1,928,782 00	1,629,508 23

Deficit for year	\$15,708 44
------------------------	-------------

The directors for the current year, who were re-elected, are:—President, Sir Wm. Mackenzie; Vice President, Sir Wm. Whyte; Sec.-Treas., F. Morton Morse; other directors, Sir Wm. C. Van Horne, Sir Donald D. Mann, D. B. Hanna, A. M. Nanton, Hugh Sutherland, R. J. Mackenzie.

Halifax Electric Tramway Company's Annual Report.

Following are extracts from the report for the year 1911, presented at the annual meeting recently:—

Compared with previous years the results of operations are gratifying. Gross and net earnings were increased. During 1910 the rates to general consumers of electric light were reduced 10%. On May 1, 1911, a further reduction in these rates was made (equivalent to about 1% on the capital stock). The rates of wages to employees were substantially increased during the year, consumers and employees thus participating with the shareholders in the general prosperity of the company.

During the year, the Point Pleasant tram line was, at the request of the Park Commissioners, extended into Point Pleasant Park. This extension has proved a great convenience to the large number of persons who frequent the park.

During 1912 it is proposed to further increase the efficiency of the tram service by double tracking the belt line (which will include the construction of about 3¼ miles of single track) purchasing additional cars, providing increased car house accommodation and installing an additional unit in power house—the whole involving an expenditure of approximately \$200,000.

In addition to expenditure on capital account, a large amount was expended for repairs and improvements to the property, the physical condition of which has been well maintained.

INCOME ACCOUNT.	
Passenger receipts	\$229,927 84
Light and power earnings ..	203,119 88
Gas earnings	61,310 24
Sundry earnings (less provision for bad debts	9,041 36
	\$502,399 32
Operating expenses	\$256,874 00
Interest on bonds	30,000 00
Net earnings to surplus account	215,525 32
	\$502,399 32

Dividends aggregating \$112,000 were paid and \$22,288.43 was appropriated to renewals and betterments in 1911, depreciation in securities, provision for bad debts, and accident claims prior to 1911.

The percentage of operating expenses to income was 51.97%; passengers carried, 5,212,257; car mileage, 918,121.

The directors for the current year, who were re-elected, are:—President, Hon. David MacKeen; Vice President, J. Y. Payzant, W. B. Ross; other directors, A. Kingman, J. C. Mackintosh, C. C. Blackader, F. B. McCurdy, M. C. Grant, O. E. Smith.

St. John Railway Company's Annual Report.

Following are extracts from the report presented at the annual meeting, Feb. 26, for the year 1911:—

The year's business shows a net profit, after providing for interest on bonds and all other charges, of \$54,232.41, out of which four quarterly dividends of 1½%, amounting to \$48,000, have been paid, leaving a balance of \$6,232.41, which has been transferred to profit and loss account. The accrued dividend of 1% for Nov. and Dec., 1910, was included in the first quarterly dividend paid April 19, 1911.

During the year the following works have been undertaken:—

New brick and steel car barn on Wentworth St., 55 by 212 ft. Brick and steel office and supply building on Nelson St., 28 by 41 ft. In connection therewith we purchased the Fisher and Cathers lots adjoining. We purchased during the year a lot of land owned by the Lantulum estate, on which part of our power house is situated. A large amount has been expended for repairs and improvements on the railway and light system, the physical condition of which has been well maintained. It is proposed to remove the railway tracks from Britain St., between Wentworth and Charlotte Sts., and place them on Broad St.

It will be necessary to provide additional cars, and we propose to have built at once six new p.a.y.e. combination cars.

At the last session of the Legislature, authority was given the company to construct and operate lines for the transmission of electric current for light, heat and power throughout Kings county; and power was also granted to develop and operate water powers in that county. Your directors propose to extend the electric light service during the present year to Rothesay, Milford and Crouchville. We have acquired all the property, franchises and privileges granted to the Carleton Electric Light and Power Co.

At the last session of the Legislature, authority was given the company to issue bonds or debentures for \$250,000. It will be necessary to sell these bonds to provide for capital expenditure.

Your directors have been conducting negotiations with the Provincial Government for crossing the new cantilever bridge, to be erected at the falls. The terms proposed to us have been too onerous, but we hope to arrange a fair settlement.

We are about completing arrangements with the Dominion Government for crossing the Intercolonial Ry. at Haymarket Square, so as to extend our railway service to the cemetery and Crouchville.

The directors for the current year, who were re-elected, are:—James Ross, President; Col. H. H. McLean, K.C., M.P., Vice President; R. B. Emerson, J. Manchester, J. J. Tucker, W. Downie, F. E. Sayre, F. R. Taylor, J. M. Robinson.

The New Orleans and Grand Isle Trac-tion Co., Ltd., has been incorporated under the Dominion Companies Act with \$10,000,000 capital stock and office at Toronto. The principal object, no doubt, is to acquire and operate the New Orleans Southern and Grand Isle Ry. and the Algiers Ry. and Power Co., which were referred to in our Feb. issue, pg. 88, and of which C. E. A. Carr, formerly General Manager, Quebec Ry., Light, Heat and Power Co., is General Manager, C. D. Warren, of Toronto, being President of the New Orleans, Southern and Grand Isle Ry.

Electric Railway Projects, Construction, Betterments, Etc.

Alberta Electric Ry.—The Dominion Parliament has authorized the Alberta Electric Ry. Co. to change its name to the Alberta Interurban Ry. Co., and has authorized organization as soon as 25% of shares to the extent of \$10,000 a mile of the section first proposed to be built shall have been subscribed, and 10% thereon paid in cash. The construction of the other sections of the line can only be undertaken on the same conditions.

We are officially advised that the prospectus prepared sometime ago was not issued, and a new one has been put out by the Land Traction Co. of Canada, which was incorporated under the Alberta ordinance 1417, on Sept. 15, 1911. The authorized capital of the L.T. Co. is \$500,000, and the capital of the A.E. Ry. Co. is \$10,000,000, with power to issue bonds at the rate of \$30,000 a mile on 1,200 miles of railway. There have been put on the market \$250,000 "A" shares of the L.T. Co. at par, and \$450,000 of 30 year 5% (2% sinking fund) first mortgage bonds of the A.E. Ry. Co. with a bonus of one share of the A.E. Ry. common stock to each \$100 bond. The L.T. Co. has acquired such share of the A.E. Ry. stock as has been thought fair and reasonable remuneration for the work it has done and has arranged to do, and the balance of the A.E. Ry. stock is held by trustees for future construction. The directors of the L.T. Co. are:—J. Breckenridge, S. E. Beveridge, W. R. Wood, W. A. Lowry, and C. S. Drummond, Calgary, Alta.

The first section of the line proposed to be built extends from Calgary passing through Rocky View, Yankee Valley, Irricana and Carbon to Red Deer, and we are advised that the location surveys are practically completed. A large number of the local improvement district councils have already passed the formal resolution required for the free use of the highways for the railway.

A general meeting of the shareholders has been called to be held at Calgary, April 16, for organization purposes, and to enter into a contract with the Land Traction Co. for the construction of the first section of the line, and to authorize the issue of the mortgage bonds in respect of the same. (Mar., pg. 147.)

Berlin and Bridgeport Electric Ry.—The general plan for the extension of the line, for which legislative sanction is being asked, shows a route via Bloomingdale, connecting with Conestogo with a spur of about a mile, crossing the C.P.R. by an overhead bridge at Montrose, and thence to Elora and Fergus, Ont. The distance between Bridgeport and Elora by the proposed route will be about 15 miles. It is proposed to have a switching connection with the C.P.R. at Montrose. (Mar., pg. 147.)

British Columbia Electric Ry.—We are officially advised that the line under construction on the Saanich Peninsula, Vancouver Island, runs north 23 miles from Victoria to Deep Cove, near the head of the peninsula. There will be a branch to Union Bay. Both these points are on the sheltered waters of Saanich Inlet. At Union Bay the company has secured the extensive tract of land, known as Meadlands, which it is proposed to develop as a residential and pleasure resort, and a wharf is to be built. It is quite possible that a ferry service may be established to the mainland, as well as a line connecting with the various islands, but at present the company has no plans in this direction. A contract for building the first 18 miles was let to Moore and Pethick, in Nov., 1911. Grading is being gone on with.

Press reports state that work will be started at once on the projected cut off

of 3.5 miles from Highland Park to New Westminster, and that the work will be finished in six months. It is said it will be double tracked, with a maximum gradient of 2.7%.

Burrard, Westminster Boundary Ry. and Navigation Co.—W. McNeill, Assistant General Manager of the Western Canada Power Co., is also President of a railway company with the above title, which proposes to build an electric railway from Vancouver to Mission, B.C. The plans which have been filed with the Dominion Railways Department show a line, starting from Main and Keefer streets, Vancouver, east to Nanaimo St., across Hastings townsite, via Burnaby to Port Moody, on by the projected C.P.R. yards at Coquitlam, crossing the Pitt River, and continuing along the Dewdney trunk road to the Stave River falls, where the Western Canada Power Co.'s plant is situated, and then southerly to the Fraser River at Mission. There will be some heavy grading and embankment work to provide an easy and uniform gradient. It is proposed to build the section of the line from Mission to Pitt River first, and it is expected to have this completed by Mar. 31, 1913. It is estimated that the bridge crossing the Pitt River will cost \$750,000. The Western Canada Power Co. has just completed the installation of the first two units of a 54,000 h.p. hydro-electric plant at Stave River Falls. (May, 1911, pg. 409. See also Western Canada Power Co., Mar., pg. 149.)

Calgary Municipal Ry.—Work on the construction of the extension to the site of the C.P.R. new shops at Maharg, Alta., was started Feb. 26. (Mar., pg. 147.)

Cape Breton Electric Co.—We are officially advised that the company will make surveys during the summer for extensions to New Waterford, N.S. At present is not possible to give any definite statement as to what construction may be done. (Mar., pg. 147.)

Coteau Power Co.—We are officially advised that surveys are being prosecuted vigorously both at the point where it is proposed to develop power, and for the location of the projected lines of railway in the Okanagan district, B.C. (Mar., pg. 147.)

Edmonton Radial Ry.—It is proposed to build during this year new lines and extensions on five streets, the total length of which will be 5.09 miles.

The city commissioners have decided to erect the new car barn on the site of the present barn at Syndicate Ave. and Gallagher St. The new building will be built over and around the present barn, which will then be torn down and taken away. The estimated cost is \$60,000. (Mar., pg. 147.)

Forest Hill Electric Ry.—Application is being made to the Ontario Legislature to incorporate a company with this title to build an electric railway from the northern boundary of Toronto, on Forest Hill road, northerly and north-westerly to two miles north of Eglinton Ave.; from Eglinton Ave. southerly along Bathurst St. to the northern boundary of Toronto; along Eglinton Ave. from Yonge St. to Dufferin St., and branches, Mills, Raney, Lucas and Hales, Toronto, are solicitors for applicants.

The Galt, Preston and Hespeler Electric Ry.'s franchise in Galt, Ont., has been renewed for 10 years. (Dec., 1911, pg. 1171.)

Halifax Electric Tramway Co.—We are officially advised that the company is building a second track on the loop line, a length of 5.5 miles. Some of the work has already been done, and there

remains about 3.3 miles of the second track to be laid. The work proposed to be done this year will be on Oxford St., Quinpool Road, Windsor St., Almon St., and Agricola St. It is expected to have the work completed by the summer of 1913. It is intended also this year to extend the track from the corner of Cunard and Gottingen streets, along the latter street for nearly a mile.

It is also proposed to enlarge the two car barns during this year. At the power house a new 1,500 k.w. steam turbine, 80% power factor, with all necessary auxiliaries, is to be installed. (Mar., pg. 147.)

Hamilton, Grimsby and Beausville Electric Ry.—At the annual meeting of shareholders, Feb. 27, President Dixon stated that the directors were not in a position to say when the projected extension from Beausville to St. Catharines, Ont., would be gone on with. (Mar., pg. 147.)

Hamilton Radial Ry.—Survey parties have been at work since Feb. 20, between the end of the track at Oakville, and a point of junction with the Toronto and York Radial Ry. at Port Credit, or an extension of the Toronto Suburban Ry.

Hamilton, Waterloo and Guelph Ry.—New York engineers who have been going over the route, completed their work Mar. 15, and it is reported that construction will probably be started within a month. The engineer who will have charge of construction for McArthur Bros., who are undertaking the financing, was expected to be in Hamilton Mar. 30, to make final arrangements for construction.

Hull Electric Co.—We are officially advised that the company will build an extension from the main line to the Ottawa Racing Association's track, a distance of over half a mile, as soon as arrangements have been completed. The extension will have a double track, with a loop at the race course end to permit the use of single end cars. (Dec., 1911, pg. 1069.)

Humber Valley Electric Ry.—The provisional directors named in the application to the Ontario Legislature for the incorporation of a company with this title are:—R. H. Smith, C. M. Garvey, F. Regan, W. G. Jackson, Toronto. The company proposes to build an electric railway from Dundas St., in Lambton Mills, southerly along the west bank of the Humber River, to the Lake Shore road, and thence easterly to Sunnyside Ave., Toronto. Power is asked to connect with existing railways. The Legislature has approved of the principle of the measure, and proposes to defer its coming into operation until Jan., 1913, to give the city time to decide whether it will build the line. (Feb., pg. 91.)

Kawartha Transportation Co.—The applicants to the Ontario Legislature for the incorporation of a company with this title are: L. H. Grahame, E. R. Tate, C. W. S. Dunn, H. G. Fitzgerald, Lakefield, Ont.; L. M. Hayes, Peterborough, Ont. They propose to build electric railways from Peterborough through Lakefield to Stoney Lake, and thence to Apsley; from Peterborough to Chemong Lake, and from Peterborough to Rice Lake, Ont. (Feb., pg. 91.)

Ladner, B.C., to Huntingdon, Wash.—Press reports state that the International Railways and Development Co. has under consideration a proposition to build an electric railway from Ladner to New Westminster, B.C., and thence to Blaine and Huntingdon, Wash.

London and North Western Ry. of Canada.—Press reports state that a syndicate of English and Belgian capitalists is negotiating for the control of this company, as well as of other companies having electric railway charters west of London, Ont., with a view of

completing through lines from London to Windsor and Sarnia, and giving connection to all towns in the district. (Mar., pg. 148.)

London Street Ry.—Bids will shortly be asked for the fitting up of an additional steam plant for power production. (Mar., pg. 148.)

Maharg Electric Ry.—The Alberta Legislature last session incorporated a company with this title, to build an electric line radiating from Maharg, Alta. C. A. Owens, G. O'Grady, J. Ruse, Calgary, are provisional directors. (Mar., pg. 148.)

Medicine Hat, Alta.—At a meeting of the city council, Feb. 29, notice was given that at the next meeting a bylaw authorizing the building of a municipally owned electric railway would be introduced. (See Medicine Hat Electric Ry.)

Medicine Hat Electric Ry.—The Alberta Legislature has incorporated a company with this title to build from Medicine Hat to Dunmore, returning by a different route into the city; and for another line to Elkwater Lake. The provisional directors are:—A. F. Krappe, D. W. Brown, W. Overplank, Medicine Hat, Alta. (Feb., pg. 148.)

Montreal.—The section in the Montreal city bill, before the Quebec Legislature, authorizing the borrowing of \$5,000,000 to build a system of underground railways, was abandoned in committee, Mar. 8. (Mar., pg. 148.)

Montreal and Southern Counties Ry.—A bylaw granting a franchise through the municipality of Laprairie, Que., has been approved by the taxpayers, and a bylaw granting a franchise in Granby, Que., is being considered by the town council.

The railway committee of the Granby, Que., city council has approved the plans of the company's proposed line from Montreal to that city. W. B. Powell, Vice President, is reported to have stated on his return from Granby, Mar. 15, that petitions had been received from Pauline and Abbotsford, asking that branches be built from the Montreal-Granby line to serve them.

Montreal Tramways Co.—We are officially advised that track was laid on Sherborne St. East, from St. Lawrence St. to Cadieux St., 0.10 of a mile, in Jan. The construction was temporary, but the line will be put in a permanent condition in the spring.

President Robert is reported to have stated, Mar. 14, that the company is prepared to go on with an extension of lines in the city, even before a contract is signed by the city council. The company is not prepared to build lines into open fields in order to please land speculators, but is anxious to build lines in the city to accommodate the people and to provide an adequate service. If the council will get down to business, the company is ready to start building the lines at once.

Morrisburg and Ottawa Electric Ry.—The Ontario Legislature is being asked to grant an extension of time for the building of this projected railway from Ottawa to Morrisburg, Ont. G. D. Kelley, Ottawa, is solicitor for applicants. (Dec., 1911, pg. 1171.)

Niagara, Welland and Dunnville Electric Ry.—The Ontario Legislature is being asked to extend the time within which the lines authorized by chap. 10 of the statutes of 1910 may be built, and to increase the capital stock to \$500,000, and the company's bonding powers to \$30,000 a mile.

The directors and officers are: President, H. C. Schofield, M.P.P.; Vice President and Managing Director, C. J. Laughlin, jr.; Secretary-Treasurer, H. Rooke; other directors, W. W. Near, W. W. Butler; Superintendent, T. F. Swayze.

A press report, Mar. 6, says that negotiations are in progress with an English firm for the building of the line, a short piece of which has already been built in Welland. (Mar., pg. 148.)

Nipissing Central Ry.—It is expected that work on the extension from Haileybury to New Liskeard, Ont., will be started before May 1. (Mar., pg. 148.)

Ottawa and Lake McGregor Ry.—The provisional directors named in the bill before parliament providing for the incorporation of a company with this title are: N. McK. Retallack, W. S. Mackenzie, J. C. Cote, Ottawa; G. Clement, Angers, Que.; J. A. Duquette, Perkin's Mills, Que. (Mar., pg. 148.)

Ottawa Electric Ry.—The city council and the O.E. Ry. have agreed that the Preston St. extension shall be built as soon as the street is prepared by the city; that the Bank St. line will be extended; and that a line will be built on Wellington St. from Bank St. to Mackenzie Ave. as soon as the Government gives the desired permission. Other proposed extensions are still under discussion. (Mar., pg. 148.)

Porcupine and Belt Electric Ry.—The provisional directors named in the application to the Ontario Legislature for the incorporation of a company with this title are:—S. F. Adalia, H. A. Rowland, F. Regan, W. H. Best, Toronto. It is proposed to build an electric railway from the eastern boundary of Ontario in McGarry tp. westerly and southerly to Ladner city, thence westerly to the headquarters of the Montreal River, and on to the eastern bank of the Mettagama River at Kenogamisse Lake, with branches. Authority is also asked to connect with the Temiskaming and Northern Ontario Ry., and any other railway that may be built through the country traversed. (Jan., pg. 39.)

Port Arthur and Fort William Electric Ry.—The taxpayers of Port Arthur, Ont., have passed bylaws authorizing the building of a second track on the Arthur St. line from Bay St. to Algoma St., and on Bay and Algoma Streets; to extend the street railway from Hill St. westerly along Dawson Road to Algonquin Ave., and to build a siding at the fair grounds.

In connection with the power asked for from the Ontario Legislature to build lines outside the city limits, we are officially advised that for several years there has been talk of extending the line into the townships of McIntyre and Oliver, and it is now desired to have power to do so when the proper time arrives.

The Manager of Public Utilities of Fort William, Ont., reporting as to the street railway, gave details of the work done during 1911. The total expenditure was \$80,793.90, or, adding departmental and miscellaneous expenditures, \$84,498.55, and deducting credits, \$73,997.22. Four double truck, double end cars had been purchased at a cost of \$28,101.19. The city now owns 12 double truck closed cars, one double truck single car, and two single truck cars. There are in the city 3.4 miles of double track and 6.2 miles of single track, altogether 13 miles of line calculated as single track. The total expenditure on construction has been \$390,863.01, and the city has a balance of \$37,136.99 of the \$428,000 of debentures sold, unexpended.

Regina Municipal Ry.—A bylaw providing for the expenditure of \$400,000 additional upon this line is under consideration by the Regina, Sask., city council. It has been decided that the work left uncompleted in 1911 shall be finished, and that a further six miles of track will be laid during the current year. (Jan., pg. 39.)

St. Thomas Street Ry.—The committee of the St. Thomas, Ont., city council

having charge of the operation of the street railway has had the question of improving the lines under consideration. The committee is of opinion that the citizens would defeat any bylaw calling for any larger immediate expenditure than \$20,000, and the City Engineer was directed to prepare estimates showing what could be done with that amount. (Mar., pg. 149.)

Sarnia Street Ry.—We are officially advised that the company proposes to build an extension to Lake Huron Park pavilion, Sarnia, Ont., owing to the increasing business to the park.

Plans are being prepared for a new car barn and machine shop. The building will be of concrete, with steel girders for roof and concrete. The building will be equipped with all the latest appliances, and will have accommodation for 20 double truck cars.

A contract has been placed for two new generators for the power house, which are expected to be set up early in April. (Mar., 1911, pg. 261.)

Saskatoon Electric Railway and Power Co.—The Saskatchewan Legislature has incorporated a company with this title to build an electric railway in Saskatoon, and also to take over an agreement made with H. M. E. Evans, of Edmonton, and the Saskatoon Power Co. The S.P. Co. is incorporated by chap. 154 of the statutes of Canada of 1907-08, and the bylaw of the city of Saskatoon adopting the agreement was approved, July 6, 1911. The Legislature also confirmed the agreement with the city council.

The Legislature inserted clauses in the act under which the company cannot transfer its charter and franchises without the consent of the city; nor extend its lines outside the city limits without the consent of the city, the municipality concerned, and the Lieut.-Governor-in-Council. (Jan., pg. 39.)

Sherbrooke Ry. and Power Co.—The power transmission line to Stanstead, Que., 32 miles, has been completed, and power was turned on Feb. 28. Press reports state that arrangements are being made for the building of an electric railway between Sherbrooke and Stanstead, and that the first section of the line to be built will be between Sherbrooke and North Hatley. (Jan., pg. 39.)

The Springhill Fruit Lands Co. is considering a proposition for the purchase of a storage battery electric car and the making of an arrangement for its operation over the St. John Valley Ry., when it is built, between Fredericton and Springhill, N.B., about five miles. F. deL. Clements, Springhill, N.B., is President.

Sudbury-Copper Cliff Electric Ry.—The provisional directors named in the application to the Ontario Legislature for the incorporation of a company with this title to build the lines mentioned in our last issue are:—Jos. Bell, W. Cochrane, J. Mackey, D. M. Morin, L. Laforest, Sudbury, Ont. (Mar., pg. 149.)

Three Rivers Tramway Co.—Application is being made to the Quebec Legislature for the incorporation of a company with this title, to build a tramway to be operated by electricity in the city of Three Rivers, and in the surrounding parishes. The provisional directors are: R. Ryan, N. Lamy, F. A. Verette, J. F. Bellefeuille, O. Beauchet, C. Bourgeoise, Three Rivers. The city council has passed a bylaw granting a franchise for the building of an electric line along certain streets in the city. The plans approved show lines covering the principal streets of the city, and extending to Ile St. Christophe, in the St. Maurice river. (See Three Rivers, Que., Jan., pg. 40.)

Toronto City.—The Toronto city council, Mar. 19, referred back for further consideration, a recommendation of the board of control to employ Ford, Bacon and Davies, New York, at a cost of \$30,000 in addition to certain expenses, to make a report on a metropolitan system of street railways for the city. It was intended that the experts employed should report upon the civic car lines now being built, and also on the handling of the Toronto Ry. system when the franchise expires in 1921. (Mar., pg. 149.)

Toronto Suburban Ry.—Plans have been filed in the York county registry office for the extension of the line now terminating at Weston, Ont., to Woodbridge, 7.97 miles; for the extension of the line now terminating in Lambton Mills, to Islington, 2.54 miles, and from that point in the direction of Georgetown as far as mileage 15.12.

A deputation from Guelph waited on the management recently, and was informed by W. H. Moore that the company expected to have its line completed from Toronto to Guelph by the fall. It was not proposed to take over the People's Ry. scheme at Guelph, but the company would be prepared to aid the Guelph Radial Ry. in building a line out of Guelph north and south.

Representatives of the Stratford city council and of the Stratford Ry., who also interviewed the management, state that they were informed that it was desired to take over the Stratford charter, with a view of making it a centre for radial lines designed as feeders for the Canadian Northern Ry. lines in Western Ontario when built. Some further negotiations having taken place, A. Waddell, one of the directors of the S. Ry., is quoted as having stated, Mar. 4, that he was only waiting orders from Toronto to sign the transfer of the company's powers to the Mackenzie, Mann and Co. interests.

Work has been started on the construction of the extension of the line from Weston to Woodbridge, Ont., and the work will be pushed forward to completion as soon as the frost is out of the ground. The present line from Keele St., which is 4 ft. 10½ ins. gauge, will be converted to standard 4 ft. 8½ ins.

On the proposed extension from Lambton to Guelph, right of way agents are out between Islington and Meadowvale, and it is expected that construction will be started soon.

Application is being made to the Ontario Legislature for authority to build an additional line from some point on the company's located line through Toronto tp., Peel county, to Brampton, thence easterly to a junction with the company's present line near the G.T.R. station at Davenport, Toronto. (Mar., pg. 149.)

Watrous Radial Ry.—The Saskatchewan Legislature has incorporated a company with this title to build an electric railway within the town of Watrous and into surrounding municipalities. N. B. Wilks, Watrous, is one of the provisional directors.

The Legislature has also authorized the Watrous town council to grant a franchise for a street railway within the town, and also to guarantee the bond of a company building such a railway.

Winnipeg Electric Ry.—We are officially advised that the company is negotiating under its Winnipeg, Selkirk and Lake Winnipeg Ry. charter, with the municipalities interested, for the building of a line to Stonewall and Stony Mountain, Man. It has not been decided from what point on the present line the new line will start, or what route will be followed. The new line will be about 20 miles long, and it is expected that construction will be started this year.

The company is applying to the Manitoba Legislature to amend its powers in several particulars.

The Winnipeg board of control passed a resolution Mar. 14, calling upon the company to construct about eight miles of new tracks this year.

Electric Railway Finance, Meetings, Etc

British Columbia Electric Ry.—Gross earnings for Jan., \$517,247; working expenses, \$313,408; net operating earnings, \$203,839; renewal funds, \$37,935; net earnings, \$165,904; approximate income from investments, \$25,000; net income, \$190,904; against \$368,754 gross earnings; \$218,428 working expenses; \$150,326 net operating earnings; \$29,770 renewal funds; \$120,556 net earnings; \$20,000 approximate income from investments; \$140,556 net income, for Jan., 1911. Aggregate gross earnings for seven months ended Jan. 31, \$3,318,641; net earnings, \$1,170,091, against \$2,360,402 aggregate gross earnings; \$970,452 net earnings, for same period 1910-11.

Calgary Municipal Ry.—Earnings for Feb., \$37,366.75, against \$19,383.21 for Feb., 1911.

Cape Breton Electric Co.—Gross earnings for Jan., \$28,327.44; operating expenses, taxes, etc., \$17,495.31; net earnings, \$10,832.13; interest charges, \$4,495.83; balance, \$6,336.30; sinking and improvement funds, \$1,140; balance, \$5,196.30, against \$27,442.73 gross earnings; \$15,289.56 operating expenses and taxes; \$12,153.17 net earnings; \$4,152.50 interest charges; \$7,640.67 balance; \$1,141.67 sinking and improvement funds; \$6,499 balance, for Jan., 1911.

Dominion Power and Transmission Co.—An action has been entered at Hamilton, Ont., by C. W. Moodie, and some other shareholders against the directors. The plaintiffs ask for damages for alleged breach of trust in procuring and permitting the acquisition by the company of its properties for a fraudulent and excessive consideration; an order to recover from the individual defendants and the company all profits made by defendants in connection with the acquisition by the company of its properties; an order to recover from them all fees as salaries received by them in excess of services rendered; a declaration that the stock of the company, issued in pursuance of the transactions complained of is not fully paid up; an injunction against the continuance or repetition of the alleged wrongful acts; an account in respect of the above matters and the appointment of a receiver. This action has been threatened for some time, the shareholders who are bringing it having complained that the directors withhold dividends on preferred stock and used them in connection with the company's business without interest.

Edmonton Radial Ry.—During Feb. the revenue was \$25,101.92, and 613,351 passengers were carried. It is stated that when the report for the month is fully prepared, a conspicuous item will be the minimum amount of current used per car mile. The system of metering the current used by each car and offering a bonus for economy is expected to show its effect on the monthly power bill.

Grand Valley Ry.—The proceedings in the courts at Toronto for the appointment of a receiver for this company are stated to have arisen in respect of \$125,000 of bonds issued on the Brantford St. Ry., prior to the amalgamation, and it is stated that this is the first step to the reconstruction of the company. A Brantford press report states that the present interests have secured sufficient capital to carry out the financial reconstruction

of the company, and that there is no prospect of the Brantford St. Ry. being taken out of the G.V. Ry. control and taken over by the Brantford city council.

Hamilton Grimsby and Beamsville Ry.—Following are the officers and directors for the current year:—President, J. Dixon; Vice President, J. Dickenson; other directors, J. Moodie, W. C. Hawkins, J. V. Sutherland; Treasurer, J. Knox; Secretary, G. D. Fearman. It was reported at the annual meeting, Feb. 26, that the total earnings for the year 1911 were \$121,000 and that about \$37,000 was expended upon maintenance.

Montreal St. Ry.—Passenger earnings for Jan., \$412,826.23; miscellaneous earnings, \$5,135.70; total earnings, \$417,961.93; operating expenses, \$267,369.52; net earnings, \$150,392.41; city percentage of earnings, \$24,143.04; interest on bonds and loans, \$15,959.84; rent of leased lines, \$661.37; taxes, \$5,000; total charges, \$45,764.25; surplus, \$104,828.16; expenses per cent of earnings, 63.97, against \$363,147.35 passenger earnings; \$6,997.25 miscellaneous earnings; \$370,124.60 total earnings; \$239,982.64 operating expenses; \$130,141.96 net earnings; \$18,352.08 city percentage of earnings; \$15,495.86 interest on bonds and loans; \$607.30 rent of leased lines; \$4,700 taxes; \$39,155.44 total charges; \$90,986.52 surplus; 64.84 expenses per cent. of earnings for Jan., 1911; passenger earnings for Feb., \$388,748.03; miscellaneous earnings, \$5,247.44; total earnings, \$393,995.47; operating expenses, \$270,123.42; net earnings, \$123,872.05; city percentage on earnings, \$25,555.64; interest on bonds and loans, \$15,724.04; rent leased lines, \$661.37; taxes, \$5,000; total charges, \$46,941.05; surplus, \$76,931; percentage of expenses to earnings, 68.56, against \$326,628.34 passenger earnings; \$4,109.33 miscellaneous earnings; \$330,737.67 total earnings; \$227,604.44 operating expenses; \$103,133.23 net earnings; \$21,024.29 city percentage of earnings; \$15,642.58 interest on bonds and loans; \$607.10 rent leased lines; \$4,700 taxes; \$41,973.97 total charges; \$61,159.26 surplus; 68.82 percentage of expenses to earnings, for Feb., 1911. Aggregate total earnings for five months ended Feb. 29, \$2,105,765.24; operating expenses, \$1,298,599.44; net earnings, \$807,165.80; total charges, \$205,781.19; surplus, \$601,384.61; percentage of earnings to expenses, 61.67, against \$1,830,922.44 aggregate total earnings; \$1,135,988.40 operating expenses; \$694,934.04 net earnings; \$182,782.64 total charges; \$512,151.40 surplus; 62.04 percentage of expenses to earnings, for same period 1910-11.

Quebec Ry., Light and Power Co.—The directors have decided not to pay any further dividend on the common stock for the present, but to devote the surplus earnings to betterments and the creation of a surplus.

Regina Municipal Ry.—Passenger earnings for Jan., \$5,154.95; miscellaneous earnings, \$270; total earnings, \$5,424.95; operating expenses, maintenance of way and structures, \$736.41; rolling stock, \$230.26; electrical equipment, \$186.08; conducting transportation, \$1,871.73; power, \$1,025.25; general, \$295.49; total, \$4,345.22; net earnings, \$1,079.73. Gross earnings per car mile, 26.746c; operating expenses per car mile, 21.423c; net earnings per car mile, 5.323c. Passengers carried, 114,067; cost of power per car mile, 5.054c.

Toronto Ry.—Gross earnings for Jan., \$656,110; operating expenses, maintenance, etc., \$326,672; net earnings, \$329,438, against \$590,418 gross earnings, \$293,150 operating expenses, maintenance, etc.; \$297,268 net earnings for Jan., 1911. Commencing with the foregoing figures for Jan., the company's return will cover the combined earnings, etc., of the Toronto Ry., Toronto and

York Radial Ry., Toronto Power Co., Toronto Electric Light Co., and the Electrical Development Co. of Ontario.

Winnipeg Electric Ry.—Gross earnings for Jan., \$319,433; operating expenses, \$175,412; net earnings, \$144,021, against \$346,144 gross earnings; \$188,349 operating expenses; \$157,795 net earnings for Jan., 1911.

Electric Railway Notes.

H. Doughty, Superintendent of the Regina Municipal Ry., resigned his position, Mar. 31.

The American Electric Railway Association's convention will be held in Chicago, Ill., Oct. 7 to 11.

The Regina city council has decided to order three additional cars for its electric railway, for delivery in Sept.

The Erie Rd. is reported to be about to electrify 208 miles of its New York suburban lines, at an estimated cost of \$12,000,000.

The New Brunswick Public Utilities Commission has under consideration the fixing of rates for the Moncton Tramways, Electricity and Gas Co.

The Moose Jaw Electric Ry. has ordered three single end, semi-convertible, pay-as-you-enter car bodies, 31 ft. long over all, from the Ottawa Car Co.

The Toronto and York Radial Ry. has ordered five passenger cars and two express cars for its Metropolitan Division from the Preston Car and Coach Co.

J. B. Rannie, heretofore Traffic Superintendent, has been appointed Traffic Agent, British Columbia Electric Ry., Vancouver, and has been succeeded by Jas. Hilton.

Hon. L. P. Pelletier, Postmaster General, has resigned as director of the Quebec Ry., Light, Heat and Power Co., and has been replaced by Elsear Baillargeon, his nephew and legal associate.

The Halifax Electric Tramway Co., during 1911, added vestibules to both ends of 24 of its closed cars, at a cost of \$2,500. It is purchasing for fall delivery four box cars, and for delivery by the summer of 1913, four open cars.

H. E. Grant, of the British Columbia Electric Ry. Co.'s light and power department, will read a paper on the education of central station employees, at the National Electric Light Association's convention at Seattle, Wash., in June.

The Ontario Legislature's private bills committee has struck out of a bill introduced in the interest of the town of North Toronto a clause which provided that no electric railway should transport freight on any highway in the town.

The Port Arthur and Fort William Electric Ry. has ordered two double end, semi-convertible, pay-as-you-enter car bodies 32 ft. long overall, and one double-end double truck semi-convertible pay-as-you-enter car body 33½ ft. long over all, from the Ottawa Car Co.

The Montreal Tramways Co. informed the Quebec Public Utilities Commission, Mar. 12, that all cars in the service had been equipped with emergency brakes, and all double truck cars were equipped with air brakes. The single truck cars were being got rid of at the rate of 50 a year, being replaced by 30 double truck P.A.Y.E. type cars.

The deal transferring the Algiers Ry. and Lighting Co.'s property to the Canadian syndicate that owns the New Orleans, Southern and Grand Isle Rd. was completed Mar. 1, and the property will pass to the New Orleans and Grand Isle Traction, Light and Power Co., incorporated in Ontario, Mar. 1, with a capital stock of \$10,000,000. C. E. A. Carr, general manager, Algiers Ry. and Lighting Co. and New Orleans, Southern and

Grand Isle Rd., and formerly of Quebec, says that no definite plan for the improvement on the property will be decided upon until it is formally transferred.

T. W. Casey, general manager, Prepayment Car Sales Company, New York, and formerly of Montreal, has returned from a trip through Europe in the interest of the International P-A-Y-E Tramcar Co., Ltd., of London, Eng. He reports a cordial reception among European electric railway officials and great interest in and willingness to discuss prepayment car operation as judged from the experience of the operation of this type of cars in the United States. The General Omnibus Co., of London, is changing some buses to prepayment operation. If these should prove practicable and successful a general conversion of all its buses is contemplated. The General Omnibus Co., of Paris, is also changing some of its buses operating between Paris and St. Germain to prepayment operation.

Gasoline Motor Car for Winnipeg City Power Railway.

The city of Winnipeg has bought a gasoline motor car for use on its railway between the C.P.R. station at Lac

Gasoline Motor Car for Winnipeg City Power Plant.

du Bonnet and the city power house at Point du Bois. The accompanying illustration of the exterior of the car shows its general features. It has a four-wheel steel frame truck with 10 ft. wheel base, standard gauge, and the total weight is about 22,000 lbs. Power is supplied by a heavy type four cylinder gasoline engine of special design, and with a conservative rating of 50 to 60 h.p. at 600 r.p.m. The transmission is of a gear type, and is so designed that there is no possibility of gear trouble in changing from one speed to another. There are three speeds in each direction, and two chains transmit the power from the gear box to the front pair of wheels. The maximum speed so far obtained is 42 miles an hour, but on good track this can be considerably increased. With this car the travelling time between Lac du Bonnet and Point du Bois has been decreased from one hour and a half (the schedule time of steam train) to 55 minutes, the present schedule. The gasoline consumption is from 7 to 8 miles per gallon. The car has hauled with ease a loaded 40-ton freight car, and has taken a 5% grade ¼ of a mile long on the high gear. There is seating capacity for 35 people, the body being divided into two compartments, the rear having reversible seats upholstered in rattan, and the forward containing engine and having ample room for light baggage and express. The forward compartment may

also be used as a smoking compartment, as it is provided with drop seats. Steam heat is supplied from a small boiler at the front end of the car. Westinghouse straight air equipment is provided. The car was supplied by the Canadian Fairbanks-Morse Co., Ltd.

Telegraph Lines in Canada.

In moving recently in the House of Commons for the appointment of a commission to investigate the systems of telegraph, etc., in Canada, with a view to submitting such data to the Post Office Department, J. E. Armstrong, M.P. for East Lambton, Ont., quoted the following figures relating to the operation and equipment of various telegraph companies in the year 1910-11:

The Dominion Government owns 8,406 miles of telegraph line and cables, 8,150 miles being land lines. There are 603 offices and 249,915 messages were sent in the year. The expenditure was \$432,970.04, and the revenue \$169,585.15, a deficit of \$263,384.89.

The C.P.R. Telegraphs operated 12,257 miles of telegraph line, with 76,175 miles of wire, sending 3,431,493 messages. It has 1,372 offices.

The Great North Western Telegraph Co. operated 11,234 miles of pole lines, with 50,092 miles of wire, sending 2,907,495 messages, and has 1,183 offices.

The Western Union Telegraph Co. had 2,639 miles of pole lines with 11,024 miles of wire, sending 551,764 messages, with 217 offices.

The North American Telegraph Co. operated 605 miles of line, with 783 miles of wire, and sent 38,015 messages, with 83 offices.

The Grand Trunk Pacific Ry. operated 1,699 miles of pole lines, with 5,081 miles of wire, sending 71,154 messages, with 73 offices.

The Algoma Central Ry. had 130 miles of line, 174 miles of wire, and sent 3,639 messages with four offices.

The Temiskaming and Northern Ontario Ry. had 265 miles of pole line and 1,865 miles of wire, sending 131,106 messages with 22 offices.

The total mileage of pole line owned by all the companies in Canada was 28,729, and the line mileage operated by telegraph, telephone and cable companies was 145,997. Messages taken and delivered over all these lines, not including press messages, 7,134,665, and total number of offices 2,934.

Canadian Street Railway Association.

PRESIDENT, James Anderson, General Manager, Sandwich, Windsor and Amherstburg Ry.; VICE PRESIDENT, P. Dube, Secretary Montreal Tramways Co.; SECRETARY-TREASURER, Acton Burrows, Managing Director, The Railway and Marine World.

ASSOCIATION'S OFFICE, 70 Bond St., Toronto. EXECUTIVE COMMITTEE.—E. P. Coleman, Manager of Railways, Dominion Power and Transmission Co.; H. M. Hopper, General Manager, St. John Ry.; J. E. Hutcheson, Superintendent, Ottawa Electric Ry.; C. B. King, Manager, London St. Ry.; D. McDonald, General Manager, Montreal Tramways Co.; M. N. Todd, President, Galt, Preston and Hespeler St. Ry.

ASSISTANT SECRETARY, Aubrey Acton Burrows, Secretary and Business Manager, The Railway and Marine World.

OFFICIAL ORGAN, THE RAILWAY AND MARINE WORLD.

Fuel Oil and Its Installation on the G. T. P. Steamships Prince Rupert and Prince George.

By C. H. Nicholson, Manager, Grand Trunk Pacific Ry. Steamships.

The adoption of oil as fuel for steamships' use is a question which involves the careful study and solution of many problems peculiar to each individual case. Some of these are:—The advantages to be gained in economy and efficiency; the abundance of the supply; means of securing proper delivery, storage facilities and convenience in fueling ships; quantities required to be carried; location of proper storage on board; ships' trim and stability; fresh water storage, etc.; and, not the least important, the system of oil burners to be adopted.

The advantages gained in the use of oil as fuel as against coal vary according to the conditions under which it is to be used, and are generally well recognized. Briefly enumerated, they are as follows: The quantity required to perform the same service is less both in weight and the space occupied, with a proportionate decrease in fuel bills. This is particularly true on the Pacific coast, where the oil supply is abundant, and coal is somewhat limited in quantity, high in price, and of comparatively poor fuel value. Such expenses as renewing of grate bars, stoke hold floor plates, slice bars, rakes, etc., which every coast engineer knows are considerable, are done away with.

It has been the experience also of ship owners who have changed from coal to oil that charges for boiler maintenance have practically disappeared. The constant opening of furnace doors for firing up, and the time required to clean fires on account of the large amount of ashes and clinkers, with the consequent inrush of cold air, and the resultant lowering of furnace temperature, cause an immense amount of contraction and expansion. This cannot but have a serious effect on joints and rivets, and as a consequence a large unnecessary expense for repairs, to say nothing of the rapid deterioration of the plant, with the ultimate necessity of replacing the boilers long before their time. I have known ships to carry a gang of boilermakers trip after trip, and when laid off for overhaul the principal expense would be boiler repairs. One superintendent engineer whose fleet made long off-shore voyages, told me it used to be a regular thing to have boilermakers waiting a ship's arrival in port, but since his line adopted oil fuel he "had not seen a boilermaker."

Another most important economy is the reduction in the number of firemen and trimmers required, with the consequent lowering in payroll and cost of subsistence. One man of ordinary intelligence on a watch, in oil burning ships with single stoke holds, will tend 18 fires and have an easy time of it, whereas with coal 18 firemen and six to nine trimmers would constitute the stoke hold crew of such a ship, and they would earn their money, too. The difficulty of securing so large a crew of efficient firemen is very often a serious one. This is greatly lessened with oil, as its use does not require nearly so many nor any more skilful men, and the cleanliness and lightness of the work appeals to them. Crews are easier to keep and are more useful on that account.

Because of the absence of smoke, cinders and coal dust, oil burning ships are

not only cleaner, but the supplies required for scrubbing and painting are much less, and while the economies from such sources are difficult to calculate, they are appreciable nevertheless.

In point of efficiency the advantages are quite as marked. The calorific value of oil far exceeds that of coal. After deducting the percentage of moisture and ash from coal, the latter from experience having been found to run as high as 20% and 25%, the average run of coal will be found to represent 7,000 to 9,500 b.t.u., whereas oil will give as high as 18,500 b.t.u. The combustion of coal is most incomplete with very high stack temperatures, while with oil combustion it is practically perfect, and stack temperatures of from 400° to 450° F. are easily obtained. Boiler efficiency (under coal usually about 57%) is in consequence increased to

P203 C. H. Nicholson,
Manager, Grand Trunk Pacific Ry.
Steamships.

something over 80%, especially where forced draft installations are found. The water evaporation is thereby increased. Instead of an evaporation of from 7 to 9 lbs. of water per pound of fuel with coal, from 15 to 16 lbs. of water per pound of fuel is secured with oil. The steam pressure is steady and easily obtained, a given speed is readily maintained, thereby adding greatly to the accuracy of dead reckoning, the safety of the ship and those travelling on her, as well as their comfort and convenience. When all these things are considered there seems little argument left in favor of coal as against oil, except the supply.

While it is difficult to calculate definitely the future oil supply, still there are no present indications of failure in this direction. It was reported a few months ago that there was in storage in California alone a quantity sufficient to take care of the world's consumption for

seven months. The California and Texas oil fields are by no means exhausted, new wells are being sunk constantly, and from indications in Alaska, Alberta and South America, other fields will be developed equally as important, so that notwithstanding the immense increase in consumption, the supply promises to be adequate, and the price will probably go lower rather than higher.

Fueling facilities are becoming more adequate, and ships may now take oil at all California ports, Portland, Ore., Tacoma and Seattle, Wash., and Vancouver, B.C. In a few instances oil barges are kept and will come alongside and fuel a vessel up while at her own pier, but in most cases it is necessary to proceed to a shore station for oil, at the expense of moving the ship and the loss of time entailed. For our own purposes, where a rigid schedule is maintained and time is a most important factor, it is desirable that the ships may be fueled, watered, freighted, and take on or discharge passengers, baggage and mails at one and the same time without requiring the ships to move from their berths. This has been accomplished by the erection on the new Grand Trunk Pacific dock, Vancouver, of an oil storage tank holding 32,000 bbls., a measuring tank holding about 1,000 bbls., and a pumping plant of 1,000 bbls. per hour delivery. An 8-in. pipe line leading down the dock, with two connections to the ship, enables both forward and after tanks to be filled at the same time. A contract has been made which calls for a constant supply of oil, having the required flash test and gravity. The pump house is of concrete, and the tanks stand on heavy concrete foundations laid on piles driven to 3 ft. centres, with retaining walls of reinforced concrete. The walls themselves form an outside tank with a capacity 10% greater than the steel tanks, and are circular in shape, with panels set in, making them more ornamental than otherwise. By the plan the rate of insurance on our own and surrounding property is not effected, and the maximum degree of safety from leaks or fire is obtained.

Individual requirements must govern the quantities required to be carried. The route the vessel is on and the frequency with which she can be fueled are to be considered. A handy rule is the i.h.p. developed, divided by 10, which will give the consumption in barrels per steaming day of 24 hours, or, generally speaking, 4 bbls. of oil will equal one ton of good coal, although on vessels with modern and well maintained equipment, 3½ bbls. will be nearer the actual consumption, including the usual auxiliaries.

The location of oil storage on board is perhaps a more difficult problem. Double bottoms are frequently used in ships where they are required for water ballast only. The principal difficulties in such cases are those of proper venting arrangements, and owing to the low temperature of the sea water, and the density and low viscosity of oils required to stand British Admiralty and Dominion Government tests, it will be found necessary to fit steam heater coils to the suction pipes to secure a free and constant flow to the pumps. Such coils, from their location, are difficult to over-

haul, and are attended with the possibility of developing leaks and the consequent introduction of water into the oil.

In high speed vessels like the Prince Rupert and Prince George, questions of displacement, trim, stability and centres of gravity are very carefully worked out by the designer and builders, and it is most important that such conditions once established should not be disturbed. These being the only ships on the Pacific coast fitted with full hot and cold running water service in all staterooms they require far more than the average supply of fresh water. The double bottoms being utilized for this purpose, it became obvious if fuel oil was to be carried there that an equal amount of water storage must be provided elsewhere. It was decided that oil tanks built in the regular bunker spaces would create the least disturbance to the domestic and boiler feed water systems of the ships, the distribution of weights and other questions of trim and stability. Besides this the plan possessed the additional advantage of convenience in filling and venting arrangements without disfiguring the vessels' cabins or exteriors, and such tanks being located above the ships main tank tops no suction heaters were necessary. The space provided contains sufficient to carry the ships a round trip (about 1,700 nautical miles) at 18 knots an hour, with ample for port consumption.

These tanks, five in number, are built of heavy steel, and are well provided with fore and aft and 'thwart ship bulkheads to prevent swashing. In addition to the usual flanged fittings required by law, full sized gate valves have been provided on the inside of pipe openings, operated by spindles from the top of the tanks, which permits closing any pipe line in case of a break, and absolutely confining the oil to the tanks. The tank plans were approved by Lloyd's, the British Board of Trade, and Dominion steamboat inspectors before the contracts were let.

The filling arrangements are most complete and simple. The forward and after tanks can be filled separately, but in addition, the after filling pipe leads to an 8-in. manifold, by which not only can the filling of any tank be controlled, but being connected with the pumping system, any tank can be filled from any other or discharged overboard if necessary. This brings all working valves in one place and constantly under observation.

Lastly, on the system of burners adopted depends the entire efficiency of the plant, and to a large extent the economy to be obtained. As is well known, there are three methods of atomizing fuel oil employed, viz.; by the use of compressed air, steam, or by mechanical process. The first entails considerable initial expense for compressors, etc., and the cost of operation; the second, while not so costly to install, uses a large amount of live steam, which is unreclaimed, and a consequent drain on the fresh water supply, and in addition, the roaring of the burners is disagreeable and a nuisance. The third, or mechanical system, consists of heating the oil to a high temperature, and putting it under pressure, from which, when escaping at the burners it bursts into a vapor and readily ignites. It is practically noiseless. After carefully considering all methods with the idea of procuring the very best, the mechanical atomizing system was decided upon as cheapest to operate and most efficient.

The particular system adopted after thorough investigation is not only very simple, but less costly to install than some others, and particularly well adapted to the forced draft, with which these ships are fitted. It consists of three specially designed heaters tested to 700 lbs. pressure, which can be used singly

or in series, two being sufficient to carry the ship working under full power, the third being held in reserve. Pumps, strainers, etc., are in duplicate, one of each to be held in reserve for emergencies, thermometers, oil meter, fire brick quail and adjustable metallic cone for regulating the supply of air. The burners are very simple as to design and arrangement for changing or cleaning. A burner can be taken out and changed in five seconds, and has various sized tips which can be changed as required, for increasing or diminishing the consumption. During a visit by the writer to San Francisco to inspect this system, a practical test was made, using a Scotch marine boiler with forced draft, an accurate record of stack and feed water temperatures were taken, and the quantities of fuel and water used were carefully computed. Very satisfactory results were obtained both as to evaporation and fuel consumption.

The contract for the tanks and for installation was given the B.C. Marine Railways, Ltd., at Esquimalt, B.C., and the s.s. Prince George was retired from service for the purpose of making the change, in Nov., 1911. Some delay was experienced in assembling the material, but the vessel went into service again March 3, relieving the s.s. Prince Rupert, which will be similarly changed and ready for service about April 15.

Much study and care has been given this installation in arranging the plans and working out the details, and it is considered the best and most complete yet made on this coast, this opinion being borne out by other steamship and oil men who have seen the work being done. It is confidently expected that when these ships are again in service, not only will the desired economy and increased efficiency be affected, but many improvements will be found possible under the new conditions, not the least of which will be clean and white painted stoke holds, smokeless stacks, and sootless decks, the latter features being a consummation devoutly to be wished, and which will be much appreciated by the travelling public.

Changes Suggested in Examinations for Masters' and Mates' Certificates for Inland Waters

The Dominion Marine Association adopted the following resolution at its annual meeting last year:—

"That the present system of examining candidates for masters' or mates' certificates is very unsatisfactory, and that the uncertainties and irregularities due to the discretionary powers now vested in individual examiners should be eliminated, and that in the opinion of this Association it would be advisable to have examinations conducted only at stated times and at stated places, and by at least two examiners present at the same time; and that the examination papers should be printed as required at Ottawa and sent sealed to the examiners; to be opened at the times and places specified, in the presence of the candidates; and that the written answers should be submitted to headquarters for judgment."

This resolution was re-affirmed at the Association's recent annual meeting and was personally urged on the Minister of Marine and Fisheries at that time by the Association's Counsel, F. King. While the matter was being presented, two points were emphasized in accordance with information received, which appeared during the discussion which ensued to have been either inaccurate or misunderstood. These were, first, that it was objectionable to have examiners paid by fees, and, secondly, that it was objectionable to have individual examiners pass upon the papers of candidates. The answer suggested by the Deputy Minister that the fees are remitted to Ottawa does not entirely dispose of the first objection, as it is still considered inadvisable that the examiners

should deal with the fees in any way. It is said that in the case of certain examiners, candidates are referred to tutors, who for a consideration will coach a candidate for a few days prior to the examination. In this and in other ways there is room for dissatisfaction with the present system, so long as there are individual permanent examiners with discretionary powers of any kind. With regard to the second point, and the suggestion made by the Deputy Minister that the papers are passed upon in Ottawa rather than by the individual examiner, explanation was made during the interview to the effect that the Association's objection was largely aimed at the exercise of discretionary powers by the individual examiner in the oral part of the examination which it was admitted was dealt with exclusively by the individual examiner, and that in the second place it is not strictly correct to say that the candidates' answers are passed upon in Ottawa, the fact being, it appears, that the individual examiner makes a report upon the examination, which report is the subject of consideration at Ottawa, the views of the individual examiner receiving considerable weight in this manner.

The suggestion embodied in the above resolution seems one which is not open to serious objection, and would at least remove from the field of discussion the various items of dissatisfaction which have given rise to a fairly unanimous impression among vessel owners that the examinations are not conducted just as they should be.

It has been suggested that if the Department could devise some method of establishing or assisting schools for the instruction of candidates in some of the principal ports on the lakes, it would improve the situation a great deal and prevent the shortage of available material in the way of masters and mates which sometimes threatens when too many of the best men seek employment in the larger field and better paid positions on the United States side of these waters.

The further suggestion has been made and very special attention is called to it, that examiners for certificates on the inland waters do not necessarily require to be men of salt water experience. The conditions on the lakes are very different from those on the ocean, and a master's duties are largely the duties of a pilot so far as navigating his ship is concerned. Examinations for the lake and river trade should, therefore, be confined to questions which relate exclusively to the requirements of navigation in these waters.

Handling Vessel Lines at Canal Entrances.

On the Dominion Marine Association's urgent requests from time to time men have been provided by the Department of Railways and Canals at certain lock entrances on the St. Lawrence canals to receive and handle the lines of approaching vessels. Some time since the Association requested that men be provided at the entrances of all the St. Lawrence canals, at lock 4 in the Soulanges canal and at Cote St. Paul in the Lachine canal, but this request was not acceded to. It has now been repeated by the Association and it is most important that the request be granted. It is often difficult for a vessel to make a landing and get a man ashore for the purpose of handling the lines, and this is particularly difficult under adverse conditions of wind and current. More than one life has been lost in the efforts to get a line ashore, and that in the interests of the safety of vessels and of lock entrances, provision should be made for men to handle lines at all the points mentioned.

Important Official Ruling on the Coastwise Passenger Trade.

The United States Attorney General, G. W. Wickerham, has given an opinion on the subject of the coastwise passenger trade which is of great importance to Canadian vessel owners and which confirms in every particular the argument presented to the U.S. Department of Commerce and Labor by the Dominion Marine Association's counsel, F. King, when the first trouble arose in August, 1911, and which he renewed at Washington in December before Acting Secretary Cable and the Commissioner of Navigation. Subsequently, at the request of the Department of Commerce and Labor, Mr. King put his views in a brief, which was forwarded to the Attorney General, and he has since received letters from the Department of Commerce and Labor stating that the position its officials took last August, and which threatened to interfere very seriously with international passenger travel all along the border, will be reconsidered and that, unless Congress makes some change in the law, the future treatment of the matter by the department and by collectors of customs will be governed by the Attorney General's opinion. Mr. King has also been informed that in view of the Attorney General's opinion bill 20626 introduced in the U.S. House of Representatives in the interest of Pacific coast lines will be withdrawn and that they will not attempt any modification of the present law. It was proposed to exempt the Great Lakes and St. Lawrence River from the operation of the bill, but the present news will be gratifying all the same, particularly to British Columbia coast vessel owners. As the Attorney General's opinion referred to is of great importance we give it in full as follows: It is addressed to the Secretary of Commerce and Labor, under date of Feb. 12.

"I have had under consideration your letter of Dec. 27, 1911, in which you say that in the course of the administration and enforcement of the coastwise shipping laws of the U.S. your Department finds it necessary, prior to the opening of navigation on the St. Lawrence River and the Great Lakes during the coming season, to deal with a situation brought to its attention toward the close of the season last past, and to issue appropriate instructions to collectors of customs and other officers concerned.

"Your letter states that 'a custom has grown up within recent years on the St. Lawrence River and the Great Lakes, whereby foreign vessels of Canadian ownership have been permitted to take on passengers at U.S. ports to transport them on excursions through domestic and foreign waters, returning them to the port of departure. Sometimes these vessels clear from the American port for a Canadian port, in which case the vessel usually makes a call at the latter port long enough to obtain clearance therefrom for the former. When such calls are made at a Canadian port, the passengers are in some cases permitted to land for a short time, and in other cases no such opportunity to land is afforded; but in either case the voyage is practically continuous and the passengers virtually remain with the vessel until her return to the port of departure in the U.S. The traffic in question is essentially domestic, since it originates and terminates in the U.S., and is supported by the American public, and is only foreign in so far as it passes through foreign ports or waters and is permitted to move in foreign vessels.'

"Upon this state of facts you request my opinion—whether the transportation by foreign vessels of passengers taken on board in the U.S. under the circumstances mentioned constitutes a violation of sec. 8 of the Act of June 19,

1886, as amended by sec. 2 of the Act of Feb. 17, 1898.'

"The amended statute provides: 'Sec. 8. No foreign vessel shall transport passengers between ports or places in the U.S., either directly or by way of a foreign port, under a penalty of \$200 for each passenger so transported and landed.'

"The legislative history of this statute is set out in the opinion rendered you under date of Feb. 26, 1910, in the case of the *Cleveland*, and need not be repeated.

"It is manifest that the passenger transportation referred to by you—excursions from U.S. ports through domestic and foreign waters, sometimes touching at a foreign port, but returning to the port of departure—does not come within the terms of the statute, which deals only with transportation 'between ports or places in the United States, either directly or by way of a foreign port.' These words imply a transportation beginning at one port or place in the U.S. and ending at another port or place therein. So, too, the clause imposing a penalty of \$200 for 'each passenger so transported and landed' implies landing at the port or place of destination.

"You state, however, that 'the traffic in question is essentially domestic, since it originates and terminates in the U.S., and is supported by the American public, and is only foreign in so far as it passes through foreign ports or waters and is permitted to move in foreign vessels.' But this is not sufficient to bring the transportation referred to within the Act. I know of no authoritative rule of construction which will permit a penal statute to be construed to cover cases not within its terms simply because it may be identical, or substantially identical, in principle with those embraced in the Act. The remarks of Mr. Justice Story in *Taber et al. vs. United States*, where it was held that a whaling voyage was not a foreign voyage within the meaning of the statute, are very appropriate in this connection: 'And it is not decisive in a case of this nature, that the mischiefs to be guarded against and remedied by the Act of 1803, are equally as applicable to whaling voyages, as to voyages to foreign ports for the general purposes of trade. Where a penalty, or a provision in the nature of a penalty, is to be enforced, the general rule is, that the statute is to be construed strictly; and the language is not to be enlarged to cover a case standing upon similar grounds, if the ordinary interpretation of the terms would not reach it.'

"In the recent case of the *United States vs. Baltimore and Ohio Southwestern Rd.*, the appropriate rules of statutory construction are thus sufficiently stated by Mr. Justice McKenna, in delivering the opinion of the Supreme Court: 'If, however, there be no ambiguity, the words of the statute are the measure of its meaning. If there be ambiguity, the character of the statute determines for a strict or liberal construction. A criminal statute is strictly construed. Courts are not inclined to make constructive crimes.'

"In the case before me, I am unable to perceive any ambiguity in the statute; certainly none which warrants the construction suggested by the statement that 'the traffic in question is essentially domestic, since it originates and terminates in the U.S., and is supported by the American public.' The answer to this suggestion is that Congress in the statute in question was not dealing with that particular kind of traffic, even if it may properly be classed as domestic, but with transportation of passengers 'between ports or places in the U.S., either

directly or by way of a foreign port.' In other words, it was legislating with respect to what is generally termed coastwise traffic, whereas the transportation referred to by you is not coastwise, but outward, into foreign waters or to a foreign port. I am unable to perceive now the fact that passengers so transported are returned to the port of departure in the U.S. bring the case within the statute.

"In the case of the *Cleveland* supra, it was held that a tourist voyage around the world on a foreign steamship, the passengers embarking at New York and landing ultimately at San Francisco, was not within the Act in question. It was said in that connection that the return of the passengers to the port in California was a mere incident of the object of the voyage, and, so far as the nature of the commerce was concerned, 'precisely the same as if, after a voyage to Japan, they had been returned over the same route and relanded in New York'—the very case now presented and which was there considered as clearly not within the statute. In the case of *Cleveland*, the transportation came within the letter of the statute, since the tourists were actually transported from one port in the U.S. to another port therein, via a foreign port or ports. But that case was held not to be within the spirit of the statute, because the real object of the voyage was the trip around the world. In the present case the transportation referred to—from a domestic port to a foreign port or into foreign waters, and return—is, in my judgment, neither within the letter nor the spirit of the law."

Specifications of Steel Hopper Scows.

The following are the principal particulars of two steel hopper scows of 150 yards capacity each, for which the Dominion Department of Public Works received tenders to March 11:—Length of hull, inside of fenders, 75 ft.; beam, moulded, 26½ ft.; depth, moulded, 8¼ ft.; length of each hopper, 16 ft.; breadth of each hopper at top, 18½ ft.; breadth of each hopper at bottom, 8 ft. They are intended for use at Pictou, N.S., and are to be delivered there.

They are to have steel hull and wooden doors, fender strakes and hopper linings, to have three hoppers or pockets each, four watertight bulkheads, rounded bilges and the bottom at ends is to be carried up to deck in a circle. The material to be open hearth steel, ship quality, tested at the mill in accordance with English Lloyd's rules. Rivets to be of steel, soft and ductile, and must stand the usual Lloyd's tests.

The scantlings of the hull will be as follows: side frames, 3½ ins. x 3 ins. x 7.9 lbs.; angles, spaces, 24 in. centres; end frames, same size angles, spaced, 24 in. centres; deck beams, 4 ins. by 3 ft. by 8.5 lbs.; angles, floors, 5 1-16 ins. by 3 5-16 ins. by 13.9 lbs.; Z bars. The shellplating, duckplating and hopper plating all to be 12.5 lbs., excepting the bilge end plates, which will be 15 lbs. The bows from frames 3 and 35 to ends and all around ends a 12.5 lbs. reinforced plate will be fitted outside of snen plating, forming a pocket between it and snell, and this pocket will be filled with cement. There will be two doors to each pocket, made of 8 in. thick maple. Hinges will be solid, without links. Doors tight enough to hold the finest sand without leakage.

On each hopper will be fitted on alternate sides a modern hand lifting mechanism so as to close the doors, wind up chains 1¼ in. and door bridles 1 in. The scows will be provided with anchor davit, anchor, chain, ladders, double headed towposts, checks, etc., and with improved chainhoist.

Earlier Opening and Continuous Operation of the St. Lawrence.

Among the things brought before the Minister of Railways and Canals during the Dominion Marine Association's annual meeting in Ottawa recently was the necessity for an earlier opening of the St. Lawrence canals and also their continuous operation during the season. It was urged that the special circumstances this year render it much more desirable than usual that the St. Lawrence canals be open for navigation at the earliest date at which cargoes can come down and get through the Welland canal. It was pointed out that heretofore the Department has reserved practically the whole of April for making repairs in the lower canals, and that while navigation may open as early as April 15, 20 or 25, vessels are debarred from entrance into Montreal harbor from the west until May 1. This year there are some 6,000,000 bush of grain already afloat at Canadian Lake Superior ports waiting for the opening of navigation. Ice breakers have been used at Fort William to bring boats alongside of elevators for loading, in order to relieve the elevators and have the cargoes ready on board. If navigation at Sault Ste. Marie and the St. Mary's River happens to be open shortly after the middle of April, it will cause great hardship and inconvenience if the St.

substantial part of this being imposed for the extra risks of the upper St. Lawrence River. Montreal harbor facilities are such that one can find in them a large part of the reason for the export of Canadian grain via Buffalo. Last season lake freighters were so seriously delayed in Montreal harbor through lack of room in the elevator, which was being used for storage rather than for transshipping purposes, that some owners preferred to charter elsewhere whenever possible. It was submitted that the imposition of the further handicap in the way of closed canals was extremely discouraging.

It was pointed out that the canals are now open from and after the first or second Sunday in September in each year to accommodate the fall traffic, and that they remain open practically until daylight and after dark on Sundays throughout the whole year. It was, therefore, argued that so far as the principle of Sunday observance is concerned consistency might call for continuous opening or for complete closure from midnight to midnight throughout the year.

In answer to the suggestion that the Lord's Day Alliance were the objecting parties, it was stated that the effect of the present system is simply to tie vessels up at some point along the canal or river bank with no corresponding advantages whatever to the crews. It is understood that the Lord's Day Alliance has based its recent arguments strictly

the Canadian Lake Protective Association.

It was also urged that under the conditions which have prevailed for the last year or two, great inconvenience has been occasioned in the Department, as well as to vessel owners, when necessity has arisen for the making of urgent pleas that the canals should be open on certain Sundays to relieve the congestion of traffic due to accidents or other special conditions. All this would be obviated if the Association's request were granted.

The Association's counsel, F. King, has received the Minister's promise that he will make every effort to facilitate an early, and, if possible, a continuous operation of the canals during the season.

Thousand Island Steamboat Co's New Vessel.

The steel passenger steamboat, which is being built at Toledo, Ohio, for the Thousand Islands Steamboat Co., which has its headquarters at Kingston, Ont., is illustrated on this page. She will be 172½ ft. long over all, 32 ft. beam moulded, and 9½ ft. deep from top of deck beams at side of hull to base line. Her draught will be about 6½ ft. She will be of the observation type, with the dining room on the main deck aft, the cabin upon the promenade deck, and

Thousand Islands Steamboat Co's New Steamboat.

Lawrence canals are not ready for navigation at a suitable date immediately thereafter. It was urgently recommended that provision be made this year for opening these canals at the earliest date possible, having regard to the time at which boats may pass through the St. Mary's river.

It was also urged that the closing of the Welland and St. Lawrence canals for part of every Sunday during part of the season of navigation constitutes a very grave difficulty and hindrance to navigation, placing the Canadian route under a serious handicap with reference to United States competition, and rendering it very difficult indeed for most of the lines to live up to any kind of schedule time. It was pointed out that Sault Ste. Marie canal was opened continuously in order to meet the competition of the adjoining U.S. canal. It was also shown that the tolls were removed from this canal for the same reason that for years tolls were charged lower down on the route, while none were charged at Sault Ste. Marie. In 1903 this anomalous condition was changed and the canals to tide water were rendered as free as the ocean. It was urged on behalf of the association that the arguments which prevailed at that time applied with equal force to the present petition. Attention was called to the serious handicaps under which the St. Lawrence route already labors. A vessel pays 8% upon the insurable value of her hull to reach Montreal harbor, a

upon a claim for the consideration of employees being entitled to one day off in the seven. It is submitted that the crew of a vessel thus tied up have to do extra work at night in consequence and gain no special advantage. It is also a question whether they have to work much harder while a vessel is canalling than when she is tied up. As to the lock men, canals are now electrically operated and little or no labor is involved in putting a vessel through. The circumstances in any event justify employment of extra men or provision for extra pay.

It was pointed out that the Lord's Day Act itself contemplates the very thing for which the Association is asking. For instance, sec. 3, sub-sec. (h) provides for the continuance to their destination of trains and vessels in transit when the Lord's Day begins and for work incidental thereto. Sub-sec. (g) provides for the conveying of travelers and work incidental thereto. It is submitted that under these and other sub-sections such vessels should enjoy the same freedom as passenger trains and that similarly freight boats should enjoy the same freedom as freight trains.

It was urged that the closing of the canals during certain hours on Sundays leads to violation of the rules and undue risks in the effort to race a boat through and prevent her being tied up. There were instances last year of racing such as this which were condemned by

the hurricane deck also available for passengers. Her appointments will be modern and adapted for the regular and excursion traffic in connection with the New York Central Rd., via Clayton, N.Y., and with capacity for 1,000 passengers. She will be equipped with twin screw propellers driven by two compound engines, cylinders 15 and 30 by 20 ins., 210 revolutions a minute. The engines will develop 1,000 h.p., 500 h.p. each. There will be one independent jet condenser; two Scotch boilers 12½ ft. diameter, 10½ ft. long, 1,240 horse power; four 45 in. inside diameter furnaces; allowed 150 lbs. steam; 3,246 ft. heating surface, 82½ sq. ft. grate surface. Hot air forced draft to insure best known economy. She will be equipped with a powerful searchlight for service in evening trips among the Islands, and her speed will be about 18 miles an hour. She is expected to be placed in service early in June. She will have capacity for 1,000 passengers.

The company offered a prize of \$25 for the most appropriate name for the new boat, the replies to be mailed by April 1, it being stipulated that the name be suggestive of the route and the territory to be served.

During Jan., one fatal and five non-fatal accidents were reported in connection with the navigation of Canadian waters. The fatality was the result of a fall.

Grand Trunk Pacific Steamships Dock at Vancouver.

Shortly after the advent of the G.T.P. steamships on the Pacific coast the officials realized the importance of securing terminals of their own in such an important centre as Vancouver, and after considering a number of propositions, finally decided, in the latter part of 1910, on the old Albion Iron Works site and foreshore facing it, on which they held an option. This property, before its acquisition by the G.T.P.R., presented the usual uninteresting and dilapidated, not to say disreputable appearance generally associated with discarded and early pioneer buildings. This the new owners soon started to demolish and improve, with the result that today at the foot of Main St. is to be seen one of the most modern and convenient docks on the Pacific coast. The work has been ably carried on under the supervision of Capt. C. H. Nicholson, Manager of G.T.P. Steamship Co., and P. T. Lucas, Resident Engineer of the company, and it is expected that operations will continue until another cargo pier is built for oceangoing steamships of the largest type at the eastern end of the property and a handsome terminal building is erected on the site facing Main St. The water terminals are at the foot of one of the main thoroughfares and in the centre of the city's population and business district, adjacent to the North Vancouver ferry.

The facilities afforded the travelling public and shipping merchants at this new wharf will be excellent. Passengers will be enabled to reach the steamships from the sidewalk of the main street of the city by a wide, covered overhead walk, electrically lighted, extending over the railway tracks along the approach to the pier into a commodious waiting-room, and thence over the warehouse to the passenger landing stages, which are reached by easy inclined approaches from the overhead walk and carried on pontoons, designed to be always at the same level as the boat's gangway. Passengers are therefore afforded the comfort of a clear dry approach from the street to the ship's deck, without the annoyance and interruptions of vehicular and rail traffic, also being entirely devoid of the dangers of grade railway crossings. The principal entrance to the dock for vehicles and drays is by the Gore Ave. crossing, and there is also a private entrance from Alexander St., a little west of Main St.

Off the waiting-room are the general offices of the G.T.P. Steamship Co. and ticket office, which are very commodious and well laid out and have a strikingly fresh and bright appearance.

The dock is about 870 ft. long from shore line to outer end, and for 350 ft. from the shore is 280 ft. wide. From this part a pier 100 ft. wide extends to the outer harbor line, giving a slip on the west side 515 by 60 ft., and on the east side a slip 550 by 130 ft. With the exception of the shore end, where the dock will be filled in, creosoted bearing piles are used throughout, the specifications for which called for piles to be first growth fir, a minimum of 9 ins. in diameter at the top and 14 ins. at the butts, penetration of oil to be 1 to 1½ ins. under a 12-lb. treatment. The piles have been spaced at distances varying from 10 ft. centres at inner to 3½ ft. centres at outer end, depending on the penetration and depth of the water, with special provision for piles to carry the spur track. The dock is strongly braced, with brace piles at every bent, driven on a batter, and in addition is braced both laterally and longitudinally with 6 by 12 in. creosoted bracing; also a system of diagonal bracing between the caps is

used. On the east side of the dock is a spur track from the C.P.R., depressed so that the car floor will be on a level with the warehouse floor. The dock is equipped with six adjustable slips, three on each side, worked by a worm, four of which are 11 ft. wide and two 8 ft. wide, railway tracks on east side being carried over slips by means of bascule bridges. At each slip is located a power plug for use of electric conveyors. Fender piles of tight bark fir are driven two at every bent, fastened to 12 by 12 in. stringers by means of ¾ in. bolts; they are spaced 5 ft. apart at sea end and clusters of seven were driven at outer corners and lashed with ¾ in. steel cable to act as dolphins.

Space has also been allowed for fuel oil tanks and pump house, which are now in process of erection. These consist of one storage tank, 76 ft. in diameter and 40 ft. high, with a capacity of 32,000 barrels, and one measuring tank 16 ft. in diameter and 24 ft. high of 1,000 barrels capacity, from which a 6-in. pipe line will lead along the base of the dock to the ship's side for the vessels supply of fuel oil, so that in future the regular passenger steamers of the line on which the oil burning system has been installed, and fuel oil tanks built, instead of suffering the delay of three or four hours to call at a coal port en route between here and Prince Rupert as has been the custom since the inauguration of the service, to the discomfort of everybody on board, will be enabled to receive their full supply of fuel for the round trip while lying at the Vancouver dock, and this process will be accomplished simultaneously with the freighting, loading and discharge of passengers and baggage.

On the west side of the approach to the pier, a carpenter and machine shop 34 by 140 ft. is being built, for which the machinery is already on the ground ready to install, which when completed will afford facilities for light repairs and general overhaul of the steamships of the line.

Changes Suggested in Certificates for Masters of Tow Barges.

It has been suggested to the Minister of Marine by the Dominion Marine Association, that a lower grade of certificate should suffice for the master of a barge which is used only as a tow barge. Except in the case of a broken tow line the sole duty of the barge is to follow the towing steamer, and the technical skill required in the case of an ordinary mariner is never exercised. Under the present system only the low class of men holding full certificates engage in services on tow barges, and they are not at all fitted for the service in question. The man who is required is one without a fund of technical knowledge, and yet at the same time skilled in the special business of a tow barge master, which involves, among various other things, skill in the way of managing his lines and his boat with reference to the towing steamer.

The only technical skill required from the master in the way of navigation would be such as emergency might require in the case of a broken tow line. For instance, he might have to know enough to hoist his sail and get the boat to anchorage. This, however, is a very limited matter.

The suggestion made by the Association is that its members would be able to procure splendid men for their services on tow barges, better qualified, in fact, than the material now available if a grade of certificates were permitted which would not require the technical knowledge now required by a master mariner on the great lakes.

Additional Dry Dock at Collingwood.

The specifications for the additional dry dock which the Dominion Government has entered into a contract to subsidize, at Collingwood, Ont., will be built in what was formerly known as the town slip, at the bottom of Hurontario St., and will be of the following dimensions—length over all, 420 ft.; width at coping level, 104 ft.; width at bottom of dock, 100 ft.; depth on the sill at low water, 16 ft. The construction will consist of a substantial earth cofferdam with a toe of concrete bags and stone on the lake side, the removal of the existing walls of the town slip, including masonry, crib work, rock and earth excavations, the excavation to the proper depths of the area occupied by the masonry, the dock proper, the entrance walls, wells, etc., masonry work, the fixing in place of all bottom timber, keel blocks, bilge blocks, entrance works, partly of concrete and partly of crib work with concrete superstructure, a caisson gate with a clear opening of 93 ft., the removal of the cofferdam and of all filling between entrance walls to a depth of at least 18 ft., the erection of a gantry crane with proper steel frame for elevated tramway, equipped with electric hoist and conveyor, electric lighting, excavation and construction for the laying of 46 in. piping to connect the dock with the existing pumping station, enabling the dock to be pumped in less than two hours, the providing of a locomotive crane, air pipe lines, air pneumatic tools, water pipe lines, air compressors, and generally all that may be required for repairing vessels. The whole of the concrete used is to be composed of one part of Portland cement, two parts sand and three to four parts of stone broken to pass through a 2-in. ring. The walls are to be 8 ft. wide at bottom and 3 ft. wide at top. The concrete bottom to be not less than 2 ft. and to conform to the rock foundation. The work will be done by day labor under the supervision of an engineer named by the Public Works Department, and carried out according to plans deposited with the Department, the whole to be in working order by Dec. 15. The subsidy granted is \$9,208.96 a year for 20 years, being 3% of the cost of construction.

Stranding of s.s. Celtic.

The following judgment was delivered recently at Vancouver, B.C., by Capt. Jas. Gaudin, agent, Marine Department, concurred in by C. Eddie and J. Stewart, as nautical assessors, re the stranding of the s.s. Celtic on Noble island in the Goletas channel, Oct. 5, 1911, while en route from Vancouver to Prince Rupert and way ports.

The court finds that safe and proper compass courses were not set and steered from Masterman island, and that there was no allowance made for deviation, leeway or tidal stream; that a good and proper lookout was not being kept on board, and that the vessel was not navigated with seamanlike care by the first mate, S. Carlson, who assumed responsibility, notwithstanding his orders to call the master on any change of weather or doubt as to his position. The court also finds that his assertion regarding the inefficiency of the red sector of Scarlet Point light is not substantiated by other evidence, and suspends his certificate as mate of a passenger steamer in the coasting trade for four months from Dec. 13, 1911. It also finds that the master, A. N. Dick, has to some extent lost sight of the responsibilities of a shipmaster in depending too much on what he was told of the mate's abilities, and entrusting him with the navigation

of the vessel in such narrow waters; he is admonished to be more careful in future. The attention of the Marine Department is called to the unsatisfactory custom of vessels being allowed to proceed to sea without a properly situated and adjusted compass, whereby bearings can be taken all round, and disapproval is expressed at the slipshod manner in which the Celtic's log book was kept.

Plans for Welland Canal Enlargement.

An Ottawa press dispatch of Mar. 23 says:—"Engineers who for the past three years have been engaged in surveys of alternative routes for the new Welland Canal have submitted their report to the Minister of Railways and Canals, and J. L. Weller, superintendent of the canal, who had charge of the surveys, has been here in connection with the matter. Several propositions were looked into, careful surveys being made, test pits sunk and calculations figured out in connection with each.

"The plan which has been recommended by the engineers and accepted by the Government provides for the widening and deepening of the present canal from Port Colborne to a short distance north of Thorold, where the new cutting five miles long will start and run west of the present canal, crossing it and the G.T.R. en route and entering Lake Ontario at Ten-Mile Creek, three miles east of Port Dalhousie.

"The present canal will be deepened from 14 to 25 ft. in the stretches and 30 ft. in the locks and will be widened from 150 to 200 ft. The new section will be of similar dimensions. A very important feature of the work is that by reason of the dredging and deepening the number of locks will be reduced from 22 to 7. This, it is calculated, will save eight hours in the time now required for carrying boats through from Port Colborne to Port Dalhousie and is obviously a large consideration in favor of the project. The total estimated cost is \$45,000,000. The plans provide for the work being carried ahead in such way that there will be a minimum of interference with navigation. It will be done, one side at a time, allowing the other side for the passage of boats."

Prosecution of a Mate on his Application for Master's Certificate.

The Court of Appeal gave judgment in Toronto, Mar. 19, in the case of the *King vs. Gordon S. Wright*, which was started by the senior County Court Judge of the County of York. Wright was charged with having on Mar. 12, 1910, at Windsor, Ont., fraudulently made use of a certificate of service to which he was not justly entitled, contrary to the Canada Shipping Act, and that he made a false representation for the purpose of obtaining a certificate of competency contrary to the Act. Wright was a mate on inland waters, and made application before a Government examiner at Windsor for master's papers. The misrepresentation which was charged arose out of the fact that the Government recognizes only one kind of mate. Wright held mate's papers, but served as second mate for a while, and then, for a few months immediately previous to his application to the examiner, served as first mate. In his certificates of service he stated that he had served as mate for over a year.

The County Judge held that there is nothing in the Act to indicate that service as a second mate is not worth as much as service as a first mate for the purpose of acquiring experience in order to become a master, so long as first mate papers are held during all the time. Both

kinds of mates exist in reality, although not recognized by the Act. The County Judge found him not guilty, but at the solicitation of the Crown granted a reserved case on the questions (1) Was I right in holding that the use made by defendant of the document was not an offence under the first count; (2) Upon the evidence was I right in law in such a false representation as to constitute an offence under the second count.

The Court of Appeal answered the questions in favor of defendant and sustained his acquittal.

The contractors are Norton Griffiths and Co., Ltd., Montreal and Vancouver, of which W. Burton Stewart is Managing Director and P. R. Warren, Chief Engineer.

The illustration, which is reproduced from *The Sphere*, London, Eng., doubtless gives a good general idea of the harbor works, but there are some errors in the view of the surrounding country. The city shown as "Salisbury" is Moncton, N.B., the Intercolonial Ry. headquarters, "Port Duchene" should be Point du Chene. "Quaco" should be

Bird's Eye View of Harbor Works at St. John, N.B., as they will appear when completed. Reproduced from *The Sphere*, London, Eng.

The Harbor Works at St. John, N.B.

The illustration on this page shows the extensive nature of the harbor works to be constructed at Courtenay Bay, St. John, N.B., by the Dominion Government, with some of the contiguous territory.

The contract provides for a 4,600-ft. breakwater, 9,900 lineal feet of quay walls, a Dreadnought dry dock, 1,000 ft. long, built to the latest British Admiralty specifications, and the reclamation of large tracts of land.

shown as St. Martins, the terminus of the St. Martins Ry. The starting point of the line to Montreal is incorrectly shown.

The Dominion Public Works Department will receive tenders to Apr. 9 for the machinery of a 3½ yd. dipper dredge.

G. W. Stephens, Chairman, Montreal Harbor Commission, has been appointed to represent the Dominion Government at the International Association of Navigation Congresses at Philadelphia, Pa., May 23-28.

Coast, Lake and River Officers for 1912.

The following appointments made by the principal navigation companies engaged in Canadian navigation, for their various steam vessels and tugs for the current year, have been officially reported to The Railway and Marine World by the managements. In the first column is given the name of the vessel, in the second, that of the captain, and in the third, that of the chief engineer.

Canadian Notes to Mariners.

The Department of Marine has issued the following:—

10. Feb. 15. 22. Nova Scotia, Cape Breton island, east coast, Great Bras d'Or, off McNeill beach, Seal reefs, red conical buoy to be replaced by gas buoy. 23. Nova Scotia, Cape Breton island, east coast, Great Bras d'Or, Man of War point, lighthouse established.

11. Feb. 20. 24. British Columbia, Vancouver island, west coast, Quatsino sound, Entrance island, hand fog horn at light station. 25. British Columbia, Strait of Georgia, sandheads of Fraser river, change in position of gas and whistling buoy, change in position of lightship.

12. Feb. 23. 26. Quebec, Chaleurs bay, Bonaventure river, wharf increased in length, light moved to end of wharf. 27. Quebec, Saguenay River, Riviere du Moulin, front range light, correction. 28. Quebec, River St. Lawrence, channel between Hare island and Hare island south reef, change in position and color of buoy.

13. Mar. 4. 29. Ontario, River St. Lawrence, Wolfe island, Quebec point, lighthouse rebuilt. 30. Ontario, Lake Ontario, Welland canal entrance, Port Dalhousie, change in characteristic of back range light. 31. Ontario, Lake St. Clair, Mitchell bay, range lights established.

14. Mar. 6. 32. Ontario, Georgian bay, Nottawasaga island, period of flashes of light. 33. Ontario, Lake Huron, north channel, Badgeley island, range lights established.

15. Mar. 7. 34. New Brunswick, Bay of Fundy, Chignecto channel, Fort Folly point, change in color of lighthouse. 35. Nova Scotia, south coast, entrance to Halifax harbor, Sambro outer bank,

change in position of light ship. 36. England, west coast, Bristol channel, King road, new range lights established. 37. England, south coast, Spithead approach, St. Helens fort, intended alteration in character of light.

16. Mar. 18. — 38. New Brunswick, River St. John, Hampstead, light pole replaced by tower. 49. Nova Scotia, Cape Breton island, east coast, Sydney harbor, southeast bar, change in position of lighthouse. 40. Canada, Hudson Bay, Port Nelson, March point, description of beacon.

17. Mar. 20.—41. Nova Scotia, Bay of Fundy, Minas basin, Cobequid bay, Spencer point lighthouse, correction. 42. Nova Scotia, southwest coast, intended change in position of Blonde rock gas and whistling buoy. 43. Nova Scotia, George bay, off northern entrance to Gut of Canso, whistling buoy established. 44. Quebec, Restigouche river, Oak point gas buoy, change in color of buoy, change in characteristic of light. 45. Quebec, Gulf of St. Lawrence, Anticosti lightship, characteristic of fog alarm.

The Loss of the s.s. Renwick.

Following is a summary of the judgment in the matter of the total loss of the Renwick Co.'s s.s. Renwick, operated by the Port Hood Richmond Ry. Coal Co., occasioned by a collision with the s.s. St. Pierre Miquelon, off Country Harbor, N.S., Dec. 27, 1911, delivered by L. A. Demers, Dominion Wreck Commissioner, and concurred in by Capt. N. Hall, Halifax Port Warden, and Capt. J. W. Harrison, Superintendent, Furness, Withy and Co.

The court having carefully weighed the evidence, which is exceptionally contradictory, finds that the s.s. Pierre Miquelon is alone responsible for the collision resulting in the total loss of the s.s. Renwick and three of her crew. Capt. Lacerdair, of the St. Pierre Miquelon, was bound, according to the elementary laws of humanity, to lower a boat and proceed to the rescue as well as make thorough searches in the vicinity of the wreck, and his unpardonable neglect in this respect will be brought to the attention of the French consul in order that he may advise his Government. The captain and second officer of the s.s. Renwick are exonerated from all blame in so far as the collision itself is concerned, but the court cannot overlook the fact that very little effort was made to ascertain if all hands had mustered before leaving the wrecked ship, and in view of this neglect and his subsequent action in not even attempting to search for bodies, Capt. Chapman stands censured, and Chief Engineer E. Meehan, for similar neglect in regard to his staff, is warned that in a like instance he should assure himself that the men under his charge are out of danger.

The Necessary Carrying of Men on Tugs and Wrecking Steamboats.

The present law re carrying men on tugs and wrecking steamboats without passenger licenses is continually being broken, and necessarily so in a great many cases where boats without passenger license require to carry men other than the master and crew. An instance may be given of a tug boat which has disposed of its raft of logs and requires to take back to the starting point the men who worked the raft during its progress. If these men are not carried back by the tug it would sometimes be necessary to pay railway fares, etc., for them. Another case is that of the ordinary wrecking vessel which takes extra men to the scene of disaster to engage in the work of rescue, lighter-

ing or other operations, and has no license to carry men other than its actual crew.

It has been suggested to the Minister of Marine by the Dominion Marine Association that the definitions of "passengers" and "passenger steamboats" in the Canada Shipping Act should be limited by the re-insertion of the words "carried for hire," so that if a party has not paid for his passage he will be on the same footing as a member of the crew, and in this way, if no passage money of any kind is paid, the vessel will be exempt from the ordinary requirements applicable in the case of a passenger steamboat. This would be perfectly fair to all parties.

If, on the other hand, the Minister feels that protection must be afforded to the men other than the crew who permit themselves to be carried, the members of the association would not consider it unreasonable to have provision required for lifeboat accommodation, and would also be content with certain limited requirements in other respects such as might be considered absolutely necessary. Provision should, however, be made for cases of emergency in order that men might be carried irrespective of the requirements of the law where the safety or protection of life or property required such carriage to take place.

Atlantic and Pacific Ocean Marine.

The Russian East Asiatic Steamship Co.'s s.s. Lituania arrived at Halifax, N.S., Mar. 3, from Libau. This is the first steamship sent to Canada by this company, which proposes to operate a fortnightly service all the year round.

It is reported from Kingston, Jamaica, that the C.P.R. is negotiating for the establishment of a fast steamship service between Canada and Jamaica, and asking for a subsidy of \$300,000 a year, half from Canada and half from Jamaica.

With reference to the appointment of F. S. MacGregor as Assistant General Passenger Agent, Allan Line, Toronto, as mentioned in our last issue, we are officially advised that Mr. MacGregor continues also to act as Travelling Agent for Ontario.

The Dominion Government recently presented R. G. Richards, master of the British s.s. Glenmay, with a silver cup, in recognition of his services in rescuing the crew of the Lunenburg, N.S., schooner Renown, which was abandoned at sea Oct. 5, 1911.

The Dominion Government has continued the arrangement with the Allan Line for the service between Montreal and Havre, France, for the forthcoming season. It is reported that the company will this year operate the steamships Ionian, Sicilian, Corinthian and Lake Erie in this service.

Furness, Withy and Co.'s s.s. Hoche-laga, recently launched at Middlesbrough, Eng., of which mention was made in our last issue, will, on completion, together with her sister vessel Lingan, also under construction at Middlesbrough, be chartered to the Dominion Coal Co. Both vessels are being built specially for the coal trade.

The Canadian Northern Steamships, Ltd., s.s. Royal Edward was delayed a week at Bristol, Eng., recently owing to the coal strike throughout Great Britain. The s.s. Royal George, which has been laid up for the greater part of the winter, has been thoroughly overhauled, and it is anticipated that her speed will be materially increased this season.

An official of the Japanese Government railway bureau, who arrived at Victoria recently, is reported to have stated that unless a sum, practically

equal to the value of the hull, be spent on the C.P.R. s.s. *Empress of China*, which was wrecked off the Japan coast some time ago, and which is now docked at Uraga, it will be impossible to make her seaworthy. In his opinion, after an examination of the hull, the only course is to scrap her, as the engines appear to be the only parts which are not damaged to any extent.

In connection with the proposed fast service between Canada and Great Britain, which it was recently stated in England would be a joint scheme in which the principal steamship companies in Canada and British capital would be concerned, Sir Thos. G. Shaughnessy, on his return from the southern States, Mar. 10, is reported to have stated in Montreal that the C.P.R. would be connected with the scheme in its entirety, or not at all, and that although favoring Halifax as a winter port, he considered that the St. Lawrence route should be used in the summer.

The Donaldson Line s.s. *Letitia*, recently launched at Greenock, Scotland, is of the following dimensions—length between perpendiculars, 470 ft.; breadth, 56 ft. 8 ins.; depth, moulded, 39½ ft. to shelter deck. She has been designed chiefly for the immigrant service, and is of the highest class at Lloyds. The accommodation for second class passengers is arranged on the bridge, shelter and upper decks, for about 300. The third class passenger accommodation, for about 600, is arranged on the shelter, upper and main decks. The machinery consists of two sets of triple expansion engines, driving two screws.

At the recent annual meeting of the Union Steamship Co. of New Zealand, at Dunedin, the chairman, in referring to the Canadian service, said that it may be looked upon as an established route, and having regard to the enormous growth of the population in Canada, it was necessary to look to the future, and it had been decided to build a large passenger vessel of the highest class for the mail service. The company had placed a contract for the construction of a vessel at Clydebank, Scotland, the dimensions of which would be—length, 522½ ft.; beam, 66 ft.; depth, 37½ ft.; gross tonnage, about 13,500 tons. She will have accommodation for 278 first class, 224 second class, and 202 third class passengers, and will be equipped with combined reciprocating and turbine engines for a speed of 17 knots an hour. Four of the boilers will be fitted for oil burning and six for coal burning, and the bunkers and ballast tanks will be built with a view to using oil entirely if the experiment with the four boilers proves satisfactory and oil is obtained at a reasonable cost in Australia or en route. She is expected to be ready for delivery in December, and should be placed in service early in 1913.

Maritime Provinces and Newfoundland.

The assets of the Miramichi Pulp and Paper Co., Chatham, N.B., which are to be offered for sale by public auction, Apr. 23, under an order of the Chancery Court, included the steam tug *Edith* and other vessels.

The Reid Newfoundland Co. is reported to have placed orders for two new vessels, to be built at Newcastle, Eng., for its Port aux Basques to Sydney route, with a view to operating a daily service between these ports.

The French Government has entered into a contract with the Newfoundland Produce Co., St. John's, Nfld., by which the latter will run its s.s. *Sagana* between Halifax, N.S., and St. Pierre, Miquelon, for a subsidy of 90,000 francs a year.

The Beaver Dredging Co., Ltd., has been incorporated under the Dominion Companies Act, with \$300,000 capital and office at Lancaster, N.B., to carry on a general dredging business. The incorporators are G.S., L. La T., and H. Mayes; C.B., and T. A. Lockhart, St. John, N.B.

The Atlantic Dredging and Construction Co. is applying for incorporation under the New Brunswick Companies Act, with \$250,000 capital and office at Loggieville, N.B., to carry on a general dredging and construction business; the incorporators being R. O'Leary, Richibucto; F. W. Sumner, Moncton; T. Nagle, St. John, and F. Ryan, Sackville.

The British s.s. *Isleworth*, from Boston, Mass., to Louisburg, N.S., in ballast, ran on the rocks off Chebucto Head, near the entrance to Halifax harbor, Mar. 13, and became a total loss. She had previously lost three of her four propeller blades in the ice, and in the high sea and fog was unmanageable. She was a new vessel, on her way from Great Britain to take up a charter for the Dominion Coal Co.

The Dominion Coal Co.'s s.s. *Bonavista*, which ran ashore at Blacks Cove, on the Bay of Fundy, off Long Island, just west of the Digby Boar's Head light, Mar. 16, is reported to be a total wreck, and, it is stated, was not insured. She was built at Newcastle, Eng., in 1884, and was equipped with engine of 160 n.h.p., driving a screw. Her dimensions were—length, 240.4 ft.; breadth, 33.5 ft.; depth, 18.3 ft.; tonnage, 1,306 gross, 837 register.

The litigation between the St. John River Steamship Co. and the Crystal Stream Steamship Co., in connection with the use of what is known as the Star Line wharf, at Indiantown, St. John, N.B., was closed, Mar. 8, when \$1,000 damages were awarded to the Crystal Stream Steamship Co. for dis-possession and use up to the present time, and \$11.50 for 23 days' use, to the St. John River Steamship Co., which is to pay all costs. It is stated that an appeal may be entered.

The Consolidated Pulp and Timber Co., Ltd., has been incorporated under the New Brunswick Companies Act, with \$5,000,000 capital and office at St. John, to carry on a general pulp and paper manufacturing business, to operate tramways, steam and other vessels, etc. Among the properties taken over is the St. John Forwarding Co. The incorporators are—N. M. Jones, Bangor, Me.; D. Morrice, Hon. R. Mackay, Montreal; T. McAvity, A. H. Hannington, H. W. Schofield and C. S. Hannington, St. John, N.B.

The decision of the Dominion Wreck Commissioner in the enquiry into the loss of the Renwick Co.'s s.s. *Renwick*, operated by the Inverness Ry. and Coal Co., and the s.s. *St. Pierre Miquelon*, which occurred in Dec., 1911, exonerates the master of the s.s. *Renwick* from blame in connection with the collision, but censures him for not standing by to save, if it were possible, all the members of the crew, three of whom were drowned. The officers of the s.s. *St. Pierre Miquelon* were made responsible for the collision, and the Renwick Co. has entered action for \$48,000 damages for the loss of the vessel.

The improvement works at Courtenay Bay, St. John, N.B., the contract for which was recently awarded to Norton Griffiths and Co., cover an area of about 400 acres, which will be enclosed by a breakwater 4,570 ft. long, averaging 20 ft. wide at the top and 150 ft. at the bottom. The area so enclosed will be dredged to 32 ft. below low water, and on the city side of the bay a large tract will be reclaimed for railway terminals. Berthing accommodation will be provided

for 22 vessels, up to 800 ft. long, and about 4,734 ft. of wharves will be built. A dry dock 900 ft. long, which is also included in the contract, will be built on the eastern side of the bay. P. R. Warren, engineer in charge for the contractors, is reported to have said recently that construction of the breakwater would be proceeded with first so that dredging might be commenced at the earliest moment.

Province of Quebec Marine.

J. A. Masse has been appointed Superintendent of the Montreal harbor yard.

The Department of Railways and Canals will receive tenders to Apr. 1 for the leasing of the Tate dry dock on the Lachine canal for five or ten years.

The St. Lawrence Navigation Co.'s s.s. *Mahone* sailed from Riviere du Loup, Mar. 3, for Seven Islands, and returned, calling at Trinity Bay, Bersimis and Escoumains, Mar. 8.

Capt. L. O. Belanger, who was for 35 years in the Richelieu and Ontario Navigation Co.'s service, and for 15 years as master of the s.s. *Quebec*, died at Montreal, Mar. 10, aged 73.

Two tugs are under construction at the Tate dry dock, on the Lachine canal, one being for the superintendent's service and the other for dredging on the canal. The first one is 93 ft. long, and the other, 60 ft. long.

The Ungava Exploration Co., Ltd., has been incorporated under the Dominion Companies Act, with \$1,000,000 capital and office at Toronto, to carry on a general exploration and development business and to own and operate vessels, wharves, docks, etc.

The Marine Department is making surveys for the placing of five new range lights in the St. Sulpice channel, St. Lawrence River, thus making it possible for tows and light draught vessels to use the north channel, instead of obstructing to some extent the main ship channel.

A number of shipping companies have forwarded a memorial to the Dominion Premier, protesting against the proposal to build the projected Quebec dry dock on the Beaupre Flats at the mouth of the St. Charles River, instead of at St. Joseph de Levis, as at first decided. They also suggest that the dock be not less than 110 ft. wide and 40 ft. deep at high water.

The Quebec Transportation and Forwarding Co. is having a steam tug built at Quebec. Following are the chief dimensions—length, 110 ft.; breadth, 23 ft.; depth, 10½ ft. She will be equipped with fore and aft compound surface condensing engines with cylinders 20 and 40 ins. diam., by 30 ins. stroke. A new boiler has been installed in the company's tug *Florence*.

Work on the construction of the floating dry dock for the Montreal harbor is reported to be progressing at Barrow-in-Furness, Eng., where it is being built by Vickers, Ltd. It is anticipated that it will be completed early in the summer, when it will be towed across the Atlantic, and placed in position in the basin, which is being prepared at Maisonneuve. The trip across is expected to be accomplished in a month.

A deputation representing the Shipping Federation of Canada waited on the Dominion Government recently to urge the building of a dry dock at Levis. A. A. Allan, President, stated that more than a dozen vessels now plying on the St. Lawrence route were too large for any dry docks at present existing in the vicinity, and pointed out the necessity of adequate dock accommodation in order to keep down insurance rates.

Ontario and the Great Lakes.

Capt. B. Todd, of St. Catharines, a well known navigator on the Great Lakes, died at Buffalo, N.Y., Mar. 15, aged 58.

The Niagara, St. Catharines and Toronto Navigation Co.'s steamboat Garden City has had new boilers installed.

The Brockville Transportation Co.'s steamboat Senator Derbyshire is having her hull and machinery generally overhauled.

G. M. Arnold, heretofore Chief Engineer, Niagara Navigation Co., has been appointed Dominion steamboat boiler inspector at Toronto.

The Northern Navigation Co. will, it is stated, not make calls at Sault Ste. Marie, Mich., this season, as heretofore, on account of the raising of the wharfage rates for the season.

E. L. Cousins, Engineer, Toronto Harbor Commission, is on a tour of the harbors along the U.S. Atlantic coast, being accompanied over a portion of the route by J. G. Sing, Consulting Engineer for the commission.

The Canadian Lake and Ocean Navigation Co. has entered four actions against insurance companies for \$37,995 for the loss of the s.s. Turret Cape, which was wrecked on Cove island, Lake Huron, Nov. 17, 1911.

Capt. D. A. Kiah, who died at Detroit, Mich., Mar. 2, was for some time a resident of Collingwood, Ont., and was master of the Chicago, Ogdensburg and Lake Champlain Line's steamboat Canada, then operating between Collingwood and Chicago.

The headquarters of the C.P.R. Upper Lake Service will, we are officially advised, be changed from Owen Sound to Port McNicoll as soon as navigation opens. All the vessels of the Upper Lake Service will sail from Port McNicoll, and one of them will call at Owen Sound on its way up.

The Minister of Railways and Canals, in response to questions in the House of Commons recently, stated that 375,239 tons of coal and 488,366 bush. of wheat passed through the St. Lawrence canals during 1911, in Canadian or British bottoms, and 381,235 tons of coal and 1,235,434 bush. of wheat in U.S. bottoms.

Owen Sound taxpayers, by 1,794 to 85, have passed a bylaw ratifying the agreement granting a bonus of \$10,000 a year for 20 years, the taking of \$50,000 common stock and granting exemption of taxation for 10 years, to a company for the construction of a dry dock and shipbuilding plant at an approximate cost of \$1,500,000.

The Montreal and Cornwall Navigation Co.'s s.s. *Brittanic* has been overhauled and repairs made, including the installation of a new combustion chamber in the boiler, and new bulwarks. The steamboat *Filgate*, which was considerably damaged by fire last year, is also being repaired and will be operated during the coming season.

The St. Clair and Erie Ship Canal Co.'s bill, extending for two years the time within which it may commence the construction of its undertaking and expend 10% of its capital stock thereon, and for five years the time for the completion and putting in operation of same, was read a second time in the Senate, Mar. 13.

The Inter-American Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with \$50,000 capital, and office at Toronto, to carry on a general shipowning, shipping and navigation business. The incorporators are—G. M. Clark, R. W. Hart, M. Gordon, G. M. Miller and C. H. C. Leggott, Toronto.

Press reports from Sault Ste. Marie

state that the Sault Dry Dock and Shipbuilding Co.'s charter has been acquired by F. H. Clergue and associates, who were formerly connected with the Lake Superior Corporation. It is stated that work on the construction of the dry dock and shipbuilding plant will be commenced as soon as the weather permits.

The Merchants Mutual Line, Ltd., Toronto, has recently placed orders for the construction of two steamboats for general lake traffic. One of these vessels is being built at Port Arthur and the other was ordered at Glasgow, Scotland, on the recent visit of J. W. Norcross, General Manager, to Great Britain.

It is reported that the underwriters have given the contract for the raising of the s.s. *Turret Cape*, which went ashore on Cove island, Lake Huron, towards the close of navigation last year, to the Reid Wrecking Co., Sarnia, Ont., who have taken the work on the "no cure, no pay" basis, with the intention of taking the vessel to Collingwood for overhauling.

The city of Toronto's tug, G. R. Geary, was launched, Mar. 7, being named after the mayor and christened by his mother. The tug was built by Polson Iron Works, the dimensions being—length 70 ft., beam 15 ft., draft 7 ft. She is equipped with high pressure single cylinder engine, with cylinder 18 ins. diam., by 20 ins. stroke, and with Scotch marine boiler.

The Algoma Central Steamship Line's steamboat *Paliki* is being overhauled at Collingwood. Her two Scotch boilers are being replaced by one boiler of similar type, 15½ by 10½ ft., with three furnaces, each 47 ins. diam., and the bushing of the high pressure cylinder of the engine is being changed. The new boiler will carry 180 lbs. of steam, instead of 160 lbs., as in the old boiler.

Capt. W. Tate Robertson, one of the pioneer captains of the upper lakes, died at Owen Sound, Mar. 17. He was born at Chatham, Ont., in 1863, and was for some time purser on the old steamboat *Francis Smith*, and subsequently captain. He retired from navigation service in 1902, since when he was for a period deputy consul for the U.S., and for the past three years harbor master at Owen Sound.

Press reports state that an additional steamboat service will be operated between Toronto and Lewiston, N.Y., on the Niagara route this summer, to be known as the People's Line, and that wharfage accommodation is being arranged for at Niagara-on-the-Lake, Lewiston and Queenston. H. W. Crawford, who last year ran a steamboat between Toronto and Olcott, N.Y., is said to be the promoter.

The Inland Lines has been having a number of its vessels overhauled. The *Midland King* is having her between deck beams moved for convenience of unloading. The *Dundurn* is being fitted with new steam steering gear, and the hull of the *Rosedale* is being repaired, a number of plates being taken off and re-rolled, and about 20 plates being replaced, consequent on damages received in the St. Lawrence canals last season.

The Northern Navigation Co.'s vessels will this season be improved by the addition of several conveniences for the comfort of passengers. The steamboats *Majestic*, *Germanic* and *City of Midland* are having electric push buttons fitted in all the staterooms and other parts of the vessels, and annunciators and bell boys will be provided. Running water is also being put in on the steamboats *Germanic* and *City of Midland*, and a new pantry and new lavatories on the latter vessel. The *Huronic's* hull and machinery are also being repaired.

The Montreal Harbor Commissioners, Mar. 12, considered the case to be presented by Canadian navigation interests

before the U.S. Secretary of War, at Washington, Mar. 27, against the request of the Chicago sanitary district for permission to divert from 4,000 to 10,000 ft. of water per second of the water flow of Lake Michigan, for a drainage canal. The proposed canal will be 28 miles long, 200 ft. wide and 28 ft. deep, and it is estimated that one-sixteenth of the total low water flow of the lake would be taken, which would lower the level of the lake by from 4½ to 6 ins., thus materially reducing the carrying capacity of vessels operating on the Great Lakes, and thereby enhancing the cost of carrying cargoes. The Minister of Marine appointed John Kennedy, Consulting Engineer of the Montreal Harbor Commission; J. Stewart, of the Hydrographic Department, and V. W. Forneret, St. Lawrence Ship Channel Engineer, to examine the whole situation and report in time to permit of the presentation of Canada's case.

The Port Colborne and St. Lawrence Navigation Co., the incorporation of which we announced in our last issue, has purchased the St. Lawrence and Chicago Steam Navigation Co.'s steamboat *Algonquin*, which it will operate between Montreal and Port Colborne, and it has also purchased the steamboat *Cataract*, which it proposes to remodel as a lighter to take care of the freight at Montreal. The *Algonquin* was built at Glasgow, Scotland, in 1888, and is screw driven with engine of 150 n.h.p. Her dimensions are—length, 245 ft.; breadth, 40.1 ft.; depth, 20.6 ft.; tonnage, 1,806 gross, 1,172 register. The company is closely allied to the Maple Leaf Milling Co., and has the following officers and directors:—President, H. Shaw; Vice President, Cawthra Mulock; other directors, C. W. Band, J. S. Barker and W. D. Robertson.

Manitoba, Saskatchewan and Alberta.

The Standard Shipping Co., Ltd., Winnipeg, is applying to the Manitoba Legislature to confirm the increase of its capital stock from \$5,000 to \$50,000.

The Lake Winnipeg Shipping Co. has applied to the Winnipeg city council for a lease of the ends of Broadway and Water St., on the Red River, for the construction of a dock.

The South Harbor Sand Co., Ltd., has been incorporated under the Manitoba Companies Act, with \$50,000 capital and office at Winnipeg, to carry on a stone quarrying and sand business, to operate vessels, and carry on a general transportation business in freight and passengers. A. J. Andrews, C. A. Millican, R. Hall, W. H. Hall and M. W. Julien, Winnipeg, are the incorporators.

With reference to the report mentioned in our last issue, that the Hudson's Bay Co. had made arrangements for the construction of two boats at Athabasca Landing, Alta., during the coming summer, we are officially advised that one of them will be 120 ft. long and the other about 160 ft. One will be operated on the Slave River and the Lesser Slave Lake, and the other on the Athabasca River.

The Hudson Bay Navigation Association has been formed at Grand Forks, N.D., by a number of the mayors of towns and cities in the Red River valley to secure recognition of the importance of the Red River as a possible waterway to the sea, by way of the Hudson Bay. It is stated that the question of improving the Red River between Winnipeg and Grand Forks will be taken up at a meeting of navigation men, to be held in Winnipeg in the summer.

A report which has been submitted to the U.S. Congress with reference to the proposals to improve the navigation of the Red River, so as to make a

through waterway to Hudson Bay, states that the construction of large storage reservoirs in the vicinity of the Red River is not necessary nor desirable in the interests of navigation. It is pointed out that the district drained by the river is covered with a network of railways, which in some cases offer better shipping facilities to elevator centres than the water routes, and that no increase in expenditure is warranted by present or prospective commerce on the Red River to the north.

The bill to incorporate the Winnipeg and St. Boniface Harbor Commissioners, introduced by the Minister of Marine, and read a first time in the House of Commons, Mar. 13, provides that the limits of the harbor shall include all the waters within the cities of Winnipeg and St. Boniface at the time of the passing of the act, and that the board shall consist of five members, three being appointed by Winnipeg and two by St. Boniface, each holding office for three years, and being eligible for re-appointment. The Manitoba Legislature has amended the Winnipeg city charter, permitting it to guarantee the commission's first mortgage bonds to the extent of the value of the works and improvements carried out, on the authority of a bylaw passed by the ratepayers.

British Columbia and Pacific Coast Marine.

The California Steamship Co., Ltd., has changed its registered office from Vancouver to Victoria.

The Union Steamship Co.'s s.s. Chelohsin, which was recently built in Ireland, made her first trip from Burrard Inlet, at the end of February, attaining a speed of 12 knots an hour.

The G.T.P. Coast Steamship Co.'s s.s. Prince George, which has been equipped with oil burning apparatus, was returned to service early in March, and made her first trip from Victoria to the north, Mar. 3.

The Merchant Service Guild of British Columbia has been formed, with headquarters at Victoria, consisting of officers in the merchant service on the coast, for the protection and guidance of masters and mates.

The Minister of Marine has decided that sick mariners' dues shall be collected once only in each voyage, in the case of vessels arriving from overseas, the term voyage being deemed to include outward and homeward passages.

The Dominion Government has awarded the mail contract for the Gulf Islands to the C.P.R. This service was formerly carried out by the s.s. Iroquois, which was wrecked last year, since when it has been performed by the B.C. Packers' Association.

L. Coste, Dominion Government engineer, has reported favorably on the proposal to construct a breakwater 1,000 ft. long at Victoria, at a cost of about \$1,250,000, in preparation for the anticipated increased business on the completion of the Panama canal.

Work is reported to have been commenced on the construction of the bulkheads for the dock project at North Vancouver. The Norton Griffiths Steel Construction Co. are the contractors, while the dredging will be done on completion of the bulkheads by the Puget Sound Bridge and Dredging Co.

The Skeena River Syndicate, Haysport, Skeena River, is having a number of vessels built at Vancouver, specially designed for the fishing business on the river, the first of which was launched recently. The dimensions are—length 70 ft., breadth 16 ft., depth 8½ ft., schooner rigged with auxiliary engine of 50 n.h.p.

Press reports from Victoria recently

stated that the C.P.R. had placed a contract there for the construction of a vessel 232 ft. long for its Vancouver Island service, are most likely erroneous. Probably the report refers to the s.s. Princess Sophia, which has been built in Scotland, and, at the time of writing, is on her way to the coast.

Capt. B. Johnson, of the G.T.P. Steamship Co.'s s.s. Prince Rupert, has prepared a paper on the peculiar tidal conditions prevailing in the Seymour Narrows, for the Department of Naval Service. In his opinion these have been responsible for several strandings and wrecks, the variations of rise and fall along the coast ranging from plus 23 ft. to minus 0.6 ft.

The formal transfer of the Canadian Mexican Pacific Steamship Co.'s stock to J. H. Welsford, President, Union Steamship Co., was reported to have been made, Mar. 1. T. H. Worsnop, President of the first named company, will remain with the new company as a director, and will act as joint manager with J. Beazley, of the Canadian-Mexican line. It is stated that a vessel is under construction in Great Britain, especially for the Mexican service.

Press reports state that the C.P.R. will commence on June 1 a weekly service between Victoria and Skagway, and that it will this season run a vessel direct between Victoria and Prince Rupert, calling at Goose Bay, instead of allowing its Queen Charlotte Islands and Skagway vessels to call at Prince Rupert as last season. The s.s. Princess Royal, which has been lying up for some time, will, it is stated, be hauled out on the ways at Esquimalt to have her hull scraped and to be generally overhauled.

The Pacific Coast Steamship Co. is receiving tenders for the construction of two steamships for its Puget Sound-San Francisco service, which, it is stated, will replace the present smaller steamships now operating between Victoria and San Francisco. The dimensions given are—length 417 ft., breadth 48 ft., depth 29 ft., tonnage 5,250 gross, 2,401 register; 5,000 l.h.p., bunker capacity 880 tons; dead weight cargo 2,817 tons, measurement capacity 3,367 tons. The engines must be suitable for a speed of 18½ knots an hour, and both vessels must be ready for service in 12 or 15 months.

Collection of Freight Rate Statistics from the Inland Marine.

It is the Department of Railways and Canals' intention to give effect this year to at least one important change in statistics relating to traffic on Canadian inland waters. These statistics are said to be satisfactory as far as they go; but they are defective in not disclosing the freight rate per ton per mile. For this reason it is quite impracticable to make a comparison between water and rail rates, and it is proposed to correct the situation.

The Comptroller of Statistics has notified all statistical officers in the canals service that each vessel's report must hereafter show the freight rate actually being charged on cargo. He gives the assurance that this information will be received in strict confidence by the Department, that it will not be published, but will merely be run into totals, so as to show the rate per ton per mile on the aggregate traffic passing through the canals.

The matter has been carefully considered by the Dominion Marine Association, and its Counsel, F. King, has notified the Comptroller that the members of the Association have no objection to giving instructions to the masters of their vessels to furnish the statistical officers with the rates on all bulk cargoes carried, as the Association is desir-

ous of doing everything possible to further the Department's work in improving navigation and navigation methods, and realizes that statistics are very essential in a great many ways. In regard to the package freight trade, which is increasing very rapidly, an enormous number of manifests in the case of each cargo would have to be dealt with to get at an average rate, and consideration would have to be given to a number of charges of varying kind and extent which would be made against the rate shown in each individual manifest. To get over this difficulty it is suggested that owners would have no serious objection to furnish from these offices the net results, either of the season, or possibly each trip, of each vessel.

The Association's Counsel has also pointed out that care will have to be taken to distinguish between cases where a rate is free to the vessel and where there are unloading or discharging or other expenses to be made against it.

Dominion Marine Association.

PRESIDENT, F. Plummer, Toronto; COUNSEL, F. King, Kingston, Ont.

Great Lakes and St. Lawrence River Rate Committee.

CHAIRMAN, W. F. Wasley, Gravenhurst, Ont. SECRETARY, Jas. Morrison, Montreal.

International Water Lines Passenger Association.

PRESIDENT, A. A. Heard, Albany, N.Y. SECRETARY, M. R. Nelson, New York.

The Shipping Federation of Canada.

PRESIDENT, A. A. Allan, Montreal; MANAGER, AND SECRETARY, T. Robb, 526 Board of Trade, Montreal.

Ship Masters' Association of Canada.

GRAND MASTER, Capt. J. H. McMaugh, Toronto, Ont.; GRAND SECRETARY-TREASURER, Capt. H. O. Jackson, 376 Huron St., Toronto.

Among the Express Companies.

The Canadian Northern Ex. Co. has opened a waybill office at Ridpath, Sask.

The Board of Railway Commissioners has defined the collection and delivery limits for express companies in Fernie, B.C., and has extended the limits for Lethbridge, Alta., rescinding its order 15082 of Sept. 8, 1911, which fixed previous limits.

G. Kennaugh, who was charged with conspiring with J. D. Chilman, now serving sentence in connection with the recent robbery of the Canadian Ex. Co.'s office at Hamilton, Ont., has been acquitted. It is stated that an appeal for pardon will be made in Chilman's case.

The Board of Railway Commissioners issued order 16090, Mar. 8, adding another rule to the conditions of carriage and directions to agents in Express Classification 2, as follows:—A shipment tendered at a common point, which cannot be carried to its destination except through a connecting company, which connecting company also has an office at the common point, must be refused, and the shipper referred to the company which can give the through service, unless having been notified of the charges by the joint route, he requests acceptance and specifies the route in writing, in which case the shipment may be forwarded at the sum of the local rates to and beyond the transfer point specified by the shipper. The transfer point must be endorsed on the agent's receipt, and the shipper's written request attached to the waybill.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Canada Iron Corporation has ordered for its ore mine near Bathurst, N.B., a 300 h.p. Robb-Armstrong horizontal Corliss engine and a 72-in. return tubular boiler.

The C.P.R. has ordered two Robb-Armstrong vertical enclosed compound engines direct-connected to 175 k.w. electric generators supplied by the Canadian General Electric Co., to be installed in the Hotel Vancouver, and to operate at 400 revolutions a minute. Each engine is to be equipped with a pressure oiling system which will maintain oil on all the bearings under 15 to 20 lbs. pressure per square inch.

Clark, Lyford and Sterling, a new firm of forest engineers, have opened offices in Philadelphia, Pa. The members are J. F. Clark, Vancouver, B.C.; C. A. Lyford, Montreal, Que., and E. A. Sterling, Philadelphia. Messrs. Clark and Lyford are also members of the firms of Clark and Lyford, Vancouver, and Lyford, Clark and Lyford, Montreal. Mr. Sterling has resigned his position as Forester of the Pennsylvania Rd., which he has held for the past five years. This organization is making a specialty of timber estimates and forest maps, and is prepared to examine and report on timber properties anywhere.

P. A. Hinds, the Ohio Brass Co.'s travelling representative in Canada, who was knocked down by an automobile in Toronto towards the end of February and badly injured, and who was taken to the General Hospital, where two operations had to be performed, is convalescing satisfactorily, but it is likely to be some little time before he is able to resume duty. He left Toronto Mar. 21 for Muncie, Ind. The Ohio Brass Co. has issued a circular to its Canadian customers, asking them, until Mr. Hinds is able to travel again, to send enquiries and orders direct to it at Mansfield, Ohio, where they will receive prompt attention. A salesman will be sent from Mansfield or one of the branch offices to care for special enquiries.

Stuart, Drinkwater and Hingston, Ltd., has been incorporated under the Dominion Companies Act, with office in Montreal. The new company will represent for Canada the Brush Electrical Engineering Co., dealing in its complete line of electrical machinery, electric rolling stock and electric supplies. It will also represent A. W. Penrose and Co., of London, Eng., manufacturers of the Penrose electric elevators. The company will take over the Canada Ford Co., Ltd., of which company C. A. Stuart is President; K. E. Drinkwater, Vice President, and H. R. Hingston, Secretary-Treasurer, these three constituting the sole shareholders of the companies. Mr. Stuart commenced his business career with the Bell Telephone Co. of Canada, being Assistant Purchasing Agent until the company disposed of its Manitoba plant to the Provincial Government, when he went west to conclude the arrangements. Almost immediately after his return to the east, he entered into partnership with E. H. Ford and K. E. Drinkwater, under the name of the Canada Ford Co., H. R. Hingston joining the firm later. In Sept. last Messrs. Stuart, Drinkwater and Hingston acquired the interests of Mr.

Ford, who retired from the business. Mr. Drinkwater started his business life with Allis-Chalmers-Bullock, Ltd., leaving it to join the Canadian Fairbanks Co., which company he left to enter into partnership with Mr. Stuart. Mr. Hingston's entire business career has been with the Canada Ford Co.

The P. Lyall and Sons Construction Co. has been organized under the Dominion Companies Act, with a total capitalization of \$4,300,000, and office in Montreal. An issue of \$1,250,000 of 20-year 6% first mortgage gold bonds, with 25% bonus of common stock, was placed on the market recently at 96. The directors are: P. Lyall, W. Lyall, T. Lyall, J. N. Greenshields, R. Mackay, H. W. Beauchler, Montreal. The company has been licensed to do business in Ontario, using a capital not exceeding \$40,000, G. G. McCullough, Toronto, being its attorney.

Telegraph and Cable Matters.

The C.P.R. Telegraph Department has opened offices at Eau Claire and Grand Valley station, Ont.; Bergen, Man.; Druid, Sifton, Holdfast and Keddeston, Sask.; Standard, Alta., and Galloway, B.C.

The Dominion Government has established wireless telegraph communication between Pictou, N.S., and the Magdalen Islands. The service, which at present will be limited to the sending of news, weekly, will be operated by the Post Office Department.

The British Government has accepted the Marconi Wireless Telegraph Co.'s terms for the erection of long distance wireless telegraph stations at London, Egypt, Aden, Bangalore, Pretoria, Singapore and other points, to link up the various scattered parts of the empire. The Government will pay the company \$300,000 for each station and 10% of the receipts for 28 years.

The British Postmaster General in a speech in London, Eng., Mar. 13, is reported to have stated that, before long, the Government would obtain control over all the cable business. It is stated in the dispatch that this statement is understood to have reference to the lapsing of landing licenses at an early date, and which can only be renewed on the condition that the Government shall have control of the rates to be charged.

Following on the leasing of the Anglo-American and Direct United States Cable companies' systems by the Western Union Telegraph Co., the eight trans-Atlantic cables of the three companies have been consolidated under one management, and are known as the Western Union Cable System. The European headquarters are at the Anglo-American Bldg., New Broad St. London, Eng., and the American headquarters at the Western Union Bldg., 195 Broadway, New York. J. H. Carson has been appointed General Operating Manager, London, Eng.; T. W. Goulding, European Commercial Manager, London, Eng., and J. C. Willever, United States Manager, New York. Mr. Goulding was at one time in telegraph service at Winnipeg.

The Leahy Engineering and Contracting Co. has been incorporated under the Dominion Companies Act, with the capital of \$20,000, and office at Montreal, to carry on a dredging and general contracting business. The provisional directors are: J. H. Leahy, G. Bourdeau, J. E. Morier, E. H. Godin, Montreal; J. G. de Lorimier, Westmount, Que.

The Canada Central Construction Co. has been incorporated under the Dominion Companies Act, with a capital of \$300,000 and office at Montreal, to carry on a railway and general contracting business. The provisional directors are: F. Dufresne, St. Laurent, Que.; J. W. Le Pailleur, A. S. Laplante, R. Carignan, Lachine, Que.; J. A. P. Descarries, Montreal.

Western Canada Railway Club.—At the regular meeting in Winnipeg, Mar. 11, a paper on foundry practice, prepared by A. Knight, foreman at the Canadian Northern Ry. shops, was read in his absence through illness in his family, and J. G. LeGrand, Bridge Engineer, G.T. Pacific Ry., showed a series of lantern slides picturing bridge and other construction work on the G.T. Pacific Ry.

The International Supply and Construction Co. has been incorporated under the Dominion Companies Act, with a capital of \$100,000 and office at Hull, Que., to carry on a railway and general contracting business, and to deal in contractors' plant and machinery. The provisional directors are: D. Chene, P. Wilson, H. P. Dupuis, I. V. Couture, Hull, Que.; W. J. Code, Ottawa.

Canadian Collieries (Dunsmuir), Ltd.
—The report for the past year shows that the properties acquired included all the coal in and underlying some 1,900,000 acres of land, known as the Esquimalt and Nanaimo Ry. Co.'s land grant, together with the operating mines, railways, shipping docks and certain timber lands, in addition to other small areas not included in the land grant. During the year contracts were made for railway coal tonnage in Mexico, and this field is being thoroughly investigated to secure the best results possible. With the nearness to completion of the Panama canal the directors look forward to greatly increased business.

Electricity continues to be the supreme power for urban and suburban railway service, and note should be made of the fact that the Edison stor-

age battery cars which have been operating during the past year in New York city have been giving reliable and satisfactory service. The application of electric traction to steam roads is not making the progress which was expected when the New York Central and the New Haven and Hartford installations had proved how reliable and punctual a service could be given. Figures of cost are difficult to obtain, but, as the report on the proposed electrification of Boston suburban roads showed, the first cost of these changes from steam to electric power is so great as to discourage investments of this character. There is a consensus of opinion that the alternating-current, overhead trolley will be used for long distance service, and the direct-current, third-rail system for terminal and suburban work.

THE GRAND TRUNK RAILWAY COMPANY OF CANADA.

NOTICE is hereby given, that the ordinary general half-yearly meeting of the Grand Trunk Railway Company of Canada will be held at the City Terminus Hotel, Cannon Street, London, E.C., on Thursday, the 18th April, 1912, at twelve o'clock noon precisely, for the purpose of receiving a report from the directors, for the election of directors and auditors, and for the transaction of other business of the company.

Notice is also given, that the transfer books of the company in London and Montreal will be closed from Saturday, the 16th day of March, to the day of meeting, both days inclusive.

By order,

ALFRED W. SMITHERS,
Chairman.
H. H. NORMAN,
Secretary.

Dashwood House, 9 New Broad Street, London, E.C., 9th March, 1912.

NOTICE.

The General Railway Signal Company, the owners of the exclusive rights to Canadian Patents No. 92323, No. 9127, 16256, and No. 97755, issued to Young and Townsend, and covering methods of signalling electrical railways, wishes to call the attention of all possible users of the devices and systems covered by such patents, to the fact that it is prepared to sell and furnish, at short notice, the same devices and to install such systems on any railway in the Dominion of Canada. Enquiries regarding the above should be addressed to the office of the company, Room 406, Eastern Townships Bank, 263 St. James St., Montreal, Que.

Chilled Iron Wheels of Increased Mileage

Wheels made of iron purified by Titanium Alloy do not develop chipped flanges, broken rims, cracked plates and seams along the throat of the flange. The metal is denser, tougher and more free from brittleness than ordinary chilled iron.

TITANIUM

The Wonder-Working Alloy

gives at least 20 per cent. longer life to wheels. Leading railways and wheel manufacturers use and endorse Titanium Alloy. Its use increases cost to user about 10c. per 100 lbs. of wheels. It also betters quality of steel wheels.

Booklet No. 30 will certainly interest you. Send for it.

EDISON BSCCO

PRIMARY BATTERY

for railway service—
the first assembled-
in-one copper oxide
battery made.

Every railway signal engineer and purchasing agent should have the complete information we have gathered regarding the service of Edison BSCCO Primary Batteries in use on many of the great railroads throughout the country. This information will tell you that the Edison is easily the most reliable, as well as by far the most economical.

The operation of making renewals is much more simple and more rapidly effected than in other batteries—and renewals cost less, considering service obtained.

Reliability is the first thing for you to consider in your battery service—and economy, the second. The Edison BSCCO is the railway signal battery in which you are certain of both.

YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference

work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost \$1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. SAVE TIME AND MONEY ON LOCOMOTIVE REPAIRS

Use Thermit and weld broken frames and mud rings without removing them from the engine. Locomotives can be repaired and returned to service in less than 24 hours.

The Thermit Process is in general use by the principal railways of the United States, Canada and Mexico; and there is nothing experimental about it.

Write for illustrated Pamphlet No. 22-N, which gives full particulars.

Goldschmidt Thermit Co.

PROFESSIONAL CARDS.

THE RAILWAY AND MARINE WORLD is especially adapted for the publication of professional cards of engineers, inspectors, analysts, electrical experts, naval, grain elevator and other architects, solicitors, etc., who desire to bring themselves under the notice of the management and officials of the various steam and electric railway, steamship, grain elevator, telegraph, telephone and power companies throughout Canada, as well as the locomotive, car and ship-builders, contractors and promoters of railway enterprises. THE RAILWAY AND MARINE WORLD is the only medium through which all these important classes can be reached.

Rates will be quoted on application.

SOLD BY

F. H. HOPKINS & CO. and MUSSENS LIMITED, MONTREAL

MAIL CONTRACT

Sealed tenders addressed to the Postmaster General will be received at Ottawa until noon, on Friday, the 19th April, 1912, for the conveyance of His Majesty's Mails on a proposed contract for four years, 18 times per week each way, between Lambton Mills and Canadian Pacific Railway Station, from the Postmaster General's pleasure.

Printed notices containing further information as to conditions of proposed contract may be seen and blank forms of tender may be obtained at the Post Office of Lambton Mills, and at the office of the Post Office Inspector at Toronto.

Post Office Department,
Mail Service Branch.

G. C. ANDERSON
Superintendent

Ottawa, 4th March, 1912.

If you CANNOT CUT those HARD CASTINGS don't give up in despair,
first try

NOVO SUPERIOR HIGH SPEED STEEL

Has already saved many castings from the scrap heap.

"BROWNHOIST" LOCOMOTIVE CRANES

"Brownhoist" Crane Coaling Engine on N. Y., N. H. & H. R. R. from cars on side track.

A RAPID AND ECONOMICAL METHOD of handling coal from car to engine or from car to coal tipple. The crane coals the engine while it is being cleaned on the ashpit. It cleans the pit, placing the ashes into the car. Many roads use the crane to fill the pockets on their coal chutes. Time and money are saved on both of these methods of coaling an engine.

ON CONSTRUCTION WORK the crane is a labor saver. The crane excavates, drives piling with a pile-driver, handles construction material of all kinds, switches the cars, places heavy steel structures, and does all the lifting and moving of material.

AROUND THE SHOP AND YARD the crane handles ALL material. It can be equipped with either grab bucket, bottom block, or lifting magnet. Either one is easily and quickly applied.

"Brownhoist" Cranes are built for hard and continuous service.

Catalogs and Full Information sent on request.

KONKRETO
A composition for the sanitary treatment of
concrete or cement.

A strictly automatic brake system with straight-air application and release features, possesses marked advantages for both city and inter-urban service.

Westinghouse AMM Automatic Brake

has straight-air features by means of which any car operating singly may be controlled with all the flexibility and prompt response of "straight air."

The distinctive automatic features are: Quick-Recharge, securing rapid recharging of auxiliary reservoirs, thus giving full braking power immediately after a release and permitting applications and releases in quick succession, without depleting the system.

Quick-Service, securing a very quick serial application in service applications throughout a train. This makes certain the prompt and uniform application of all brakes in the train, and increases correspondingly the effectiveness of any given brake-pipe reduction.

Graduated Release at the triple valve, enabling the motorman to control the exhaust of brake-cylinder pressure at will, and thus partially, or entirely, release the brakes on the entire train as may be desired.

High Emergency Pressure, which gives maximum brake-cylinder pressure in emergency applications and therefore the shortest possible stop when most needed.

The Westinghouse "AMM" Automatic Air Brake is intended for the operation of trains of one, two, three, four or five cars.

Consult our nearest office regarding your braking problems. Our air-brake experts are always prepared to give you authoritative advice as to the best equipment to meet your particular conditions.

FAIRBANKS - MORSE

Combined Gasoline Engine and Pump

Our Water Station Equipment will reduce your expenses, such as attendance, maintenance and fuel cost to a minimum. A great advantage in this system, whether for railroads water station or for town waterworks, is the little attendance necessary. A section foreman or a station agent can look over the engine and start it before taking up his other duties.

We contract for complete erection of these tanks and the furnishing of pumping machinery.

THE SIMMEN SYSTEM

of Railway Signalling and Train Despatching

Despatcher's Table

THIS system combines all the features of Telephone Train Despatching with Remote Control Block Signals. A permanent record in the despatcher's office is automatic and continuously made and shows the exact position of trains at all times.

All signals from the despatcher are made direct to train crew (without any intermediary).

Switches on despatcher's table are interlocked and clear opposing signals are rendered absolutely impossible. The track capacity is increased and double-tracking may be delayed correspondingly. Passing sidings being all in electric communication with the despatcher become equivalent to telegraph stations with day and night operators.

Specify Titanium Rails

—Specify Titanium Rails on your curves and save money, as the Boston Elevated is doing. Read carefully these rail diagrams for part proof of Titanium superiority.

CONDITIONS OF TEST

All rails A.S.C.E. Section, 85 lbs. per yard.

Laid April 1st, 1911.

Measured October 31st, 1911.

In service when measured, 214 days.

Average wear in square inch (for all rails)

	Open Hearth	Ferrotitanium
In 214 days,	.755	.537
Per 1,000,000 tons, (approximately)	.0686	.0488

Test rails laid alternately on high side of track.

Radius of curve, 100 feet.

Grade, 5 per cent. down.

Track elevation, 3 inches.

Ratio of Wear

For all Rails
Ferrotitanium to Open Hearth
1 to 1.41

This is only one of many actual-service tests that have proved the superiority of Titanium Rails. And when you consider that they cost only about \$2.00 more per ton than plain open hearth or Bessemer rails, you can easily see the advantage of specifying Titanium Rails—not only on curves, but also on every part of your road.

Ask us to send you Booklet No. 30 with diagrams giving detailed results of rail tests on leading steam and electric roads.

Titanium Alloy is made for Canadian consumption by Electro-Metals, Ltd., Welland, Ont.

ROBB- BRADY SCOTCH BOILER

This new type solves the circulation problem. The water beneath the furnaces is constantly compelled to flow upward to the rear by the downflowing feed water which comes through the front neck, as shown.

The Robb-Brady Boiler has a cylindrical combustion chamber—engineers know what that means—no flat top, no crown bar or girder stays.

The large body of water in steam drum, neck and shell maintains practically the same temperature throughout the boiler, preventing unequal expansion.

Why the C. P. R. North Toronto Route to Ottawa and Montreal is the Logical One

The train leaves as follows:

Leave North Parkdale	- - -	9.15 p.m.	Arrive Ottawa, 6.50 a.m.
Leave West Toronto	- - -	9.30 p.m.	Arrive Montreal, 7.00 a.m.
Arrive North Toronto	- - -	9.40 p.m.	Daily.
Leave North Toronto	- - -	10.00 p.m.	Will Stop at Westmount.

Electric Lighted Compartment Cars and Standard Sleepers for both points.

- ¶ The North Toronto route is over an hour faster and overcomes a long hill climb for the train out of Toronto, obviating any inconvenience and ensuring early arrival at Montreal and Ottawa.
- ¶ The roadbed has been improved till it is unexcelled in Canada.
- ¶ The equipment is "Canadian Pacific Standard," a synonym for the "best" and attentive porters, ensure efficient service.

The Railway and Marine World

May, 1912.

The Grand Trunk Railway Grade Separation Work at Toronto.

The grade separation work on the G.T.R. near the western outskirts of Toronto on the Toronto-Hamilton section of the main line is rapidly nearing completion, work for the spring having been resumed recently. At the rate in which the work is being pushed to completion it will be finished in July or August. This portion of the work includes only the section from Strachan Ave. westward, the viaduct through the city forming another part of the comprehensive scheme of level crossing elimination along the Toronto waterfront.

The section here referred to may be divided into two subdivisions, the first of these extends from Strachan Ave. to

with the city under the Board of Railway Commissioners orders. In order to fully carry out the plan of level crossing elimination, it was found necessary to extend the separation work as far as Mimico, a total length of about six miles. The maximum gradients on the old line was 0.7%, while that of the work under construction is 0.4%.

At Dufferin St. the new rail level will be about 22 ft. lower than the old; at Dunn, Jamieson and Dowling Aves., it will be 25 ft. lower; in all these cases the highway is to be carried across at practically street level. At Sunnyside, the rail level is to be raised 4½ ft., with the highway carried on an overhead

additional right of way and finally build four tracks throughout nearly the whole of the length of this section. The width of the right of way was increased on the southerly side.

As the prime requisite was that train service should in no way be interfered with, special provisions had to be made with this end in view. Close alongside of the northern fence of the right of way, two temporary tracks were laid, as indicated to the extreme right in fig. 3, and on to these the traffic was diverted. This left all the new right of way strip, together with a good portion of the old right of way, clear for the excavating operations. The plan adopted was first

Fig. 1. Looking West from Dowling Avenue Bridge, Dec. 1, 1911.

Sunnyside, consisting of one long cutting, at places as much as 27 ft. deep, and the second extends from Sunnyside to Mimico, the western terminus of the grade separation as at present contemplated. This second section is almost entirely elevated on an embankment, the highest point being about 16 ft. above the former level.

The construction work was simplified to a considerable degree by the fact that the new grade is to have four new tracks instead of the two through tracks of the former level. The wider right of way made possible the construction of the roadbed half at a time, the other half being used temporarily for the construction machinery.

The Railway and Marine World for Aug., 1911, contained profiles of the grades as they formerly existed, and as they are to be eventually with a short description covering the scope of the work. This profile, fig. 2, together with a brief recapitulation, is here given for the benefit of those not aware of the scope of the work which is being carried out by the G.T.R. in conjunction

bridge with long approaches, a few hundred feet east of the present crossing. From Sunnyside to Ellis Ave., the track will be 14 ft. higher, with subways at Indian Rd., Howard Ave., Ellis Ave., Windermere Ave., Jane St., Queen St., near the Humber River; Salisbury Ave. and Church St., Mimico. The tracks across the Humber will be carried on a 4-track deck girder bridge of two spans, the centre resting on a pier sunk in the centre of the river.

The section of the work extending from Strachan Ave. on the east to Sunnyside, as the profile in fig. 2 indicates, extends through a heavy cutting all the way. In the former construction the right of way through the major portion of the distance, carried only two tracks, the section near the easterly end along the frontage of the National Exhibition grounds, where there are several sidings, being the only part with more than the two. It was found that to maintain traffic and carry on the construction work the same amount of right of way would be required for two as for four tracks; it was therefore decided to obtain the

to dig a cut of sufficient width to depress two of the ultimate four tracks, and after the completion of these two tracks, to divert on to them the traffic from the temporary tracks on the edge of the embankment, and then proceed with the excavation through the ground on which the temporary tracks stood, for the depression of the two northerly tracks.

In view of the fact that the maximum cutting ran as high as 27 ft. and the capacity of the shovels was only 10 ft. deep at a setting, it was necessary to work the cuttings in three levels. Commencing at both ends of the cutting on the southerly edge, the shovels ate their way into the cutting, working towards each other. A temporary track on the north embankment of the steam shovel cutting was advanced simultaneously with that of the steam shovel for the accommodation of work trains. In this manner excavation on the three levels was pushed successively to completion. Up to July 1, 1911, there were two shovels at work, and from that time on until the close of the season, early in

December, there were three. From 10 to 12 work trains were employed in removing the earth to the embankments under construction concurrently near the Humber end. The work at Dowling Ave., as it appeared June 18, 1911, is shown in fig. 3. It will be noticed that two levels had been partially put down. This illustration also shows the method of working to these levels, that on the left being the first to be lowered, followed by that in the centre, which will extend over the left portion, and finally lower these two levels to the proper depth. The temporary tracks on the embankment at the extreme right meanwhile divert the regular traffic.

Last autumn the double track cutting

ment. The most interesting point shown in this illustration is the method of carrying the gas main temporarily across the excavation. A cable, carried on posts on each side of the bridge, supports at intervals the elevated pipe line. The clean-cut appearance of the slope as it will finally appear on completion, is well shown in this illustration by referring to the appearance of the right-hand embankment. This slope will later be covered with turf.

With the exception of that portion of the cutting along the face of the exhibition grounds, which section is shown in fig. 6, the whole cutting has sloping earth embankments, battered $1\frac{1}{2}$ to 1. At the exhibition grounds, however, the

east, the northerly end coming out at the junction of King and Queen Sts. Forming part of this scheme, the roadway to the right in this illustration, is to be moved further in that direction, long approaches leading the roadway up to the bridge. As will be noticed to the right of the present highway, a trestle alongside of the road carries tracks leading from the cuttings further along, from which the work trains discharge their loads for building up the roadway approaches to the new bridge. The approach leads in a straight line to an abutment at the proper elevation, from which point the bridge curves off to the left over the tracks to the before-mentioned point. The portion of the

Fig. 2. Profile of G.T.R. Grade Separation Zone from Strachan Avenue, Toronto, to Mimico.

having been depressed to the required depth, the traffic from the upper temporary tracks was again diverted, this time on to tracks laid permanently at the bottom of the cut, as shown to the left in fig. 1, which is a view looking west towards Sunnyside from the temporary Dowling Ave. bridge. Work then proceeded on the depressing of the northerly half of the right of way, which is also to be seen in fig. 1. This shows the method of performing the work and illustrates the manner in which it was pushed, the two shovels working right up to each other, and

impossibility of procuring sufficient ground to give a sloping embankment, made necessary the use of a retaining wall, constructed of reinforced concrete of the form indicated. Some of the top moulds in place, with one method of raising the concrete by elevator, are shown in this illustration. The bridge abutment in the foreground is that for the Dufferin St. bridge, leading into the exhibition grounds, and in consequence is to be made larger and more elaborate than the balance of the overhead bridges through this South Parkdale district. A more simple method of car-

right of way in the immediate foreground in fig. 7 has not as yet been altered. When the highway is diverted to its final location on the right, the railway right of way will extend over the present position of the highway.

From Sunnyside to Mimico there is one long embankment. Previous to this change in grades, there was a small double track embankment from Sunnyside to the Humber River. The first operation, therefore, was to extend the embankment sufficiently northward to receive two tracks on the same level, on which temporary tracks were laid to carry the diverted traffic. With the exception of a short portion near Swansea, the elevated track is on an embankment. At the point mentioned, owing to the presence of buildings to the north cramping the right of way over towards the roadway, a concrete retaining wall of full height was required. Behind this wall and along this roadbed from Sunnyside to the Humber, the old embankment was raised by the excavated material from the easterly end of the work. This filling work was accomplished by means of a temporary trestle raised to the required height over the roadbed.

At the Humber, a new four-track deck plate girder bridge, having 2 spans, was built, 100 ft. each. While this bridge was under construction the two main lines from the high level on either side of the Humber were carried across on the old truss immediately north of the new bridge by means of ramps.

Near Sunnyside, as mentioned before, and as illustrated in fig. 7, the two northerly tracks alone have been elevated in anticipation of the use of the present highway for part of the roadbed when the highway is diverted to its ultimate location. Fig. 8 shows how the southerly ends of the subway abutments have been left for final completion when the property for the completion of the two final tracks at this point is available. This illustration also shows the way in which the elevated tracks were temporarily carried across the highways before the steel bridges were finally placed. The manner of performing this latter operation and the type of subway bridge used are shown in fig. 9.

This work is under the charge of J. R. W. Ambrose, Assistant Engineer, and D. McCooe, Superintendent of Grade Separation.

Other illustrations in connection with this grade separation work, will be found on pages 213, 214 and 215.

Fig. 3. Looking West, at Dowling Avenue, June 18, 1911.

fighting, so to speak, for the last shovelful.

Fig. 4 shows the same spot as that in fig. 1, and was taken at the same time, Dec. 1, 1911, from a point a little further east. It illustrates the type of temporary bridge used to carry highways across the cutting while operations were in progress. A finished abutment for the final bridge is also shown. It will be noticed on the date mentioned, which was shortly previous to the suspension of work for the winter, the second pair of tracks had been nearly lowered to their final position, leaving but little excavation work to be carried on this spring.

The semi-finished cutting, looking east across Dunn Ave., on the same date, is shown in fig. 5. This also shows the temporary bridge, completed south side embankment and bridge abut-

ment. The gas main across is here shown. The easterly limit of the cutting is also shown in the distance. The portion shown is the only part of the cutting to have a retaining wall.

The westerly end of the long cutting skirts the edge of the lake, as may be noticed in the distance in fig. 7. In fact, part of this work only required the reduction of the face of the cliff above the shore, the major portion of the additional right of way being obtained by building outward over the shore.

Sunnyside, the point of division between the elevation and depression of the tracks, is to have an overhead bridge with long approaches. In fig. 7, a view looking easterly across Sunnyside, shows the present level crossing of the highway on the left. The roadway for the new bridge is to be diverted so as to cross the tracks some distance further

AMERICAN RAILWAY ENGINEERING ASSOCIATION.

Summary of the Year's Investigations of the Various Standing Committees.

During the past year the Association's various standing committees have been continuing their investigations along the lines followed in the past, and have made a number of studies of new subjects, looking toward the establishment of uniformity in maintenance of way standards and the outlining of good practice in the work of that department. A summary of the work of the committees is given in the following account. The action of the convention held in Chicago recently

the Louisville and Nashville Rd, is also discussed.

During the past two years the committee has collected information as to the drainage laws of various states, but finds that since they are frequently changing and difficult of useful application without reference to the companies' attorneys, it seems impracticable to employ them. Consequently the committee suggests that its further work along this line be directed toward the benefit

Fig. 4. G.T.R. Grade Separation. Dowling Avenue Bridge, Dec. 1, 1911.

establishes certain of the conclusions and recommendations embodied in these reports as the approved practice of the association.

Committee on Roadway

The work of this committee consisted of further investigations leading to the presentation of formulas of general application for the determination of waterway areas; a study of allowable unit pressures on roadbeds of different materials conferring with the committee on ballast; a study of tunnel construction and ventilation; and an investigation of agricultural drainage as affecting roadbeds. The first subject has been under consideration for several years and a considerable amount of data has been collected, and a general relationship also found between the best known waterway and runoff formulas. Since the previous convention the committee has directed its attention to the hydraulic features of the culvert, and reports progress, but does not go so far as to make any definite recommendation.

The committee has collected a considerable amount of additional data relative to the bearing power of soils, which is included in the report, and also presents a mathematical analysis of the action of pressures on soil composing a railroad subgrade based on Rankine's analysis of earth pressures. In this connection a form of field test of railroad subgrade material is suggested.

The committee has confined its attention to ventilation of tunnels in connection with the third subject. No definite conclusion has been reached, but the opinion is held that artificial ventilation is usually unnecessary in American steam railway tunnels of lengths less than 2,000 to 2,500 ft. The report states that probably the most efficient form of artificial ventilation for tunnels is to force air into one end by fans powerful enough to drive the smoke out ahead of the train. This system has been installed in several tunnels in this country, which are listed in the report. Experience with the clearing of smoke in several tunnels of

to the roadway to be derived by the construction of agricultural drainage work.

Committee on Ballast

This committee has been engaged in work leading to the determination of the proper depth of ballast for uniform distribution of loads on the roadbeds; on the fixing of physical tests of stone for ballast; and in the preparation of a review of the use of gravel ballast.

Fig. 5. G.T.R. Grade Separation. Dunn Avenue Bridge, Dec. 1, 1911.

As a part of the investigation of the proper depth of ballast the committee presents references to published accounts of investigations of this subject, calling particular attention to the experiments recently conducted on the Pennsylvania Rd. From its study of the data available the committee concludes that with ties 7 x 9 in. x 8 1/2 ft. spaced about 24 to 25 1/2 in. on centres, a depth of 24 in. of stone ballast is necessary to produce uniform pressure on the subgrade and a combination of a lower layer of cinder

ballast, 18 in. to 14 in. in depth, and an upper layer of stone ballast, 6 to 10 in. in depth, approximately 24 in. deep in the aggregate, with the same spacing of ties, will produce nearly the same result.

In regard to physical tests of stone for ballast, the committee reports an additional compression test, which the U.S. Office of Public Roads will make for the railways, and which it presents for addition to the other tests adopted in 1910. The committee advises that the description of the physical test, together with instructions for providing samples and blue prints of machines used, may be obtained by writing to the Department of Agriculture at Washington.

In its review of the use of gravel ballast the committee presents the results of determinations by a number of railways of the percentage of sand, gravel, dust and clay in the ballast used. This information is tabulated in the report, together with brief statements of the practice of a number of roads and the results which are being obtained by them from the use of gravel ballast. A description of the new gravel-washing plant of the Richmond, Fredericksburg and Potomac Rd. is presented as an appendix.

In view of the wide variation found in the character of ballast which is reported to give good results, the committee considers further investigation of this subject desirable.

In the discussion on this report one point brought out as bearing on the experiment on the Pennsylvania Rd. to determine the depth of stone ballast and stone ballast underlain by cinders, being the experience of the Santa Fe with deep cinder ballast, which was later replaced with slag, the latter requiring much subsequent attention due to the settlement of the cinders beneath it. It was pointed out that here the composite ballasting showed up well in experiment but not in practice.

It was decided to make the following additions to, or changes in, the association's approved practice:—

A definition of the depth of ballast as the distance from the bottom of the tie to the top of the subgrade.

A standard compression test for stone

to be used for ballast, this test to be added to the physical tests of stone for ballast already adopted by the association.

In addition to the adoption of these recommendations, endorsement was given to the conclusions of the committee on its study of the necessary depth of ballast for even distribution of loads.

Committee on Ties

This committee has had under consideration the subject of size of cross-tie

required for present stresses; the advisability of tie renewals in continuous stretches as compared to single-tie renewals; and experience with metal, composite and concrete ties. A large amount of information has been collected on each of these subjects and is included in the report.

Replies to a circular asking opinions as to the size of ties were received from roads representing about one-third of the total mileage in the association. From extensive tabulations of this material in the report it is found that there has been an increase in the number of

mittee presents a large amount of additional information in the form of brief reports from various roads using special forms of ties. From a study of this data the committee observes that the concrete tie, the combination concrete and metal tie and the combination asphalt and metal tie have not yet proved a success because of fracture caused by vibration, excessive weight and deterioration of asphalt filling. A combination tie of steel and wood is stated to give promise of developing an economic substitute, while the all-steel tie is believed to have proved satisfactory under heavy,

mental track maintained on that basis and that it was expected the ties could all be renewed when the rail was renewed.

The recommendation of the practice of single-tie renewals in preference to renewals in continuous stretches was adopted.

The association endorsed the conclusions of the committee in reference to its study of the size of ties and its study of metal, composite and concrete ties as presented in the review mentioned above.

Committee on Rail

This committee has prepared a study of rail failures and presents in its report a large amount of tabulated and analytical data on rail failures for the year ended Oct. 31, 1910. It was found that the responses to enquiries were more complete than before and showed that most of the railways are now keeping a record of their rail failures. Eighty-three companies furnished statistics relating to about 11,750,000 tons of rail. The report included summaries by sections, weights and kinds of steel; classification according to position in the ingot and a comparison of the wear of special rail.

As a result of its study of this information the committee makes the observation that accurate and specific information is not furnished for the determination of the value of different sections of rail because of the variations in traffic and roadbed conditions and in the conditions surrounding manufacture. It is believed that the difference in quality of material may eliminate differences in rail sections, but it is pointed out that the matter of desirable features of rail sections should be kept in mind at the same time that the present efforts toward improvement of material are made so that when a good quality of metal is attained there will also be a desirable rail section. It is observed that a study of these statistics furnishes information relative to the difference between Bessemer open-hearth and alloy steels and shows a relation between broken rails and failure of head, web

Fig. 6. G.T.R. Grade Separation, Shoring Wall at Exhibition Grounds, Dec. 1, 1911.

ties used per 30 ft. rail since 1905, the rail-bearing area now being about 40%, as against 35½% in the former year. It also appears that about 59% of the mileage reporting in the circular is of the belief that a 6 x 8 in. x 8 ft tie is too small and 96% of that mileage considers a larger tie desirable. It is found that 22 sizes of cross-ties are now in current use, with 47% of the mileage reporting using the 6 x 8 in. x 8 ft. size. It is pointed out that the sentiment is evidently in favor of a larger tie, but evidently the length has not been considered as much as the width and depth. Of the mileage reporting 18% uses a tie 8½ ft. in length and over 10% favors a tie 7 x 9 in. x 8½ ft., none favoring 6 x 8 in. x 8½ ft.

In connection with this discussion a table is presented which shows the superior strength of air-dried timber for ties as compared to that of green ties. A list of articles is appended relating to the size of cross-ties and the stresses to which they are subjected.

The committee draws the conclusion that it is not feasible to make a fixed rule for the size and spacing of ties based on the A, B and C classification of density of traffic due to the variation in the character of the subgrade, ballast, axle loads, tie timber and other considerations. In general, however, it is considered good practice for class A and perhaps class B roads to space ties 10 to 12 in. face to face, the width of tie being considered not so important with this spacing, provided that the minimum width of face of the ties is limited to 7 in.

The investigation relative to the advisability of renewals of ties in continuous stretches against single-tie renewals showed almost universal endorsement of single-tie renewals. Continuous renewals at station platforms, street crossings and similar places are favored by some. It is recognized that there would be advantages in continuous renewals in giving a uniform lift to the track and in reducing labor costs of renewals, but these are outweighed by the fact that single renewals keep the track as a whole in more uniform and safe condition and obtain the maximum life out of each tie.

As a result of its investigation of ties of other materials than wood, the com-

medium-speed traffic. It is believed that the fastenings for these ties will be further improved.

The discussion of this report brought up the question of computation of actual stresses in ties under given wheel loads. The opinion was expressed and sustained that enough information is now becoming available to permit approximate assumptions and exact methods of design somewhat similar to those for bridges and abutments. The President explained that progress had already been made along this line in Europe and

Fig. 7. G.T.R. Grade Separation. Looking East at Sunnyside, Dec. 1, 1911.

that it is proposed that the committee shall take up the subject.

Referring to the recommendation favoring single-tie renewals, Hunter McDonald gave some figures on an experimental mile of track laid in 1908, where he has applied the practice of renewals in continuous stretches, with the result that the maintenance account is so far about \$200 a mile cheaper than for single-tie renewals. He believes that the continuous system has its merits, but that railway officials have become accustomed to single-tie renewals and are not willing to go to the expense of trying the other plan. C. A. Morse stated that the Santa Fe had 22½ miles of experi-

and base. It also shows a difference between rails of different mills when the sections and chemical composition are practically the same.

M. H. Wickhorst, engineer of tests of the committee, has made an investigation to throw light on the relationship of the size of ingots of Bessemer rail steel to the segregation of the metalloids, locations of pipes and blow holes, and the properties of the rails. It was found that under the conditions of the tests, the carbon, phosphorus and sulphur collected or segregated toward the interior and upper part of the ingot and that, in a general way, such segregation increased with the size of the ingot. The

manganese segregated to a much smaller extent, while the silicon showed little tendency to segregate. The elements which segregated showed a lowering in the top part of the ingot below the average composition of the steel, and this lowering extended downward along the sides. The "negative" segregation increased with the size of the ingot and extended down farther along the sides. There was a region of negative segregation in the interior and lower part of the ingot, but the lowering of the elements was not as great in this region. It appeared that the material was distributed in the rail bar about the same, relatively, as in the ingot from which it was rolled.

Another investigation has been made by Mr. Wickhorst to determine the influence of the temperature of rolling on the properties of Bessemer rails. It indicated that the ductility and deflection in the drop test were little influenced by the rolling temperature. The number of blows to break the rails was uninfluenced by the temperature of rolling. The yield point and tensile strength in the tension tests were little influenced. The elongation in the tension test decreased some as the temperature increased. The influence of temperature showed most prominently in the tension test, in the reduction of area, which decreased as the temperature of rolling increased. The size of the grain shown by the microscope increased with the temperature. It appears that the ductility in the drop test with the head of the rail in tension more nearly indicates the ductility of the interior metal as measured in the tension test than does the ductility in the drop test with the base of the rail in tension, which is usual in inspection work.

An analysis of U.S. Government investigations of rail ingots at the Watertown arsenal, embodied in the report of tests at the arsenal for 1909 has also been made by Mr. Wickhorst.

J. T. Richards, Chief Engineer of Maintenance of Way, Pennsylvania Rd., has prepared a study of the compara-

He thinks the drop test does not go quite far enough and that more information is needed on the elastic limit and also upon the fibre stresses in rails. He also pointed out that if a high ductility in a crosswise direction were required in the drop test there would probably be fewer base fractures.

He said that carbon may vary considerably in different parts of a rail and that it should be examined carefully for it. Chemical composition, he believes, should be determined by the physical requirements of fibre stress and rolling

was adopted, some paragraphs of which however, are not considered as final, in that sufficient information is not yet in hand to make these sections mandatory. These paragraphs include provisions for modification of carbon for low phosphorus, for the fixing of average carbon, for ductility and for permanent set.

Committee on Track

The work of this committee has been directed toward the preparation of general specifications covering material and workmanship for frogs, crossings and

Fig. 8. G.T.R. Grade Separation. Keele Street Subway, Dec. 1, 1911.

resistance, and that a steel harder than a mild steel is necessary, though not so hard as to be brittle. He favors medium carbon in a zone around 0.65 to 0.70. He stated that the rapid alterations of stress may produce a change in the properties, the wheel pressures producing internal strains which might result in failure. To illustrate, he cited the case of a steel cylinder in which very high internal strains were induced by tapping continually with a light hammer, the bore becoming enlarged.

switches, including the use of manganese and other special alloys; specifications for track bolts, nuts, locks, tie plates, common track spikes and screw spikes; and the study of designs for main-line turnouts. Specifications for frogs, crossings and switches have been prepared and are included in the report. On the second subject the committee is formulating principles as to the functions, material and form of tie plates and track fastenings, but the work has not progressed far enough to be presented in the report. Work on the design of turnouts has been held in abeyance pending the adoption of standard numbers of frogs and lengths of switches.

This matter of frogs and switches has been under consideration several years. In determining the length of switches the committee reports that provision should be made for the following general classes of turnouts: (1) Those to be operated over the divergent route at the maximum practicable limited speed; (2) main-line turnouts and cross-overs to be operated over the divergent route at low speed; (3) yard turnouts, and (4) turnouts requiring frogs of large angle. Bearing upon this is the question of economical cutting of the 33-ft. rail. Objections which were presented to the use of the full 33-ft. rail are that the length, being the same as that of the stock rail, is such that one joint of the latter must necessarily come near the point of the switch and the other joint ahead of and near the heel of the switch, often necessitating the clipping of the angle bars; and also the great length of laterally unsupported rail. On these points the committee is of the opinion that the location of the joints of the stock rail 40 in. ahead of the point and heel of the switch is not seriously objectionable, and that the clipping of the angle bars is not an expensive operation and does not seriously weaken the joint; also that switches 33 ft. and even 45 ft. long have been successfully used to such an extent that there seems to be little ground for apprehension on account of the length of laterally unsupported rail.

It is stated that the longest switch points should be used in those turnouts where the highest speed is desired, and that since these switch points necessarily get severe usage they should be made of the very best rail. These considerations lead the committee to the

Fig. 9. G.T.R. Grade Separation. Locating a Subway Girder.

tive wear of Bessemer, open-hearth and nickel-steel rails on that road, which is appended to the report.

The committee presents a set of rail specifications and reports progress on recommendations for a standard rail section.

In the discussion, E. Howard, of the U.S. Bureau of Standards, stated that he believes the rail tests have not yet covered some important points. Speaking of the influence of ductility and the indications of the drop test, he stated that these show principally that the metal is well worked, which is already established by the fact that it has become a rail.

A point of discussion receiving considerable attention was brought up by L. C. Fritch, suggesting that a test piece should be taken from each ingot. He believes that in addition to the present prescribed tests, a piece should be taken from the A rail of each ingot, nicked and broken. If it shows no interior defect the rails of the ingot should be accepted. Otherwise the A rails should be rejected and a test piece broken from the B rail, and so on. It was pointed out that some Canadian mills have voluntarily proposed a somewhat similar plan.

A set of specifications for steel rails

opinion that the length of switch points for the four classes of turnout above mentioned should be respectively 33 ft., 22 ft., 16½ ft. and 11 ft.

A theoretical investigation of the rate of turning of a locomotive at the switch point and of the angle between the stock rail and a line passing through the truck centres of a car leaving the switch, indicates that an approximate balance between the deflection through the switch point and the deflection through the lead is attained when the switch angle equals one-fourth the frog angle. This proportion has been found to work out economically in practice. With a 6¼-in. heel distance and ¼-in. thickness of point, this relation between switch angle and frog angle would make the length of the switch in feet equal to twice the frog number.

The committee considers that the highest number of frog which is economically consistent with the longest switch point is desirable for turnouts of the first class and that frogs over no. 14 should have a 33-ft. point; 22-ft. points should be provided for frogs over no. 10 up to and including no. 14; 16½-ft. switch points for frogs over no. 6 up to and including no. 10; and 11-ft. points for no. 6 and under, where they are required. Frogs nos. 8, 11 and 16 are believed to meet all general requirements for yards, main-track switches and junctions. It is believed that new work should be laid out as far as practicable for these three frogs, so as to effect the gradual elimination of frogs of other numbers, lessen the cost of manufacture and decrease the amount of stock carried.

Discussion of this report centred on the lengths of switch points and the numbers of frogs which were recommended. In further explanation of the committee's selection of frogs nos. 8, 11 and 16 to serve all ordinary purposes, the chairman stated that though the no. 11 and no. 16 were not yet in very general use, they meet the present tendencies for sharper frogs for high speeds and modern equipment, give the most economical use of rails, and serve practically the purpose of a number of other frogs now in use, reducing the stocks required. The lengths of switch rail selected were explained to make economical use of the rail, to make possible the exact determination of the quality of the rail, in that they are made from the standard 33-ft. rail which is marked as to its position in the ingot. It was argued that they meet the present tendency for longer switch points. It was stated that in France and Germany switch points longer than 33 ft. are in use.

The Association adopted a set of general specifications for frogs, crossings and switches, together with plans for nos. 8, 11 and 16 rigid frogs, no. 11 spring frog and 11-ft., 16½-ft., 22-ft. and 33-ft. switches.

The recommendation was adopted that 16½-ft. switch points be used for frogs over no. 6, up to and including no. 10; 22-ft. points for those over no. 10, up to and including no. 14; 33-ft. points for those over no. 14 and 11-ft. points for no. 6 and under where they are required. Frogs nos. 8, 11 and 16 are recommended as meeting all general requirements for yards, main-track switches and junctions, and it is recommended that these three frogs be used in new work as far as practicable to effect the elimination of frogs of other numbers and thereby lessen manufacturing costs and decrease stocks carried.

Committee on Wooden Bridges and Trestles

This committee has been investigating the following subjects: formulas for use in determining the strength of sheet piling; equipment required for pile driving; special methods of driving sheet piles in cofferdams where conditions do not permit the use of ordinary equip-

ment; experience on the bearing power of piles and on the practical results of the use of formulas; the use of guard rails for wooden bridges and trestles, fire protection of wooden trestles.

An experimental method has been devised for determining the distribution of pressure on sheet piling as an aid in the work of the committee, and it was hoped that experiments would be carried out during the past year, but so far it has been impracticable to make arrangements for such. The procedure suggested for these experiments was the construction of a strong open-top concrete box containing a vertical diaphragm of tempered spring steel across its middle, secured at the top and bottom against horizontal motion. Sand or other material to be tested is to be filled in this box and then excavated from one side of the diaphragm, templates being made to record the curve of the diaphragm due to the pressure of the sand. To determine the amount and distribution of the pressure, the diaphragm would then be removed from the box and placed horizontally, supported at its end at the same points as formerly, and loaded with metal strips in such way as to obtain the same curve as that recorded by the templates. The total pressure and centre of pressure could thus be determined experimentally and could be checked mathematically from the recorded curve of flexure. It is believed that this apparatus could also be used for testing such materials as semi-fluid mud and ballast, and that it could be used to determine the pressure on abutments.

No data is given in the current report on the second and third subjects under consideration. In regard to pile-driving experience giving information on the practical use of formulas, the committee found that only a few roads kept records of their pile driving in form for use in its investigations. The committee is of the opinion that a pile-driving formula should be based on theoretical considerations, but that there are so many modifying conditions that the final formula must be more or less empirical. These modifying conditions may be obtained from actual experience and records, records of the behavior of piles during driving and after loading. Records of test piles loaded to failure are considered especially valuable.

A large amount of data has been collected in reference to guard rails, but is not considered to be in form to present recommendations.

In reference to the fire protection of timber bridges and trestles, the committee found that 62% of the 110,000 miles reporting adopted either full-ballast decks, floors protected by a thin covering of ballast or other light material or by sheet metal in such cases where fire protection was considered necessary.

Committee on Masonry

This committee has made a study of the waterproofing of masonry; methods of patching and repairing plain and reinforced concrete; methods of depositing concrete under water; and the unification of Portland cement specifications. Replies to a circular letter, which are abstracted in the report, show that waterproofing is being done throughout the country, but that the methods used are very much the same as previously reported. Some of the replies indicate that impervious concrete can be made without special waterproofing by using a suitable gradation of aggregates and cement and reinforcing the concrete to counteract temperature and shrinkage stresses and by using care in depositing to obtain a dense concrete.

It is observed that in using such materials as felt with coal tar, pitch or asphaltum, fair results are obtained when the weather conditions are favorable and when the work can be done without interference, working continuously until completed; but when such

work is done at an unfavorable season, or at separate periods, or in separate sections, under difficulties, or where undue haste is necessary, the results have generally been unsatisfactory.

Relative to methods of patching and repairing concrete, the committee has found that most of its replies contain useful information. These replies are abstracted in the report and certain methods are described, together with comments on their service.

In its investigation of depositing concrete under water the committee finds that nine methods are being employed effectively.

In regard to the unification of Portland cement specifications, the committee has been represented during the year at several meetings of committees representing the U. S. Government departments, the army, the American Society of Civil Engineers, American Society for Testing Materials and Association of Portland Cement Manufacturers. At these meetings agreement was reached upon all points excepting the use of the Vicat needle vs. the Gilmore needle in determining the time of set and the Vicat needle vs. the ball tests in determining normal consistency. The result has been that the Government's representatives have recommended the latter test in each case for the standard Government specification, which agrees with the present standard of the association, but uniformity among all those represented has not yet been attained on these points.

Discussion of the recommendations as to methods of patching concrete brought up the question of the use of patented compounds. The committee explained that such materials had not been definitely considered for strictly patching purposes, since their cost is stated to be much more than that of cement, and cement seems to answer satisfactorily. The opinion was expressed that information should be obtained on such special preparations if it is found that they meet conditions where plain concrete does not appear to answer, but it was pointed out that some such information is already included in the committee report.

The conclusions of the committee as to good practice in patching concrete surfaces were endorsed. The conclusions as to good practice in placing concrete under water were also endorsed.

Committee on Signals and Interlocking

This committee has prepared a new insulation-resistance table to be added to its revised specifications for various kinds of insulated wire and has prepared a report on uniform signaling, conferring with the American Railway Association. This latter report contains majority and minority recommendations. The majority presents a signaling scheme in which there are included, in addition to the fundamental positions of "stop," "proceed with caution" and "proceed," a number of supplementary indications covering cases where it is desired to give advance information as to the condition of the block ahead. The minority report provides for positions of the signal covering only the three fundamentals and the supplemental signals of "proceed at low speed" and "proceed at medium speed," the view being held that advance information should not be given and that each signal should have no relation to those in advance or in the rear, but should be observed as the train comes to it.

Committee on Records and Accounts

This committee has continued its study of forms, but has spent the greater part of its time this year in a study of economical ways of managing a storehouse so as to assure a minimum stock of materials at all times. This latter investigation has been based on the effects of storehouse management on the broader

economies of maintenance and operation.

From a study of the report of the Interstate Commerce Commission for 1909 it is found that the wages of labor of the classes whose efficiency depends to a great extent on having proper materials and tools represents about 29% of the total operating expenses, and that the interest on the total value of materials and supplies on hand, at 5%, amounts to about 2.2% of the wages of those employees. Assuming it possible to reduce the stock 50%, it is pointed out that the annual saving would be only 1.1% of the amount paid in wages, so it is believed that even a slight loss in the efficiency of the labor, through failure to secure materials and tools as required, will soon absorb much more than the amount saved by reduced investments in stock. It is therefore believed that the most important function of a storehouse is the prompt delivery of materials and tools so that delays to labor may be reduced to a minimum.

In order to facilitate prompt delivery the committee states certain general principles governing storehouse management, which include standardization of materials and instructions for their use in order to reduce to a minimum the number of items of material of the various classes carried in stock; classification for economical handling; proper stock account for prompt replenishment; notification of shipment in distribution; and efficient organization of the storekeeper's department.

Committee on Rules and Organization

This committee has continued its compilation of rules for the government of maintenance of way employees, which has been carried on for several years past, and has also given attention to the formulation of rules in the nature of specifications or instructions regarding the conduct of work. In the latter connection the committee presents instructions in regard to the maintenance of the proper cross-section of roadbed, the provision of drainage, ballasting, handling of ties, handling of rail and surfacing.

The discussion brought out a statement by E. R. Lewis, of the Michigan Central Rd., of experience with ties laid heart-side down and heart-side up, in which he differed from the committee, which stated that the former method is preferable. He finds that the heart-side up gives better spike-holding power and produces less trouble from warping and checking, due to its denser wood. Further discussion led to the alteration of the committee recommendation to allow ties to be laid either way to obtain the best bearing.

Instructions for the conduct of track work were adopted as presented in the report with several minor changes. These instructions cover the maintenance of the subgrade, ballasting, placing ties, laying rail and surfacing.

Committee on Water Service

Investigation is in progress by this committee on the subjects of the design and relative economy of track pans; deep-well pumps; reinforced concrete for water tanks and supports; and water treatment.

Progress is reported on the study of track pans, and it is stated that extensive tests are in progress on the Pennsylvania Rd. at Atglen, Pa.

In its report on concrete for water tanks the committee makes reference to a number of cases of this type of construction and presents a discussion of the advantages of concrete for this purpose and the disadvantages which must be overcome in adapting it. General specifications are presented in the report for reinforced-concrete stand-pipe water tanks for railways, and sketches are given for a tank of this type and also for a concrete tank on a reinforced-concrete substructure.

Progress is reported on the investigation of water treatment and the report presents a paper giving an account of an experience with locomotive boiler corrosion, which followed a partial installation of water softeners, where small pumps were added to discharge soda ash in solution into the tanks.

In the discussion a set of specifications for steel water and oil tanks was adopted as representing good practice. They are intended for tanks requiring plates not more than $\frac{3}{8}$ -in. thick and of open-hearth steel. Some changes were made in the specifications as printed in the report, the principal one being to eliminate for the present the parts referring to special steels.

Committee on Yards and Terminals

This committee has been investigating situation plans of passenger stations; development in mechanical freight handling; the design and operation of hump-yards; situation plans for engine terminals; and methods of handling baggage, express and mail at passenger terminals.

Reference is made to a number of installations for mechanical freight handling which are being studied, but it is pointed out that sufficient time has not yet elapsed since their installation to enable all points as to their utility to be determined, and consequently full report on the systems is held over for future presentation. A list of published accounts of freight-handling installations is included in the report.

The committee has prepared a typical situation plan for a division engine terminal and presents this with a discussion of the considerations influencing the planning of such a layout.

The committee reports progress on its other investigations, but is holding the data collected for future presentation.

In the discussion the following principles were adopted as governing the oil of lower grades; these are the same design of a division locomotive terminal: The locomotive terminal should be so located as to afford easy access to both main line and yards, with the fewest possible reverse or conflicting movements; and the facilities provided should be arranged to permit of the most direct and rapid handling of a locomotive in its terminal in the order of its needs.

Committee on Iron and Steel Structures

As a part of the work of this committee a further investigation has been made of secondary stresses by means of field tests. A special form of extensometer for measuring such stresses has been developed and manufactured and has been used for several weeks in the field. The instrument has been developed along the lines of the extensometers used in impact tests, but to secure sensitivity the principal bearings were made with knife edges, and instead of using a pencil for securing a continuous record a ray of light has been utilized to make the record by allowing it to pass through a minute perforation in a disc at the end of a long lever, the path of this ray of light being photographed on a moving slip of sensitized paper. It is stated that the instrument has proved satisfactory in practical operation and that a very good record has been obtained. The sensitized paper was developed in the field so that results were quickly obtained. Several field tests were made, but the results have not yet been put in form for presentation.

Progress is also reported on the subject of instruction and guidance of inspectors in mills, shops and field, and it is expected that the results will be available within a few months.

On the subject of the design of built-up columns the committee reports that it is working with the joint committee of the American Society of Civil Engineers, and that a very comprehensive programme is planned which should add

greatly to the present knowledge of the subject. Practical work on this subject has not yet been taken up.

The work of the committee along the line of specifications for the erection of steel bridges has resulted in the preparation of a set of such specifications, which are included in the report.

A set of specifications for the erection of railway bridges was adopted as presented in the committee report with some slight changes.

Committee on Electricity

The committee on electricity has directed its attention to the subject of clearances and transmission lines and crossings. As a result of its year's work on clearances a clearance diagram for third-rail lines is presented, and conferences held with similar committees of the American Railway Association, and the American Electric Railway Engineering Association lead the committee to believe that similar diagrams will be recommended to those associations. The clearance lines have been established from a study of the clearance diagrams of all principal railroads in the U.S. using third rail. Practically all of the mileage thus represented, with the exception of some interurban electric roads and elevated roads in cities, will clear with this diagram.

As the result of its work on transmission lines and crossings, which has been carried on in conjunction with committees of other interested technical associations and representatives of the telephone and telegraph companies, a set of specifications is presented and is included in the report.

Discussion on this report was chiefly in relation to details of the specifications for transmission lines and crossings, the specifications being adopted with certain revisions, bringing them into accord with those of other interested associations, and giving promise, it was explained, of thus attaining a uniform specification for this country.

A definition of third-rail gauge was adopted, stating that it shall be the distance measured parallel to the plane of the top of both running rails between the gauge of the nearest running rail and the inside gauge line of the third rail.

A standard clearance diagram was adopted, showing lines for equipment and permanent way structures adjacent to the third rail and for the third-rail structure.

A set of specifications for overhead crossings of electric light and power lines was adopted along lines which it is believed will make it conform to a uniform standard for this continent.

Conservation of Natural Resources

This committee has made an extensive investigation of tree planting and general reforestation and of coal and fuel oil resources, collecting information concerning the United States and Canada. A large amount of this material has been presented in the report as progress information. A review has been made of the subject of tree planting and to this there is appended a bibliography of articles pertaining to the U.S. timber sources.

Attention is drawn to the enormous consumption and waste and the loss by fire, and it is shown that experience abroad proves that damage by forest fires is preventable. The consumption of timber in the U.S. (not including fire losses) is 230 cu. ft. per capita, as against 37 cu. ft. in Germany and 25 cu. ft. in France.

As the result of its work on coal and fuel oil resources the committee presents a number of abstracts of important papers on the subject, together with statistical information and specifications, much of this material having been taken from reports issued by the Government.

Signs, Fences and Crossings

The chairman of this committee explained that the investigations of fence

wire to secure a quality resisting corrosion had met with the co-operation of wire manufacturers and that a large amount of data had been collected which should warrant definite conclusions next year. Up to the present time it appears that wire galvanized after weaving has proved most durable. It was also stated that the tendency toward concrete fence posts was becoming very pronounced and should soon furnish valuable information, but that the period of service is as yet too short.

Relative to forms of flangeways at crossings it was stated that a special roller filler is being tried which should prove a distinct advance.

Discussion of railway signs pointed toward the desirability of uniformity throughout the country as both advantageous for the railways and the public. It was stated that the railways and the public utilities commissions of several States have already taken up this matter and that the railways should take some early action.

The report of the committee on signals and interlocking was presented as information and there was no discussion.

Committee on Wood Preservation

This committee recommended that ties should be grouped for treatment: (1) Those of the two general species of hardwoods and pines should be grouped separately; (2) heartwood and sapwood pine ties should be kept separate; (3) green and seasoned ties should be kept separate, and (4) ties of approximately the same period of seasoning should be put together for treatment. These recommendations were adopted.

The revised standard specifications provide that the oil shall be "the best obtainable grade of coal-tar creosote; a pure product obtained from coal-gas tar or coke-oven tar, and free from any tar (including coal-gas tar or coke-oven tar), oil or residue obtained from petroleum or any other source." At 38 degs. C., it must be liquid and of at least 1.03 specific gravity; it must give no distillate below 200 degs. C., not over 5% below 210 degs. not over 25% below 235 degs. and the residue above 355 degs. C. (if over 5% in quantity) must be soft. The oil must not contain over 3% water. Specifications were submitted also for oil of lower grades; these are the same as above, except that the distillate below 210 degs. and 235 degs. may be 8 and 35% for no. 2 oil and 10 and 40% for no. 3 oil, while the specific gravity for the no. 3 is 1.025.

Discussion of this report centred on the proposed revisions to the specifications for creosote oil. Objection was made to the presentation of a specification for a no. 2 and a no. 3 grade on the ground that it might lower the standards of quality of the treatment. The committee explained that this was done simply to meet a commercial condition which cannot well be avoided in that creosote meeting the no. 1 specification cannot be had in a great many cases. The no. 2 and no. 3 specifications, which differ from the no. 1 only in allowing slightly greater percentages of distillation, meet the needs of many cases and may offer some price advantages. It is stated, however, that where these grades are used it is desirable to inject a greater quantity per cubic foot. It was pointed out that there are cases where the use of such grades would be economical, because of the probability of ties wearing out in the track before they were made useless by decay.

S. R. Church, from the manufacturer's point of view, stated that any of these three oils would prove an effective preservative. He also observed that there is a constant effort among the manufacturers to improve quality.

The following principles governing the grouping of timbers for antiseptic treatment were adopted, which are expected

to be supplemented by further conclusions made from future work.

Ties of approximately the same period of seasoning should be grouped together for treatment; green ties should never be mixed with seasoned ones.

Pine ties should be separated on the basis of heartwood and sapwood; it would also be advisable in some cases to group hardwoods on the same basis, but it is not generally practical to do so.

Grouping on the basis of species and families, as for example, red oaks, pines, beech, etc., if a further division into heartwood classes is made with pine is usually a satisfactory practice. From this it follows that red oak, beech, long-leaf pine, loblolly pine and gum should be treated separately. Birch and hard maples and certain other combinations depending on the locality, can be grouped together to advantage.

The separation in the yard, on the basis the ties are to be grouped for treatment, is an essential and economical practice.

Changes in the adopted specifications for creosote oil, recommended by the committee, were approved as follows: The first clause of the standard specification was revised to state that creosote oil shall be a pure product from coal gas tar or coke oven tar and free from any foreign admixture, including coal gas tar or coke oven tar. A specification was also added for a no. 2 grade of creosote oil, differing from the no. 1 in that it permits greater percentages of distillation; and for a no. 3 grade, showing higher distillations than the no. 2.

Buildings.

The report consisted mainly of information in regard to various roof coverings (supplementing the report of 1911), and several drawings showing different styles of flashing used for roofs and walls, and methods of laying asbestos shingles.

Grading of Lumber.

The committee submitted definitions of defects and rules for the grading of lumber, which represent specifications for maintenance-of-way lumber, as it can be purchased in the market at present. Similar matter was presented at the 1911 meeting, but was not then adopted. The report was adopted without discussion.

Uniform General Contract Forms.

The association approved the recommendation that a two-page general agreement be used as a folder within which the other portions of a contract can be bound, thus permitting a concise contract form or a large contract form, according to the requirements of the case. A two-page form for this purpose was adopted as presented by the committee. A partial set of general conditions for a construction contract was also adopted, but the committee proposes to add other paragraphs in the future to make it complete.

Safety in Steel Rails.—A joint committee of railway officers and steel-rail manufacturers, organized to consider what can be done to make steel rails less liable to breakage and more durable, was held in New York city recently. It was conceded that improvements can and ought to be made by both sides. Every reasonable effort will be made promptly in this direction. A subcommittee of six was appointed, three representatives of the railways and three of the steel manufacturers to consider the whole subject matter and report their conclusion and recommendation at a future meeting of the general committee.

U. S. courts have recently decided cases for damages against the C.P.R. for forest fires in Maine in 1898, due to sparks from locomotives. The amounts awarded aggregate \$139,400, being about half what was claimed.

Victoria Rolling Stock and Realty Co. of Ontario, Ltd.

Following are extracts from the report for the year ended Feb. 15, 1912, presented at the annual meeting in Toronto, March 6:—

The company has not issued any new debentures, and outstanding debentures against leases have been reduced by \$160,000. The profit on the year's business, after charging up directors' fees and expense account, was \$30,488.09, out of which a dividend of 6%, or \$14,400, has been paid, leaving \$16,088.09 carried forward to profit and loss account, which now amounts to \$50,500.11.

ASSETS.	
Obligations on leases	\$1,065,675 00
Debentures held by company and accrued interest	107,324 61
Cash in bank	71,833 83
Call loans	175,000 00
	\$1,419,833 44

LIABILITIES.	
Capital stock subscribed	\$600,000 00
Capital stock paid up	240,000 00
Debentures outstanding	1,120,000 00
Interest accrued on same	9,333 33
Balance at credit of profit and loss account	50,500 11
	\$1,419,833 44

PROFIT AND LOSS ACCOUNT.	
Balance at credit of profit and loss account, Feb. 15, 1911	\$ 34,412 02
Rents received and accrued on leases and interest on advances and debentures held by company	82,664 21
	\$117,076 23
Interest paid and accrued on debentures	\$ 49,996 83
Expense account	879 29
Directors' fees last year	1,300 00
Dividend account	14,400 00
Balance carried forward	50,500 11
	\$117,076 23

MEMORANDUM RE ROLLING STOCK.

Original cost of rolling stock held under existing leases

Amount paid in on account by railway companies in addition to interest 1,819,370 00

Total amount of the company's debentures outstanding

.....\$1,120,000 00

The directors and officers for the current year, who were re-elected, are as follows:—President, Sir Edmund B. Osler; Vice President, W. D. Matthews; Managing Director, R. A. Smith; other directors, D. Coulson, Hon. J. S. Hendrie, F. G. Osler, D. C. Wilkie.

Improved Mikado Type Locomotive.

A forward step in locomotive design was recently made by the American Locomotive Co. in the construction of a Mikado (2-8-2) type locomotive for the Chesapeake and Ohio Ry. A very complete interchangeability of parts has been obtained between this locomotive, designed for heavy moderate speed freight service, and a Mountain (4-8-2) type locomotive built for severe passenger service in hilly country on the same road. Practically all the important parts are capable of an interchange, these including such members as cylinders, crossheads, pilot, pistons, bearings, springs, throttle, side rods, crank pins, trailing truck, and numerous other parts of equal importance. In all, there are nearly 60 main parts that are the same on both locomotives. This duplication of parts is said to have been made without any sacrifice in the efficiency of the newer locomotive. The principal change in the design, due to the shorter wheel-base, occurred in the boiler, which was shortened the desired amount through reducing the lengths of combustion chamber and smokebox, the tubes remaining as before.

Mackenzie, Mann and Co., Ltd., have ordered recently 75,000 tons of steel rails from the Dominion Iron and Steel Co., and 50,000 tons from the Algoma Steel Co., for use on the various Canadian Northern Ry. lines.

Simple Mallet Locomotive Built by the Canadian Pacific Railway.

In the March issue of The Railway and Marine World, a detailed description of a series of Mallet locomotives built by the C.P.R. for use in the mountain service on the British Columbia Division was given. It was mentioned that the fifth of the series was to differ from the other four in that it was to be simple with 20 x 26-in. cylinders on both frames, instead of 23 x 26-in. on the rear, and 34 x 26-in. on the front frames, as in the compounds. This simple Mallet is numbered 1955, the others running from 1951 to 1954.

The general design of this locomotive has been carried out on the same general lines as the compounds, except that the boiler was increased slightly to give a greater heating surface, and the valve

steam in exhausting from these cylinders, passed straight out through the valve body to a small header on the ends of the valve chambers, connecting then through a looped pipe to the low-pressure cross-over header. The connection between the two engines through this looped pipe, is through a swivel joint located directly over the point of junction of the two frames. From the low-pressure cross-over header the steam is passed into the low-pressure chests, which are of the outside admission type. The exhaust from these cylinders passes out from the valve chambers to a common exhaust pipe, 9 ins. diameter, leading to the exhaust pipe in the smokebox. This 9-in. pipe is designed to adjust itself to the different positions of the front truck by having the ends swivelled, one end in addition having a slip joint that allows the pipe to lengthen slightly when the engine is taking a curve.

The piping in this simple engine is very different, as an inspection of the accompanying illustration will show. Steam, as in the former case, passes out through piping under the runboards, the size being increased to 5½ ins. The pipe on the left leads directly to a header connecting the two steam chests of the rear cylinders. The one on the

the connection on the boiler and that on the front cylinders is very slight, expansion joints capable of meeting a wide range of extension are not a necessity. Instead, sufficient extension can be obtained by having the faces of the elbows slide on the faces of the ball rings. The method of thus allowing the faces to slide within limits is obtained by a simple change in design. A large retaining ring, bored out 1½ in. larger in diameter than the flange of the elbow, is held in position by studs carrying small coiled springs, of 200 lbs. capacity each, between the flange and the nuts of these studs. This allows the joint to slip within the limitations set by the bore of the retaining collar, and at the same time maintain a steam-tight joint.

The front sliding joint connection is attached directly to the lower face of the Y-connection casting, the rear engine exhaust passing through a flanged connection face. As before mentioned, the exhaust from that point is divided up to the point where it enters the smokebox exhaust pipe. As first made, the smokebox exhaust pipe was likewise divided, but this has since been replaced by a single exhaust of the form shown. Dividing the exhaust pipe up to the point where it enters the smokebox

Steam Piping Arrangement for the Canadian Pacific Ry. Simple Mallet Locomotive.

gear was changed to suit the new single-expansion cylinders. The cylinders, steel castings as in the compounds described in the last issue, and similar in construction, are all made from the same pattern, both pairs having outside admission. This feature results in both the front and rear valve gears being duplicates. The valve travel was increased from 5½ to 6½ ins. in order to obtain a greater cut-off, the maximum being at 88% of the stroke.

The arrangement of steam piping, one of the most prominent points of difference in these locomotives, is shown completely in the accompanying illustration. In the compounds, the steam passed back from each side of the superheater header through the smokebox sides to 5-in. pipes passing along under the runboard on each side to the high pressure cylinders located one on each side of the forward end of the rear frame. The high-pressure cylinders, being of the inside admission type, meant that the

right leads back to the swivel connection located directly over the point of juncture of the two frames, passing down into a cross-over header connecting the front cylinder steam chests. The four cylinders being of the outside admission type with the exhaust passage coming up through the top of the valve chest, make a good arrangement of exhaust piping, as the illustration points out. The exhaust from the rear engine passes through a 7-in. pipe leading over the front cylinders and under the boiler to a Y-connection. The front engine exhaust passes out from its cylinders in a similar manner to a pipe leading to the lower face of the Y-connection. The exhausts from both engines pass on into a 10-in. pipe divided down its centre by a ¼-in. plate, leading into the smokebox, exhausting at that point through a 5½-in. nozzle.

The exhaust from the front engine is the only one requiring flexible connections, and as the relative movement of

exhaust pipe, has the advantage of making the draft more continuous, and what is more important, keeps it from losing strength. Were the exhaust of both cylinders to pass into the large volume of the 10-in. pipe, provided the latter were not divided, this pipe, from its volume, would act as a receiver, reducing the intensity of the draft.

The only other simple Mallet in America that is known to the writer, is one recently built by the American Locomotive Co., for the Pennsylvania Rd. This was claimed by the builders to be the only one then existing, and as far as known, none has since been constructed, other than the C.P.R. locomotive under discussion. The Pennsylvania locomotive is so different in construction from this simple Mallet as to make a fair comparison impossible. The C.P.R. locomotive was the first to be put into regular service, the other having been subjected to considerable experimenting before it was finally put into service.

The C.P.R. locomotive was in regular service last October, while the Pennsylvania one, as far as can be ascertained, was not working before the end of November.

The writer is indebted to the C.P.R. Motive Power Department for the information contained in the foregoing.

Canadian Northern Quebec Railway Locomotive House and Shops at Quebec.

The Canadian Northern Quebec Ry. is building a roundhouse and shops at Quebec for joint use with the Quebec and Lake St. John Ry. The location is on the outskirts of the city, just across the St. Charles River, at a point where the two railway lines come together in the old village of Limouliou, which was absorbed by the city a couple of years ago.

The site, which is practically level, occupies some 20 acres laid out in the manner indicated in the accompanying ground plan. Electricity for both power and lighting purposes is distributed to all the buildings from outside sources.

for locomotive repairs. It is a reinforced concrete building 62 x 168 ft., provided with both standard and narrow gauge tracks down the centre, the latter connecting with the narrow gauge system in the roundhouse. One corner of the shop is partitioned off for the boiler room, and contains the heating apparatus and the necessary auxiliary equipment. All the machine tool equipment is to be contained in the machine shop, with none in the drop pit part of the roundhouse, this being the reason for these two buildings being located adjacent to each other. The machinery from the old shops is to be installed, together with a considerable quantity of new machinery to cope with the increasing rolling stock.

THE CASTING SHOP or foundry is housed in a concrete building, 50 x 80 ft., located parallel to the machine shop with an intervening space of 50 ft. It is to be equipped with the latest in foundry appliances.

THE STORES are located in a 50 x 130 ft. concrete building in line with the casting shop. It is to be fitted with shelves and racks for easy access to the supplies. The storekeeper's and officials' offices are located at the front of the building on one side of the central en-

required at present and in the near future the shops will be of sufficient capacity to meet all demands.

Self Clearing Ash Pans for Locomotives.

Mention was made in The Railway and Marine World for March that the Board of Railway Commissioners had passed an order requiring that all railways under its jurisdiction must by Dec. 31, 1913, equip their locomotives with ash pans that may be dumped without the necessity of any employee going under the locomotive to do so. In order to ascertain the extent to which dumping ash pans are used in Canada, we communicated with the larger railways and have elicited the following information:—

The Canadian Pacific Ry. has about 25% of its locomotives equipped with a standard type of self-clearing ash pan.

The Grand Trunk Ry. has a number of locomotives of all sizes equipped with ash pan cleaning devices.

The Canadian Northern Ry. has practically none of its locomotives equipped, but has the matter under consideration.

The Temiskaming and Northern Ontario Ry. has only four of its 40 locomotives equipped, and no decision has

Canadian Northern Quebec Ry. Locomotive House and Shops at Quebec.

The grounds are piped with city water, which with steam and compressed air piping, is carried in a tunnel connecting all the buildings with a central power station in which will be located all the heating apparatus, compressors and water pumps.

All the buildings are single story, constructed throughout in a fireproof manner of reinforced concrete. Entrance to all the buildings from the tracks is from the lower end.

ROUNDHOUSE.—A 15 stall roundhouse is located at the left end of the grounds. It is divided into three 5 stall sections by two fire walls, with communication between the sections through doors at the rear. A 75 ft. turntable provides access to all the stalls. The two sections to the left have cinder floors, while the third is laid with concrete for washout purposes. This latter section also has a connecting drop pit under three of its stalls, each equipped with hydraulic jacks for lowering driving wheels, etc. Around the rear wall of the roundhouse, there is a narrow gauge track for the carrying of parts, leading into the machine shop by means of a couple of small turntables.

MACHINE SHOP.—Along the right edge of the roundhouse is the machine shop

trance. A similar division on the other side of the entrance forms a stationery store room.

THE OIL HOUSE, 30 x 50 ft., is in line with the stores building, but 50 ft. in front, designed in the most approved manner. Self-measuring oil pumps located along the side walls, connect with the oil supply tanks in the basement, where they are away from disturbing influences. The whole structure is of reinforced concrete.

THE CAR SHOP, located 100 ft. to the right of the last row of structures, is a reinforced concrete building, 65 x 350 ft., extending some distance below the position indicated as its end in the plan. There are three repair tracks extending the length of the building. One end of the shop is to be set aside for the necessary wood-working machinery.

PILING GROUND.—Alongside the car shop there is a strip of land 116 ft. wide for timber, car repair parts, and sundry outdoor stores.

The shops as at present planned are not very extensive, as the intention is to only handle such rolling stock there as terminates at that point. This will include the Quebec and Lake St. John Ry. and the eastern end of the Canadian Northern Quebec Ry. For the purposes

been arrived at as to what type will be adopted.

The Wabash Rd. has practically all the locomotives on its Canadian lines equipped, two types being in use. For shallow ash pans, the swipe system is used, by which the ashes are blown out by steam pressure, while a self dumping ashpan is applied on the deeper types of pans.

Largest Railway Terminal in Germany.—The central station at Frankfurt which has heretofore held the record for size among the railways terminals in Germany, must now give place to the station at Leipzig, which has been building for the last nine years and has just been completed at a cost of \$34,000,000. an outlay represented not so much by ornament and decoration as by enormous size for the accommodation of freight as well as passenger traffic.

During Feb., 12 employees were killed and 31 injured in the course of their work connected with the operation of Canadian railways. Of the fatalities, five were due to persons being run over, three to being crushed between cars, two to derailments, and one each to being struck by a train and to falling material.

Railway Mechanical Methods and Devices.

Saw Guard at the Michigan Central Railroad Car Shops.

Prevention of industrial accidents occupies a very important position in the minds of those responsible for the physical welfare of their workmen. Railway shops have kept well in the van in this movement for better safety devices on dangerous machinery, such as saws and machines of a similar nature. In this connection, the Michigan Central Rd. St. Thomas, Ont. shops afford a good example in some particulars of what is being done in that connection, for the writer on going through them was impressed with the manner in which

Simple and Easily Adjusted Saw Guard.

some of the dangerous wood-working machinery had been protected.

The saw guard illustrated herewith is a fair sample of what is being done in these shops. A simple sheet metal hood, giving ample clearance space for the saw, is held securely in position by two pipe supports from the roof girders, and is laterally braced by wall struts, made of pipe and secured in the manner indicated. This holds the saw rigidly, the vibration of the saw not affecting it in any way. The vertical strip holding the guard, slides through guides in the vertical pipe supports, and may be secured in a number of positions by the insertion of pins in the holes provided. This permits of the hood being kept down as low on the work as practical clearance limits will permit, leaving no dangerous space through which the workman's fingers might slip. At the same time the guard may be lifted completely out of the way, when not required, for a special job. The construction is especially simple, and should appeal to all car shop foremen.

A Dynamometer Car of unusually high capacity has been put in service on the Atchison, Topeka and Santa Fe Ry. It is designed to take and safely record a shock of 1,000,000 lbs. at the drawbar, and is mounted on a steel frame of a very solid construction as necessitated by the nature of the work to be performed. The recording apparatus is operated by electric power.

Pneumatic Tool Holder used by Pere Marquette Railroad.

The accompanying illustration shows a novel device for holding lathe tools on such jobs as require a frequent changing of the tool relatively to the work. Such a condition exists in car and driving-wheel lathes, where it is necessary to shift the tool quite often to give the correct tire contour. The tool here shown was designed by F. C. Pickard, Machine Shop Foreman at the P.M.R., Grand Rapids shops, and is being adapted by other shops of the system.

The device consists of an air cylinder A, held between plates B, which form the cylinder heads; other arrangements of the cylinder are possible. These two heads are held together and supported by four bolts C on the tool carriage of the lathe D, the bolts being at the four corners. On this carriage the tool holder rests. The top of the tool holder is

Pneumatic Lathe Tool Holder.

cut out just to fit the 1½-in. steel used for the tool. This part of the design is one of the most important features, for, by the use of a tool properly supported on all sides, as in this case, the section of the tool may be materially decreased, resulting in a considerable saving in expensive high-speed steel.

Over the tool, there is a clamp plate E, supported by coiled springs over the corner bolts, normally keeping the clamp-plate clear of the tool. Pressing down on this clamp-plate when it is in use, are two cams F, pivoted on cross-arms G between the bolts C at the sides, and operated by a plunger in the air cylinder A. A tight, positive grip is thereby obtained on the tool, controlled by the air valve above the cylinder, and which, of course, may be arranged where desired by piping.

The C.P.R. has, according to press reports, arranged with the Trans Siberian Ry. for round the world tickets, to go into effect May 1.

Stand for Coupler Knuckles at the Central Vermont Railway Shops

A convenient method of piling coupler knuckles is shown in the accompanying illustration of the practice in the Central Vermont Ry. stores department at St. Albans, Vt. The stand, comprising a series of racks, is of a very simple construction. The individual units of the stand are made up of rough boards placed face to face a sufficient distance apart to allow the entry between them of the hinge portion of the knuckle. The edges of the boards are inclined slightly from the perpendicular, giving the face of the

Stand for Piling Coupler Knuckles.

stand a little slope. Eight boards ranged in this manner form rack recesses for seven piles of knuckles. This is duplicated on the other side of the stand, making 14 rack piles in all.

No special care is required to pile the knuckles in position, the lowest one being merely placed on the floor, and the others in a pile above, the sloping face of the stand preventing them from falling out. In a rack of the capacity shown, each unit holds about 16, making a total rack capacity of 224 knuckles. The principal advantage of such a scheme of storing lies not so much in the saving in floor space, which is very slight, but rather in the convenience and accessibility, the knuckles being easy to get at, and making a neat arrangement both from the standpoint of appearance and storekeeping.

This arrangement is not exactly a new one, but there are so few places where it is in use that a spreading abroad of its advantages would seem desirable.

Eastern and Western Railway Mileage.
—Senator Loughheed announced in the Senate recently that on Jan. 1 there were 14,800 miles of railway in Canada east of Lake Superior. On the same date being in operation, and 11,280 miles west of Lake Superior. On the same date 2,200 miles were officially regarded as being under construction east of Lake Superior, and 4,800 miles west of it.

Making Superheater Tubes at the Montreal Locomotive Works.

An interesting operation is that of making tubes for superheaters such as the Vaughan-Horsey type, the steps in the process of manufacture of which are outlined in this article, the Montreal Locomotive Works practice being the one considered. The initial steps in the production of these tubes occur in the blacksmith shop, under the direction of J. G. Boyer, Blacksmith Shop Foreman. As this part of the process is the only one of particular interest, the description will be confined to it.

The tubes in the several stages of completion are shown together in fig. 1. The original tubes appear as at A, plain tubes as they come from the mill. They are first taken to the upsetting machine, where the ends are upset in the usual form of upsetting dies to the form indicated at B. In this operation, the end is heated for a short distance, and gripped in the upsetting machine just back of the red-hot portion, by the cross ram, the dies of which are formed to the outside shape of the completed flanged end, the end plunger with guiding fit to enter the tube bore and prevent it from crushing, upsetting the end to this shape. There is also a back stop for keeping the tube from slipping in the dies while upsetting. A flash which runs back from the upset end may be noticed on the lower end of the tube as at B, the flash forming a cup ring around the edge. The tubes in this state are next taken to a small hollow-spindle engine lathe, the flash being there removed, and the end machined all over to the required end shape, size gauges being employed. This leaves the tube end in the shape indicated at C. The most interesting part of the work commences at this stage of the proceedings. The machined end is heated as before, and a small iron plug of a diameter corresponding to the internal diameter of the tube, driven lightly in the end, this operation on completion leaving the tube end as at D. The reasons for this will become apparent when the next operation is explained.

The great difficulty to be overcome in the bending of tubes is the tendency they have towards collapsing, especially if bent to a very sharp radius. There are several means of overcoming, or at least counteracting, this tendency, the more common of these means being that

break up to accommodate the bending of the tube, this breaking up presenting sufficient resistance to keep the walls out into their normal circular form. In the case of these superheated tubes, the supporting medium is common sand, held in position by a piece of waste packed in on top of the sand, so that while solid, it has sufficient give to accommodate the tube in bending.

Fig. 2. Filling the Tubes with Sand.

Following the end-plugging operation, the tubes are ready to be filled the desired amount with sand. The method of performing this seemingly awkward operation is shown in fig. 2. A vertical stand, built up against the wall as indicated in this illustration, has recesses for six tubes standing vertically along its front face. Near the top there is a stand, on which one of the two operators stands. About a pint of sand is poured through a funnel down the interior of the tube, filling it for about 10 ins., the other operator meanwhile tapping the

the operation is a continuous one, both operators being at all times employed. A whole batch of tubes is prepared in this way at one time.

The next operation is that of bending to the required angle—slightly more than 90 degrees on account of the small reverse curve a little further along the tube. The process of bending is shown by fig. 3. Fig. 4 illustrates the mechanism of the bending machine, which bends the tube ends to the shape shown at E, fig. 1. Referring to fig. 4, the construction of the device is as follows: On a stationary base A, there is mounted block B, recessed as shown at C to form a half shape of the tube end, that is to say, this block contains the lower half of the impression of the completed end of the tube, following a line through the centre of the tube. Another block D sliding on guide surfaces E of the base casting A, and prevented from lifting by flanges under the walls of B, contains the corresponding half impression of the downwardly projecting end of the tube, that is, the part at F. This block D may be moved back and forth by the fulcrumed lever G, connected to the block through the link H. When the link G is thrown into its horizontal position to the left, the half sections of the die at F are in tight contact with each other.

Pinned on this sliding block D, there is an arm I, to which is rivetted a die J, forming the upper half of the tube end former. This contains, on its lower surface the form of the upper section of the tube end, from the downwardly projecting end to the right. Thus the forms for the tube bending are in three blocks, the lower section in block B and the upper section in blocks D and J.

The operation is as follows: With the handle K thrown back into its horizontal position so as to raise die-block J into a vertical position, and with the lever G raised drawing D to its open position, a prepared tube, plugged and filled with sand as at D, fig. 1, and heated to a working heat, is placed vertically in the forming dies against the vertical face of the stationary die-block B. The sliding die block D is then forced over to the left against the tube end by the lever G, this operation clamping the tube securely in a vertical position. One of the operators then grasps the upper part of the clamped tube, pulling it over into the die form of block B. Lever K is then raised until block J rests on the

Fig. 1. Tube Ends in Different Stages of Completion.

of filling the interior of the tube in the vicinity of the section to be bent with a foreign substance that can more or less readily be removed after bending. A substance frequently used for bending brass tubing is resin, poured into the tube bore in the molten state, and melted out after bending, the solid resin during the bending being sufficiently solid and withal having the ability to

lower end with a short rod to settle the sand into a solid mass in the bottom of the tube. After the six tubes have been successively filled with sand and have had it well tapped down, a small piece of cotton waste is pushed down inside the tube, and rammed tightly with a long rod. The lower operator removes each one as it is prepared, replacing with one that has not been sanded, so that

Fig. 3. Operation of Bending the Tube Ends.

partially bent tube end, when by a combined action of the lever K, and a hammering on the outer end of the block J, the tube end is forced down into the die forms until the faces of blocks B and J meet. Lever K is then lowered, and lever G raised, releasing the formed tube ends from the dies.

The bending action releases the plug from the tube end, so that when the tube

is removed, the plug remains, a considerable portion of the sand in the tube falling out with it. An air hose connection to the rear in fig. 3 is directed on the dies after the tube and plug have been removed, blowing out all the remaining scale and sand. The red-hot tube has by this time burnt the plugging waste sufficiently to cause it to fall out

Oil Burning Locomotives on Great Northern Railway Lines.

As stated in The Railway and Marine World of April, the Board of Railway Commissioners has exempted the Vancouver, Victoria and Eastern Ry. and Navigation Co. from compliance with

Fig. 4. Mechanism of the Tube Bending Machine.

with the sand remaining in the tube, when the latter is tapped lightly. When cooled, the only operation required to put the tube in a finished state as regards that end, is to grind off the contact face of the flange.

Oil Heater at the Intercolonial Railway Shops.

A very efficient oil-burning torch has recently been designed and made at the Intercolonial Ry.'s Moncton, N.B. shops for boiler shop use for such purposes as heating firebox patches, heating mud-ring corners preparatory to moulding in-to shape, and other places of a like nature.

The construction of the heater is shown in the accompanying illustration. Oil and air are led into a header, the oil through a $\frac{3}{8}$ -in. w.i. pipe, and the air through a $\frac{1}{2}$ -in. w.i. pipe, these pipes being in turn connected to the respective supply pipes on the shop wall by rubber hose. A 1-16-in. hole through the centre of the header leads into the air chamber, the oil passing out from its chamber through a 1-16-in. hole close alongside. A cap or regulating nozzle which screws down over the header, has a conical recess on its inner face, registering over a corresponding projection on the end of the header. This cap or nozzle has a 3-32-in. hole through its centre.

The oil supply passing out into the chamber between the header and regulating nozzle, may be regulated at will by screwing down the nozzle on the projecting tip of the header. The air supply being at all times steady, draws forward with it more or less oil, depending on the nearness together of the contact faces.

The intense flame is concentrated on the desired spot by a hood made of no. 16 iron, secured to the header by a wrought iron carrying brace. This hood 10 ins. long, is $4\frac{1}{2}$ ins. in diameter at its outer end. The air and oil pipes are secured together by a light clamp, so that the whole device forms a solid unit. These two united pipes serve as a handle for the operator in directing the flame on the desired spot, and for that reason are made about 2 ft. long, the hose connections leading off from the outer ends.

the order requiring railway companies to provide zinc covering over caps and intersections on wooden trestles in territory where oil burning locomotives are used.

In this connection D. Hawkins, Superintendent of Motive Power, Great Northern Ry., of which the Vancouver, Victoria and Eastern Ry. is a subsidiary advises us that all the V.V. and E.R. locomotives are burning oil. In fact oil is being used as locomotive fuel over the entire Cascade Division, from Portland Ore. to Vancouver, B.C., and from Seattle to Leavenworth, Wash.; also on all freight power from Leavenworth to Wilson Creek, Wash. All passenger locomotives running between Leavenworth and Spokane, Wash., are also being equipped for oil. All the burners are applied to the front end.

The Stadia for Preliminary Railway Surveys.

The advantages of the stadia for topographical surveys have been argued time and time again, and the adaptability of the method to preliminary railway surveys is a subject which has been thoroughly discussed. Yet, apparently, in spite of all that has been written and spoken, railway location engineers are reluctant to give the stadia a fair trial.

Oil Heater of Simple Construction.

A correspondent, in Denver, Colo., writes as follows:

It is strange that the stadia is not more used for preliminary railway surveys in difficult countries. None of the large roads use it—I speak from experience in every state between Lake Michigan and the Pacific Ocean. Small

corporations which have no engineering departments with fixed old ideas have permitted me to use the stadia enough to satisfy me that 15 to 20 men parties in rough preliminary survey work are radically wrong. With one-fourth that force and the stadia I can do more and better work in the same time.

On the Pacific Coast, which is one of the most difficult sections for surveys, railway stockholders have lost much money, and many engineers have lost their reputations, in using old methods. In one headquarters there have been six different chief engineers in as many years. A dozen parties have been sent into one county in a desperate attempt to get a line. Promoters have bought all the timber land for sale, relying on promises of a railway; yet nothing has been done because a survey that can pass inspection has not been made.

Large parties of cheap men cannot be handled or cared for. There is constant dissatisfaction and change. To keep the cook is by no means the least problem. The cook must have a flunkie, a fine cooking range and what not. I have seen one chief-of-party flunkiey to keep the cook and finally doing the cooking himself. Anything for the salary and title he never had before.

Where a party cannot reach the country where they want to survey, I have seen them survey such country as they could reach. Lines have been run along trails over hill and dale when there was a water grade half a mile away in the wet brush. A report of miles run must be sent to headquarters each week. There is no end of difficulties working in the rough country under these conditions.

A small stadia party can move every day and carry all the equipment on the backs of the men. Trails are not necessary, and the party can penetrate anywhere. Such a party would consist of a transitman, rodman, two axemen and a cook. The chief-of-party himself would act as rodman, and select the salient points. For the final line where the compass needle could not be used for backsights, a back-flagman and a stake-man should be added.

The locating engineer may have several such parties out in the vicinity, keeping a camp of his own on the trail, where profiles and maps may be made and compared, and supplies for the parties kept. Final locating parties need not stake out the line until they can go out over the contractor's roads.

For accuracy the stadia is better than the tape on slopes with the kind of tape-men usually available. For that reason I have used it on townsite work. For contour work (in which preliminary railway location consists in a large measure) it is ideal.—Engineering News.

Intercolonial Ry. Ticket Collectors—Some six or seven ticket collectors have been placed on I.R.C. trains to relieve the conductors of ticket collections, etc., as an experiment. We are officially advised that until the plan has been tested it is uncertain whether it will be continued or extended over the whole line.

VALUE OF STATISTICS.

By D. C. Coleman, General Superintendent, Manitoba Division, C.P.R.

A statistical return with its row upon row of figures is to some of us an object of terror, if not of despair. We make one desperate effort to grasp the significance of the information here set forth with appalling detail, and then, baffled, we consign it to the bottom of the basket, in the vain hope that the man higher up will forget to place an accusing finger on the item which does us the least credit. Therein we do err. That bald and wearisome succession of figures, if we stop to analyze it, is crammed with human interest, and with incident. It tells us perhaps of demonstrations of the power of nature over the works of man, of blizzards reducing mighty locomotives to impotence, of periods of drought, drying up or poisoning the supply of water on which the locomotives depend; of slides on the slopes of the Rockies and the Selkirks demolishing in the twinkling of an eye the dykes and ramparts on which we have expended much toil and money; of mild sluggish prairie rivers transformed in a night to torrents tossing about like chips the proud structures that we have erected. But the story may be more personal, it may recount the triumphs and tragedies of business; it may tell us of the man who after many years of painful effort has finally reached a position of distinction in the service only to find himself unequal to the strain of maintaining himself there; it may tell us how the man who, equipped by Providence with ability, energy and strength, snatches victory after victory from the lap of destiny. Or the story possibly comes even more closely home to us. It may be of the mistakes we made in trusting this man or that, or in sacrificing this man or that, or in failing to foresee the effect of this or that event on this or that departure in policy. It may be of the fortunate results which crowned a happy stroke we made, or a particularly worthy piece of work we did. All this may appear fanciful, but it is not a whit overdrawn. Statistics, if they are properly prepared, are not dry reviews of petty details, but are mirrors in which are reflected the failures and triumphs of those who make the history of a business.

It has fallen to me on one or two occasions to investigate the compilation of statistical reports on various American railways, and as a C.P.R. man, I am proud to be able to say, that on no railway does the system of reports approach that on the C.P.R. for completeness and practical value. On the other leading systems in the Canadian West, where a large proportion of the mileage is in the hands of the construction department, elaborate statistics would be as yet of little value. On our system the efficiency of our statistical department, is due to the personal interest in its work taken by our President, and by the Vice President in control of our financial and accounting departments. They have employed exceptionally able statisticians, who in turn have received stimulation and encouragement from the enthusiasm with which the leading operating officers have availed themselves of the information offered. Here and there, as I have already intimated, are still unappreciative ones who look on the monthly returns as an affliction, but they are in a rapidly dwindling minority.

Our statistical reports are so prepared that a superintendent, if he will, can view the operation and maintenance of his district from every possible angle, and discern exactly where he is weak and where he is strong. Does he desire to judge the transportation work as it is handled by his chief train dispatcher, he does not have to be governed by im-

pressions colored by the action and reaction of one personality on another. He can take up his forms and see exactly what the transportation expenses per gross ton mile have been on his district in the previous month, and in the corresponding month of the previous year, or in any other month with which a fair comparison could be made. He can also compare his cost with that on any other district on which he considers the conditions similar. If he desires to go into details, he has before him figures showing average size of trains in tons, the percentage of the actual load to the authorized rating of locomotives; the percentage of contents to capacity per loaded car, the pounds of coal consumed per ton mile, the percentage of empty or total freight car miles, the overtime paid to trainmen and enginemen per train mile, and the cost of actual train

of course, prepared as early as possible after the accounts of the previous month are closed. If a superintendent is making proper use of them the delay does not destroy their value. Let us presume that he receives January statistics on March 1. He notes, although he is probably aware of it, that his trains were light loaded and his overtime was very high. Is he supposed to sit still and wait until March statistics come to hand before he investigates what improvement has been made since January? Not at all. He can take his dispatchers' train sheets, and his accountant's books, and ascertain at once to what extent the lost ground has been recovered, and instead of waiting to see whether March figures are satisfactory or otherwise, he can be busily employed in manufacturing the results by improving his operations. We have already compared statistics to a mirror. We will further define it as a lady's mirror. Why does the fair lady pose before the mirror? So that she may note

expenses per ton mile. To make these comparisons still more valuable there are marginal notes showing any disturbance of the factors since the previous year, so that allowance can be made for new conditions.

As to the cost of maintenance of way and structures, our system of handling accounts enables the superintendent to secure at any time the exact expense incurred under any particular item, and it is an easy matter for him to figure out the cost per mile of road, which is the unit of comparison. If he has this done for each month and compares it with the corresponding month of the previous year he can realize whither he is tending. For the higher officers, who have not access to the original accounts, the statistical department analyzes, and subdivides, the expenses on each district in the manner above indicated.

It is frequently stated that transportation statistics are of little value because they are so late in reaching the hands of the district officers. They are,

her beauty? Cynical proverbs to the contrary, I think not. She looks not for lines of beauty, but for defects, for evidences of the ravages of time or ill-health, or hard work. She seeks these in order to repair them by the artifices which to man are ever a mystery. She seeks not information for itself, but hints for improvement. So should it be with statistics. They should be searched, not merely for information, but for hints as to where and how improvements can be made.

In my opinion the successful operating officer on a railway will be the one who realizes the value of statistics in any form, and uses them not as a text for self-complacency, or for mourning or lamentation, but who, making intelligent allowance for all special conditions and circumstances, extracts benefit from the details given, and applies the lessons he has learned to the management of his territory.

The foregoing paper was read before the Western Canada Railway Club at

Winnipeg, recently. In the discussion which followed S. J. HUNGERFORD, Superintendent of Rolling Stock, Canadian Northern Ry., said:—I entirely agree with Mr. Coleman in regard to the value of statistics. The subject is worth a great deal of thought. I am unable to see how anyone can carry on any business successfully without having accurate statements available showing the unit cost of operation in connection with each class of work. The unit cost of train operation may exactly indicate the efficiency of operation, but when we come to consider maintenance costs the matter is much more complex, as it is possible of course to reduce expenditure below that absolutely necessary to maintain and for a short time at least it will appear that the cost of operation is abnormally low and that a high state of efficiency exists, whereas the actual condition is quite the reverse.

E. T. SPIDY, Assistant to General Locomotive Foreman, C.P.R. shops: I think Mr. Coleman has put forward one of the most reasonable arguments I have ever heard in favor of efficiency systems. As he said, a record compared with the previous record gives us a base to work on. Without the previous record and knowledge of affecting conditions, half the comparative value of the record is gone. What is deduced from the monthly report can also be deduced from the weekly report, and equally well to the individual work of each employee. That is the basis of the system we are applying to each machine at our locomotive department. Our records are our statistics and their value to locate the detail defects which would otherwise be missed, cannot be over-estimated. As it is impossible to apply a remedy until the defect is located, likewise we cannot consider ourselves efficient until we have corrected our own defects. To do this, accurate records or statistics are absolutely necessary. First find your defects, remedy, and obtain results.

G. B. WILLIAMS, Car Service Agent, C.P.R.: The question of the accuracy of the information from the subordinate offices, while not dealt with by Mr. Coleman, is worth considering. For instance, take the important item of fuel consumption. We are all aware of the fact that it is to a great extent approximated, and sometimes tickets covering coal handled are not made up as carefully as they should be. The same might be applied to oil issues. The close checking of each item is an important factor in the compilation of statistics. On short notice and having just heard the paper read, I am hardly prepared to go into this further except to comment on the difference between present day statistics and those of 10 or 12 years ago. While our present method is undoubtedly the better and continually improving, I am inclined to think it is not as plain to the individual, as it is to the officer. I can remember when engineers, firemen and others would anticipate the arrival of a locomotive performance sheet to ascertain their relative standing, and there was always more or less contention for a place, and very often they would ask for check of tickets if they considered that errors had occurred. Mr. Coleman's paper attracts attention to the value of information given from statistical offices and should stimulate interest in maintaining a knowledge of railway performance in the various departments.

D. C. COLEMAN,—I think there is a great deal in what Mr. Williams says. For instance, in the matter of fuel tickets, the system of all railways seems to be based in the matter of fuel supply on approximation. I don't know that that could be checked up without very great expense. It certainly does affect the statistics of a master mechanic who is trying to check up the record of an individual locomotive, in the matter of oil

and fuel consumption. I agree with what Mr. Hungerford says with reference to maintenance expenses. It is possible for a superintendent to allow his track to run down without the effects being immediately apparent, but if the statistics are checked up for a long term it will be found that the superintendent who lets his track run down is paying for it in the form of accidents, and that the motive power department, or the road which allows its motive power to run down is paying for it in the form of overtime.

S. J. HUNGERFORD:—I wish to express approval of the last point made by Mr. Coleman. I am firmly of the opinion that the way to maintain efficiently and economically is to maintain all the time, and I am unable to see any advantage in curtailing expenses abnormally for a time and later incur the necessary expense, and also the loss of efficiency usually connected with an extra effort to catch up.

S. C. BRAY:—The statistical report received by the general storekeeper is very handy. For the division we have it in the office by the 17th or 18th of the month, and for the whole Western Lines by the end of the month for the previous month's business. We can make comparisons one month with the previous month, and with the same month of the previous year to get the average percentage of business done at each point, also for the division by the month as well as for the Western Lines. We have the statistics for several years past filed in a convenient place for reference at any time. As the statements are received monthly, the percentage of business handled at each point is noted and if it does not show a satisfactory turn over of stock the matter is referred to those responsible, for an explanation.

S. J. HUNGERFORD:—Would it be in order to ask Mr. Coleman to give a general idea of how train operation statistics are arrived at. I am not asking for specific information, but would like a general idea.

D. C. COLEMAN:—What I presume Mr. Hungerford refers to is the cost of handling 1000 equivalent gross tons one mile. That form is compiled in the following way: The train mileage is arrived at from the conductors' train journals. The wages of engineers, firemen, conductors and brakemen are taken off by the timekeeper on each district separately, and work service, passenger service and mixed service are taken off separately from the freight service, and the total of the freight service is arrived at. Then they take the fuel figures as shown on the conductors' train journals and oil figures as furnished by the mechanical department. I think those are all the items used. I don't know if I have made myself clear or not, but these are the only items included—the wages of the train men, the fuel and the oil. The basis of all our reports is the conductors' train journal.

J. T. WARDE, chief clerk, General Car Foreman, C.P.R.:—In this matter of statistics, the benefit shows itself in the pay roll, as at the end of the month, we invariably come out within a few dollars of the estimate, and this shows the benefit of statistics in our department.

R. R. NEILD, General Foreman, Locomotive Shops, C.P.R.:—We should all know the value of statistics. I don't know how we could run a railway or any other business without them. We derive a great deal of benefit from the statistics that are drawn up in the mechanical department, although we run up against some errors occasionally. We find what our system is costing us each week, and it helps us to know just how we are to come out at the end of the month, and also what each individual engine is costing us, and if it is going too high we have a chance to look out for the leaks. Of course in the mechanical department, statistics are no use if

they come up two or three months after the engine is turned out of the shops. We get the figures weekly, which gives us an opportunity of checking up. I would have liked Mr. Coleman to have told us something about the general statistics drawn up as to the depreciation of rolling stock, machinery, etc. We should know almost at a glance just the value of our rolling stock and machinery of every description. I would like to hear from Mr. Coleman as to how they arrive at the depreciation values.

D. C. COLEMAN:—As far as rolling stock is concerned, there is an arbitrary charge. I cannot tell from personal knowledge what it is, but I believe the Canadian roads use an arbitrary arrived at by U.S. railways at the instance of the Interstate Commerce Commission. I don't know that there is anything written off for machinery. When a machine is replaced it is debited with the full price of the machine replaced, and balance of cost charged to special replacement accounts.

Birthdays of Transportation Men in May.

Many happy returns of the day to—

W. R. Baker, Secretary, and Assistant to President, C.P.R., Montreal, born at York, Eng., May 25, 1852.

G. S. Cantlie, General Superintendent Car Service, C.P.R., Montreal, born there May 2, 1867.

M. Donaldson, M. Can. Soc. C.E., Superintendent, Ottawa Division, G.T.R., Ottawa, Ont., born near Edinburgh, Scotland, May 1, 1851.

A. E. Duff, District Passenger Agent, G.T.R., Toronto, born at Sherbrooke, Que., May 1, 1872.

G. C. Dunn, District Engineer, G.T.P.R., Winnipeg, born at Quebec, May 13, 1862.

J. D. Evans, Chief Engineer, Central Ontario Ry., Trenton, Ont., born at Goderich, Ont., May 27, 1843.

E. T. Galt, President, Alberta Ry. and Irrigation Co., Montreal, born at Sherbrooke, Que., May 24, 1850.

G. H. Hedge, Master Mechanic, Central Division, Canadian Northern Ry., Winnipeg, born at Neath, Wales, May 26, 1865.

R. B. Hepburn, President and General Manager, Ontario and Quebec Navigation Co., Ltd., Picton, Ont., born there, May 27, 1876.

G. A. Hoag, Superintendent, Central Ontario Ry., Trenton, Ont., born at Walker's Falls, Ont., May 31, 1866.

W. T. Huggan, Accountant and Auditor, Prince Edward Island Ry., Charlottetown, P.E.I., born at Halifax, N.S., May 24, 1851.

J. Irwin, Superintendent, District 3, Canadian Northern Ry., Dauphin, Man., born at Clinton, Ont., May 23, 1866.

W. Marshall, Superintendent, Ontario Division, C.P.R. Telegraphs, Toronto, born at Garden Island, Ont., May 18, 1859.

H. B. Sherwood, Superintendent, Bay of Quinte Ry., Napanee, Ont., born at Auburn, N.Y., May 25, 1847.

W. Stapleton, District Passenger Agent, Canadian Northern Ry., Saskatoon, Sask., born at Bristol, Eng., May 20, 1844.

E. Tiffin, Member, Government Railways Managing Board and General Traffic Manager, Government Railways, Moncton, N.B., born at Hamilton, Ont., May 5, 1849.

J. H. Walsh, General Manager, Quebec Central Ry., Sherbrooke, Que., born at Quebec, May 12, 1860.

H. K. Wicksteed, B.A.Sc., M. Can. Soc. C. E., Chief Engineer of Surveys, Mackenzie, Mann & Co., Ltd., Toronto, born at Quebec, May 25, 1855.

James Yeo, ex-Roadmaster, Intercolonial Ry., Riviere du Loup, Que., born at Bideford, Devonshire, Eng., May 1, 1830.

Orders by Board of Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place, and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the dates assigned to them.

16152. March 21.—Authorizing C.P.R. to rebuild bridge 176.9 over Bow River, Calgary subdivision, Alta.

16153. March 18.—Rescinding order 12783, Jan. 18, 1911, in complaint of Dawson board of trade vs. White Pass and Yukon Route.

16154. March 22.—Authorizing C.P.R. to build its Lacombe Easterly branch across highways from mileage 140.31 to 143.61, Alta.

16155. March 22.—Relieving C.P.R. from further protection at public highway near Griswold, Man.

16156. March 21.—Authorizing C.P.R. to build spur for Vancouver Lumber Co., Merritt, B.C.

16157. March 22.—Authorizing C.N.O.R. to build spur for Alexander Bruce & Co.'s tie preserving plant near Port Frances, Ont.

16158. March 20.—Approving T. H. & B.R. rules for operation of automatic block signals.

16159. March 22.—Approving Campbellford, Lake Ontario and Western Ry. location through Oshawa, and revised location as previously approved by order 11947, through East Whitby tp., Ont., mileage 29.1 to 34.2.

16160. March 22.—Authorizing Montreal and Southern Counties Ry. to build from G.T.R. property east of Front St., St. Lambert, Que., to Central Vermont Ry., crossing Victoria Ave. overhead.

16161. March 21.—Ordering G.T.R. to file special tariff or supplement to existing tariff C.R.C. 1686, to take effect not later than Apr. 8, establishing rate of \$3 a car for switching lumber from F. McGibbon & Sons' docks, Sarnia, Ont., to storage yard and mill, for storage, sorting or dressing and re-shipment by G.T.R.

16162. March 21.—Authorizing G.T.R. to build siding for W. Laking, Haliburton, Ont.

16163. March 22.—Ordering G.T.R. to remove at once, shrubs, etc., at crossing of first highway east of Waterdown station, Ont.; cars not to be left standing within 75 ft. of crossing.

16164. March 20.—Approving G.N.R. standard plan of portable stations.

16165. March 25.—Defining express delivery and collection limits for Hull, Que.

16166. March 22.—Authorizing G.T.R. to build spur for Steel and Radiation, Ltd., St. Catharines, Ont.

16167. March 23.—Authorizing highway board of Grand Falls parish, N.B., to build highway across C.P.R.

16168. March 23.—Approving location of C.P.R. Suffield to Kipp branch from main line near Suffield to mileage 21, Alta.

16169. March 13.—Authorizing Georgian Bay and Seaboard Ry., (C.P.R.) to build across Jackson St., Bethany, Ont.

16170. March 5.—Approving location of G.T.P.R. station at Henry House, Alta.

16171. March 25.—Approving Supplement 8 to Express Classification for Canada 2.

16172. March 25.—Correcting errors in revised plan of G.T.P. Branch Lines Co.'s Cutknife branch.

16173. March 25.—Amending order 16076, Mar. 5, re C.P.R. Boissevain-Lauder branch.

16174. March 23.—Authorizing city of Saskatoon, Sask., to carry 20th St. across C.P.R. at rail level.

16175. March 25.—Amending order 16064, March 1, re Bridgeburg bridge, Ont., by adding clause that municipality shall maintain same.

16176. March 26.—Authorizing G.T.R. to build bridge over Clubbiness Creek and over Holland River, Northern Division, Ont.

16177. March 25.—Approving location of G.T.P.R. station at Houston, B.C.

16178. March 25.—Approving Kettle Valley Ry. location from mileage 43.92 to 55, northwest of Midway, B.C.

16179. March 26.—Approving location of three G.T.P.R. unnamed stations in Coast district, B.C.

16180. March 28.—Ordering C.N.R. to put its main line in Saskatoon yard in good shape and condition before June 1, and pending completion of work, trains not to exceed six miles an hour.

16181. March 28.—Authorizing Lachine, Jacques Cartier and Maisonneuve Ry. (G.T.R.) to cross certain streets in Montreal, by overhead crossings, subways and level crossings.

16182. March 25.—Rescinding order 16122, March 14, and amending order 16095, Mar. 7, re C.N.O.R. taking lands in Trenton.

16183. March 28.—Rescinding order 13060, Feb. 21, 1911, and approving M.C.R. bylaw authorizing C. F. Daly, V.P., L. W. Landman, G.P.A., W. C. Rowley, G.F.A. and J. L. O'Brien, Chief of Tariff Bureau, to issue tariffs of tolls.

16184. March 4.—Rescinding order 15938, Feb. 6, in so far as it authorizes building of Lachine, Jacques Cartier, and Maisonneuve Ry., (G.T.R.) across Rachel St., Montreal.

16185. March 26.—Ordering G.T.R. withing 90 days to install electric bell at crossing just east of Clarkson station, Ont., 20% to be paid from railway grade crossing fund.

16186. March 26.—Authorizing Saskatchewan government to build highway across C.N.R. in s. w. ¼ sec. 30, tp. 47, r. 26, w. 2 m.

16187. March 27.—Relieving C.P.R. from further protection at first highway south of St. Vincent Rd., mileage 91, near Owen Sound, Ont.

16188, 16189. March 28, 26.—Authorizing C.P.R. to build three spurs from main line in s. w. ¼ sec. 28, tp. 23, r. 29, w. 4 m., into and through blocks 24, 25, and 30, and block G. in subdivision of s. e. ¼ sec. 28, tp. 23, r. 29, w. 4 m., and spur for Calgary Brewing and Malting Co., at Coleman, Alta.

16190. March 28.—Rescinding order 15683, Dec. 23, 1911, and recommending to Governor-in-council for approval G.T.R. operating department rules and regulations.

16191. March 27.—Authorizing G.T.P. Branch Lines Co. to cross with its Regina-Moose Jaw Branch, the C.P.R. Moose Jaw Northwest Branch by undergrade crossing at Moose Jaw, Sask.

16192. Mar. 29.—Authorizing C.N.O.R. to cross Sydenham Lake, Loughborough tp., and rescinding order 15026, Oct. 16, 1911, giving similar authorization.

16193. Mar. 26.—Approving revised location of Algoma Central and Hudson Bay Ry. between mileage 123.74 and 130.87 and connection with N.T.R. at Grant, Ont.

16194. Mar. 28.—Authorizing British Columbia Public Works Department to carry park Ave. over C.P.R., in Slokan.

16195, 16196. Mar. 28.—Authorizing C.P.R. to build additional track across highways at Basswood and Birtle, Man.

16197. Oct. 9.—Authorizing C.P.R. to divert highway at mileage 119.7, Medicine Hat subdivision, Alta.

16198. Mar. 29.—Authorizing V. V. and E. Ry. and N. Co. to build crossings in Sumas, B.C.

16199. Mar. 8.—Authorizing G.T.R. to take S. McLean's lands, being part of lot 13, r. 1, south of Longwood's road, Ekfrid tp., Ont.

16200. Apr. 1.—Authorizing M.C.R. to use bridge over Bear Creek, mileage 57.3, St. Clair Division.

16201. Mar. 29.—Authorizing G.T.P.R. to build spur for Imperial Oil Co., Edmonton, Alta.

16202. Mar. 30.—Authorizing G.T.R. to rebuild bridge at mileage 7.47, District 8, Northern Division, Ont.

16203. Mar. 30.—Authorizing C.P.R. to rebuild bridge across Muskrat River, Chalk River subdivision, Ont.

16204. Mar. 30.—Authorizing C.P.R. to build spur for A. F. Vincent, near Mile End station, Montreal.

16205. Mar. 21.—Authorizing C.N.O.R. to build transfer track to connect its Sudbury branch with Algoma Eastern Ry. through Sudbury.

16206, 16207. Mar. 30, Apr. 1.—Approving location of C.N.R. Calgary-Strathcona line through tp. 40, r. 26, mileage 0 to 4.55, and C.N.R. location through tps. 14 and 9, r. 26 and 25, w. 4 m., Alta., mileage 65.05 to 102.50.

16208. Mar. 30.—Dismissing complaint of C. W. Deaver, Viscount, Sask., re cattle pass on G.T.P.R.

16209. Apr. 1.—Approving location of C.P.R. station at Lydiatt, Man.

16210. Mar. 30.—Dismissing complaint of residents of Brownlee, Sask., re C.P.R. car supply.

16211. Apr. 1.—Authorizing Kootenay Central Ry. (C.P.R.) to open for freight traffic its line from Colvalli to Bull River, 9.2 miles.

16212 to 16214. Apr. 1.—Authorizing C.P.R. to build spurs for Dominion Match Co., New Westminster District, B.C.; Sudbury Construction and Machinery Co., Sudbury, Ont.; and Canadian Hanson and Van Winkle Co., near Morrow Ave., Toronto.

16215. Mar. 30.—Authorizing C.N.R. to cross Calgary and Edmonton trail, Bailey, Barnett, and Oliver Aves, and Matthias St., and to close certain lands, Lacombe, Alta.

16216. Mar. 30.—Authorizing G.T.R. to rebuild bridge across Narrows at milepost 120.39, District 9, Northern Division, Ont.

16217. Apr. 2.—Authorizing C.P.R. to rebuild bridge 81.0, Sudbury Division, Ont.

16218. Apr. 2.—Approving revised location of C.P.R. Wilkie to Angila branch from Pheasant Hills branch, sec. 6, tp. 40, for 35.34 miles to sec. 22, tp. 34, r. 19, w. 3 m., Sask.

16219 to 16221. Apr. 2, 1.—Approving location of C.N.O.R. Sudbury-Port Arthur line through unsurveyed territory, Thunder Bay District, mileage 343.15 to 363, and revised location Algoma District, mileage 209.1 to 219.43, from Sudbury Jct.; and revised location of Montreal-Port Arthur line through unsurveyed territory Sudbury District, mileage 270.9 to 272.83.

16222. Apr. 2.—Approving location of C.N.O.R. Calgary-Strathcona branch through tps. 47 and 52, r. 24 and 26, w. 4 m., and part of Strathcona, Alta.

16223. Apr. 3.—Approving Klondike Mines Ry. Standard Passenger tariff C.R.C. 3.

16224. Apr. 3.—Authorizing C.P.R. to build its Moosejaw southwesterly branch across four highways, mileage 23.22 to 36.65.

16225. Apr. 3.—Ordering that Vancouver, Fraser Valley and Southern Ry. local tolls on lumber, etc., shall be same as charged by C.P.R. and G.N.R. for similar distances within their corresponding territories and that joint through rates on lumber be on basis of 1c per 100 lbs. etc.

16226 to 16228. Apr. 3.—Disallowing G.T.P.R., C.N.R. and C.P.R. increased tolls from Westfort, Port Arthur, Fort William, Ont., from Apr. 1, and restoring lower tolls in effect immediately before that date.

16229. Apr. 4.—Extending to Oct. 1, time for completion of C.N.R. spur St. Boniface, Man., authorized by order 13322, Mar. 29, 1911.

16230. Apr. 4.—Extending for six months from Mar. 30, time for completion of Algoma Central and Hudson Bay Ry. extension to Bruce St., Sault Ste. Marie, Ont.

16231. Apr. 3.—Correcting errors in G.T.P. Branch Lines Co. Regina-Moose Jaw branch location plan.

16232. Mar. 25.—Approving location of C.P.R. station at Griffin, Sask.

16233. Apr. 8.—Approving order of Exchequer Court of Canada appointing F. W. Blair, D. E. Waters, and N. Erb receivers of Pere Marquette Rd. in Canada.

16234. Mar. 11.—Rescinding order 16004, Feb. 15, and authorizing C.N.O.R. to cross C.P.R. at Lambton, by undercrossing.

16235. Apr. 1.—Amending order 15558, Dec. 5, 1911, by adding clause directing city to reimburse C.P.R. for services of flagman, etc., at Talbot St. crossing, Winnipeg.

16236. Apr. 3.—Authorizing Lachine, Jacques Cartier and Maisonneuve Ry. (G.T.R.) to cross Montreal St. Ry. by overhead bridges at three streets.

16237. Apr. 1.—Ordering that C.N.R. and C.P.R. protect crossing on Main St., Gladstone, Man., by watchman.

16238. Apr. 1.—Ordering G.T.P.R. to grade a new crossing parallel with Main St. and open Beaver Hills Road across its right of way, Ituna, Sask.

16239. Apr. 2.—Dismissing application of residents in Carrot Creek vicinity, Alta., re G.T.P.R. siding.

16240. Apr. 1.—Dismissing application of farmers in Pleasant Point vicinity near Carberry, Man., to order C.P.R. to build a siding.

16241. Apr. 1.—Ordering C.N.R. to fence its right of way now unfenced along the Qu'Appelle, Long Lake and Saskatchewan Ry. between Saskatoon and Regina, under penalty of \$50 a day after Nov. 1.

16242. Apr. 2.—Ordering G.T.P.R. to cease discriminating in carriage of freight in favor of its contractors as against general public over its line from Hinton, Alta., west thereof, subject to fine of \$100.

16243. Apr. 6.—Authorizing C.N.O.R. to cross four highways in Nepean tp.

16244. Apr. 6.—Authorizing C.N.R. to cross with its Calgary-Edmonton branch six highways in Alberta.

16245. Apr. 1.—Authorizing C.N.R. to build spur to power house, Saskatoon, Sask.

16246. Apr. 3.—Authorizing C.N.R. to cross five highways in Strathcona, Alta.

16247, 16248. Apr. 4.—Approving location of Campbellford, Lake Ontario and Western Ry. (C.P.R.), Glen Tay to Belleville branch from mileage 15 across Oso, Bedford, and Hinchinbrooke tps., crossing Kingston and Pembroke Ry., near Parham station to westerly boundary of Hinchinbrooke tp., at mileage 38.5; and location of Glen Tay to Cobourg line from mileage 38.5 to 58.5 in Lennox and Addington counties, Ont.

16249, 16250. Apr. 4, 6.—Authorizing G.T.P.R. to build bridges across Fraser River at mileage 316 and 274 west of Wolf Creek, B.C.

16251. Apr. 2.—Dismissing G.T.P. Branch Lines Co. application re Toffield-Calgary branch right of way.

16252. Apr. 3.—Authorizing G.T.P. Branch Lines Co. to cross C.P.R. Brandon branch

overhead in n.w. ¼ sec. 26, tp. 10, r. 18, w. p.m., Man.

16253, 16254. Apr. 2.—Authorizing C.P.R. to take lands for construction of permanent snow fences in Pickering tp., Ont.

16255. Apr. 4.—Relieving C.P.R. from erecting fences on portion of its Calgary subdivision, Alta.

16256, 16257. Apr. 6.—Authorizing G.T.P. Branch Lines Co. to cross with its Calgary Boundary branch the C.P.R. Alderside branch in n.e. ¼ sec. 4, tp. 12, r. 23, and n.w. ¼ sec. 26, tp. 19, r. 28, w. 4 m., interlocking plants to be installed.

16258. Apr. 6.—Authorizing G.T.P. Branch Lines Co. to build Y connecting its Alberta coal branch with Yellowhead Pass Coal and Coke Co.'s spur.

16259. Apr. 9.—Rescinding order 8462, Oct. 29, 1909, and ordering G.T.P.R. to build overhead crossing on Fort Saskatchewan trail, north Edmonton, Alta., plans to be filed within 30 days and work to be completed within 90 days from approval, under penalty of \$100 a day.

16261. Apr. 9.—Authorizing G.T.R. to build spur into Western Foundry Co.'s premises, Wingham, Ont.

16262 to 16264. Apr. 9.—Authorizing C.P.R. to rebuild bridges 22.5, Newport subdivision; 32.6, Ottawa subdivision; and 24.8, 30.7, 32.2 and 35.8, Farnham subdivision.

16265. Apr. 9.—Authorizing C.P.R. to build its Moose Jaw southwesterly branch across highway at mileage 36.63, Sask.

16266. Apr. 10.—Approving C.N.O.R. revised location in Litchfield tp., mileage 59.13 to 59.73 from Ottawa.

16267. Apr. 10.—Approving location of C.N.R. Montreal-Port Arthur line through MacLennan, Scadding, Street and Davis tps., Sudbury District, mileage 405.36 to 421.09 from Montreal.

16268. Apr. 10.—Authorizing C.N.O.R. to connect with C.P.R. at mileage 2, in Port Arthur, for construction purposes only.

16269. Apr. 9.—Authorizing C.N.R. to build its Calgary-Strathcona line across 25 highways in Alberta.

16270. Apr. 10.—Dismissing application of town of Battleford, Sask., re C.N.R. branch passenger service.

16271. Apr. 10.—Dismissing complaint of Namaka Farmers Association no. 122, Namaka, Alta., re C.P.R. mail service.

16272. Mar. 16.—Ordering C.N.O.R. to build concrete foot subway through Deaf and Dumb Institute property, near Belleville, Ont.

16273. Apr. 9.—Approving revised location of C.P.R. Lacombe Easterly branch, mileage 100.07 to 146.10, Alta.

16274. Apr. 10.—Authorizing C.P.R. to rebuild bridge 30.5, Temiskaming subdivision.

16275. Apr. 11.—Amending order 15995, Feb. 16, general order re fireguards.

16276. Apr. 11.—Postponing effective dates of M.C.R. tariff C.R.C. 1874; G.T.R. C.R.C. E. 2376, as amended by supplement 1, and Wabash Rd. C.R.C. 566 as amended by supplement 1, advancing rates on anthracite coal from Niagara frontier to Canadian points.

16277. Apr. 11.—Authorizing South Ontario Pacific Ry. (C.P.R.) to build its Guelph Jct. to Hamilton line under Hydro-Electric Power Commission's wires, at mileage 13.32 from Guelph Jct., Ont.

16278. Apr. 9.—Approving location of eight G.T.P.R. stations in Coast and Cassiar Districts, B.C.

16279. Apr. 11.—Authorizing G.T.P. Branch Lines Co. to operate over crossing of its Melville-Regina branch with C.P.R. in Saskatchewan, interlocker being completed.

16280, 16281. Apr. 11, 12.—Approving location of C.N. Alberta Ry., mileage 166.01 to 192.83 and authorizing it to occupy portion of G.T.P.R. about mileage 185.5; and approving location from mileage 192.83 to 222.79.

16282. Apr. 12.—Authorizing C.N.R. to build bridge across Pembina River, s.w. ¼ sec. 29, tp. 53, r. 7, w. 5 m.

16283. Apr. 12.—Approving C.N.O.R. revised location in Ferris tp., mileage 339.5 to 340.72.

16284. Apr. 12.—Authorizing C.N.R. to build bridge across Macleod River in west half of sec. 33, tp. 52, r. 17, w. 5 m.

16285. Apr. 10.—Authorizing Esquimalt and Nanaimo Ry. to take lands for railways purposes, lots 54 and 55 of Lime Bay, sec. 31, Victoria West.

16286 to 16289. Apr. 11, 10.—Authorizing C.P.R. to build spurs for Alsip Brick, Tile and Lumber Co., St. Boniface, Man., Wolverton Milling Co., Wolverton, Ont., H. Hilton and Sons, Winnipeg, and to ballast pit near Marquette, Man., and to cross four highways to same.

16290. Apr. 11.—Authorizing C.N.R. to cross public road between s.e. ¼ sec. 3, tp. 39, and n.w. ¼ sec. 33, tp. 38, r. 27.

16291, 16292. Apr. 11.—Authorizing C.N.O.R. to cross two public roads in Fitzroy tp.

16293 to 16296. Apr. 12.—Authorizing C.P.R. to rebuild five bridges on its Macleod, Sherbrooke, Ottawa, Mountain and Farnham subdivisions; bridges 54.4, Muskoka subdivision, 92.3, Boundary subdivision, and 54.0 over new cut Macleod subdivision.

16297. Apr. 12.—Authorizing Roxborough tp., Ont., to build highway across C.P.R. near Mountain.

16298. Apr. 12.—Authorizing C.P.R. to build spur into Canadian Carbon Co.'s premises, Winnipeg.

16299. Apr. 12.—Authorizing C.N.O.R. to cross public road between cons. 1 and 2, Ottawa Front, Nepean tp.

16300. Apr. 12.—Approving details of interlocking plant by G.T.P. Branch Lines Co. at crossing of C.P.R. Langdon Branch, Alta., authorized by order 15088, Oct. 13, 1911.

16301. Apr. 12.—Authorizing C.P.R. to build bridge 65.3 over irrigation siphon, Calgary subdivision, Alta.

16302. Apr. 13.—Approving Midland Ry. of Manitoba (G.N.R.) bylaw authorizing C. E. Dafoe, Superintendent and General Freight and Passenger Agent, to issue tariffs of tolls.

16303. Apr. 13.—Authorizing C.N.O.R. to cross public road between lots 10 and 11, con. 4, March tp.

16304. Apr. 11.—Ordering C.P.R. to build station and appoint agent at St. Francois de Salle, Que., and file plans within 30 days showing side track.

16305. Apr. 12.—Ordering C.P.R. by May 1 to make Winchester, Ont., a regular stop for trains 21 and 22.

16306. Apr. 12.—Naming express collection and delivery limits for Chapleau, Ont.

16307. Feb. 15.—Approving Canadian Northern Ontario Ry. branch to Bond St., and spur into William St., Oshawa.

16308. Apr. 15.—Certifying correction to G.T.P. Branch Lines Co. Regina-Boundary branch location plan.

16309, 16310. Apr. 13.—Authorizing C.P.R. to rebuild bridge 33.9 and 103.9 Edmonton and Muskoka subdivisions.

16311. Apr. 15.—Approving location of Central Ry. of Canada Montreal to Midland line, from Oka, mileage 81 to south side of highway at Carillon, mileage 45.61.

16312. Apr. 3.—Authorizing C.P.R. to build additional track across street railway at Pacific Ave., Fort William, Ont.

16313. Apr. 11.—Ordering Canadian Northern Ry. to build road crossing, etc., and grade roadway to loading platform, elevator and team track at Pelly, Sask., by May 1, under penalty of \$10 a day.

16314. Apr. 12.—Ordering that supplement 6 to G.T.R. tariff C.R.C. E. 1432 and supplement 5 to C.P.R. tariff C.R.C. E. 1286 may become effective June 1, re order 15844, Jan. 27, in connection with Consumer's Cordage Co., Montreal.

16315. Apr. 12.—Ordering C.P.R. to build farm crossing for F. W. Dodwell, Austin, Man.

16316. Apr. 13.—Authorizing C.P.R. to build spur for William Davies Co., near Front and Overend Sts., Toronto.

16317. Apr. 13.—Certifying correction to G.T.P. Branch Lines Co. Regina-Boundary branch location plan.

16318. Apr. 13.—Authorizing G.T.R. to build siding for Ridgeway Milling Co., Ridgeway, Ont.

16319. Apr. 12.—Authorizing G.T.R. to build additional track across Pape Ave., Toronto.

16320. Apr. 13.—Approving revised location of Canadian Northern Ry. Calgary-Strathcona branch, mileage 72.58 to 81.75, Alta.

16321. Apr. 15.—Approving agreement between C.P.R. and C.N.R. for joint facilities at Regina, Sask.

16322. Apr. 15.—Approving location of C.P.R. station at Cutknife, Sask.

16323. Apr. 12.—Ordering C.N.O.R. to install electric bell at Manvers road crossing east of Bowmanville station.

16324. Apr. 15.—Ordering Dominion Atlantic Ry. before July 1 to install electric bell east of Berwick station, N.S., 20% of cost to be paid from railway grade crossing fund.

16325. Apr. 11.—Approving location of Campbellford, Lake Ontario and Western Ry. Glen Tay to Cobourg line from mileage 88.21 to 106.17 from Glen Tay, Ont., and authorizing it to take possession of certain portions of G.T.R. right of way.

16326. Apr. 13.—Approving location of James Bay and Eastern Ry. (C.N.R.) station grounds at Demeules, Que.

16327. Apr. 15.—Authorizing C.P.R. to build additional tracks across highways at Tantaloon, Esterhazy and Killalee, Sask.

16328. Apr. 12.—Ordering C.P.R. to widen crossing at King St., Walkerton, Ont.; bell question reserved for further consideration.

16329. Apr. 15.—Authorizing G.T. Pacific Ry. to build spur for Edmonton Portland Cement Co., near Edmonton, Alta.

16330. April 15.—Authorizing Canadian Northern Ontario Ry. to build bridge across the Muskegogama river at mileage 94 from Sudbury Jct.

16331. April 18.—Amending order 13357, Mar. 30, 1911, re collections and deliveries in municipalities by express companies. This order is given fully under heading of Among the Express Companies on another page.

16332. April 17.—Authorizing Michigan Central Rd. to rebuild bridge over Grand River, Ont.

16333. April 16.—Approving character of Hill drain across Pere Marquette Rd. being built by Aldborough tp., Ont.

16334. April 16.—Approving location of Canadian Northern Quebec Ry. station at Cap Sante.

16335. April 17.—Approving Georgian Bay and Seaboard Ry. (C.P.R.) plan B re crossing at Jackson St., Bethany, Ont., and rescinding order 16169, Mar. 13, in the same connection.

16336. April 17.—Approving location of C.P.R. station at Claresholm, Alta.

16337. April 17.—Authorizing C.P.R. to build nine spurs for Birds Hill Sand Co., near Winnipeg.

16338, 16339. April 13, 15.—Approving location of G.T. Pacific Branch Lines Co.'s stations at Bremen and Meacham, Prince Albert branch; and Stony Beach and Keytown Regina-Moose Jaw branch.

16340. April 17.—Authorizing G.T.R. to build spur for Barber-Ellis, Ltd., Brantford, Ont.

16341. April 17.—Ordering C.P.R., G.N.W. and C.N.R. Telegraph Cos. to deliver telegrams free of charge within corporate limits of St. Boniface, Man.

16342. April 18.—Authorizing G.T.R. to build spur for Connell Anthracite Mining Co., Carlaw Ave., Toronto.

16343. April 18.—Approving plans for Canadian Northern Ry. standard portable station for use on eastern lines.

16344. April 18.—Approving location of James Bay and Eastern Ry. (C.N.R.) station grounds at Chute a l'Ours, Que.

16345. April 18.—Dismissing application of Stockton and Mallinson Regina, Sask., re Dominion Ex. Co.'s rates.

16346. April 18.—Authorizing city of Fort William to build Pacific Ave. across C.P.R.

Grand Trunk Pacific Railway Telegraphs

We are officially advised that the construction programme for this year comprises 840 miles of poles, and 2,404 miles of wire, including the erection of a copper metallic circuit for telephone train dispatching, from Prince Rupert to mileage 250. The line is at present complete west of Winnipeg to mileage 1,073, which is 30 miles beyond the summit of the Rocky Mountains. The total mileage complete and in operation is 1,964½ miles of pole line, and 5,971½ miles of wire. Following is a list of the location and mileage of this year's construction:—

	Mileage	
	Pole.	Wire.
Prince Rupert eastward	149	798
Milepost 1073, from Winnipeg, west ..	50	200
Regina-Boundary branch	143	286
Regina-Moose Jaw branch	56	112
Moose Jaw and West	57	114
Young-Prince Albert, to complete	51	286
Biggar-Calgary branch	60	60
Oban to Battleford	57	114
Cutknife branch	50	50
Tofield-Calgary branch, to complete....	94	288
Alberta Coal branch	50	100
Mountain Park Coal branch	23	46
Total	240	2,404

The American Society of Civil Engineers will hold its annual meeting at Seattle, Wash., June 25 to 28, instead of at Saratoga, N.Y., as first arranged.

Sir Donald Mann is reported to have purchased a large area of coal lands in the Groundhog Valley, B.C., which, it is said, he will proceed to develop at once.

During Feb., 14 employees were killed and eight were injured, in the course of their work in connection with railway construction in the Dominion. Of the fatalities, 13 were due to a premature explosion of dynamite on the C.N.R., near Fort Frances, Ont., the other was due to the man being run over by a train.

Canadian Pacific Railway Construction, Betterments, Etc.

Entrance to Boston, Mass.—A resolution was unanimously passed by the Massachusetts State Legislature, April 8, asking the C.P.R. to extend its lines through the State to Boston.

Halifax, N.S.—It is said that a conference between business men and others interested in the development of Halifax, and Sir Thos. G. Shaughnessy, took place, April 10, with the object of securing the entrance of the company's lines into the city. At present C.P.R. trains are hauled in over the Intercolonial Ry. by the latter's locomotives. Press reports state that the Government has under consideration a proposition for granting the C.P.R., and possibly other lines, running rights over the line into Halifax, and is taking up the question of building a second track from Moncton to Halifax, in connection with the proposal.

St. John, N.B.—D. McNicoll, Vice President, returned to Montreal April 9, from a trip of inspection to St. John, and is reported to have referred to the necessity of the Dominion Government pushing forward with the development of the harbor works on the west side. The company's line between St. John and Montreal was capable of handling double the present traffic, if there were sufficient handling facilities at St. John. As soon as the Dominion Government had built the new sea wall the company would start building a 1,000,000 bush. elevator. It was hoped to have this ready for the opening of the winter traffic in 1913. The extension of the freight yards would also be gone on with when the Government works had been sufficiently advanced.

Improvements between Granby and Farnham, Que.—Press reports state that G. H. Gardner, one of the company's engineers, has opened an office at Granby, Que., and is arranging for making surveys between that place and Farnham.

Orford Mountain Ry.—The Quebec Legislature has granted 2,000 acres of land a mile for 22 miles of railway, viz., from Bolton to Mansonville, from Mansonville to the international boundary, from Windsor Mills to Bronson Falls, and for 3.5 miles from Melbourne, Que.

Quebec Station Building, Etc.—The mayor of Quebec has received plans showing the lay out of the proposed new station and terminal facilities in Quebec. The company proposes to straighten its line and rearrange its yard, for which purpose it desires to expropriate a large section of Victoria Park, and to divert the St. Charles River, making certain exchanges of property with the city. Freight sheds would be built near St. Paul street, and the new passenger station would be built at the Palais. The plans are being considered by the city council.

Cap de la Madeleine Ry.—The Dominion Parliament has declared the C. de la M. Ry. to be a work for the general advantage of Canada, and has authorized its amalgamation with the C.P.R. under agreement, the head offices being moved to Montreal.

Northern Colonization Ry.—The Quebec Legislature has granted 3,000 acres of land a mile for the building of 100 miles of line from Mont Laurier, the present terminus of the Northern Colonization Ry., towards Lac des Quinze.

Ottawa Northern and Western Ry.—The Dominion Parliament has extended the time for the building of various branch lines authorized to be built.

Ottawa Tunnel Proposals.—It is said that the Government has promised an early consideration of the company's plans for a tunnel in Ottawa, and that the Minister of Railways has personally approved of the general proposal,

though he has not given any definite approval of the plans.

Campbellford, Lake Ontario and Western Ry.—The Board of Railway Commissioners has approved of location plans of the line from mileage 15 to 58.5. The revised location plans for the entry of the line into Belleville show that it will go in parallel to, but north of the Canadian Northern Ontario Ry. In West Belleville and Sidney tp. it is proposed to expropriate part of the C.N.O. Ry. and to rebuild that line a little further south. G. A. Mountain, Chief Engineer, Board of Railway Commissioners, is going over the route with a view to reporting upon a number of proposed revisions, and a local report states that an arrangement may be made between the two companies by which a common right of way will be used through Belleville.

It was reported April 17, that about 800 men had started work on the line. W. H. McGann, of the company's engineering staff, has taken up his headquarters at Belleville.

Kingston and Pembroke Ry.—Press reports state that 3,000 tons of new steel rails will be laid on this line during the current year, that several bridges will be rebuilt, and a lot of ballasting and considerable other betterment work done. The estimated expenditure is \$205,000.

Georgian Bay and Seaboard Ry.—A meeting of shareholders has been called to be held at Toronto, May 9, to authorize the issue of additional bonds or other securities for the completion of the line from Victoria Harbor to Bethany Jct., Ont.

Leaside Jct., Ont., Developments.—The company is reported to have acquired over 1,000 acres of land at Leaside Jct., Ont., just east of Toronto, upon which it is said will be laid out freight yards and terminals similar to those at West Toronto. It is further said that this work will be done as part of the plans for the improvement of the company's facilities in and near Toronto, and in preparation for the completion of the Campbellford, Lake Ontario and Western Ry.

Union Station for North Toronto.—It is said that plans are being prepared for the building in conjunction with the Canadian Northern Ontario Ry., of a union station on the east side of Yonge street, in the north part of the city. It is proposed to have six tracks entering the station, which will be reached by stairs, from the street level.

Lambton to Brampton, Ont.—Press reports state that the company has engineers in the field locating a line from Lambton to Brampton, Ont. In this connection it may be noted that some of the company's engineers have been making a survey for a line from the South Ontario Pacific Ry. through Acton to Georgetown.

South Ontario Pacific Ry.—Work has been started on the ballasting and other finishing work on the Guelph Jct.-Hamilton line.

Surveys are reported to have been made for an extension through Acton to Georgetown, Ont.

Galt, Ont.—It is reported that the company has purchased four acres in Galt, Ont., and will expend \$100,000 in laying out a down town freight terminal. The plans, it is said, provide for the laying of seven tracks, and the building of a 290 ft. freight shed, abutting on the east end of Main street.

Tillsonburg, Lake Erie and Pacific Ry.—The Dominion Parliament has voted subsidies in aid of the building of a line from Ingersoll to Stratford, or to near Berlin, Ont., 35 miles; in lieu of the subsidy voted in 1907.

Spur Track at St. Marys.—Press reports state that a spur line of about three-quarters of a mile is to be built to the cement works at St. Marys.

London Improvements.—Negotiations are reported to be in progress with the London city council, for the carrying of the company's line across the G.T.R. east of the city, down into the manufacturing district in the east end, and making a connection with the London and Port Stanley Ry.

Chatham, Ont.—Press reports state that a considerable expenditure is to be made upon the station, and the yards, during the current year. The other works proposed to be undertaken, it is stated, are the building of a spur line to connect with the Pere Marquette Rd., and the reconstruction of a bridge over the Thames, east of the city.

West Ontario Pacific Ry.—The Dominion Parliament has extended the time within which the company may build its projected line from near Sarnia to Lake Erie, with branches to Ingersoll and Woodstock, Ont. The company was originally incorporated in 1885.

New Buildings at Windsor, Ont.—Local press reports state that some extension is to be made to the company's yards at Windsor, and that a new freight shed, 500 x 30 ft. wide, will be built.

Fort William Elevators.—The mayor stated, April 3, that he had received notice from the C.P.R. that it was proposed to build a 1,000,000 bush. cleaning elevator at Fort William, Ont., and that work would be started at once in order to have it ready in time to handle this year's crop.

Proposed Yards at Springfield, Man.—Winnipeg press reports state that the plans for the proposed new yards at Springfield, on the east side of Winnipeg, provide for the final covering of all area of 2.5 miles by half a mile, and that altogether 100 miles of track will be laid. The buildings will include freight shed, round house, machine shop, and a large terminal grain elevator. Negotiations with the Springfield municipal council for the closing of roads, etc., have been started, and it is expected to have everything ready so that work may be commenced on the laying out of the yards in the fall.

Red River Bridge, Winnipeg.—We are officially advised that a contract has been let to the Foundation Co., Montreal, for putting in the substructure of a bridge across the Red River at Winnipeg. The bridge is situated about half a mile east of the station. The substructure will consist of concrete foundations, with five piers and two abutments of masonry. The Dominion Bridge Co. will build the superstructure, which will consist of four 130 ft. through double track truss spans, and one 260 ft. through double track swing span. The dimensions from centre line to centre line of the trusses will be 32 feet. The swing span will be operated either by a gasoline engine or electric power. The total length of the bridge from face to face of ballast walls will be 770 ft.

Gimli Branch Extension.—We are officially advised that it is probable the extension of the Gimli branch from the present track end to Riverton, on the Icelandic River, Man., will be proceeded with, but nothing definite has yet been decided.

The Dominion Parliament has voted a subsidy in aid of the building of this branch line from near Teulon to the Icelandic River, 35 miles, in lieu of that voted in 1906.

Manitoba and North Western Ry.—The Dominion Parliament has voted a subsidy in aid of the building of a line from Hamiota to Birtle, Man., about 30 miles.

Regina Terminals.—The President of the Regina Board of Trade stated at a meeting, April 12, that he had been advised by the company's officials in Winnipeg, that it was intended to double its facilities in Regina during this year.

Moose Jaw Southwesterly.—The Board of Railway Commissioners has approved revised location plans for the branch from Moose Jaw, Sask., southwesterly, 35.59 miles, and location plans from mileage 35.59 to 37.85. The branch has been opened for traffic for 27.4 miles, and the remainder of the mileage is under construction.

Wilkie-Anglia Branch.—The Board of Railway Commissioners has approved of revised location plans of the Wilkie-Anglia branch, from the Pheasant Hills branch, in sec. 6, tp. 40, range 19, for 35.34 miles, to sec. 22, tp. 34, range 19, west of the third meridian, Sask.

Bridge at Outlook, Sask.—A subsidy of 15 per cent. of the cost of the bridge across the Saskatchewan River at Outlook, Sask., has been voted by the Dominion Parliament, but the total amount payable is not to exceed \$115,000.

Weyburn-Lethbridge Branch.—General Superintendent Scully was at Weyburn, Sask., April 11, and informed the Board of Trade that arrangements were being made for improving the company's facilities there. It is proposed to put in a spur line at Forward, Sask., to connect with the Canadian Northern Ry. The construction of the line westerly from the present track end at Viceroy, Sask., is being proceeded with.

At the western end of the line, the Board of Railway Commissioners has approved of the route for 36 miles due east from Sterling, Alta., the point of junction with the Alberta Ry. and Irrigation Co.'s line. The contract, let to J. Timothy, Edmonton, calls for the grading of 25 miles, but General Superintendent Price is reported as having stated that the 36 miles, for which the route plans have been approved, will be graded this year.

Department of Natural Resources.—Tenders are being received to May 1, for concrete construction, etc., on about half the area comprised in the eastern section of the company's irrigation block, Alta. The approximate quantities are 15,000 cubic yards of concrete and 1,200,000 lbs. of reinforcing steel. The quantities in individual structures vary from five cubic yards to 700 cubic yards of concrete, with a proportionate weight of steel.

Ogden Shops, Calgary.—Work on the new shops at Calgary, Alta., which are to be named after I. G. Ogden, Vice-President, is being progressed with. Large quantities of material have been delivered, and several gangs of men are at work clearing the site, getting the foundations prepared for the buildings, and grading for the tracks.

Lacombe Branch.—The Board of Railway Commissioners has approved revised location plans for the extension of this branch, easterly from mileage 100.07 to 146.10.

Overhead Bridge, Strathcona.—Tenders are under consideration for the placing of concrete for an overhead bridge at Anthony St., Strathcona, Alta.

Office Building at Edmonton.—A permit has been issued for the erection of an office building on Jasper Ave., to cost \$350,000. The contractors are C. H. Sharp and Son, Winnipeg, Man. The clearing of the site was started April 2, and it is expected to have the new building completed by Feb., 1913.

Frank, Alta.—The condition of the mountain at Frank is again causing some anxiety, and it is reported that surveys are being made for the diversion of the C.P.R. from near Cowley to Blairmore, so as to have the line beyond the danger zone.

Alberta Central Ry.—We are officially advised that it is intended to complete the line from Red Deer to Rocky Mountain House, Alta., this year. D. F. McArthur, Winnipeg, is the contractor. J. G. McGregor is chief engineer of the A.C. Ry., reporting to W. A. James, C.P.R. Division Engineer of Construction at Winnipeg.

Second Track Work in B.C.—F. F. Busted, who has been placed in charge of the second track construction west of Calgary, Alta., has opened an office in Kamloops, B.C., and is arranging for the surveys preparatory to starting work.

Laggan to Lake Louise.—In consequence of the great increase in travel to the summer hotel at Lake Louise, B.C., a line 3½ ft. gauge is being built from Laggan, on the main transcontinental line, to Lake Louise, 3.5 miles. It will have a maximum gradient of 4 per cent. The contractors are Grant Smith and MacDonnell. Four gasoline motor cars, two with capacity for 35 passengers each, and two with capacity for five tons of baggage each, are being built at the Angus shops. Hitherto the transfer between Laggan Station and Lake Louise Hotel has been performed by busses and wagons.

Proctor, B.C.—Ties and rails have been delivered at Proctor, B.C., for the construction of a spur line from the wharf to the hotel. The grading is being gone on with.

Rossland Branch Electrification.—This is dealt with in a separate article in the electric railway department further on in this issue.

Kootenay Central Ry.—In place of the subsidies voted in 1910, the Dominion Parliament has granted aid towards the building of this line as follows:—From Golden, via Windermere and Fort Steele to near Jackson, on the British Columbia Southern Ry., not exceeding 175 miles; and from near Cathness on the B.C.S. Ry., towards the international boundary, not to exceed 25 miles.

The Board of Railway Commissioners has authorized the opening for freight traffic of the line from Coivalli to Bull River, 9.2 miles.

Tunnel in Vancouver.—We are officially advised that while General Superintendent Osborne has not had any conference with the Vancouver city council about the construction of a tunnel to connect the company's main line with its False Creek yards, a proposition to this end has been brought up at the council meetings. The object in view by those suggesting the tunnel is to avoid some grade crossings at Hastings and Powell streets. The company has not prepared any plans.

Buildings in Vancouver and Victoria.—A permit has been taken out for the building of a six-story reinforced concrete power house and laundry building at the rear of the company's hotel in Vancouver, to cost about \$120,000.

It is said that plans are being prepared for the erection of an office building for the C.P.R. coast steamship service in Victoria. (April, page 176.)

Frog and Switch Repair Cars.—Both the Southern Pacific and Frisco Lines appear to be meeting with considerable success in the use of frog and switch repair cars, which travel over the system, stopping at previously advised points, where in conjunction with the section foreman, the track is carefully gone over and repaired. The track tools are at the same time put in condition. A big saving results, not only in eliminating the cost of shipment to the nearest shop, but the track foremen co-operate to a greater degree in keeping the track material under their charge more carefully inspected in anticipation of the visit of the repair car.

Canadian Northern Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net profits, increases or decreases, compared with those for 1910-11, from July 1, 1911:—

Earnings.	Expenses.	Net Earnings.	Net Increase
July \$1,475,900	\$1,114,300	\$361,600	\$13,400
Aug. 1,420,900	1,105,900	314,700	51,700
Sept. 1,576,400	1,157,000	419,400	38,200
Oct. 2,028,900	1,348,600	680,400	99,900
Nov. 2,001,500	1,336,300	665,200	106,300
Dec. 1,831,400	1,327,600	503,800	141,600
Jan. 1,223,100	1,004,400	223,700	122,000
Feb. 1,203,400	965,800	237,600	101,800
\$12,766,200	\$3,359,800	\$3,406,400	\$877,900
Inc. \$ 3,093,900	\$2,416,000	\$ 677,900	

Approximate earnings for March, \$1,572,700, against \$1,270,600 for March, 1911.

Canadian Pacific Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net profits, increases or decreases, compared with those for 1910-11, from July 1, 1911:—

Earnings.	Expenses.	Net Profits.	Increases.

Railway Taxation in Manitoba.—An act has been passed by the Manitoba Legislature, adding the following words after "place" in line 8, sec. 19, chap. 166, of 1902: "Or of levying on all real property, the property of a railway company, its share or proportion of taxation levied and imposed under or pursuant to the provisions of the Land Drainage Act." The second section of the act makes it apply to all drainage districts already formed, or which may be formed during the continuance of the Land Drainage Act.

The Death of Charles M. Hays.

Charles Melville Hays, President, G.T.R. and G.T. Pacific Ry., who was lost in the Titanic disaster, April 15, was born at Rock Island, Ill., May 16, 1856. He entered railway service in 1873, since when he has been, to 1877, clerk Atlantic and Pacific Rd. (now part of the Frisco Lines), St. Louis, Mo.; 1877 to 1844, secretary to Vice President and General Manager, Wabash and Missouri Pacific systems; 1884 to 1886, secretary to Vice President and General Manager, Wabash, St. Louis and Pacific Rd.; 1886 to 1887, Assistant General Manager same road; 1887, appointed General Manager, Wabash Western lines, comprising all the lines west of the Mississippi River and that portion of the lines east, between Chicago and Detroit, and on the consolidation of the Wabash lines, he was appointed General Manager of the entire system. In 1894 he was elected also Vice President, and resigned Dec. 31, 1895, on his appointment as General Manager, G.T.R., which position he resigned in 1901 to become President, Southern Pacific Rd., but on that railway changing hands after a few months he returned to the G.T.R. as General Manager, and was also elected Second Vice President in 1902. On Jan. 1, 1910, he was elected President. He was also President, G.T. Pacific Ry., from Aug. 10, 1904.

Mr. and Mrs. Hays left Montreal Feb. 12, and sailed from New York for England Feb. 16. They were preceded by Thornton and Mrs. Davidson, their son-in-law and daughter, who travelled in Europe before joining Mr. and Mrs. Hays for the return journey. Of the family party Messrs. Hays and Davidson were drowned, Mrs. Hays and Mrs. Davidson being rescued. Vivian Payne, Mr. Hays' private secretary, was also lost.

The arrival of the s.s. Carpathia in New York, April 18, with the survivors from the Titanic was awaited by H. G. Kelley, Vice President, G.T.R.; E. H. Fitzhugh, President, Central Vermont Ry.; Dr. J. A. Hutchison, Chief Medical Officer, G.T.R., who is also the Hays' family physician; and Hope and Mrs. Scott, Mrs. Hays' son-in-law and daughter, and by W. H. Gregg, of St. Louis, Mrs. Hays' father, and some other relatives. The party was taken as quickly as possible after the boat docked to the Grand Central Station, where they boarded a special train to Montreal, arriving there the following morning.

Shortly after Mrs. Hays' return to Montreal, H. G. Kelley, Vice President, G.T.R., gave a statement to the press, in which he said that Mrs. Hays and her daughter, Mrs. Davidson, had retired to their cabins, but had not undressed when the crash came. Mr. Hays and Mr. Davidson were on deck, with H. Markland Molson. Shortly after the Titanic ran into the iceberg, the ladies were brought on deck, and Mr. Hays and his son-in-law went back to the cabins to get fur coats for them, as the night was very cold. All imagined that there was no immediate danger, and in spite of the fact that some of the lifeboats were being lowered and the passengers being loaded into them, it was thought to be the best course to pursue to remain with the ship. As the second last lifeboat was swung over the steamer's side, Mr. Hays informed his wife and daughter that he thought it advisable that they get into this, saying that he and Mr. Davidson would wait until help came in the morning. The men then wrapped the two ladies in their warm coats, and with Mrs. Hays' maid helped them into the boat. The last seen of Messrs. Hays, Davidson and Molson, they were standing on the deck, waving to the ladies in the boat, and as a further assurance, Mr. Hays called out that the Titanic was good for ten hours more, and by that time help would have surely arrived. The

lights of the liner went out shortly after the smaller lifeboat pulled some distance away, but neither of the ladies saw her sink below the surface. Naturally, both were greatly agitated, and although anxious for their husbands, did not consider them in any imminent danger. The women were huddled together in the bottom of the boat, and did not suffer any hardships from the exposure. It was not until the next day that Mrs. Hays and her daughter were definitely aware of the loss of their husbands.

Col. Gracie, of the U.S. Army, who had a most remarkable escape, having stayed on the ship till the last, is reported to have said:—"Before I retired I had a long chat with Mr. Hays. One of the last things he said was this: 'The Hamburg-American lines are devoting their attention and ingenuity to vying with one another to attain the supremacy in luxurious ships and in making speed records. The time will come soon when this will be checked by some appalling disaster.' Poor fellow, a few hours later he was dead."

Major Peuchen, of Toronto, who was saved, in testifying before the U.S. Senate committee at Washington, D.C., April 23,

P269 The Late Charles M. Hays.

described feeling the shock of the collision and going on deck, where a friend told him an iceberg had been struck. He continued:—"After a few minutes I went to other friends and said it was not serious. Fifteen minutes later I met C. M. Hays. I asked him: 'Have you seen the ice?' He said 'No.' Then I took him up and showed him. Then I noticed the boat was listing. I said to Mr. Hays: 'She's listing; she shouldn't do that.' He said: 'Oh, I don't know. This boat can't sink.' He had a good deal of confidence, and said: 'No matter what we have struck she's good for eight or ten hours.'"

A memorial service for Mr. Hays was held on April 25 in the American Presbyterian Church, Montreal, of which he was a member. At 11.30 a.m., Montreal time, all trains, yard engines, vessels, telegraph and telephone services over the entire system were stopped for five minutes, and all labor was similarly suspended. The principal stations and offices were draped in black and purple, and all the companies' flags were lowered to half mast.

Joliette and Lake Manuan Colonization Ry.

A company with this title was incorporated by the Dominion Parliament in 1903 to build a railway from Joliette northerly to St. Emelie de l'Energie, thence northerly and northwesterly to St. Michel des Saints, and thence to Lake Manuan, Que. Subsequently cash and land subsidies were voted by the Dominion Parliament and the Quebec Legislature, respectively, and acts extending the time for construction were passed in 1905 and 1909. Up to 1910 nothing had been done, but in that year a change was made in the control of the company, and arrangement effected for British capital to build the line. J. N. Patton was appointed Chief Engineer, a contract was let to the Enterprise Construction Co., and some grading was done. In 1911 a further extension of time for construction was granted, and power was given for the extension of the line southerly through Montcalm, L'Assomption and Hochelaga counties to Montreal. The Dominion subsidy for the line from Joliette to Lake Manuan, about 60 miles, is still available, and the Quebec Legislature has re-granted the old land grant subsidy for the same mileage at the rate of 4,000 acres a mile. This subsidy covers about half the distance to the National Transcontinental Railway, and the Government has pledged itself to provide a land subsidy for the balance of the line to the N.T. Ry., as well as for the extension southerly into Montreal, a total mileage of 120, or 180 miles from Montreal to the N.T.R.

The principal nominal officers of the company are:—Hon. A. N. Belcourt, Ottawa, President; and J. R. Ritchie, K.C., Vice President. A. M. Laredo, of London, Eng., who has been in Canada for two years in connection with the company, has acquired a three-fourths interest in the charter, and is also interested in the British Canadian Construction Co., which has been formed to carry out the general construction and equipment contract. H. S. Ross, K.C., Montreal, is President of this company. The contract for the construction of the 60 miles from Joliette to St. Emelie de l'Energie has been let to the Enterprise Construction Co., with which are associated W. J. Sims, 48 Spark St., Ottawa, and I. A. Hodge, of Syracuse, N.Y. It is expected to have this graded and ready for the steel this year, and the track will be laid with 80 lb. steel this year if it can be obtained. The company's Chief Engineer is J. M. Paton, and H. S. Dickson is Resident Engineer, both with headquarters at St. Felix de Valois, Que. The company is arranging to make an issue of bonds in London, Eng., and Paris, France.

Mr. Laredo is also one of the principal promoters of the Ottawa, Abitibi and Hudson Bay Ry., which was incorporated at the recent session of the Quebec Legislature, to build a line from Hull, through Wright and Pontiac counties, and the Coulonge River Valley via Great Lake Victoria, to the National Transcontinental Railway, and on past Lake Metagami to James Bay. (Feb., pg. 68.)

C.P.R. Oil Burning Locomotives—The C.P.R. is changing a large number of locomotives to burn oil than was at first intended. On the British Columbia division 76 will be changed, and 14 on the Esquimalt and Nanaimo Ry. even Seven stationary plants on the B.C. division, for pumping stations at oil storage plants, will also be equipped for oil burning. A storage tank of 43,000 barrels capacity is being built at Esquimalt, B.C., to provide an auxiliary supply for the company's B.C. coast steamship service, and this will be used to supply the E. and N Ry. locomotives, for a time at least.

Canadian Northern Railway Construction, Betterments, Etc.

Quebec and Lake St. John Ry.—The Quebec Legislature has granted 3,000 acres of land per mile for the following lines:—From Valcartier to St. Catherine, a 4½ mile branch from Valcartier towards Gosford, and to extend a branch line 12 miles to Valcartier.

St. Charles and Huron River Ry.—The Dominion Parliament has voted a subsidy for the building of a line from Indian Lorette on the Quebec and Lake St. John Ry., along the valley of the St. Charles River to Stoneham, 7.5 miles. The Quebec Legislature has granted 2,000 acres of land a mile for the same line.

James Bay and Eastern Ry.—The Quebec Legislature has voted 4,000 acres of land a mile for the 30 miles of this line from Roberval, westerly towards James Bay, now under construction.

Canadian Northern Quebec Ry.—W. A. Kingsland, Auditor C.N.Q. Ry., is reported as having stated in Quebec, April 11, that the work of laying out tracks and building the shops at Limoilou, Quebec city, will be re-started May 1, and pushed to completion, and that when the Canadian Northern transcontinental line was completed the terminals at Cap Rouge, where the company has a mile of river frontage for development, will be arranged. A complete description of the Limoilou shops appears on another page.

A subsidy has been voted by the Dominion Parliament in aid of the building of a line from near Arendal to Preston and Hartwell tps., not exceeding 30 miles.

Subsidies have been voted by the Quebec Legislature as follows:—To the Great Northern Ry., one of the C.N.Q.R. constituent companies, 2,000 acres of land a mile for a line from St. Sauveur to St. Jerome, 15 miles; and to the C.N.Q. Ry. 3,000 acres a mile for 16 miles of line in Montcalm county; 2,000 acres a mile for 65 miles from near Montreal to a junction with the C.N.Q. Ry. near Grenville; 2,000 acres a mile for 82 miles from Quebec to Garneau Jct., with a five mile branch to the Quebec bridge, and a 7½ mile line from Limoilou to the Montmorency river.

Canadian Northern Montreal Tunnel and Terminal Co.—In a recent interview Sir Wm. Mackenzie is reported to have stated that the company's act of incorporation having been passed, a start would be made on the tunnel and connecting lines immediately. The contract with the C.N.R. calls for the completion of the tunnel before the end of 1913.

S. P. Brown, Chief Engineer of the tunnel construction, who is located in Montreal, and is working on the final plans, is reported as having stated that the tunnel will be a double track one, with a diaphragm wall between the two tracks. It will be about three miles long, but it is not expected that it will present any serious engineering difficulties. The geological formation promises good conditions, and although the rock will vary considerably, water is the only difficulty which may be expected. The tunnel will be lined with concrete, the thickness of which will vary as conditions require. Work is expected to be started May 1 at both ends of the tunnel, and it is hoped to complete the tunnel in less than the 500 days estimated.

Ottawa Car Shops.—Sir Wm. Mackenzie, President, is reported as having stated at Ottawa, April 3, that car shops will be built on the site acquired near Ottawa, but he would not say that they would be the company's central car shops.

Ontario and Ottawa Ry.—The Dominion Parliament has extended the time for the building of a line from near

Lake Couchiching to Snowden tp., and from Herschell tp. easterly to Renfrew, thence across the Ottawa River to Hull, and recrossing the Ottawa River to Ottawa.

Toronto to Hamilton, Niagara, etc.—A large area of land is reported to have been acquired by the company at Leaside Jct., near Toronto, close to that purchased by the C.P.R. for terminal yards, etc.

Plans are said to be in preparation for the building of a union station in North Toronto, for joint use with the C.P.R.

At Hamilton considerable time has been spent in discussing the company's plans for its line in the city. The city council has engaged F. L. Sommerville, formerly District Engineer, G.T.R., Toronto, to advise as to the plans.

Col. Davidson, of the company's land department, and other officers of the company have been in London and other places in Western Ontario during the past month, making enquiries in connection with traffic, etc.

Orillia to Sturgeon Point, Ont.—Press reports state that engineers are locating a line from the C.N.R. just outside Orillia, to Sturgeon Point, Georgian Bay.

Montreal-Ottawa-Port Arthur Line.—The Board of Railway Commissioners has approved of location and revised location plans as follows:—For 0.60 of a mile in Litchfield tp. at mileage 59 from Ottawa; for 1.12 miles at mileage 339.5 in Ferris tp.; through MacLennan, Scadding, Street and Davis tps., mileage 405.36 to 421.09 from Montreal; from mileage 270.9 to 272.83 and from mileage 343.15 to 363, from Sudbury Jct.

The Board has also authorized the building of a transfer track to connect the Sudbury branch with the Algoma Eastern Ry. in Sudbury; and the making of a connection with the C.P.R. at mileage two from Port Arthur, for construction purposes only.

The plan and book of reference of location of the line through the city of Port Arthur and McGregor tp., mileage 2 to 6.49, have been deposited in the Port Arthur Registry Office.

Canadian Northern Ry.—The Dominion Parliament has extended the time for the building of a number of branch lines authorized to be constructed in 1908 and 1910, and has approved of the building of various lines authorized by the Saskatchewan Legislature to be built by the Saskatchewan Midland Ry., the Saskatchewan North Western Ry., and by the Alberta Legislature under the charter of the Alberta Midland Ry.

M. H. MacLeod, General Manager, stated recently at Port Arthur that the company was planning to secure a second track between that city and Winnipeg, and that engineers were engaged in making the necessary surveys.

The Manitoba Government has guaranteed the principal and interest of the company's bonds for \$13,000 a mile for a line from the present terminal of the line authorized to be built by par 2 in the schedule attached to chap. 57 of the statutes of 1909 for 150 miles northerly to tp. 44. This line is to start at Winnipeg and is intended to connect with the line being built by the Dominion Government from Le Pas to Hudson Bay.

The President of the Regina Board of Trade stated at a meeting, April 12, that M. H. MacLeod, General Manager, has informed him that the company has under consideration the building of a line from Regina, to join the Gorse Lake line at either Rosetown or Kindersley, in place of the previously projected line from Chamberlin to Kindersley, and that it is possible that some grading will be done on this line during the current year.

The question of the building of a transfer railway in Saskatoon is being considered, and the local men who hold the Saskatoon Transfer Ry. charter are negotiating with the C.N.R. with a view to that company building the line.

Sir Wm. Mackenzie is reported as having informed some Prince Albert, Sask., people, Mar. 25, at Ottawa, that 50 miles of the line from Prince Albert towards a junction with the Government line to Hudson Bay at Le Pas will be built this year. M. H. MacLeod, General Manager, stated subsequently that the surveys will be made at an early date, and grading gangs will follow the survey parties. A later press report stated that W. Ozeman, Kinistino, Sask., had been given a contract for the work, but we were advised by him, April 16, that this was incorrect.

We are officially advised that a contract on the Prince Albert Battleford Branch, for 34 miles west of Blaine Lake, has been let to W. J. Cowan, Winnipeg.

An office has been opened in Moose Jaw, Sask., with Engineer Thomas in charge. Grading has been completed to 15 miles south of the town and work on a big trestle four miles out has been started. The clearing of the area secured for terminals in Moose Jaw is expected to be completed by May 15.

The Board of Railway Commissioners has approved of revised location plans for the Swift Current branch from mileage 78.29 to 124.96 in Saskatchewan.

Arrangements have been made with the G.T. Pacific Ry. for the erection of a union station in Edmonton. The present C.N.R. station will be used as the basis of the new station.

Press reports state that location surveys have been completed for a line southeasterly from Camrose, Alta., and that construction is expected to be started at an early date.

A contract has been let to the Northern Construction Co. for the building of the remaining four miles of the short line from the Brazeau line to Red Deer.

The Board of Railway Commissioners has approved of location plans for the Strathcona-Calgary line through Strathcona and the adjoining tp.; from mileage 0 to 4.55 and from mileage 65.05 to 102.50.

The James O'Connor Construction Co. has had 250 teams, with the necessary gangs of men, shipped to Macleod for the grading of the line from that place to Pincher Creek. The work is reported let to seven subcontractors, who expect to have the grading completed within three months.

The Dominion Parliament has passed two acts relative to aiding the construction of the Canadian Northern Alberta Ry. The first recites that by the act of 1910, certain aid was to be given by guaranteeing bonds towards the building of 150 miles of line, and provides that such aid may be applied to the 150 miles of line from St. Albert towards the Yellowhead Pass, and the second provides for the guaranteeing of bonds for \$25,000 a mile, for the extension of the line from mileage 150 from St. Albert, to the boundary of British Columbia at the Yellowhead Pass, not exceeding 115 miles.

The Board of Railway Commissioners has approved location plans for the main line from mileage 166.01 to 192.83, and has authorized the occupying of a portion of the G.T. Pacific right of way, from mileage 192.83 to 222.79.

Canadian Northern Pacific Ry.—The Dominion Parliament has granted \$12,080 a mile towards the building of a line from Yellowhead Pass to the mouth of Fraser River, about 525 miles.

In a recent interview M. H. MacLeod, General Manager, stated that the contracts for the whole of the line from the Yellowhead Pass to the mouth of the Fraser River had been let. An announcement was recently made that the

contractors for the section from Kamloops to the Yellowhead Pass, expected to put the last 120 miles of the section in the hands of subcontractors at an early date.

We are officially advised that the company's engineers have secured a route through the Yellowhead Pass which will give a lower gradient than that of the G.T. Pacific Ry. On the Alberta side the maximum gradient will be 0.5 deg. and on the Pacific side 0.7 deg.

Vancouver Island—It is reported that tenders will be asked at an early date for grading, etc., on a further mileage on the line on Vancouver island. It is expected that the section will carry the line to Comox at the north of the island. Press reports state that the company has acquired 1,480 acres of land in the vicinity of Duncan Bay, about three miles south of Seymour Narrows. (April, pg. 178.)

Railway Rolling Stock Notes.

The G.T.R. is reported to be in the market for six tourist cars and 15 colonist cars.

The Quebec Central Ry. has received two mogul locomotives from the Canadian Locomotive Co.

The Temiskaming and Northern Ontario Ry. is in the market for four steel underframe cabooses.

The Algoma Central and Hudson Bay Ry. has received four 10-wheel locomotives from the Canadian Locomotive Co.

The Reid Newfoundland Co. has ordered the construction of a rotary snow plough and two locomotives at its shops at St. John's.

The Intercolonial Ry. has received four switching and five consolidation locomotives from the Canadian Locomotive Co.

The Temiskaming and Northern Ontario Ry. has ordered four steel underframe vans from the Canadian Car and Foundry Co.

The Joliette and Lake Manuan Ry., in which A. M. Laredo, Windsor Hotel, Montreal, is principally interested, will probably be in the market for rolling stock about August.

The C.P.R. is building at its Angus shops four gasoline motor cars, two with capacity for 35 passengers each, and two with capacity for five tons of baggage each, to run on the line which is being built between the main line at Laggan, Alta., and Lake Louise, 3.5 miles, which will be 3½ ft. gauge.

O'Brien, McDougall and O'Gorman, railway contractors, have ordered one Rodger double plough distributing car from the Hart-Otis Car Co. Following are the chief dimensions:—

Capacity	30 tons
Length over end sills	32 ft.
Width over side sills	8 ft. 9 ins.
Height from rail to floor	4 ft. 1½ ins.
Truck centres	23 ft. 8 ins.
Wheel base of truck	5 ft. 2 ins.

Following are the chief details of the two sleeping cars and one dining car, which the Intercolonial Ry. is having built by the Canadian Car and Foundry Co.:—

Length over end sills	72 ft. 3 ins.
Width over side sills	9 ft. 10 ins.
Width between deck sills	5 ft. 6 ins.
Height from rail to top of roof boards	14 ft. 2 ins.
Height from rail to centre of coupler	2 ft. 11 ins.
Underframe	Steel
Lighting	Pintsch gas and electric

Roberts Bros. and Co., railway contractors, Chicago, Ill., who have a contract on the Canadian Northern Ry., have ordered one Rodger double plough distributing car from the Hart-Otis Car Co. Following are the chief dimensions:—

Capacity	30 tons
Length over end sills	32 ft.
Width over side sills	8 ft. 9 ins.

Height from rail to floor	4 ft. 1¼ ins.
Truck centres	23 ft. 8 ins.
Wheel base of truck	5 ft. 2 ins.

The C.P.R., between Mar. 14 and Apr. 16, received the following additions to rolling stock:—154 wooden box cars, two tourist cars, 13 first class cars, 13 baggage and express cars, and 11 G2 locomotives, from its Angus shops, Montreal; 423 steel frame box cars from the Canadian Car and Foundry Co.; two ballast spreaders from F. H. Hopkins and Co.; 343 steel frame box cars from the American Car and Foundry Co.; 309 steel frame box cars from the Western Steel Car and Foundry Co.; two Bucyrus steam shovels and two wrecking cranes.

Following are chief details of the 50 Otis steel dump cars which the Intercolonial Ry. has ordered from the Hart-Otis Car Co., and which will be built by the Canadian Car and Foundry Co.:—

Length over end sills	38 ft. 9 ins.
Length inside	36 ft. 9¼ ins.
Width over all	9 ft. 11¼ ins.
Width inside	9 ft. 6 ins.
Height inside	5 ft.
Height from rail to top	9 ft. 4 13-16 ins.
Height from rail to floor	4 ft. 4 13-16 ins.
Truck centres	26 ft.
Wheel base of truck	5 ft. 6 ins.
Wheel base of car	31 ft. 6 ins.
Number of doors on each side	Six
Width of door opening	2 ft. 2 ins.

Following are the chief dimensions of the 20 Otis semi-composite ore cars, which the C.P.R. has ordered from the Hart-Otis Car Co.:—

Capacity	50 tons
Length over end sills	25 ft. 9 ins.
Length inside	23 ft. 5 ins.
Width inside	9 ft. 7 ins.
Width over all at top	9 ft. 11 ins.
Height from rail to floor	4 ft. 4 13-16 ins.
Height from rail to top of car	9 ft. 4 13-16 ins.
Height inside	5 ft.
Wheel base of car	18 ft. 6 ins.
Wheel base of truck	5 ft. 6 ins.
Truck centres	13 ft.
Number of doors on each side	4
Total number of doors	8
Door opening	2 ft. 2 ins.

Following are the chief details of the two sleeping cars and one dining car, which the Intercolonial Ry. is having built by the Pullman Co.:—

Length over end sills, dining car	72 ft.
Sleeping car	73 ft. 6 ins.
Width over side sills	9 ft. 8 ins.
Width between deck sills	5 ft. 6 ins.
Height from rail to top of roof boards	14 ft. 2 ins.
Height from rail to centre of coupler	2 ft. 11 ins.
Underframe	Steel
Draft gear	Westinghouse
Buffing device and vestibule	Pullman standard
Gas lighting	Pintsch, Safety Car Heating and Lighting Co.
Electric lighting and fans	United States Light and Heating Co.
Trucks	6-wheel, wood, plated
Wheels	36 ins. steel tired
Journal boxes	McCord & Co.
Axles	5 by 9 ins.

The Canadian Northern Ry., between Mar. 14 and Apr. 15, received the following additions to rolling stock:—31 ten-wheel locomotives (heavy) and 10 ten-wheel locomotives (light), from the Montreal Locomotive Works; three consolidation locomotives, from the Canada Foundry Co.; 440 box cars, 80 steel underframe flat cars, five sleeping cars and six first-class cars, from the Canadian Car and Foundry Co.; 80 steel underframe flat cars, from the Crossen Car Co.; 115 Hart-Otis cars from the Hart-Otis Car Co.; five second-class and baggage cars, from the Preston Car and Coach Co.; 195 box cars from the Nova Scotia Car Works; 35 cabooses from its Winnipeg shops, and 88 flat cars.

The Toronto, Hamilton and Buffalo Ry. has ordered two six-wheel switching locomotives from the Montreal Locomotive Works. Following are the chief details:

Cylinders, diam. and stroke	21 by 28 ins.
Driving wheels, diam.	51 ins.
Boiler, diam.	67¼ and 68¾ ins.
Boiler, pressure	180 lbs.
Firebox, length and width	76 by 65¼ ins.
Tubes, no. and diam.	308-2 ins.
Tubes, length	16 ft.
Heating surface, tubes	2,567 sq. ft.
Heating surface, firebox	129 sq. ft.
Heating surface, total	2,696 sq. ft.

Grate area	32.7 sq. ft.
Weight on drivers	166,000 lbs.
Weight, tender	110,000 lbs.
Wheel base	11 ft. 6 ins.
Wheel base, engine and tender	46 ft. 8 ins.
Maximum tractive power	37,000 lbs.
Factor of adhesion	4.48
Tender, water capacity	5,500 gals.
Tender, coal capacity	8 tons

The C.P.R., between Mar. 14 and Apr. 16, ordered the following rolling stock:—2,000 wooden box cars, 10 vans, six flat cars, eight stock cars, four refrigerator cars, one horse car, one baggage and smoking car, one compartment sleeping car and two U3 switching locomotives, from its Angus shops, Montreal; 3,177 steel frame box cars, 100 automobile cars from the Canadian Car and Foundry Co.; 20 Otis dump cars from the Hart-Otis Car Co.; 25 N3 locomotives from the Montreal Locomotive Works. 20 tank cars from the American Car and Foundry Co.; 2,000 steel frame box cars from the Western Steel Car and Foundry Co.; 2,000 steel frame box cars from the Standard Steel Car Co., and one Bucyrus steam shovel and one wrecking crane.

The Toronto, Hamilton and Buffalo Ry. has ordered two consolidation locomotives, equipped with superheaters, from the Montreal Locomotive Works. Following are the chief details:—

Cylinders, diam. and stroke	23 by 28 ins.
Driving wheels, diam.	68¼ and 76 ins.
Boiler pressure	180 lbs.
Firebox, length and width	96 by 75¼ ins.
Tubes, no. and diam.	202 2 ins. and 28 5¼ ins.
Tubes, length	15 ft.
Heating surface, tubes	2,162 sq. ft.
Heating surface, firebox	168 sq. ft.
Heating surface, total	2,330 sq. ft.
Grate area	50.2 sq. ft.
Wheel base, driving	17 ft.
Wheel base, engine	25 ft. 9 ins.
Wheel base, engine and tender	57 ft. 3 ins.
Weight on drivers	178,000 lbs.
Weight on leading truck	25,700 lbs.
Weight, total	204,500 lbs.
Weight, tender	136,000 lbs.
Maximum tractive power	41,200 lbs.
Factor of adhesion	4.33
Tender, water capacity	7,000 gals.
Tender, coal capacity	10 tons

O'Brien, Fower and McDougall Bros., railway contractors, have ordered 20 Hart convertible ballast and construction cars, 1912 design, 40 tons capacity. In addition to the 40 mentioned in our last issue, from the Hart-Otis Car Co. The dimensions given for these in our last issue, referred to the 13 Rodger double plough distributing cars ordered by the C.P.R., having been transposed with those of the latter. Following are the chief dimensions:—

Length over end sills	36 ft. 8 ins.
Length over side sills	8 ft. 10 ins.
Length inside as hoppers	20 ft. 10 ins.
Length inside as gondolas	34 ft. 8 ins.
Width inside	8 ft. 8 ins.
Width over all	10 ft.
Width at top	9 ft. 10 ins.
Height from rail to floor	4 ft. 4¾ ins.
Height from rail to top of car	8 ft. 1¾ ins.
Height inside	3 ft. 9¼ ins.
Truck centres	26 ft. 8 ins.
Wheel base of truck	5 ft. 4 ins.
Length of hopper door opening	16 ft. 8½ ins.
Width of hopper door opening	2 ft.

Railway Lands Patented.—Letters patent were issued during February, covering railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary and Edmonton Ry.	357.18
Canadian Pacific Ry.	183.50
Kootenay Central Ry.	85.804
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	3,533.47

Total 4,159.954

The International Railway General Foremen's Association, which holds its annual convention at Chicago, Ill., July 23 to 26, will discuss the following papers—How can shop foremen best promote efficiency, Shop supervision and local conditions, Shop specialization work and tools, Roundhouse efficiency, Reclaiming of scrap, and The relation of tests to shop efficiency

National Transcontinental Railway Construction

F. P. Gutelius, M. Can. Soc. C.E., and G. L. Staunton, K.C., the commissioners appointed to investigate the construction of the N.T.R., will leave Ottawa shortly to begin their investigations on the line. They have been looking over the plans and specifications and examining the contracts and reports upon which payments for work were made, in order to familiarize themselves with the position of the work. The principal object of the investigation is to determine the causes of the discrepancies between the original estimates and the actual cost of the work. It is expected that the investigation along the line from Moncton to Winnipeg will last about three months.

The section of the line from Moncton, N.B., to the southern end of the Quebec bridge is reported to be ready to be taken over from the contractors, as also is the section of the line from just outside Quebec westerly for about 350 miles. The sections of the line, the construction on which is being proceeded with east and west from Cochrane, Ont., are well advanced. Steel is reported to have been laid easterly from Cochrane to Peter Brown Creek, 150 miles. Track was laid to mileage 1197.45 from Moncton, on Division C, that is to about 37 miles east of the west end of Division C, which lies west of Cochrane. Work on the various sections of the line on which grading has not been completed was carried on where possible during the winter, and the construction camps are now filling up with men preparatory to starting up the regular season's operations.

The first locomotive to be taken into the shops at Transcona, Man., was run in Mar. 25, although the shops are not yet fully equipped for work. Good progress is being made by Harvey, Quinlan and Robinson with the erection of the car shops, and the J. D. McArthur Co. has a large force of men on laying out the yard tracks. The coal chute erected by the J. McDiarmid Co., has been completed. Tenders are under consideration for a diversion of the sewer on Verandrye and Archibald streets, necessitated by the layout of the yards, etc.

The following have been given as the levels of the line in western Quebec by K. Weatherbone, assistant engineer of District C:—Lake Abitibi, high water level, 870 ft.; Whitefish River, water level, 870 ft.; Lois River, 915 ft.; Kakmoonan River, water level, 994 ft.; Robertson Lake, water level, 1,004 ft.; branch of Nawapitechin River, water level, 978 ft.; Molesworth Lake, water level, 1,003 ft.; Spirit Lake, water level, 1,036 ft.; Harricaw River, water level, 971 ft.; Peter Brown creek, water level, 1,003 ft.; Nataganan River, water level, 1,000 ft.; Coffee River, water level, 1,007 ft.; Bell River, water level, 994 ft.; Migiskan River, west crossing, water level, 1,071 ft.; Sunday Brook, water level, 1,092 ft.; Crooked Creek, water level, 1,123 ft.; Migiskan River, east crossing, water level, 1,158 ft.; Canon Creek, water level, 1,139 ft.; Atik River at outlet from Atik Lake, water level, 1,277 ft.; Durant Lake, water level, 1,327 ft.; Steele Lake, water level, 1,353 ft.; Kekew River, water level, 1,364 ft.; Hamilton Lake, water level, 1,427 ft.; Susie River, 1,394 ft. (April, pg. 180.)

Grand Trunk Pacific Railway Construction.

Main Line.—The plans for the proposed yards between Namayo St. and Kinistus Ave., Edmonton, involve the crossing of the latter. The company desires to cross at the level, but the city council, April 10, passed a resolution

calling upon the company to put in a subway.

It has been decided that the new union station at Edmonton with the Canadian Northern Ry. will be located between First and Second Streets.

C. Schrieber, Consulting Engineer Dominion Government, returned to Ottawa, April 17, after having made a trip of inspection over the line as far as Tete Jaune Cache, B.C. He reports having found track laid to 30 miles beyond the Yellowhead Pass, and grading well advanced to Tete Jaune Cache. The contractors were putting forth every effort in order to get the line through to the Fraser River, in order that a steamship service might be opened up as far as Fort George. On the section easterly from Prince Rupert, track had been laid for 138 miles, and grading was being carried on as far as the 245th mile.

It was reported, Mar. 30, that the following subcontractors were at work east and west of Tete Jaune Cache:—H. E. Carlton and Co., A. E. Griffin and Co., Burns, Jordan and Co., Sims, Carey and Co. P. Welch, representing the contractors, Foley, Welch and Stewart, is in charge of the whole of the work in British Columbia, and is making his headquarters alternately at Fitzhugh, Alta., and at Bulkeley Summit, B.C.

Harte-Brandon Branch.—The contractors for the branch under construc-

the municipal authorities at an early date.

Regina-Boundary Branch.—Track laying was started April 11 on the branch line from Regina to the international boundary, 155 miles. The grading is being done by J. D. McArthur, Winnipeg. It is expected to have the branch completed this year.

Regina-Moose Jaw Branch.—It is expected that the 60 mile branch connecting Regina and Moose Jaw, Sask., will be completed this year. The contractors are Rigby, Hyland and Plummer, Winnipeg.

Moose Jaw Northwesterly.—The construction of the branch line from Moose Jaw for 40 miles northwesterly was expected to have been started April 30. The contractors are Rigby, Hyland and Plummer, Winnipeg.

Battleford Branch.—Construction on the branch from Oban to Battleford, Sask., 48 miles, has been started up for the season by the contractor, J. Daude-lin, Battleford. It is expected to have it completed this season.

The Prince Albert Branch, which starts at Yonge, Sask., has been completed for 67 miles. The extension of the line to Prince Albert, 54.5 miles, is being built by J. D. McArthur, Winnipeg.

Cutknife Branch.—The Board of Rail-

The Grand Trunk Pacific Railway Wolfe Creek Bridge.

tion from Harte to Brandon, Man., are Rigby, Hyland and Plummer, Winnipeg. It will be 24 miles long, and is to be completed during the current year.

The Dominion Parliament has voted a subsidy of 25 per cent. of the cost of a bridge across the Assiniboine River at Brandon.

The company is being invited to build a line from near Miniota, Man., to Brandon, to effect a junction with the Harte-Brandon branch.

Melville-Canora Branch.—The branch line northerly from Melville, Sask., which now terminates at Canora, will, it is said, be extended to Le Pas, Man. Recent press reports state that the surveys have been completed over a route from Canora to Le Pas.

Regina Station and Hotel.—Plans for the station at Regina have been completed, and have been communicated to the municipal authorities. The building, which will be erected at the corner of Sixteenth Ave. and Albert St., will be two stories, with a frontage of 250 ft. and a depth of about 600 ft., including the train sheds. The ground floor will contain all the public offices, while upstairs will be located the divisional staff. The estimated cost is \$200,000.

Plans for the proposed hotel in Regina will, it is expected, be submitted to

way Commissioners has approved the correction of errors in the revised location plans of the branch. The contract for the building of 50 miles, from Battleford, Sask., is being carried out by Lamoreaux and Peterson, Omaha, Neb.

Biggar to Calgary Branch.—Work is reported to have been started on this branch by Foley, Welch and Stewart. The branch starts from Biggar, and will enter Calgary over the company's To-field-Calgary branch tracks. Its total length will be 104 miles.

Tofield-Calgary Branch.—Track laying was resumed April 8, and it is expected that the work will be completed into Calgary, Alta., early in July. The contractor is J. D. McArthur, Winnipeg. Considerable difficulty was met with in fixing the route of this line, as, in common with the Canadian Northern Ry. branch into Calgary, it passed through the C.P.R. irrigated lands.

Calgary Terminals.—It is reported that the company has purchased the N.W.M.P. barracks site in Calgary, for terminal purposes, for \$1,000,000. E. J. Chamberlin, V.P. and G.M., stated Mar. 30, that a site had been acquired, and that an announcement would be made as to plans at an early date. The station would be built as soon as possible.

Calgary-Lethbridge Branch.—No contract has yet been let for the grading

of the proposed branch from Calgary to Lethbridge, 107 miles. The line will enter Lethbridge by a junction with the C.P.R. line west in the southeast quarter of sec. 2-9-22, just west of the high level bridge. Surveys have been made for an extension of the line, from Lethbridge to Coutts, about 63 miles.

Alberta Coal Branch.—The grading on this branch, which runs south from Bickerdike, Alta., is being completed by the contractors, Foley, Welch and Stewart. The distance to be completed is 25 miles. (April, fig. 180.)

The Wolf Creek Bridge at mileage 913.5 west of Winnipeg, of which an illustration is given on this page, rests on two steel towers and masonry. Its length between parapets is 652 ft. 2 in. It has two 60 ft. end deck spans, two 40 ft. tower spans, and three 150 ft. deck truss spans. The height from the river bed to bed of rail is 130 ft.

Prince Rupert Marine Terminals.—Press reports state that the British North American Construction Co., Vancouver, B.C., has been given a contract for the preliminary work on the construction of the wharves, dry dock, etc., comprising a large amount of creosoted piling and mill work construction, at a cost of about \$260,000. It is said that following the completion of this work contracts will be let for the dry dock and wharf buildings, involving a further expenditure of about \$1,250,000.

Great Northern Railway Lines in Canada

Fort William.—Press reports from St. Paul, Minn., April 12, state that G.N.R. interests have acquired a site along the water front at Fort William, Ont., about two miles in length, for iron and steel works, and for terminal purposes. The report adds that a line is to be built by the G.N.R. from some point in the U.S. to Fort William. Reports from Winnipeg state that the mayor of Fort William was in that city, April 11, in consultation with G.N.R. officials, and a New York engineer, in connection with the project.

Midland Great Northern Ry.—Midland Ry. of Manitoba.—The finishing up of construction on the company's line into its freight terminals in Winnipeg has been in progress since the completion of track laying at the end of 1911, and it was announced that the line would be opened for traffic May 1. The company's passenger trains will continue to be operated into the Canadian Northern Ry. station.

The G.N.R. runs its trains over its own tracks to Emerson at the International boundary, then over the Canadian Northern Ry. to about eight miles south of Winnipeg, where its own line into the city branches off. The Northern Pacific Ry. will also use this line as an entrance into Winnipeg, using its own tracks to Pembina, N.D., and then running over the C.N.R. tracks to the point of junction with the new line.

Application is being made by the company for the building of a spur line from McPhillip St. to Tecumseh St., on the north side, and on Elgin Ave. south side, along William Ave.

Calgary.—The Assistant General Manager of the G.N.R., with other officers, was in Calgary, Alta., April 8, and it is reported that they were arranging for the purchase of a right of way for a line into Calgary from the west.

Vancouver Terminals.—The contract for the erection of the first part of the new wharves between Hastings Mill and the sugar refinery, Vancouver, is reported to be practically completed. Four temporary piers reaching 700 ft. from the C.P.R. tracks have been built, and Chase and Co., the contractors, expected to finish their work by April 30. A contract for the concrete work is re-

ported to have been let to Cummings and Deihl, at an estimated cost of \$125,000. The work is expected to be started May 1. (April, pg. 183.)

Quebec and Lake St. John Railway Gas Electric Car.

The last issue of The Railway and Marine World contained a complete description of the gas electric car which the Canadian Northern Ry. Co. has procured for use on one of its subsidiary lines, the Quebec and Lake St. John Ry., to run between Quebec and Lake St. Joseph, 23 miles, the company having a summer hotel at the latter point. The description was accompanied by a diagram showing the front, side and rear elevations and the floor plan. An illustration of the car's exterior appears on this page.

The car reached Toronto on April 10, and on the following day made a trip on the C.N.O.R. Toronto-Sudbury line from Toronto to Richmond Hill, 21 miles, with the chief executive officers and a number of officials of the C.N.R. and others. On April 13 it was run over the C.N.O.R. line from Toronto to Tren-

Quebec and Lake St. John Ry. Gas Electric Car.

ton, 105 miles, a number of officials and press representatives being on board.

It was then put on the run between Trenton and Picton, 30 miles, for a short time before being sent to Quebec, where it is to go into service May 1.

Should the car's operation prove satisfactory to the C.N.R. management it is probable that orders for others will be placed, but it is not probable that this will be done for some months.

The car referred to, which was manufactured by the General Electric Co., Schenectady, N.Y., was sold through the Canadian General Electric Co.

The Steam Railways of Connecticut. according to the latest report of the Railroad Commissioners, are all controlled by the New York, New Haven and Hartford Rd., with the sole exception of the Grand Trunk's New London Northern Line and a road 2½ miles long, owned by Cheney Bros.

Quebec Bridge.—It is said that the reports received by the Department of Railways show that satisfactory progress is being made with the building of the substructure of the bridge across the St. Lawrence, near Quebec, and that everything will be in readiness early in the fall for starting work on the erection of the superstructure.

The C.P.R. High Level Bridge at Edmonton, Alta.

The bridge being built by the C.P.R. to connect Strathcona and Edmonton, Alta., is progressing rapidly, all the masonry having been completed, and the steel work is in course of erection.

It is a steel span bridge 2,500 ft. long from face to face of ballast walls of the end abutments. This distance is made up of three 288 ft. centre spans across the river, 10 tower spans each from 30 to 50 ft. long, and 14 open spans each from 30 to 100 ft. long. The main spans over the river are supported on concrete piers which measure approximately 115 ft. from the base of rail to the footing, the latter in one instance extending to a depth of approximately 40 ft. below the river surface. The approach trestles on each bank are carried on concrete pedestals built up on concrete piling.

The bridge is to carry steam and electric railway and vehicular traffic. The railway deck on the top of the structure carries three tracks, one for C.P.R. trains and the other two for electric railway service. The roadway deck is located 20 ft. below the railway tracks, and

consists of a reinforced concrete roadway 23 ft. wide, paved with wood, in addition to which there are two side paths 8 ft. wide supported on cantilever brackets.

The highways and electric line approach the bridge from Saskatchewan Ave., on the Edmonton side, and from Anthony St. on the Strathcona side. The C.P.R. tracks on the Edmonton side are carried across Victoria and MacKay Aves. on reinforced concrete structures, and across Saskatchewan and Jasper Aves. on steel structures. On the Strathcona side Anthony St. is carried over the railway tracks on a reinforced concrete bridge.

The Dominion Parliament has voted the C.P.R. as lessees of the Calgary and Edmonton Ry., a subsidy of 15% of the cost of the bridge in lieu of the subsidy of \$126,000 voted in 1908.

The Atlantic Construction Co. has been incorporated under the Dominion Companies Act with authorized capital of \$750,000 and office at Quebec, to carry on railway and general contracting, and in connection therewith to own and operate steam and other vessels, dredges, etc. The provisional directors are:—J. B. Craven, Larchmont, N.Y.; H. Dussault, Quebec; C. Donohue, R. Wall, and L. P. Goyette, Montreal.

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place and not those on which the orders were issued:—

Apple Rates from Maritime Province

16101 Mar. 14.—Re application of United Fruit Companies of Berwick, N.S., complaining of the proposed increase, by the C.P.R., of 4 c. per 100 lbs. in the rate on apples in carloads shipped from points in the Maritime Provinces to Winnipeg, it is ordered that the application be dismissed.

White Pass and Yukon Route Rates

16153. Mar. 18.—Re order 12783, Jan. 18, 1911, disallowing Joint Freight Tariff C.R.C. 9, and Joint Passenger Tariff C.R.C. 3, of the Pacific and Arctic Ry. and Navigation Co., the British Columbia Yukon Ry., and the British Yukon Ry. and directing the companies to substitute joint tariffs of freight and passenger tolls based on a reduction of at least one-third in each case from the freight and passenger tolls shown in the said tariffs, and re application of British Yukon Ry. Co., British Columbia Yukon Ry. and Pacific and Arctic Ry. and Navigation Co., for a rehearing, pursuant to the order of the Governor in Council of June 16, 1911. Upon the said hearing in Ottawa on March 1, 1912, counsel for the applicant companies and the Dawson board of trade appearing at the hearing, and what was alleged; and upon reading the evidence taken under commission upon the application of the Dawson board of trade, it is ordered that the order 12783 be rescinded.

Switching Charge on Lumber at Sarnia.

16161. Mar. 21. Re application of F. McGibbon and Sons, Sarnia, Ont., complaining against the rate of 1c per 100 lbs., minimum \$5 a car, charged by the G.T.R. for switching lumber from the applicants' docks to their storage yard and mill at Sarnia, and applying for the same rate as charged by the Pere Marquette Rd. for switching lumber from its docks to other storage yards at Sarnia, namely 50c a car. It is ordered that the G.T.R. file a special tariff, or supplement to the existing tariff C.R.C. 1686, to take effect not later than April 8, establishing a rate of \$3 a car for switching lumber from the applicants' docks to their storage yard and mill at Sarnia, for storage, sorting, or dressing, and re-shipment via the G.T.R.

Rates on B.C. Forest Products.

16225. April 3. The application of Oliver-Scrim Lumber Co., Ltd., of Vancouver, complaining of the rate of 5½c per 100 lbs. charged by the Vancouver, Fraser Valley and Southern Ry. on lumber, from Stormont Road to Vancouver, alleging that the rate should have been 3c per 100 lbs., and applying for an order directing restitution for the difference between the 5½c rate and 3c rate; and also against the rate of 3c per 100 lbs. charged by the railway from Stormont Road to New Westminster on lumber destined to points on the C.P.R. and Canadian Northern Ry., and applying for a through rate on the basis of 1c per 100 lbs. over the rate beyond New Westminster, and for restitution on past shipments. It is ordered that the local tolls of the V., F.V. and S.R. on lumber and other forest products, in carloads, between all its stations, shall be the same as charged by the C.P.R., and the Great Northern Ry., for similar distances within their corresponding territories. The joint through rates on lumber and other forest products, in carloads, from the V., F.V. and S.R. stations between Vancouver and New Westminster to points on the C.P.R. and Canadian Northern Ry. via Vancouver or New Westminster,

shall be on the basis of 1c per 100 lbs. over and above the rates from Vancouver and New Westminster to the same points, as published in the C.P.R. Special Joint Tariff C.R.C. no. W. 1574, effective Mar. 16, 1911, and supplements thereto, or subsequent issues thereof; the said basis having been prescribed by the board from stations on the Vancouver, Westminster, and Yukon Ry. to the same points; the Vancouver, Fraser Valley, and Southern Railway Company's proportion of the said joint through rates to be 2½c per 100 lbs., as allotted to the Vancouver, Westminster, and Yukon Ry.

Disallowance of G.T.P.R. Special Freight Tariff

16226. April 3. Re Grand Trunk Pacific Ry.'s special freight tariff from Westfort, Ont., C.R.C. no. A. 245, issued Mar. 24, to take effect April 1. Whereas the said tariff contains certain tolls which increase those in effect upon the same commodities and between the same points before April 1, without giving the 30 days' notice required by sec. 328 of the Railway Act, as amended. It is ordered that the increased tolls be disallowed as from April 1, and that the lower tolls in effect immediately before that date be restored.

Disallowance of G.N.R. Special Freight Tariff.

16227. April 3. Re Canadian Northern Ry.'s special freight tariff from Port Arthur, Fort William, and Westfort, Ont., C.R.C. no. W. 609, issued Mar. 23, to take effect April 1. Whereas the said tariff contains certain tolls which increase those in effect upon the same commodities and between the same points before April 1, without giving the 30 days' notice required by sec. 328 of the Railway Act, as amended. It is ordered that the increased tolls be disallowed as from April 1, and that the lower tolls in effect immediately before that date be restored.

Disallowance of C.P.R. Special Freight Tariff.

16228. April 3. Re C.P.R.'s special freight tariffs from Port Arthur, Fort William and Westfort, C.R.C. nos. 1692 and 1693, issued March 25, to take effect on April 1. Whereas the said tariffs contain certain tolls which increase those in effect upon the same commodities and between the same points before April 1, without giving the 30 days' notice required by sec. 328 of the Railway Act, as amended. It is ordered that the said increased tolls be disallowed as from April 1, inclusive, and that the lower tolls in effect immediately before that date be restored.

Canadian Northern Ry. Machine Tool Requirements.

The Canadian Northern Ry. has issued from Winnipeg a list covering its 1912 requirements of machine tools, for which tenders will be considered in the near future. The list is as follows:—One 80-in. drive wheel lathe, complete with 220-volt direct current motor and controller; one 42-in. double head upright boring mill for boring tires; one hollow spindle turret lathe, capable of taking bars up to 6 ins. diameter; one 24-in. upright shaper; one 14-in. upright slotting machine; one hollow spindle turret lathe, capable of taking bars up to 2½ ins. diameter; one 18-in. brass turret lathe; one 20-in. brass turret lathe; one 20-in. sensitive drill press; one 36-in. back geared drill press; one 8-in. pipe threading and cutting machine; one 2-in. double head bolt cutter; one 1½ in. triple head bolt cutter; one 48-in. blast fan for supplying air to oil furnace; one motor driven air compressor, capacity 1,000 cu. ft. free air per minute, compressed to 115 lbs.; one Lassiter automatic stay bolt drilling machine; one roller type tube welding machine; one 1-in. 6 spindle, semi-automatic nut tapping machine; one 24-in. planer; one 8-roll patent triple cylinder sandpapering

machine; one scroll sawing machine; one 4-spindle Universal boring machine; one Universal dado and saw machine; one rod, dowel and pin machine; one band-saw with 36-in. wheels; one concentric slide wood turning lathe; one 2½-in. double bitted surface planer; one 6-spindle vertical stay bolt threader; one No. 8 Beaudry Champion power hammer; one no. 3 washer cutting machine; one 36-in. Bullard vertical turret lathe; one 24-in. by 36-in. by 14-ft. gas engine lathe; two 24-in. column shapers; two 36-in. back geared upright drill presses. The approximate cost of the whole will be about \$35,000.

G.T.R. Running Rights Over Temiskaming and Northern Ontario Ry.

The Dominion Parliament has confirmed two agreements made between the Temiskaming and Northern Ontario Ry. Commission and the Grand Trunk Ry. Co., under which the G.T.R. acquires running rights over the Ontario Government railway.

The first agreement, dated May 1, 1911, provides for the building by the T. and N.O. Ry. of a line southerly from North Bay to a junction with the G.T.R. at Nipissing Jct., and to lease the same to the G.T.R. at a rental of 4½% upon the cost, for 50 years, determinable after 20 years on five years notice. Other companies may be given the right to operate over the line, in which case a joint arrangement shall be made as to terms. The G.T.R. will pay in addition to the rental, all taxes, and keep the extension in repair, and the Commission has right of re-entry in case of default. All differences are to be arbitrated.

The second agreement, dated Dec. 1 1911, provides for the use by the G.T.R. of the T. and N.O. Ry. line from the terminal yards at North Bay to the junction with the National Transcontinental Ry. at Cochrane, Ont., about 252 miles, with all sidings, side tracks, buildings, etc., but exclusive of the repair shops and store buildings at North Bay and Englehart. The G.T.R. is given the right of joint use of the line as described with the T. and N.O.R. for \$300,000 a year and interest at the rate of 4½% on all sums expended upon the betterment of the line since July 1, 1911. The Commission agrees to maintain the line and all the appurtenances up to a standard equal to the portion of the G.T.R. line between Nipissing Jct. and Toronto. The schedule of trains shall be arranged between the officials of the two railways, the Commission's superintendents to be in charge. The Commission's employees to render service to both parties equally; the G.T.R. trains to be manned by G.T.R. employees, and in cases of doubt T. and N.O.R. trains are to be given the right of way. Switching connections shall be provided and operated by the Commission, but one half of the cost of operating the same is to be paid by the G.T.R. The division of the cost of maintenance between the two lines is also provided for. The books of each railway recording the operations over the line may be mutually inspected. The agreement also provides for the terms upon which traffic is to be interchanged with the C.P.R., etc., the carriage of express matter, and the use of telegraph lines, etc. The agreement is to run for 21 years, but within three years the G.T.R. may secure legislation extending it to 25 years, with the option of a renewal for a further period of 25 years. Matters unprovided for are to be arranged by agreement, and all differences arising between the parties are to be settled by arbitration.

The Safety Car Heating and Lighting Co. has removed its Montreal office to 718 Transportation Building.

Railway Finance, Meetings, Etc.

Canada Southern Ry.—The shareholders of the Michigan Central Rd., which leases the Canada Southern Ry., will vote, May 2, on the question of authorizing the guarantee of the principal and interest of \$40,000,000 fifty-year consolidated mortgage bonds of the C.S.R., with interest at not more than 5 per cent. The present issue is to be \$22,500,000, to refund \$14,000,000 first mortgage 6 per cent. bonds due Jan. 1, 1913, \$6,000,000 second mortgage 5 per cent. bonds due Mar. 1, 1913, and to cover the cost of improvements made, and to be made, to the property. A vote will also be taken to authorize the M.C.R. to join in the C.S.R. mortgage to secure the consolidated bonds, so as to cover its leasehold.

Canadian Pacific Ry.—There has been deposited with the Secretary of State at Ottawa two mortgages made between the Royal Trust Co., the Calgary and Edmonton Ry. and the C.P.R., covering, in one case, the extension of the Lacombe branch for 125 miles, and in the second, the branch line from Strathcona to Edmonton, including the high level bridge over the Saskatchewan River.

Dominion Atlantic Ry.—Passenger earnings for Mar., \$33,658.27; freight earnings, \$49,120.71; total earnings, \$82,778.98, against \$67,600 total earnings for Mar. 1911.

Grand Trunk Ry.—An issue of \$1,500,000 perpetual 4 per cent. consolidated debenture stock was placed on the London, Eng., market during April, at 98½.

A London, Eng., cablegram of April 18 says the issue was only moderately successful, about 75% being taken by the public.

Halifax and South Western Ry.—The Premier informed the Nova Scotia Legislature, Mar. 29, that all the interest due the Government upon this railway had been paid, and there were no outstanding notes or drafts. The payments made to the Government amounted to over \$450,000, there having been three years' interest due, which had been temporarily met by notes discounted by the Government.

London and Port Stanley Ry.—It was reported in London, Ont., April 10, that the officials of the Pere Marquette Rd. had decided not to ask for a renewal of the lease of the L. and P. S. Ry. from the city of London.

The Pacific Coal Mines Co. has been organized in Montreal to take over the coal properties on Vancouver Island immediately adjoining the Dunsmuir properties. The capitalization of the company is \$1,500,000 of 6 per cent. preferred non-accumulative participating shares, \$2,000,000 of ordinary shares, and \$3,500,000 of 5 per cent. bonds. The company owns a large area of coal lands, several operating mines, connecting railways, and shipping facilities. The railways at present built are seven miles in length, and connect the mines with the shipping docks. Following are the directors:—C. P. Hill, E. Bristol, K.C., M.P.; C. C. Michener, A. H. B. MacDon-

Pere Marquette Rd.—The Michigan courts have dismissed the application of the company for permission to issue bonds to the extent of \$4,000,000, and upon application of the American Brake Shoe and Foundry Co., Mahwah, N.J., the U.S. courts have appointed F. W. Blair, Detroit, Mich.; D. E. Waters, Grand Rapids, Mich., and N. Erb, New York, as receivers for the company. The company operates 2,320 miles of line, of which it owns in Canada, the Lake Erie and Detroit River Ry., 198.81 miles, and leases the London and Port Stanley Ry., 23.66 miles, and has, in addition, track-

age rights over 136.57 miles of other Canadian railways. The bonds and other liabilities amount to about \$69,689,000, and the \$4,000,000 bond issue was intended to meet maturities due Apr. 1.

The Board of Railway Commissioners for Canada has approved of the appointment of the receivers above mentioned.

A protective committee for the holders of the \$5,000,000 6 per cent. five year debentures, has been formed, and it is expected that other similar committees will be formed for the holders of other outstanding securities.

Quebec and Lake St. John Ry.—A special general meeting of shareholders was called to be held at Quebec, Apr. 30, to consider an agreement with the Railway Share Trust and Agency Co. and the Canadian Northern Ry. Co., with regard, among other things, to the issue by the company, of certain new securities heretofore issued by the company, for certain new securities to be issued by the company and guaranteed by the C.N.R., and to consider the issuing of certain 4 per cent. perpetual consolidated debenture stock to be guaranteed as to principal and interest by the C.N.R. The Quebec Legislature has passed an act in which authority is given to carry out the plans arranged for the readjustment of the company's finances.

Quebec Central Ry.—Two acts have been passed by the Quebec Legislature, the first confirming an agreement between the company and the C.P.R. Co., by which the latter secures a lease of the line, and the second amending the Q.C. Ry's charter, by changing the location of the head office from London, Eng., to Montreal, and making other alterations to suit the change in control.

Quebec Central Ry.—Gross earnings for February, \$74,112.90; expenses, \$63,711.78; net earnings, \$10,401.12, against \$71,445.68, gross earnings; \$58,190.87, expenses; \$13,254.81, net earnings for February, 1911. Aggregate gross earnings for eight months ended Feb. 29, \$867,749.16; expenses, \$605,705.26; net earnings, \$262,043.90, against \$759,541.76, aggregate gross earnings; \$529,561.11, expenses; \$229,980.65, net earnings, for same period, 1910-11.

Quebec Oriental Ry.—The holders of the first and second mortgage bonds of the Matapedia section met in London, Eng., April 16, to pass resolutions authorizing the directors to issue price lien bonds or other securities for \$250,000 for the purpose of carrying out repairs and renewals upon the Matapedia section. The notice calling the meeting was signed by E. B. Read, President.

Temiscouata Ry.—The profit on the operation of this railway, for Jan., was \$75, against a deficit for Jan., 1911, of \$841.

Temiskaming and Northern Ontario Ry.—Provincial Treasurer Matheson, speaking in the Ontario Legislature recently, said the T. and N. O. Ry. had cost \$17,000,000 to build, and the interest on debentures was \$700,000 a year. As the earnings were only about \$500,000, there was a loss of \$200,000 a year.

White Pass and Yukon Route.—Gross earnings for two months ended Feb. 29, \$22,840, against \$27,680 for same period, 1911.

Protection of Manganese Frogs against breakage at the point of connection with the Bessemer rail by maintaining a smooth joint through frequent renewal of the rail has been found to be effective in obtaining full service from the frog by T. Hickey, Roadmaster, Michigan Central Rd., St. Thomas, Ont. Such frogs have been kept in service six or seven years, he states, by taking out the Bessemer rail before its condition became bad enough to endanger the frog.

G.T.R. Semi-Annual Meeting.

The half-yearly meeting of shareholders was held in London, Eng., Apr. 18, when the Chairman, A. W. Smithers, in presenting the report for the half year ended Dec. 31, 1911, said that notwithstanding the large increase in operating expenses, which were beyond control, the management was able to report an improvement of 1% on the third preference, making 1½% for 1911, and out of \$800,000 of an increase in in gross earnings, nearly eleven-twelfth gross earnings, nearly eleven-twelfths was spent in Canada, leaving the remaining twelfth to come to England for distribution among shareholders. Although passenger freight rates were less, the earnings per train mile increased about 2¼d. Concerning the Grand Trunk Pacific grading, this is progressing, while practically all the branch lines were completed, and were being laid with Canadian steel. Large contracts for the delivery of rails have been made within the last few days, whereby American mills will deliver rails for G.T.P. purposes. Satisfactory completion of arrangements has been effected for running rights over the Ontario Government railway from North Bay to Cochrane, which will give the G.T.R. valuable connection and save raising of additional capital.

Referring to labor difficulties, he quoted what he had said in Oct. 1910, regarding the persistent demand for higher wages, which was felt not only in Canada, but throughout the world. There was no use expecting the wages to go back, and in considering the position today he quoted the rates paid workers as compared with 1897, which showed an average increase from 49 to 69%. Prospects were never more promising, and he was certain that Canadian labor will put no obstacle against capital obtaining a fair return on investments.

He feelingly referred to the Titanic disaster, and the serious loss which would be sustained by the G.T.R. in the event of C. M. Hays, who was a passenger on the steamer, not being among the survivors.

He said, "We meet today under the shadow of a great calamity. We do not know for certain, at the present moment, whether or not Mr. Hays is among those lost. But in any case the calamity is so appalling that I am sure you will all wish me to transmit to the relatives of those who perished our deepest sympathy. I am bound to say that our fears are very great regarding Messrs. Hays, Davidson and Payne, but we have still faint hope remaining that they may yet be rescued."

The meeting passed a resolution of sympathy in silence.

Touching finally on the possible death of Mr. Hays, Mr. Smithers said that the G.T.R. is surrounded with talented and able officials, who would qualify to take up the work so successfully carried on by Mr. Hays and his helpers.

Engineers' Club of Montreal.—The club house on Beaver Hall Square is to be materially enlarged. There will be on the ground floor a lounge, hall, porter's office, writing rooms, billiard room, coat room, lavatory, service department and minor offices. On the second floor there will be a reading room, secretary's room, private dining rooms, a 79 x 29 ft. club dining room 22 ft. high, smoking rooms, a ladies' dining room and a reception room. In the top floor, in addition to a few small dining and card rooms, there will be several bed rooms. The kitchen and mechanical equipment will be in the basement. When the work is finished the club house will be about three times its present size.

Enormous Rolling Stock Orders Placed by the C.P.R.

During the past month the C.P.R. has given out the largest orders for cars which have ever been placed in Canada. The orders for freight equipment alone comprises between 9,000 and 10,000 cars, and will involve an expenditure of over \$10,000,000.

In addition to this 27 locomotives were ordered and other locomotive orders are pending.

Car building Plant for West Canada.

N. Curry, President, and W. W. Butler, Vice President, Canadian Car and Foundry Co., left Montreal about the middle of April for Port Arthur and Fort William, Ont., to select a site for a car building plant, Mr. Butler intending to go on to British Columbia to select a site there also, probably at Vancouver, or in its vicinity. We are officially advised that the plants will be complete and self-contained as far as possible, with facilities for manufacturing all steel, all wood and composite passenger and freight cars. They will comprise also axle forging shops, grey iron and steel foundries, bolster and brake beam shops, and all the accessories necessary to enable the company to produce everything possible that enters into the construction of cars, thereby enabling it to manufacture at a minimum of cost.

F. B. McCurdy, J. R. McLeod and F. M. Brown, of Halifax, N.S., with their associates, have entered into an agreement with the city of Port Arthur for the erection of a steel and wooden car plant, the company, the Ontario and Western Car Co., Ltd., to be capitalized at \$5,000,000. The company agrees to expend not less than \$1,250,000 on buildings and machinery, the plant to have a capacity of 40 cars a day, and to be capable of employing 1,000 men, of which 500 are to be at work by Dec. 15, 1913. The company is to be given a deed of 102 acres of land, and 52 acres of water, along its waterfront. The company will issue bonds for \$2,000,000, of which the city will guarantee 33 1-3 per cent.

Railway Route Maps Approved.

The following route plans have been approved by the Minister of Railways since those published in The Railway and Marine World for March, pg. 126:—

ALBERTA RY AND IRRIGATION Co.—Mar. 30. From Stirling easterly, about 36 miles.

BURRARD, WESTMINSTER AND BOUNDARY RY. AND NAVIGATION Co.—From Mission to Port Moody, B.C., about 40 miles.

CANADIAN NORTHERN RY.—Revision on Sudbury-Port Arthur, Ont., line, 10.4 miles.

CANADIAN PACIFIC RY.—Swift Current towards Camrose, Alta. Partly approved. 195.48 miles. The part where it parallels the Canadian Northern Ry. Saskatoon-Calgary branch, left over for revision.

Revision between Suffield and Klpp, Alta., about 18 miles.

Revision between Bull's Head and Purple Springs on Crowsnest branch, about 36 miles

Mar. 30. From 20 miles northeast of Kerrobert to the G.T.P.R. near Reford, about 15 miles.

CARIBOO, BARKERVILLE AND WILLOW RIVER RY.—From Eagle Lake on G. T. Pacific Ry., east of Fort George, B.C., southwards along the Willow River to Barkerville, about 140 miles.

CENTRAL RAILWAY OF CANADA.—Revision between St. Eustache and Carillon, about 27 miles.

ESQUIMALT AND NANAIMO RY.—Mar. 30. From Ayster River to Hardy Bay, about 140 miles.

KETTLE VALLEY RAILWAY.—Revision between Carmi and Penticton, B.C., 85 miles.

NORTHERN NEW BRUNSWICK AND SEABOARD RY.—April 9. From Drummond Mines to Allston Point, 25.9 miles.

QUEBEC AND SAGUENAY RY.—Mar. 30. Cap Tourmente to Chicoutimi, 126.5 miles.

Canadian Freight Association's Officers, Etc.

At the recent annual meeting it was decided to abolish the offices of president and vice president and to appoint a chairman instead. T. Marshall, heretofore Secretary-Treasurer, was appointed Chairman. The standing committees for the current year are as follows:—

ADVISORY COMMITTEE—C. A. Hayes, W. M. Kirkpatrick, G. C. Ransom, G. H. Shaw.

EXECUTIVE COMMITTEE—W. M. Kirkpatrick, F. F. Backus, H. C. Martin, Wm. Phillips.

CLASSIFICATION COMMITTEE—W. M. Kirkpatrick, W. Phillips, E. N. Todd, H. E. Macdonell, M. H. Brown, H. C. Martin, F. J. Watson, L. Macdonald, G. T. Pettigrew, R. E. Perry.

INSPECTION COMMITTEE—R. W. Long, F. Conway, G. C. Ransom, J. P. Daly, W. B. Bamford, G. Tombs, R. W. Youngs, A. D. Huff, H. A. Young, W. S. Elliot.

United States Regulations Regarding the Sealing of Cars.

The United States Treasury Department has issued new regulations covering the sealing of cars in which import and export traffic is carried. It orders that in future the Tyden car seal, which is self-locking, numbered consecutively and applied without a press, is to be used to the exclusion of all other devices to seal railway cars and compartments of vessels containing merchandise shipped in bond or under entry for immediate transportation from port to port within the U.S., goods forwarded under transportation and exportation entry, merchandise shipped from place to place in the U.S. through Canada and Mexico, merchandise shipped from place to place in Canada or Mexico through the U.S., and cars sealed by U.S. consuls or customs officers stationed at places in contiguous foreign territory for that purpose; that the present seals may be used by carriers until the supply on hand is consumed, but all carriers are required to begin the use of the Tyden seal not later than July 1, and the use of other seals will be discontinued after June 30.

Steps are being taken to organize a Canadian Society of Civil Engineers branch in Saskatchewan. A. J. McPherson, B.A.Sc., of Regina, Superintendent of Provincial Highways, is chairman of the organization committee.

The Canadian Northern Prairie Lands Co., a subsidiary of the C. N. R. Co., sold 480 acres during Feb., realizing \$7,056, an average of \$14.70 an acre. Up to Feb. 29, it had sold 428,200 acres realizing \$3,339,953, and has 71,600 acres remaining unsold.

The Customs officers at Medicine Hat, Alta., recently seized 30 horses, eight waggons, and various other effects which had been brought in from the United States as settlers' effects, but which, it is claimed, in reality formed part of a contractor's plant for use on C.P.R. work.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta Pacific Ry.—The Dominion Parliament has voted a subsidy in aid of the building of 100 miles from Cardston, northwesterly via Pincher Creek, to Lundbreck, on the C.P.R. Crow's Nest Pass branch, and then northerly, but west of the Porcupine Hills, towards Calgary, Alta. (Mar., pg. 120.)

Alberta, Peace River and Eastern Ry.—A meeting of shareholders was held in Ottawa, April 20, to elect directors, and organize the company.

The Dominion Parliament extended the time within which the projected railway may be built. (Feb., pg. 67.)

Algoma Central and Hudson Bay Ry.—A subsidy has been voted by the Dominion Parliament in aid of the building of this railway from Sault Ste. Marie to the C.P.R. transcontinental line between White River and Dalton stations, Ont., not to exceed 200 miles, for a line from Michipicoten Harbor towards the C.P.R. transcontinental line, not to exceed 50 miles, and for 50 miles from the C.P.R. transcontinental line towards the National Transcontinental Ry. These subsidies are in lieu of those granted in 1910. A new subsidy was also voted for the extension of the line from the C.P.R. northerly to a junction with the National Transcontinental Ry., a further 65 miles.

The Board of Railway Commissioners has approved of revised location plans between mileage 123.74 and 130.87, and of the connection with the National Transcontinental Ry. at Grant. (Mar., pg. 120.)

Algoma Eastern Ry.—The Dominion Parliament has voted subsidies in aid of the building of a line from the line between Sudbury and Little Current, for 76 miles westerly towards the Algoma Central Ry., and for a line 30 miles northerly from Sudbury. These are in lieu of subsidies voted in 1910.

The Dominion Parliament has extended the time for the building of the company's authorized lines, except the section lying between Sudbury and Little Current, which is now almost completed, and the section between Meaford and Owen Sound, which it is said will not be built. (Jan., pg. 21.)

British Columbia and Dawson Ry.—The Dominion Parliament has extended the time within which the projected line may be built, and authorized the building of a branch from Fort George, B.C., via the Parsnip, Peace and Fowler rivers, to a junction with the main line at Telegraph Creek on the Stikene River; from some point on the above line to Peace River Landing, Alta., and from Vancouver to Lillooet. (Feb., pg. 67.)

Bruce Mines and Algoma Ry.—A subsidy has been voted by the Dominion Parliament for the building of a line from Rock Lake northerly and easterly to a junction with the C.P.R. transcontinental line, near Winneboga River, Ont., about 50 miles. (Feb., pg. 67.)

Burrard Inlet Tunnel and Bridge Co.—We are officially advised that all the preliminary work, on surveys, location, etc., has been completed, and that the tests made for the foundations of the proposed bridge across the Second Narrows of the Burrard Inlet, have been satisfactory. The plans for the bridge are being prepared by Sir J. Wolfe Barry and partners, London, Eng., with whom are associated Messrs. Cleveland and Cameron, Vancouver. It is expected to have the contracts let at an early date, and to have the work on the substructure under way during this year.

Beyond a certain amount of location work nothing has been done in connection

with the company's tunnel project.

The Dominion Parliament has voted subsidies in aid of the following lines:—From Eburne to mouth of Seymour Creek, not exceeding 10 miles; from Seymour Creek to Deep Cove, not exceeding 5 miles, from Seymour Creek to Horse Shoe Bay, not exceeding 14 miles; from Pender St., Vancouver, to North Vancouver, B.C., not exceeding 3 miles. (April, pg. 181.)

Calgary and Fernie Ry.—A subsidy has been voted in aid of the building of a railway from Calgary, Alta., southwesterly via Kananaskis Pass, and the headquarters of the Elk River to Fernie, B.C., not to exceed 100 miles.

The Dominion Parliament has extended the time within which the line authorized by chap. 71, statutes, 1906, as amended by subsequent acts, may be constructed. (Mar., pg. 120.)

Campbell River towards Fort George. The Dominion Parliament has voted a subsidy in aid of the building of a line from near Campbell River, on the Esquimalt and Nanaimo Ry., 100 miles in the direction of Fort George, on the mainland of B.C. A subsidy for this railway was voted in 1908 to the Vancouver Island and Eastern Ry., but in revoting the subsidy Parliament decided to leave the subsidy to be availed of by any company.

Canada and Gulf Terminal Ry.—The Dominion Parliament has voted a subsidy for the building of a line from Matane easterly to Gaspé Basin, about 200 miles. The Quebec Legislature has granted 2,000 acres a mile in aid of the building of the line from Matane to Gaspé Basin, but giving the mileage as 190. (Feb., pg. 67.)

Caribou, Barkerville and Willow River Ry.—A subsidy has been voted by the Dominion Parliament in aid of the building of a line from near Eagle Lake, on the Grand Trunk Pacific Ry., to Barkerville, B.C., about 107 miles. A subsidy not to exceed \$95,000 was also voted in aid of the building of 20 railway bridges on the line, the basis of payment being 20% of the cost of each bridge. (Sept., 1911, pg. 853.)

Central Ry. of Canada.—We are officially advised that the Minister of Railways is being asked to approve a route map of the line from Carlton, Que., to South Indian, Ont., and that as soon as this has been obtained, progress will be made towards construction. (April., pg. 181.)

Chaudiere Jct. to Sherbrooke, Etc.—The Quebec Legislature has granted 2,000 acres of land a mile for a line of 120 miles from Chaudiere Jct., to Sherbrooke; a 10 mile branch from St. Agathe to Lyster; and a 30 mile branch from St. Agathe to Black Lake, Que.

Delaware and Hudson Co.—The Quebec Legislature has granted land subsidies in aid of the building of additional lines by the following companies controlled by the D. and H. Co. in Canada:—Napierville Jct. Ry., 1,000 acres a mile for a line from St. Constant to the international boundary, about 27 miles. Quebec, Montreal and Southern Ry., 740 acres a mile, for a line from Betancourt to the St. Lawrence River, and 99,000 acres for a line of 52 miles from St. Philomene towards Levis. (Mar., pg. 120.)

Dominion Atlantic Ry.—An extension of time for the building of a branch from the Cornwallis Valley branch to the main line near Middleton, N.S., has been granted by the Dominion Parliament. (April, pg. 181.)

Edmonton, Dunvegan and British Columbia Ry.—J. D. McArthur, President, is reported as stating that it is intended to proceed with construction immediately and push it as fast as possible. It is hoped to have the line in operation to the crossing of the Athabasca River, 100 miles, this year, and on to Dunvegan within three years. (April, pg. 181.)

The Erie, London and Tillsonburg Ry. was granted an extension of time to build its projected line from Port Burwell to London, Ont., at the recent session of the Dominion Parliament. (Nov., 1911, pg. 1035.)

Esquimalt and Nanaimo Ry.—A subsidy has been granted by the Dominion Parliament in place of those voted in 1907 and 1908, for the building of a line from Wellington to Alberni, 60 miles; from McBride Jct. towards Sandwich, 45 miles, and from Sandwich to Campbell River, 38 miles.

The Dominion Parliament has authorized the building of a line from near Oyster Bay to Homely Inlet, Vancouver Island; extending the time for building certain lines, and provided that no portion of the branch lines authorized to be built by chap. 14, British Columbia Statutes, 1884, shall be built unless authorized by the Governor in Council. (April, pg. 181.)

Fredericton and Grand Lake Coal and Ry. Co.—A subsidy has been voted by the Dominion Parliament for the building of a line from Gibson, on the Intercolonial Ry., to Minto, with a branch to Marysville, N.B., a total length of 35 miles. (April, pg. 181.)

Ha Ha Bay Ry.—The Dominion Parliament has voted a subsidy in respect of the following lines:—From St. Mathias to Ha Ha Bay, not exceeding 20 miles; from Labrosse Jct. to the Saguenay River, not exceeding 5 miles; from La Terriere Jct. northerly to Lake Kenogami, not exceeding 12 miles; from near Bagotville to St. Alexis, not exceeding 3 miles. In lieu of a 40 mile subsidy granted in 1910.

The Quebec Legislature has voted 4,000 acres of land a mile to complete the building of the line to Ha Ha Bay, 9.5 miles, and at the rate of 2,000 acres a mile for a four mile branch to Chicoutimi, and for a 12 mile branch through La Terriere Village to Lake Kenogami. (Feb., pg. 67.)

Hudson Bay and Pacific Ry.—A London, Eng., cablegram, says application was made there, April 17, before Mr. Justice Eady, for the compulsory winding up of this company. Counsel for the company opposed, and asked the judge to allow the motion to stand over for a month, when petitioners who desired it could be paid off, he stated. The company was raising funds for the construction of the railway. The judge granted the company's application. This is the company which proposed to build a line from Prince Albert, Sask., to Fort Churchill. (April, pg. 181.)

Indian River Ry.—A subsidy at the rate of 3,000 acres of land a mile for a line of 19 miles from the northern extremity of Lake Megantic and along the border of the lake to the international boundary, has been granted by the Quebec Legislature. (May, 1911, pg. 409.)

Intercolonial Ry.—The contract for building of the line from Dartmouth to Deans, N.S., 73 miles, for which M. P. and J. T. Davis were given the contract by the Dominion Government, will be carried out by Cavicchi and Pegano, who have taken the entire work from the first mentioned firm.

The work, for which a contract has been arranged, with the late Government, for the building of a line from Guysboro to Country Harbor, N.S., to connect up with the Dartmouth-Deans settlement line, will not be gone on

with. A similar decision has been reached by the Government with regard to the projected line to Baddeck on Cape Breton Island, N.S., for the building of which tenders were asked by the late government.

The question of the building of a second track for the entire distance between Halifax, N.S., and Moncton, N.B., is being considered. Some portion of the line out of Halifax, and at the Moncton end, is already double tracked, and if the rest of the work be undertaken, there will be considerable grade reduction and curve elimination done. However, it is not proposed to make the whole section a double track line, as it is suggested that a new single track line be built around the Cobequid Mountain, from near Parrsboro, by Minas Basin to Truro. The negotiations reported to be in progress with the C.P.R. for running rights into Halifax, are said to be involved in the consideration of this second track work. (April, pg. 181.)

Interprovincial and James Bay Ry.—A subsidy in aid of the building of this line from the Lake Temiscamingue Colonization Ry., a C.P.R. branch terminating at Timiskaming, with a branch to Kippawa, Que., to the Des Quinze River, 50 miles, has been voted by the Dominion Parliament, in lieu of that given in 1906.

The company was originally incorporated by the Dominion Parliament in 1901, and the time for construction has been extended on several occasions, the most recent being at the recent session.

The Quebec Legislature has granted 4,000 acres of land a mile for 50 miles of the line from the present terminus of the C.P.R. line at Gordon Creek, to Ville Marie. (Dec., 1911, pg. 1139.)

Kettle Valley Lines.—It is reported that an arrangement is being made between the company and the British Columbia Government for changing the route of the line now under construction, in order that the main line may be carried through Princeton, B.C., instead of building a branch into the town. Survey parties are in the field locating the line right through to Hope, and it is expected to have the greater portion of the work necessary to complete the line under contract early in July. The only section which will then be open will be that from the summit to Hope, with reference to which negotiations are in progress between the company, the Vancouver, Victoria and Eastern Ry. and the B.C. Government. It has been arranged that the termini of the line shall be at Midway and at Hope.

The Dominion Parliament has revoked the subsidy granted in 1910 for a line from Grand Forks for fifty miles up the north fork of Kettle River, B.C. Parliament also voted the company \$250,000 towards the building of a bridge across the Fraser River near Hope.

The Dominion Parliament has extended the time for the building of the lines authorized to be constructed by chap. 68, statutes of 1901, as amended in 1904, 1906 and 1910, and has authorized the building of a line from Vernon south-easterly to Penticton, B.C. April, pg. 181.)

Kootenay and Alberta Ry.—The Dominion Parliament has granted an extension of time for the building of the projected railway from near Cowley, Alta., to the Flathead River country, and from Cowley along the Milk River Valley to the international boundary near Coutts, Alta. (Dec., 1911, pg. 1139.)

London and Port Stanley Ry.—The London, Ont., city council, is considering the advisability of buying land in the city in order to increase the siding accommodation. (Feb., pg. 68.)

Manitoba and Nelson Ry.—The Mani-

toba Legislature has incorporated a company with this title to build a railway, to be operated by steam, electricity or other power, from lot 3, Kildonan, near Winnipeg, northerly, but west of the C.P.R. Gimli branch, to Sturgeon Bay, thence to Grand Rapids, and thence northerly and easterly to Hudson Bay. Power is also given to build branch lines. The provisional directors are:—C. W. N. Kennedy, C. Vokes, Winnipeg; A. C. Clare, Parkdale, Man.; B. S. Benson, Selkirk, Man.

Montreal Central Terminal Co.—The Dominion Parliament has extended the time within which the bridges and tunnels at Montreal, authorized by chap. 109, statutes of 1909, may be constructed. It is provided that the company may only exercise its powers upon the authority of the Governor in Council, and that it can only have power of expropriation upon obtaining special legislation. (April, pg. 182.)

Montreal to National Transcontinental Ry. and Hudson Bay.—A subsidy has been voted by the Dominion Parliament in aid of the building of a line from near Montreal, to the National Transcontinental Ry., about 837 miles west of Moncton, a distance of not to exceed 200 miles. This is in lieu of a subsidy granted in 1910. A subsidy has also been voted for a line from near mileage 837 west of Moncton on the National Transcontinental Ry., to the mouth of the Nottaway River on James Bay, not to exceed 300 miles.

The Quebec Legislature has granted 4,000 acres of land a mile for the first section of the line mentioned above, and 5,000 acres a mile for the second section. (See Joliette and Lake Manuan Ry., on another page.)

North Shore Power, Ry. and Navigation Co.—The Quebec Legislature has granted 3,000 acres of land a mile in aid of a line from Seven Islands Bay, towards Clark City and St. Margaret River, Que.

North Shore Ry.—Subsidies have been voted by the Dominion Parliament in aid of the following lines:—From Adamsville to a junction with the National Transcontinental Ry., near Snow Shoe Lake, not exceeding 20 miles, and from Beersville, via Rexton, to Richibucto Head, not exceeding 20 miles. (April, pg. 182.)

Northern New Brunswick and Seaboard Ry.—The Dominion Parliament has voted a subsidy for a line from the Drummond mines at Austin Brook, a branch of the Nipisiguit River above Great Falls, to the Intercolonial Ry, thence either to Alston Point, on the north side, or Caron Point on the south side of Bathurst Harbor, N.B., the total length not to exceed 26 miles. (Mar., 1911, pg. 209.)

Northern Territorial Ry.—The Dominion Parliament has incorporated a company with this title to build a line, as previously described, from Fort Churchill, on Hudson Bay, to the Pacific coast, with branches to Fort McMurray and Smooton. (Mar., pg. 121.)

Ottawa, Abitibi and Hudson Bay Ry. The Quebec Legislature has incorporated a company with this title to build a railway from Hull to Grand Lake Victoria, and thence to James Bay. (Feb., pg. 68.)

The Ottawa, Brockville and St. Lawrence Ry. was originally incorporated in 1900, by the Dominion Parliament, and has obtained extensions of time for building the line from Ottawa to Brockville, on five occasions since. A sixth extension of time was granted at the recent session. (Jan., pg. 23.)

Ottawa, Montreal and Eastern Ry.—The Dominion Parliament has extended the time within which the company may build the railway and tunnel under the St. Lawrence River, which were au-

thorized by chap. 141, statutes of 1910. The company's powers may only be exercised by authorization of the Governor-in-Council, and expropriation powers can only be obtained by a future act. (Feb., pg. 68.)

Pacific and Atlantic Ry.—The Dominion Parliament has extended the time within which the company may build its projected line from Ottawa to Georgian Bay, and Lake Ontario, with branch lines to Manitoulin Island and other places. The company was originally incorporated by the Ontario Legislature in 1886, J. Conmee being one of the provisional directors; and in 1906, it was declared to be a work for the general advantage of Canada. (Jan., pg. 23.)

Pacific Great Eastern Ry.—The company has opened offices in Victoria, B.C., to conform to the charter requirements, and also in Vancouver, from which the construction operations will be directed. The formal organization has been completed, the officers and directors being:—President, J. W. Stewart; Vice President and General Manager, P. Welch. Vice President and General Counsel, D'Arcy Tate; other director, T. Foley.

In an interview April 17, Vice President D'A. Tate said engineers were at work locating the line out of North Vancouver, and out of Fort George south-easterly. It is hoped that construction will be started at an early date, and when it will be pushed through with dispatch.

J. Callaghan, heretofore Division Engineer, G.T. Pacific Ry., Fitzhugh, Alta., has been appointed chief engineer.

It is said that the company has entered into negotiations for the use of the bridge to be built across the second narrows of Burrard Inlet by the Burrard Inlet Tunnel and Bridge Co., and the Vancouver, Westminster and Yukon Ry., and press reports state that the line already built from near Vancouver in the direction of Pemberton Meadows, by the Howe Sound and Northern Ry., is to be acquired by the P.G.E. Ry. (April, pg. 179.)

Pacific, Trans-Canada and Hudson Bay Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from Edmonton via Athabasca Landing, easterly to Fort Churchill or Port Nelson on Hudson Bay, and westerly to Prince Rupert or the Portland Canal, B.C. (Mar., pg. 121.)

Quebec and Saguenay Ry.—We are officially advised that construction work has been proceeded with in a satisfactory manner during the past winter, the smallest monthly estimate being \$130,000. The work is very heavy and about 500 tons of explosives have been used during the nine months ended Mar. It is confidently expected that track will be laid on the 65 miles of the line at present under contract by Sept. O'Brien and Doheny, contractors, intend to start tracklaying from the Murray Bay end of the line as well as from the starting point at St. Joachim. The boring of the tunnels at Cap Rouge and Cap Martin is being proceeded with satisfactorily.

Under the direction of A. H. N. Bruce, Chief Engineer, an exploratory survey was made by a party under E. S. M. Lovelace for an extension of the line from Murray Bay to Ha Ha Bay, 73 miles. The engineers report that a satisfactory route can be obtained, and that the construction of the line will not be expensive. It is the intention to build this extension in the near future, and eventually to continue the line to Seven Islands, and along the shore of the Gulf of St. Lawrence to Cape Charles at the entrance to the Strait of Belle Isle. With a line of steamships from the port reached at this point, to a port on the west coast of Ireland, the ocean trip could be made in less than three days,

thus effecting a very considerable saving in time for the mainland passenger service.

The Dominion Parliament has voted a subsidy in aid of the building of a line from St. Joachim, northeasterly for not exceeding 62.8 miles, and from the latter point for 107.2 miles in the direction of Seven Islands, Que., in lieu of that granted in 1910.

The Quebec Legislature has granted 3,000 acres of land a mile for a line from St. Joachim to Nairn's Falls, 63 miles; and 2,000 acres a mile for 72 miles from Nairn's Falls to Ha Ha Bay. (Mar., pg. 121.)

Reid Newfoundland Co.—We are officially advised that it is expected to complete the construction of the Trepassey branch this season. Of the total length of 102 miles, 60 have been completed. It is also intended to build the branch to Hearts Content, 34 miles. This will make 76 miles to be built. (April, pg. 182.)

Roberval-Saguenay Ry.—We are officially advised that surveys have been made for about 52 miles of line from Mathias Jct. to about two miles beyond the Peribonka River, Que. The locating part was expected to reach the Mistassini River, May 1, which would cover the first 80 miles projected. A branch will be built from near Mathias Jct. early this season to the Jouquières pulp mills. Mathias Jct. is a junction on the Quebec and Lake St. John Ry., at which the Ha Ha Bay Ry. has one of its termini. The constructed and projected lines of the Ha Ha Bay Ry., extend from Bagotville, on Ha Ha Bay, to Mathias Jct., with branches through La Terrière village to the shores of Lake Kenogami, and to Chicoutimi on the shore of the Saguenay River. The Roberval-Saguenay Ry. will really be an extension of the main line to the Mistassini River, and will enable pulpwood, etc., to be brought out from the country north of Lake St. John to deep water navigation on Ha Ha Bay. The Dominion Government is making a hydrographic survey of the Bay, and as soon as this is completed it is proposed to build deep water docks.

The officers of the R.S. Ry. are:—President, J. E. A. Dubuc; Vice President, J. E. Cloutier; Secretary, R. Bellet; Treasurer, J. E. Robitaille; Chief Engineer, J. F. Grenon. They all reside in Chicoutimi, and are all more or less interested in the Ha Ha Bay Ry.

The Quebec Legislature has granted a subsidy for a line of 80 miles from the junction of the Q. and L. St. J. Ry. and the H.H.B. Ry. in the direction of the Mistassini Ry.

Temiskaming and Northern Ontario Ry.—In connection with the plans to revise the location of the first 30 or 35 miles out of North Bay in order to provide a lower gradient and less curvature, we are officially advised that the Commissioners will not undertake the work during this year. The Elk Lake branch will leave the main line at Earlton, and run 28.7 miles to Elk Lake. The maximum gradient will be 1.00% compensated, and the maximum curvature 6°. The quantity of rock work is very light, amounting to about 1,000 cubic yards; the estimated quantity of earth excavation is 340,000 cubic yards. There will be one timber trestle over the Jean Baptiste River at mileage 12. This will be a permanent structure 600 ft. long and 70 ft. high from water line to base of rail at the centre. There will be a steel bridge about 300 ft. long over the Montreal River at mileage 22.75, consisting of one large centre span and two approach spans. S. B. Clements is Chief Engineer. The contractors are McCaffery and McQuigge, Toronto. Work was started April 7.

The House of Commons passed a measure granting a subsidy upon the usual terms and conditions to the T. and N.O.R. for the line from North Bay to

Cochrane, 252.8 miles; the branch from Englehart to Charlton, 7.8 miles; the branch from Cobalt to Kerr Lake, 3.9 miles; the branch from Iroquois Falls to Timmins, 33.16 miles, and the extension from North Bay to Nipissing Jct., 2.18 miles. The Senate, however, refused to pass it. (April, pg. 183.)

Vancouver, Westminster and Yukon Ry.—A subsidy has been voted by the Dominion Parliament for a line, not exceeding 100 miles, from Vancouver, way of Burrard Inlet northerly, in lieu of that voted in 1908.

A subsidy of \$350,000 was also voted towards the construction of a bridge across Burrard Inlet, in lieu of one voted in 1908. (Oct., 1911, pg. 937.)

THE CANADA SOUTHERN RAILWAY COMPANY.

NOTICE IS HEREBY GIVEN that the annual general meeting of the shareholders of The Canada Southern Railway Company will be held at the Head Office of the company in the City of St. Thomas, Ontario, on Wednesday, the 5th day of June, 1912, at 11 o'clock in the forenoon, for the purpose of electing directors and approving, ratifying and confirming the action taken by the Board of Directors of the company at meeting held March 7th, 1912, authorizing the execution of a mortgage upon its railroad and other property providing for the issue of corporate bonds to an aggregate amount not exceeding \$40,000,000, bearing interest at a rate not exceeding 5% per annum, under the provisions of an indenture of lease, dated August 15th, 1903, of which amount \$22,500,000 are proposed to be presently issued, and guaranteed by The Michigan Central Railroad Company, for the purpose of refunding the First and Second Mortgage Bonds of this company maturing January 1st, 1913, and March 1st, 1913, respectively, and to cover the cost of improvements made and to be made to this company's property; and also for the transaction of such other business as may be brought before the meeting.

NICOL KINGSMILL,

Secretary.

Dated St. Thomas Ont., May 3rd, 1912.

NIAGARA GRAND ISLAND BRIDGE COMPANY.

NICOL KINGSMILL,

Secretary N.G.I.B. Co.

23rd April, 1912.

NIAGARA RIVER BRIDGE COMPANY

The annual general meeting of the Niagara River Bridge Company, for the election of directors and other general purposes, will be held on Wednesday, the 5th of June, 1912, at the hour of eleven o'clock in the forenoon, at the offices of the Canada Southern Railway Company, in the City of St. Thomas.

NICOL KINGSMILL,

Secretary N.R.B. Co.

23rd April, 1912.

POSITION WANTED.

Technical Graduate, experienced in all classes of freight and passenger equipment in plant office and engineering, will make permanent change to company offering good opening. Apply box 117 S. The Railway and Marine World, Toronto.

Dominion Government Railway to Hudson Bay.

The Dominion Parliament has voted \$1,500,000 on account of construction from Le Pas, Man., to Hudson Bay, in addition to the \$2,000,000 previously voted. The last-named sum the Minister of Railways explained would not do more than cover the work on the contract which had already been let for 185 miles. It was expected to let a further contract in May or June, by which time the location of the port on Hudson Bay would be settled. When that was done, contracts for the balance of the line, and the terminal facilities, elevators and harbor improvements, would be let. The 185 miles now under contract was expected to be completed by Jan. 1, 1913.

It is reported that the piers for the erection of the bridge across the Saskatchewan River at Le Pas have been completed, by Mackenzie, Mann and Co., Ltd., and that preparatory work for the erection of the superstructure is being gone on with. Work is being gone on with on the section of the line from Le Pas to Thicket Portage at Split Lake, 185 miles, by McMillan Bros., who have been given the contract by the original contractors, the J. D. McArthur Co. The heaviest piece of work at present struck is a 1,000 ft. rock cutting about five miles from Le Pas. It is said that the second section of the line to be placed under contract will be 100 miles.

A proclamation has been issued by the Governor-General that the provisions of part III of the Criminal Code, chap. 146 of the revised statutes of 1906, shall be enforced within a distance of 10 miles on either side of the line under construction. The only sections of part III not being in force are declared to be 144 to 149 inclusive. (April, page 193.)

Screw Reverse Gear.—In the April issue of The Railway and Marine World, in the article describing the screw reverse gear as applied to some recent C.P.R. locomotives, it was stated that the first locomotive so equipped on this continent was one built during 1911 by the American Locomotive Co. for the Chesapeake and Ohio Ry. W. A. Gray writes us from Chicago that three locomotives so equipped were built by the Grand Trunk Ry. in the Hamilton, Ont., shops before removal of the shops to their present location at Stratford about 1883. These three locomotives were numbered and named as follows: 728, Empress; 729, Princess, and 730, Duchess. For some reason this screw reverse gear did not prove satisfactory, and, in consequence, the locomotives were changed over to the old reverse lever.

The Coast Construction Co., Ltd., has been incorporated under the New Brunswick Companies' Act, to build railways, and harbor works, and do a general contracting business. The head office is at Fredericton Jct., N.B., the capital is \$49,000, and the provisional directors are: E. R. Teed, Woodstock, N.B.; J. S. Eagles, St. John, N.B.; G. D. Jones, Apohaqui, N.B.; T. B. Hartt, Fredericton Jct., N.B.; S. A. McLean, Sussex, N.B.

The Intercolonial Ry. has ordered 100 platform cars, 80,000 lbs. capacity, 10 refrigerator cars, 20 stock cars, and one first class car, from the Canadian Car and Foundry Co., Montreal; 50 Hart-Otis steel dump cars, 100,000 lbs. capacity, from the Hart-Otis Co., Montreal; one first class car from the Preston Car and Coach Co., Preston, Ont.; four switching and five consolidation locomotives, from the Canadian Locomotive Co., Kingston, Ont., and 373 box cars, 60,000 lbs. capacity, from the Nova Scotia Car Works Halifax.

Mainly About Transportation People.

C. R. HOSMER, director, C.P.R., was on a motoring trip in France during April.

H. LOGAN has retired from the directorate of the Maritime Coal Ry. and Power Co.

Lady SHAUGHNESSY and the Misses Shaughnessy returned to Canada from Europe Apr. 11.

J. W. LOUD, ex-Traffic Manager, G.T.R., Mrs. and the Misses Loud are making a Mediterranean trip.

Sir THOS. SHAUGHNESSY was entertained at dinner by the board of trade at Halifax, N.S., Apr. 11.

C. H. RUST, M. Can. Soc. C.E., City Engineer of Toronto, has resigned to accept a similar position at Victoria, B.C.

H. E. GRANT, formerly sales agent, British Columbia Electric Ry., has gone into private business in San Francisco, Cal.

D. E. GALLOWAY, Assistant to the President, G.T.R. and G.T.P.R., was married at Montreal, Apr. 24, to Miss L. B. Eaton.

H. MARKLAND MOLSON, of Montreal, who was lost in the Titanic disaster, was a director of the Richelieu and Ontario Navigation Co.

E. F. FAUQUIER, railway contractor, who, with Mrs. Fauquier has been spending several months in the South, has returned to Ottawa.

R. TINNING, Travelling Freight Agent, G.T.R., Toronto, will retire May 1, under the provisions of the pension rules, after 50 years service.

F. L. WANKLYN, General Executive Assistant, C.P.R., Montreal, has been elected a director of the Guardian Accident and Guarantee Co.

K. W. BLACKWELL, Vice President, Canadian Steel Foundries, Ltd., Montreal, has been elected Vice President, Merchants Bank of Canada.

Sir DONALD and Lady MANN spent a week end with the Governor General and the Duchess of Connaught at Rideau Hall, Ottawa, early in April.

Sir RODOLPHE FORGET, Lady and Miss M. Forget, arrived in London, Eng., from Montreal, April 15. Sir Rodolphe went on to Paris the following day.

E. H. Keating, M. Can. Soc. C.E., formerly General Manager, Toronto Ry., was reported, May 25, to be slowly improving, after a serious illness.

Mrs. RENNELS, who died at Maltland, N.S., Mar. 27, was widow of W. Rennells, formerly Superintendent, Intercolonial Ry., Campbellton, N.B.

Miss Marian Creelman, daughter of A. R. CREELMAN, K.C., director and General Counsel, C.P.R., was married in Montreal, April 20, to E. B. Savage.

W. P. HINTON, General Passenger Agent, G.T. Pacific Ry., gave an address on the passenger department before the Railway Club at Winnipeg, April 8.

C. N. ARMSTRONG, who has been associated with various railway enterprises in Quebec, and Mrs. Armstrong, arrived in England from Montreal, Mar. 29.

The Governor-General will occupy Benvenuto, SIR WILLIAM MACKENZIE'S house, in Toronto, during the Ontario Jockey Club's spring meeting in May.

Capt. C. H. NICHOLSON, Manager, G.T. Pacific Coast Steamship Co., was presented with a fitted travelling bag by the Vancouver city council recently.

SIR WILLIAM WHYTE, director, C.P.R., Lady and Miss Whyte, returned to Winnipeg early in April from the Southern States, where they spent several weeks.

W. J. CROSSEN, President, Crossen Car Co., Ltd., and Mrs. Crossen, returned to Cobourg, Ont., early in April, after a few weeks' trip to the Southern States.

Mrs. Leonard, wife of J. W. LEONARD, Assistant to the Vice President, C.P.R., died in Montreal, Apr. 28, and was buried in Toronto.

SIR WM. and LADY MACKENZIE spent a week end at Rideau Hall, Ottawa, towards the end of April, as guests of the Duke and Duchess of Connaught.

R. B. ANGUS, director, C.P.R., has been granted a permit by the Montreal city council for a residence on Redpath Ave., to cost approximately \$42,000.

Hon. G. P. GRAHAM, M.P., ex-Minister of Railways and Canals, spoke on the general subject of transportation at a meeting of the Canadian Club, Montreal, April 1.

J. F. DOLAN, City Passenger Agent, Richelieu and Ontario Navigation Co., Montreal, is recovering from the effects of a broken leg, followed by an attack of pneumonia.

T. WALMSLEY, insurance agent, etc., who died in Toronto recently, was associated with Sir Henry Pellatt in the purchase of the Kent Northern Ry. in New Brunswick.

P270 I. G. Ogden, Vice President, Canadian Pacific Railway, after whom the company's shops, to be built, at Calgary, Alta., will be named.

chase of the Kent Northern Ry. in New Brunswick.

C. E. POOLEY, K.C., ex-M.P.P., who died in Victoria, B.C., recently was for many years solicitor for the Dunsmuir interests, including the Esquimalt and Nanaimo Ry.

G. HANNAH, Passenger Traffic Manager, Allan Line, gave an address on the romance of steam navigation before the Christ Church Cathedral Men's Club, Montreal, recently.

J. W. STEWART, of Foley, Welch and Stewart, who is recovering from his recent serious illness, at Pasadena, Cal., expected to leave there, April 30, for a year's European trip.

The Rev. H. J. Hamilton, of Nagoya, Japan, who has been elected Bishop of the Anglican diocese of Japan, is a brother of L. A. Hamilton, formerly Land Commissioner, C.P.R.

Sir Melbourne Tait, Chief Justice of Quebec, and father of SIR THOMAS TAIT, President, Fredericton and Grand Lake Ry. and Coal Co., has announced that he will retire during May.

W. HAMIL, coach shop foreman, Canadian Northern Ry. shops, Fort Rouge, Winnipeg, was presented with a purse of gold by the employees, Mar. 29, on his leaving the service.

H. L. JOHNSON, a division engineer of construction on the Canadian Northern Pacific Ry., had a narrow escape from drowning while skating on Kamloops Lake, B.C., recently.

E. N. BENDER, General Purchasing Agent, C.P.R., and Mrs. Bender, left Montreal early in April to spend about two months in Europe, in consequence of Mrs. Bender's ill health.

G. R. G. CONWAY, Chief Engineer, British Columbia Electric Ry., gave an address on famous tunnels under rivers before the National Electric Light Association at Vancouver recently.

J. S. SUTHERLAND, who was station agent at Aulac, N.S., on the Intercolonial Ry., from the time the line was opened until his retirement in 1900, died at Parrsboro, N.S., Mar. 30, aged 78.

P. R. TODD, Vice President, Bangor and Aroostook Rd., Bangor, Me., visited Ottawa, April 11. He was at one time assistant to E. J. Chamberlain, then General Manager, Canada Atlantic Ry.

Mrs. L. G. COLEMAN, wife of the Assistant Superintendent, G.T.R., at Belleville, Ont., is a sister of Thornton Davidson, son-in-law of C. M. Hays, both of whom were lost in the Titanic disaster.

Lady Tait, wife of Sir THOMAS TAIT, and her daughter, who spent the winter in Toronto, left there early in April for Watkins Glen, N.Y., where Lady Tait hopes to recuperate after a long illness.

Mrs. J. McL. BROWN, wife of the European Manager, C.P.R., London, Eng., visiting her mother, Mrs. Creerar, in Hamilton, Ont., during April, returning to England towards the end of the month.

H. O'SULLIVAN, M. Can. Soc. C.E., formerly Inspector of Surveys and Provincial Topographer, died at Indian Lorette, Que., recently, aged 66. He did considerable exploratory work for railways in that province.

JULES HONE, Jr., formerly C.P.R. ticket agent at Quebec, and latterly carrying on a general ticket and steamship agency, there and in Montreal, will, it is reported, shortly be appointed chief immigration agent at Quebec.

J. S. PYEATT, at one time Superintendent, Pere Marquette Rd., St. Thomas, Ont., was married to Miss M. Lay at St. Louis, Mo., recently. He is now Vice President and General Superintendent, Fort Worth, Texas.

C. R. MORGAN, G.T.R., city ticket agent, Hamilton, Ont., has joined the Canadian Ticket Agents' Association, of which his late father was a member for many years, occupying office on several occasions, including the presidency.

R. W. REFORM, Montreal, has subscribed \$25,000 towards the \$250,000 proposed to be raised for Anglican Church purposes in Montreal diocese, and promises to contribute a further \$25,000 if the fund is made up to \$500,000.

A. HAWKIN, who died in New York, April 10, aged 52, was the engineer who laid out and had charge of construction of the White Pass and Yukon Ry. He subsequently had charge of other railway construction work in Alaska.

F. L. SOMERVILLE, formerly District Engineer, G.T.R., Toronto, has been appointed to co-operate with the Hamilton, Ont., city engineer, to prepare a report on the proposed Canadian Northern Ontario Ry. entrance into the city.

C. A. FORSYTHE was presented with a cabinet of silver by the headquarters staff of the British Columbia Electric Ry. at Vancouver, April 13, on his retiring from the position of Chief Accountant to enter private practice.

R. J. MACKENZIE, of Mackenzie, Mann and Co.; H. SUTHERLAND, Executive Agent, Canadian Northern Ry.; J. WHALEN, President, Great Lakes Dredging Co., and F. S. WILEY, vessel owner, Port Arthur, are among the directors of the recently organized Stanley Mineral Springs and Brewing Co., Winnipeg.

W. S. KINNEAR, who has resigned as President, Kansas City Terminal Co., to become President, United States Realty and Construction Co., New York, was formerly Assistant Chief Engineer, Michigan Central Rd., and had charge of the construction of the Detroit River tunnel.

W. E. BELCHER, who was for many years connected with the C.P.R. Passenger Department in Toronto and Winnipeg, and until June, 1909, was General Agent, Freight Department, and subsequently, to 1910, Travelling Freight Representative, Northern Pacific Ry., Detroit, Mich., has returned to Winnipeg to take up his residence.

JAS. MCCBEE, who died at Lansing, Mich., recently, after some years spent in Canada, entered railway service in the United States, and was successively Trainmaster, Chicago and Port Huron Ry., and Superintendent, Port Huron and Western Ry. He had retired from active service for some years.

P. K. SEATH, of the Montreal Harbor Commissioners' staff, and son of D. Seath, Secretary to the Commission, was presented with a purse of gold by his associates, Apr. 9, on the occasion of his marriage, which took place on the following day.

A. WILLIAMS, Chief Dispatcher, C.P.R., was presented with a gold watch and chain and a travelling bag by the company's employes and other friends at Woodstock, N.B., on the occasion of his transfer to North Bay, Ont., as Assistant Superintendent.

C. H. GODFREY, Vice President and Secretary, Canadian Steel Foundries, Ltd., has been elected a member of the Montreal city board of control, to succeed F. L. Wanklyn, who resigned on his appointment as General Executive Assistant, C.P.R.

J. G. SKILLINGER, Division Engineer of Maintenance of Way, Cleveland, Cincinnati, Chicago and St. Louis Ry., at Galion, Ohio, has been appointed Chief Engineer of the Rutland Rd., at Rutland, Vt., succeeding J. C. Irwin, M. Am. Soc. C.E., resigned.

J. H. TAYLOR, General Superintendent, Great Northern Ry., Great Falls, Mont., has been transferred to Superior, Wis., succeeding D. M. Philbin, and C. O. Jenks, Division Superintendent at Great Falls, has been appointed General Superintendent, succeeding Mr. Taylor, at Great Falls.

J. MCLELLAN was presented with a purse of gold by the employes of the C.P.R. terminals at Winnipeg recently, on the occasion of the thirtieth anniversary of his entering C.P.R. service. He was in the employ of the Canadian Government during the construction of the St. Boniface-Emerson line.

A. SHIELDS was presented with a diamond ring by the Brotherhood of Locomotive Engineers between Port Arthur and Edmonton, and the Locomotive Firemen of Winnipeg, April 2, on his resigning the position of General Master Mechanic, Canadian Northern Ry., in order to enter private business in Winnipeg.

W. R. BAKER, C.V.O., Secretary, C.P.R., while the horse attached to a cab was running away, in Montreal, Apr. 2, jumped from the vehicle, and sustained serious injuries, including a wound on his head and a dislocation of the thigh. He was taken to the Royal Victoria Hospital, where he is likely to have to remain for some weeks.

J. P. MEAGHER, a nephew of Lady Mackenzie, died at Joliette, Que., Apr. 6, as

a result of injuries sustained while attempting to board a moving locomotive. He had been in railway work for several years, latterly as roadmaster's clerk, Canadian Northern Quebec Ry., Joliette.

Mrs. R. W. Leonard, wife of R. W. LEONARD, Chairman of the National Transcontinental Railway Commission, has extended her offer to subscribe 10% of the total subscriptions for a women's residence in connection with Queen's University, Kingston, Ont., for another year.

A. SHIELDS, whose resignation of the position of General Master Mechanic, Canadian Northern Ry., Winnipeg, was announced in our last issue, has been elected President of the Railroaders Investment Co., there, the Vice President being W. R. Smith, until recently Superintendent of Works, Canadian Northern Ry.

A. S. GOODEVE, who has been appointed a member of the Board of Railway Commissioners, was born at Guelph, Ont., Dec. 15, 1860. He was mayor of Ross-

P271 The Late E. A. Hall, President, Ottawa Forwarding Company.

C. B. MUTCHLER, who has been appointed Signal Engineer, Grand Trunk Pacific Ry., Winnipeg, was born at Pine Island, Minn., Mar. 8, 1879, and graduated from the University of Wisconsin in 1902, since when he has been, to 1904, engineer in the Bridge and Building Department, Chicago, Milwaukee and St. Paul Ry.; 1904 to 1910, in the Signal Department, same road; 1910 to Apr., 1912, engaged in signal and interlocking construction in Canada.

A. J. McDONALD, Superintendent, City Division, Quebec Ry., Light and Power Co., Quebec, resigned recently to become General Superintendent, New Orleans, Southern and Grand Isle Ry., of which company, C. E. A. Carr is General Manager. After going to New Orleans, and looking the property over, he concluded that as the greater portion of the work was steam railway operation, with which he was not familiar, he would not undertake the duties, and he left New Orleans again, Apr. 14, for the north.

E. A. HALL, President, Ottawa Forwarding Co., who died in Ottawa, April 7, and whose portrait is published in this issue, was born in Montreal, June 19, 1853. He lived at L'Orignal, Ont., for a number of years, engaged in hay and grain business. In 1884, in partnership with his two brothers, W. J. and J. H. Hall, of Ottawa, he bought the steamboat Welshman, which was the beginning of the present Ottawa Forwarding Co. In later years he branched out, and at the time of his death was interested in a number of vessels trading on the Great Lakes, St. Lawrence River and Gulf of St. Lawrence.

W. E. WOLFENDEN, whose appointment as General Passenger Agent, Pere Marquette Rd., Detroit, Mich., was announced in our last issue, was born at Port Hope, Ont., Mar., 1862, and entered railway service in 1881, since when he has been, to 1883, operator, Chicago and West Michigan Ry., Woodville, Mich.; 1883 to 1890, agent, same road, New Richmond and Benton Harbor; 1890 to 1893, Travelling Passenger Agent, same road; 1893 to 1900, General Baggage Agent, same road and Detroit, Lansing and Northern Line; 1909 to 1904, District Passenger Agent, Pere Marquette Rd., Grand Rapids, Mich.; 1904 to Mar., 1912, General Western Passenger Agent, same road, Chicago, Ill.

C. BERESFORD FOX, M.A., M. Can. Soc. C.E., of Wragge and Fox, consulting engineers, etc., Toronto, died there, April 15. He was the eldest son of Francis Fox, who with his brother, Sir Douglas Fox, form the firm of Sir Douglas Fox and Partners, civil engineers, London. Eng. Mr. Fox had been a resident of Toronto for the past three years. Prior to going to Toronto, he had been engaged in many important engineering works, having passed some years in South Africa on the Rhodesian railways, and at the construction of the bridge over the Zambesi River at Victoria Falls. He was also engaged for about two years at the building of the Assouan barrage on the Nile in Egypt, and for a time at the Simplon Tunnel.

T. McHATTE, who has been appointed Master Mechanic, Eastern Division, G.T.R., Montreal, and whose portrait appears in this issue, was born at Dufftown, Banffshire, Scotland, Aug. 8, 1854, and entered railway service, Oct., 1870, since when he has been consecutively to 1878 in locomotive shops, Great Western Ry., at Hamilton, Ont.; June, 1878, to Aug., 1886, locomotive engineer, same road; Aug., 1886, to Apr., 1889, locomotive foreman, G.T.R., Palmerston, Ont.; Apr., 1889, to Apr., 1898, General Foreman in charge of locomotives, same road, London, Ont.; Apr., 1898, to Jan., 1909, Master Mechanic, Eastern Division, same road, Montreal, Jan., 1909, to Apr., 1912, Superintendent of Motive Power and Car

land, B.C., 1899-1900, Provincial Secretary of B.C. in 1902, Provincial Forestry Commissioner in 1909, and up to the date of his present appointment has represented Kootenay in the Dominion Parliament.

D'ARCY TATE, who has been Solicitor to the Grand Trunk Pacific Ry., at Winnipeg, since its inception, has resigned, in order to devote his time to the Pacific Great Eastern Ry. Co., the incorporation of which was announced in our last issue, and of which he is Vice President and General Counsel. Prior to entering G.T.P.R. service, he was, from 1895, connected with the Toronto, Hamilton and Buffalo Ry. legal department.

E. H. WOOD, who has been appointed car foreman, Hochelaga shops, C.P.R., Montreal, was born at St. John, N.B., Dec. 30, 1880, and entered C.P.R. service, July 4, 1899, since when he has been, to Aug. 1, 1903, car repairer at St. John, N.B.; Aug. 1, 1903, to Jan. 31, 1904, car inspector, St. John, N.B.; Feb. 1, 1904, to Jan. 24, 1911, car foreman, St. John, N.B.; Jan. 24, 1911, to Apr. 9, 1912, assistant car foreman, Hochelaga shops, Montreal.

Department, Central Vermont Ry., St. Albans, Vt.

The following subscriptions have been made to the fund for the Victorian Order of Nurses, for which an appeal was recently made by the Duchess of Connaught:—SIR HENRY M. PELLATT, \$5,000; SIR DONALD MANN, \$2,500; R. B. ANGUS, \$1,000; HUGH PATON, \$500; SIR H. MONTAGU ALLAN, \$500; R. W. REFORM, \$100.

E. ELEY, who has been appointed Divisional Car Foreman, Lake Superior Division, C.P.R., North Bay, Ont., was born in London, Eng., in 1867, and commenced railway service with the Great Northern Ry., at King's Cross, London, Eng., June, 1888, and came to Canada in 1889. He entered C.P.R. service in the Bridge and Buildings Department, Mar., 1894, and was transferred to the Car Department, at North Bay, Ont., Aug., 1894, and was, from Mar., 1902, to Jan., 1903, charge hand at Chapleau, Ont.; 1903 to July, 1906, leading hand at North Bay, Ont.; July, 1906, to Feb., 1907, Car Foreman at Quebec; Feb., 1907, to May, 1911, Car Foreman at Glen Yard, Montreal; May, 1911, to Apr., 1912, General Foreman, passenger car repair shops, West Toronto, Ont.

G. C. CONN, whose appointment, as Vice President, Pere Marquette Rd., was announced in our last issue, was born at Woburn, Mass., July 1, 1867, and entered railway service, Oct. 1, 1884, in the general freight department of the Boston and Lowell Rd., and was, later, to 1888, with the Boston and Maine Rd., since when he has been, 1888 to 1890, Travelling Freight Agent, Pennsylvania Rd.; 1890 to 1897, Travelling Agent, Canadian Pacific Despatch; 1897 to 1900, Commercial Agent, Flint and Pere Marquette Rd., Minneapolis, Minn.; 1900 to 1904, General Agent and Assistant General Freight Agent, Pere Marquette Rd., Milwaukee, Wis.; 1904 to 1909, General Freight Agent, Minneapolis, St. Paul and Sault Ste. Marie Ry.; 1909 to Mar. 7, 1912, Freight Traffic Agent, Pere Marquette Rd.

I. G. OGDEN, Vice President, C.P.R., in charge of Financial and Accounting Departments, in whose honor the company's new shops at Maharg, near Calgary, Alta., are to be named the Ogdén shops, and whose portrait appears in this issue, was born at New York, Oct. 10, 1844, and entered railway service, Mar., 1871, since when he has been, consecutively, to 1876, Paymaster and Accountant, Chicago and Pacific Ry.; 1876 to Mar., 1881, Auditor, under receiver, same road; Mar., 1881, to July, 1883, Auditor, C.P.R. Western Division, Winnipeg; July, 1883, to June, 1887, Auditor, same road, Montreal; Dec., 1901, to June, 1910, Comptroller, same road, Montreal; Dec., 1910, to June, 1910, Thrd Vice President, same road, Montreal, at which latter date, the numerical designations of the Vice Presidents were abolished.

SIR MAURICE FITZMAURICE, M. Am., M. Eng., M. Can. Soc., C.E., who received his recent knighthood in recognition of his having been engineer in charge of the construction of the stone embankment that lines the river frontage of the new London County Council hall in London, Eng., the foundation stone of which was laid by the King recently, was one of the original board of engineers appointed by the late Dominion Government for the construction of the Quebec bridge, after the collapse of the completed portion of the first structure. He has been Chief Engineer to the London County Council since 1901, and has been associated with many important works, including the Rotherhithe and Blackwall tunnels, the new Vauxhall bridge, Kingsway, and the tram subway in London. He was formerly engaged on the Forth bridge and the Assuan dam.

E. W. DUVAL, who has been appointed Superintendent, District 4, Manitoba

Division, C.P.R., Souris, was born at Toledo, Ohio, June 5, 1885, and entered railway service July 1, 1902, since when he has been, to June 1, 1905, in Superintendent's office, Canadian Northern Ry., Winnipeg, and at Port Arthur, Ont.; June 1, 1905, to Jan. 2, 1911, successively, secretary to General Superintendent, Central Division, C.P.R., Winnipeg; chief clerk to Superintendent, District 2, Central Division, C.P.R., Winnipeg; assistant chief clerk to General Superintendent, Central Division, C.P.R., Winnipeg; chief clerk to General Superintendent, Western Division, C.P.R., Calgary, Alta.; chief clerk to Assistant General Manager, and later to General Manager, Western Lines, C.P.R., Winnipeg; and Trainmaster, C.P.R. Terminals, Calgary, Alta.; Jan. 2, 1911, to Apr. 6, 1912, Superintendent, District 1, Saskatchewan Division, Moose Jaw.

R. E. MERKELEY, whose appointment as Trainmaster, District 3, Manitoba Division, C.P.R., Brandon, was announced in our last issue, was born at Ottawa, Sept. 3, 1882, and entered railway service, May, 1899, since when he has been, to May, 1901, timekeeper on construction, Ottawa Northern and Western Ry.; May, 1901, to June, 1903, freight clerk, Canada Atlantic Ry., Depot Harbor, Ont.; Jan., 1903, to Apr. 14, 1904, switchman, Union Pacific Rd., Denver, Col.; Apr. 14 to Sept. 15, 1904, chief statistical clerk, Canadian Northern Ry., Winnipeg; Sept. 15, 1904, to July 1, 1906, brakeman and switchman, C.P.R., Kenora, Ont., and Farnham, Que.; July 1, 1906, to Oct. 18, 1909, Travelling Agent, Car Service Department, Canadian Northern Ry., Winnipeg; Oct., 18, 1909, to May 12, 1910, chief clerk, Winnipeg Terminals, Canadian Northern Ry.; May 12 to Aug. 1, 1910, car tracer, C.P.R., Calgary, Alta.; Aug. 1 to Sept. 15, 1910, chief clerk, Car Service Agent's office, C.P.R., Moose Jaw, Sask.; Sept. 15, 1910, to Feb. 25, 1912, Travelling Car Service Agent, Western Lines, C.P.R., Winnipeg.

F. F. BUSTEED, M. Can. Soc. C.E., who has been appointed Engineer in charge of C.P.R. revision and double tracking, west of Calgary, Alta., Kamloops, B.C., was born at Battery Point, Que., Oct. 10, 1858, and entered railway service in 1879, since when he was, to 1881, rodman; 1881 to 1883, transitman; 1883 to 1887, assistant engineer in charge of construction, 1887 to 1889, in charge of location, and Division Engineer of Construction, C.P.R.; 1890, locating and Division Engineer of Construction, Alberta Ry. and Coal Co.'s extension from Lethbridge, Alta., to a junction with the Great Falls and Canada Ry. at the International boundary; 1890 to 1892, locating engineer and city engineer, Bristol, West Virginia; 1892 to July, 1904, successively, Roadmaster, Assistant Engineer, Resident Engineer, Engineer of Maintenance of Way and Structures, Division Engineer, Superintendent at Nelson, B.C., all with C.P.R.; July, 1904, to Feb., 1907, Assistant Chief Engineer, Western Lines, C.P.R., Winnipeg; Feb., 1907, to June, 1910, General Superintendent, Pacific Division, C.P.R., Vancouver, B.C.; June, 1910, to Jan., 1912, General Superintendent, British Columbia Division, C.P.R., Vancouver.

E. P. GOODWIN, whose appointment as Inspecting Engineer, National Transcontinental Ry., Ottawa, was announced in our last issue, was born at Baie Verte, N.B., Mar. 17, 1865, and educated at Mount Allison University, Sackville, N.B., and Queen's University, Kingston, Ont. He commenced railway work in 1887, as chairman on the C.P.R., and from 1888 to 1893 was inspector and assistant engineer, Department of Public Works; 1894, provincial land surveyor; 1895, transitman on survey, Kingston, Smiths Falls and Ottawa; Oct., 1895, to Dec., 1896, Resident Engineer, St. Lawrence and Adirondack Ry., 1897, Resi-

dent Engineer, Missiquash Marsh Co.; 1898 to 1899, Resident Engineer and Division Engineer, Midland Ry. of Nova Scotia; 1900, Resident Engineer, Dominion Iron and Steel Co.; Jan. to Aug., 1901, in charge of location party, Nova Scotia Eastern Ry.; Aug., 1901, to Feb., 1903, in charge of party and Division Engineer, Cape Breton Ry.; Mar., 1903, to Dec., 1904, Chief Engineer, Nova Scotia Eastern Ry.; Jan. to Mar., 1905, in charge of party, Canadian Northern Ry.; Mar., 1906, took charge of survey party, National Transcontinental Ry., and became Division Engineer when surveys were completed. He has been connected with the militia since 1881, and is captain in the Corps of Guides.

Wabash Rd.—W. BOCKSTAHLER, heretofore Contracting Freight Agent, Detroit, Mich., has been appointed Traveling Freight Agent, Buffalo, N.Y., vice W. N. Price, promoted.

W. N. PRICE, heretofore District Freight Agent, Buffalo, N.Y., has been appointed General Agent, San Francisco, Cal., vice Z. T. George, resigned.

Cancellation of Central Ry. Co. of Canada's Ontario Land Grant.

The Ontario Legislature has passed an act respecting land grants to railways, which affects the claims of the Central Ry. Co. of Canada to participate in the grant made by chap. 112, of the act of 19 and 20 Vict., passed by the old Legislature of Canada, for aiding the building of a railway from Lake Huron to Quebec. The preamble to the act sets forth that the Canada Central Ry. was incorporated by chap. 80, 24 Vict., to take advantage of the 4,000,000 acres granted by the first-mentioned act, and that with the exception of the section of the line between Carleton Jct. and Ottawa—built prior to 1870, and which now forms part of the C.P.R., and in respect of which full and satisfactory settlement was made by the province—no part of the line has been built. Since the passing of the acts, continues the preamble, other lines have been built; serving the territory through which the projected line was to pass, and which lines have been aided by grants from the Ontario Legislature, as well as from the Dominion Parliament. It is enacted that "no person or company should be entitled to or receive a grant of land . . . out of any lands . . . reserved by any act or acts of the Parliament of the late Province of Ontario . . . for the purpose of aiding or encouraging the construction of a railway or railways."

Application is being made for the incorporation of the Vancouver Monorail Co., to build a monorail line in Vancouver City. W. M. Shepard and M. Cameron, Seattle, Wash., are provisional directors.

Grand Trunk Railway Betterments, Construction Etc.

Back Cove Bridge, Portland, Me.—We are advised that a contract has been let to the John S. Metcalf Co., Ltd., Montreal, for building the rest piers for the new swing bridge at Back Cove, Portland, Me. Double walled caissons, open type, will be used, the piers being of concrete.

Southern New England Ry.—The Massachusetts Legislature has ordered the preparation of a bill granting the necessary permission to the company to enter Boston. The Legislature further directed that the bill should contain a provision extending to all railways in the state the privilege thus granted to the S.N.E.R.

The Rhode Island Legislature has granted the G.T.R.'s application, through the S.N.E.R., for a lease of part of the state's new docks at Providence. The lease will be for 20 years. The Legislature also authorized the expenditure of \$1,000,000 upon the completion of the docks.

P274
T. McHattie,
Master Mechanic, Eastern Division, Grand
Trunk Railway.

Central Vermont Ry.—We are officially advised that press reports to the effect that the C.V.R. had under consideration plans for the electrification of its line and connections between Montreal, Que., and Providence, R.I., are in error. The only statement made by the management on the subject of electrification of lines is that the company will be ready to electrify the line to Boston, Mass., for the building of which legislative authority is being asked, as soon as the other lines entering that city are electrified.

The original counterpart no. 6 of the agreement and conditional sale between Blair and Co., the Central Vermont Ry., and the Bankers Trust Co., series D, dated Feb. 23, has been filed with the Secretary of State at Ottawa.

Lachine Bridge, Montreal.—The bridge across the Lachine canal at Wellington St., Montreal, is being rebuilt. It is situated on the branch line connecting the G.T.R. Point St. Charles yard with the Montreal harbor tracks. The new span consists of a 257 ft. single track equal arm skew and draw, with

run bearing centres. It will be erected on the existing masonry seats and pivot pier, and will be electrically operated. The old bridge was designed for engine driving axle loading of 24,000 lbs., while the new bridge is designed for engine driving axle loading of 50,000 lbs. The Dominion Bridge Co., which built the old structure in 1893, is putting up the new bridge.

Lachine, Jacques Cartier and Maisonneuve Ry.—We are officially advised that the length of this projected line is seven miles. It starts from St. Laurent on the Jacques Cartier Union Ry., and goes round Mount Royal, past the C.P.R. Angus shops, down to the terminal on St. Catherine St., between Harbor and Frontenac Streets, opposite the gas works. The construction is heavy, being practically all track elevation. The Board of Railway Commissioners has authorized the company to carry its line across the Montreal St. Ry., at three points by means of overhead bridges. It is expected that construction of the line will be started this year.

Bridge at Rockfield, Montreal.—A new highway bridge is being built over the G.T.R. and the Montreal Park and Island Ry. at Rockfield, Montreal, to replace the present level crossing. The cost is being met by the G.T.R., the Montreal Tramways Co., and the municipalities, supplemented by a grant from the Dominion grade separation fund.

Coteau to Ottawa.—We are officially advised that the relaying of the line between Coteau and Ottawa, 70 miles, with 80 lb. steel, will be started as soon as the frost is out of the ground.

Yards at Stoney Creek, Hamilton.—We are officially advised in reference to reports that large yards are to be located at Stoney Creek, near Hamilton, Ont., that no such plan has been decided on.

Brantford Improvements.—In connection with the projected early start on building the Holmedale extension, plans have been prepared for the erection of a new bridge across the Grand River. The present bridge, which has three spans of 100 ft. each, will be replaced by two truss spans of 114 ft. 10 in. each, and two girders 68½ ft. each, on concrete piers and abutments. The route map for the extension shows that it will be 5.68 miles long. The estimated quantities are 85,000 cubic yards of excavation, and 245,000 cubic yards of banks. The maximum gradient will be 1.25%. Construction work is to be started at once, and, according to the agreement with the city council, the line is to be completed by Oct., 1913.

Spur Line at London, Ont.—It is reported that a spur will be built at London to connect the G.T.R. with the London and Port Stanley Ry. now operated by the Pere Marquette Rd. (April, pg. 183.)

The Canadian Collieries (Dunsmuir), Ltd. is reported to have arranged to spend \$2,000,000 on betterments during this year. The work to be done includes the building of an extension of the railway to no. 8 mine in the Cumberland district, 6.5 miles. The contract for this line, press reports state, has been let to C. Hoard, Victoria, B.C.

The first divisional point, just east of Calgary, Alta., on the Canadian Northern Ry. branch from Saskatoon to Calgary, has been named Hanna, in honor of D. B. Hanna, the company's Third Vice President.

W. J. Camp, Assistant Manager, C. P. R. Telegraphs, while at a recent meeting of the eastern and western divisions of the Association of Railway Telegraph Superintendents, at Chicago, Ill., denied that the C.P.R. had abandoned the use of telephones for train dispatching, as reported in some newspapers. The ground for the reports was fully explained in our Jan. issue.

Electric Railway Department

Toronto's City Engineer on the Use of T and Girder Rails.

C. H. Rust, M. Can. Soc. C.E., City Engineer of Toronto, presented the following report to the city works committee recently, which is of great interest to street railway engineers and construction and maintenance officials:—

In reply to a communication from your committee, forwarding a notice of motion from council regarding the use of T rails as follows: "That the laying of T rails on the streets for street railway purposes be not permitted under any circumstances in the future, and that this council place on record its approval of the grooved rail for the aforesaid purpose," I beg to report as follows:—

Under either the name T or girder (grooved) rail are grouped the various types of rail being manufactured for street railway purposes. Figs. 1 and 2 show the type of T and girder rail which is in most general use today. About 19 miles of this T rail construction has been used in Toronto streets up to the present.

Before a decision can be made as to which is the most suitable rail to instal, consideration should be given as to which is better adapted to meet the requirements: 1. From a railway operating and maintenance standpoint; 2. From a street pavement standpoint; 3. From the standpoint of public convenience.

first against one rail and then against the other. This not only aggravates the spread of the gauge, but produces undue wear and tear on both the rail and rolling stock, hence decreasing their useful life and correspondingly increasing the maintenance bill. The friction between the rail and the wheel flanges is also increased because of this swaying motion of the car trucks, and more power is required to maintain the car service. In several instances in this and other cities, the tram of the girder rail has been broken from the rail proper, and the Toronto Ry. Co. is constantly meeting claims for damages for automobile tires cut, torn rubbers, etc., caused by these broken or partly severed trams of rail sticking up above the pavement.

As an illustration of how the gauge of girder rail can be spread by team traffic, the Toronto Ry. Co. laid a 73-lb. girder rail section on York St. in 1893, and for about five years only an occasional car was run between King and Queen Sts. on the northbound track. At the end of that time complaints from the conductors as to the condition of the track led the company to test the gauge, which was found to have spread over an inch, while the gauge of the southbound track, on which the street car traffic had been frequent and hence the team traf-

fection to the flanges of the car wheels, has long served as a convenient and smooth-going highway for vehicular traffic. However, a scoria block is now being made, so patterned as to form, when in place, the groove alongside the gauge side of the T rail, as shown in fig. 1. This block is in service on Wilton Av. and allows of as smooth a riding for vehicles as the ordinary brick pavement.

Unfortunately, while this arrangement meets the requirements for wide tired vehicles, the sharp corners between the gauge side of the head of the T rail and the groove of the scoria block once in a while catch the rubber tire of a light vehicle and force it from the wheel rim.

The swaying of street cars increases in proportion as the gauge of the track increases, and in a street car which is swaying from side to side to any extent, the discomfort to the passengers is considerable, especially so if the cars be crowded, as they are during the rush hours.

Another fact that must not be lost sight of is that the street railway tracks are laid not for the carriage of vehicular traffic, but for the convenience of such of the public as may wish to ride on the street cars that run upon them.

It would help considerably in that now vital problem of rapid transporta-

Fig. 1. T Rail Construction.

Fig. 2. Girder Rail Construction.

1. FROM THAT OF THE RAILWAY OPERATING and maintenance standpoint.—The most suitable rail from a railway operating and maintenance standpoint is that which produces the smallest operating and maintenance charge; i.e., which permits of the operating of the rolling stock with a minimum of power and necessitating the smallest possible expense for track and rolling stock maintenance. In the winter, especially in the outlying districts, the ice and snow has a tendency to collect in the groove, rendering it more difficult to maintain a proper service with a grooved girder rail than with a T rail.

1st. Because the head of the T rail is centred directly over the web, the wheel loads produce no overturning effect, and hence has no tendency to spread the gauge; while in the case of the girder rail, every car that passes over it produces an outward thrust because of the fact that the head of the girder rail is not centred directly over the web. The gauge, therefore, has a tendency to spread.

2nd. Heavy vehicles in travelling on the track allowance of girder rail construction cut into the groove of the rail, and also have a tendency to loosen up the gauge. When once this occurs, the trucks of the cars commence to bang,

fic but slight, had remained tight. To tighten and adjust the gauge of street railway track is an expensive operation, as it means tearing up all the pavement between the rails over the section to be repaired.

At present the city is not concerned with this railway operating and maintenance feature, but it soon will be, that is if it is decided to operate and maintain the civic car lines, or if, as has been suggested, it is decided to take over the Toronto Ry.

2. FROM A STREET PAVEMENT STANDPOINT.—The street railway track allowance throughout the city, with a few very small exceptions, is paved, and girder rail being harder to maintain than T rail, it is more often necessary to tear up the paving, which it is well nigh impossible to replace as evenly as before.

Furthermore, when once the tram side of girder rail has begun to wear, or has been bent out of position, it is impossible to keep the paving blocks alongside it in good condition, because of the severe bumps to which they are subjected by loaded vehicles.

3. FROM THE STANDPOINT OF PUBLIC Convenience.—Girder rail owes its popularity from a public standpoint, to the fact that the groove of this rail, which was intended primarily to act as a pro-

tection if the use of the tracks for vehicular purposes were discouraged.

Under the agreement between the Toronto Ry. Co. and the city, the type of rail to be used has to be approved of by the City Engineer, and I certainly would not recommend the total abolition of the T rail. Each case should be considered on its merits. I am of the opinion that in the congested parts of the city the grooved girder type of rail is the most suitable, but in the outlying districts, where the track allowance is not used so much by the travelling public, and where, during the winter, there is a tendency for snow and ice to gather in the groove of the rail, the T rail is the more suitable.

[Notwithstanding the City Engineer's very full and convincing arguments, as given in the above report, the works committee of the city council, none of the members of which are practical men, or have any knowledge of the subject, decided that no more T rail be permitted, except on private right of way. —EDITOR.]

H. Knight, heretofore cashier, Quebec Ry., Light, Heat and Power Co., has been appointed manager of the company's Kent House at Montmorency Falls.

British Columbia Electric Ry's. Construction Work.

The construction programme so far as the B.C.E.R. Co.'s power and lighting plant is concerned will necessitate expenditures estimated at nearly \$3,000,000. The expenditure for railway work had not been announced to Apr. 15. It is not expected, however, that it will include much new work, owing to the fact that the question of the company's franchises in Vancouver and vicinity are being considered, and negotiations are in progress with respect to them. Certain work of doubling lines and extensions previously ordered will be completed.

The Minister of Railways for British Columbia has approved plan showing the general location of a proposed line from Highland Park to Twelfth St., New Westminster; and for a highway crossing over the Yale Road in district lot 2, group 2, New Westminster district. The new Westminster city council has approved of plans for the bridge over the Brunette River, on the extension to Fraser Mills.

Considerable progress is reported to have been made on the new car terminals on the Kitsilano Indian reserve, Vancouver.

The Vancouver, Fraser Valley and Southern Ry., a subsidiary of the B.C.E. Ry., has been authorized by the Dominion Parliament to enter into agreements with the B.C.E. Ry. and the Vancouver Power Co., and has been given an extension of time within which to build lines from New Westminster to the International boundary near Douglas; from the New Westminster bridge to Chilliwack, and westerly from the Fraser River to Ladner's Landing. It is proposed to have surveys made for the line to Ladner's Landing made at once.

The company is building a railway from Port Moody to Lake Coquitlam, about six miles. The company is building a big dam on the lake, and construction material will be taken in over the line, and logs from the lake will be hauled out. Steam will be used as the motive power.

The Minister of Railways for British Columbia has approved plans showing the general location of the line under construction from Victoria to Deep Cove, and the branch from mileage 20 to Union Bay, Vancouver Island. (April, pg. 196.)

The programme also includes the increasing of the North Arm hydro electric plant by the addition of three 14,000 h.p. units at a cost of \$1,000,000, the addition of a 5,000 k.w. turbo generator at the Vancouver steam auxiliary plant at a cost of \$250,000, the doubling of the capacity of the substations at Vancouver, Lulu Island, Point Grey, New Westminster and Burnaby and general light and power extension works.

Operations are steadily progressing on the preliminary work for the additional installation at the North Arm hydro electric plant, 900 men being now engaged on the new dam at the outlet of Lake Coquitlam. This number will be raised to 1,300 as the outdoor working season opens. At Lake Buntzen about 400 ft. has been driven on the 2,250 ft. tunnel which will convey the water from the dam to the generating station. This work is being rushed, operations being carried on through two shafts, 75 ft. deep. About 40,000 cubic yards of granite have been cleared away on the site for the new station. At Lake Coquitlam about 50,000 cubic yards have been placed in the toe wall of the large dam and the work of cementing the tunnel 28 x 18 ft., which will divert the river, is in progress. Extensive clearing operations and installation of special equipment for the New Westminster water supply are also being carried on.

Plans have been prepared for a new

substation on Earl's Road, South Vancouver, for the regulation of the light and power service in that district as well as on the Westminster interurban line, along which the station is located. The building will be 70 x 86 ft., one story, with an additional half story at one end for transformer gallery, the type of construction being reinforced concrete. The electrical equipment will consist of two 1,000 k.w. motor generator sets, two banks of transformers of 3,000 k.w. each for light and power service, eight arc regulators with a total capacity for 800 lamps and a switching station for a 10,000 volt feeder switch. The total investment at the point will be \$125,000.

Fake Accident Cases in Toronto.

In the county court at Toronto, A. Burnett recently claimed \$500 damages against the Toronto Ry. Co. for injuries alleged to have been sustained through his being jolted from a car in boarding it, on Oct. 12, 1911. The plaintiff not being in court when the case was called, the medical evidence was taken, when Dr. A. H. Garratt detailed conversations between himself and the plaintiff, covering the description of the alleged injuries by the plaintiff, the medical treatment administered, and an opinion as to the period during which partial disability would continue.

The plaintiff, on being called, stated that he had not been injured in any accident, but was a detective engaged by the Toronto Ry. Co. in an effort to stop the launching of fake, or trivial, claims for damages. His visit to Dr. Garratt was at the request of an official of the company, and during the time he was visited by the doctor he was able to be out, and was only at home when the doctor was expected. He had been examined by two doctors engaged by the company, after he had been to Dr. Garratt, and both of them knew him to be in good health and without mark.

J. W. Curry, K.C., then stated that he had been specially retained to act for the Toronto Ry. Co., which had felt obliged to take the action decided upon in this case to protect its interests. It had come to the notice of J. H. Forrest, Claims Agent, that damage actions were being brought against the company on evidence not supported by facts, and it was necessary to take the steps disclosed on account of the frequent unreliability of medical evidence.

A second case brought by W. E. Smalling, on similar lines, was also called, and after hearing the evidence as quoted above, both cases were dismissed.

As an outcome of the foregoing cases, R. J. Fleming, General Manager; J. H. Forrest, Claims Agent, Toronto Ry.; J. W. Curry, K.C., A. Burnett and W. E. Smalling were indicted before the grand jury of the general sessions at Toronto, Apr. 11, and true bills returned, charging them in five separate counts, with having conspired to commit the crime of fabricating evidence with intent to mislead a court of justice, of wilfully attempting to obstruct, pervert or defeat the court of justice, and by maliciously, fraudulently and vexatiously procuring the suits above mentioned, for damages for pretended injuries suffered by plaintiffs, when the suits were, as they well knew, feigned and fictitious actions, to bring into contempt and reproach, the courts of justice, one of the judges and the administration of justice, and against the peace of the King, his crown and dignity.

The matter is being discussed from all points by those concerned, and it is stated that the discipline committee of the Ontario Law Association is considering the question of taking action as regards the counsel engaged in the cases, while the attention of the Medical Council has also been directed to it, and to the posi-

tion of the medical men engaged in damage cases generally.

Whatever the ultimate outcome of these cases may be, they will doubtless serve as a warning to medical men, to the scrupulous ones to be extremely particular in thoroughly satisfying themselves as to reported injuries before giving evidence, and to the unscrupulous ones that they are running a great risk in assisting fake accident operators.

Park Attractions and Special Days.

By C. B. King, Manager, London, Ont., Street Ry.

We are somewhat limited in the way of park activities, as we operate a purely city system and have no park except the city waterworks park of some 700 acres, situated on the Thames river four miles below the city. Being a city park, the installation of park attractions is practically prohibited, so that about the only attractions there are picnic parties from the smallest up to the annual school picnic when there will be from 8,000 to 10,000 people on the grounds. This picnicing at the city park is encouraged by us when it seems favorable to do so by bonuses of some 5 to 10%.

Our principal holidays are Victoria Day, Dominion Day, Municipal Day, the first Monday in August, and Labor Day, the first Monday in September. The attractions and the traffic on these days, of course, depend almost entirely upon the weather. We endeavor to get large societies to hold their annual picnics on other days than these public holidays when general traffic is large enough anyway if the weather is good. By having the large picnics on an off day it is more correctly extra business.

The one regular attraction at the park is a summer theatre which is operated by a stock company for 12 weeks during the season. We have found stock companies playing a good repertoire are very much more attractive than vaudeville. They change the programme twice a week and draw an average of 500 or 600 people an evening. The admissions to the theatre range from 5 to 25c and pay something more than the cost of the attractions.

Hours of Labor for Ontario Electric Railway Employees.

The Ontario Legislature has passed the following act:—

1. The Ontario Railway and Municipal Board Act amended by inserting the following as section 58a:—

58a (1).—The board may regulate the hours during which conductors and motormen employees of a street railway company may be required or permitted to work, but in no case shall an employee be permitted to work more than six days in a week or 10 hours per day, and whenever practicable and reasonable, such 10 hours work shall be performed within twelve consecutive hours.

(2) The power conferred by subsec. 1 may be exercised notwithstanding the provisions of any agreement between a municipal corporation and a railway company as to hours of labor.

(3) Every company which, and every director, superintendent, manager or officer of a company who contravenes the provisions of any order of the board made under the authority of subsec. 1, or contravenes any of the provisions of this act, shall for each contravention incur a penalty of not less than \$100 and not more than \$250, recoverable under the Ontario Summary Convictions Act.

B. J. Arnold, of Chicago, Ill., has been engaged by the Montreal and Southern Counties Ry. as consulting electrical engineer, in connection with its projected extensions.

Electrification of the C.P.R. Rossland Subdivision

There have been persistent rumors during the last three or four years that the C.P.R. intended to electrify the mountainous portions of the British Columbia Division. Nothing definite has been done in the matter until quite recently, but now the electrification of the Rossland subdivision is to be pushed forward at an early date to determine the applicability of such a course under the heavy conditions to be encountered. The underlying purpose of this installation is to determine what electrification will do for main line operation.

The section to be electrified runs from Rossland to Castlegar Jct., the junction with the Boundary subdivision. From Smelter Jct. to the end of the section at Rossland, 10.6 miles, is one long continuous grade. The length of the Rossland subdivision is 29.3 miles, which with sidings and yard track amounts up to a total trackage of 43 miles, all laid with 80 lb. rails. From Castlegar Jct. to Smelter Jct., 18.7 miles, there is a ruling gradient of 2.2% except for a short distance at China Creek hill, where it is 4%. From Smelter Jct. to Rossland is the heavy portion of the line, with a 4.8% ruling gradient averaging 4% over the section, and a maximum curvature of 20°. One mine switch on this line has a 26° curvature. All grades and curves are compensated.

There is a fairly heavy tonnage to be handled over both portions of the line. The average daily tonnage from Castlegar Jct. to Smelter Jct. (the junction point for Trail, two miles distant on a branch) is 2,489 tons, of which 2,349 are freight. In the opposite direction the figures are 1,039 tons, of which 899 are freight. From Rossland to Smelter Jct. there are 2,110 tons, of which 1,970 are freight; and in the opposite direction 1910 tons, 1,770 tons being freight. This traffic is now being handled by five locomotives; two of 115% capacity or 23,000 lbs. tractive power, two of 180% or 36,000 lbs., and one of 120% or 24,000 lbs.

The motive power installation will consist of four 70 to 80 ton electric locomotives, power being obtained from the West Kootenay Power and Light Co. at probably 60,000 volts. This will be utilized through motor generator sets in a substation located either at Trail or Smelter Jct.

Two companies are tendering on the work, the Canadian Westinghouse Co., represented by D. L. Keiser, is advocating a.c. 6,600 volts, while the Canadian General Electric Co., represented by H. D. Byane, special agent, is advocating 2,400 volts d.c.

The matter is being considered by the C.P.R. management and a decision will probably be given at an early date.

Electric Trunk Railway Operation is actively being planned for in many of the German states. Prussia, Bavaria and Baden have led in this planning, and Saxony is about to consider the subject. The Bavarian and Baden state railways, it is stated, have adopted as standard the single-phase system, with 15,000 volts trolley-line potential and 16% cycles frequency. This is the same standard as adopted for the Prussian development.

Night Cars in Winnipeg.—The Winnipeg Electric Ry., under its contract with the city, was required to operate cars from midnight until 6 a.m. after the city's population reached 100,000, and to charge double the day rate of fare. The company has arranged with the city council to operate cars until 2 a.m. at the day fare, in lieu of an all night service.

The Future of the London Street Railway.

A street railway expert from New York City is working in London, Ont., on behalf of the city utilities committee, preparing figures as to the cost of purchasing the local system. His coming was not announced, but it is known that the object of securing his report is to try and prove that the price asked for the stock, viz., \$150—is excessive. The city authorities claim that \$125 is about the value of the shares. The action of the council in adopting the report of the committee as to track extension and general improvements is also significant. Friends of the company assert that the city is demanding its pound of flesh in order to influence the possible sale of the system. Under the charter granted to the company the entire system must be kept up to the standard of the lines operated in Cleveland, Ohio, and this is to be adhered to strictly. As a result air brakes must be installed on all cars, and many thousands of dollars worth of new equipment provided. Track extensions due to London on a population basis are to be laid in the north end, with a crossing over the C.P.R. at Adelaide street.

Establishment of Manitoba Public Utility Commission.

The Manitoba Legislature, at its recent session, passed an act providing for the establishment of a Public Utility Commission, and prescribing its powers and duties. The words "public utility" are defined to mean every corporation other than a municipal corporation (except where such municipal corporation voluntarily comes under the act in the manner provided) engaged in carrying on a telegraph or telephone business, the conveyance of travellers or goods over a railway, street railway or tramway, companies for the supply of water, gas heat, light or power, the Government telephones and the Government elevators, and covers all companies now existing, or which may hereafter be incorporated. The commission is to consist of one member to be called the Public Utility Commissioner, who shall constitute a court of record. The Commissioner shall devote the whole of his time to his duties, and shall hold office during good behavior. A secretary is to be appointed, and such experts as may be necessary shall be appointed upon the recommendation of the Commissioner. The Commissioner will sit where the Government shall fix his permanent office, but sittings may be held in other parts of the province. The remuneration of the Commissioner, Secretary and experts is to be fixed by the Government. The Public Utility Commissioner is to have jurisdiction in all matters given to the Railway Commissioner, the powers of that officer being vested in the Public Utility Commissioner; in all questions relating to the transportation of goods or passengers on lines of any tramway, street railway or steam railway under the jurisdiction of the province; in the matter of reducing tolls where found upon complaint to be unreasonable; to fix terms and conditions for the entering of any public utility in any municipality; to settle differences between companies and municipalities as to the placing of poles, stringing wires, etc., across, along, or under public streets; and power to order extensions of public utilities where necessary. Power is also given to investigate complaints, to value the property of public utilities, to fix rates, to require the filing of tariffs, to make regulations, to maintain necessary conveniences for the transaction of business. The act also contains provisions relating to the conduct of public utilities which the Commissioner has

power to enforce; sections governing the procedure of the Commissioner's court, the costs of the same. The decision of the Commissioner as to questions of fact or law is to be binding, and is not to be bound by the findings of any other court as to questions of fact or law. An appeal may be made to the Court of Appeal upon questions involving the jurisdiction of the Commission, with the permission of a judge of the Court of Appeal, to be applied for within 15 days after the decision questioned. In addition to any penalties imposed by the Commissioner, the offender may be proceeded against summarily before a police magistrate, and a fine of not less than \$50, nor more than \$100 and costs may be inflicted, with the alternative of imprisonment for not exceeding six months. All acts and parts of acts inconsistent with the present act are repealed. The act came into force, April 8.

T. D. Cumberland, county court judge at Brandon, has been appointed Commissioner.

Traffic Regulation in Hamilton.

When the new traffic bylaw comes into effect on May 1, the Hamilton, Ont., St. Ry. will inaugurate a few changes that will work for the benefit of the system. The bylaw calls for the direction of the cars at the corner of King and James streets and James and Barton streets by a policeman instead of an inspector, as is the case at present. Under the present system of running things the inspector holds all cars for connections at the points mentioned above. In so doing many of the cars lose on their schedule, possibly a minute or two minutes, depending largely on the crowds. Thus it is often noticed that one car will be seen going down King street, for instance, loaded, while another car following at a close interval is practically empty. This is the situation the street railway officials wish to overcome. The plan, it is thought, will be to do away with all connection, and thus keep the cars more closely to their schedule, and at the same time improve the service to a greater extent.

Interchange of Traffic Between Ontario Electric Railways.

On April 15 the Ontario Court of Appeal set aside the Ontario Railway and Municipal Board's order providing for an interchange of traffic between the city's municipal electric railway and the Toronto Ry. This, however, will not have any practical effect, as the Ontario Legislature at its recent session passed The Ontario Railway Amendment Act as follows:—

"Board" shall mean The Ontario Railway and Municipal Board.

"Corporation" and "corporations" shall include a municipal corporation.

Where two or more electric street railway systems owned or operated by different corporations lie contiguous to one another, it shall be the duty of each corporation to afford to the other or others all reasonable facilities for the interchange of traffic and running rights over its lines.

If the corporations are unable to agree as to the nature or extent of the facilities and running rights to be afforded to one another or as to the terms and conditions upon which they shall be exercised, the matter shall be determined by the Board, and it shall be the duty of each corporation to conform with and obey any order of the Board made in the premises.

The Board shall have jurisdiction and authority to require each of the corporations to give to the other such reasonable facilities for the interchange of traffic and running rights over its system or any

part of it as the Board shall deem to be in the public interest and on such terms and conditions as the Board may deem just.

The Board may from time to time vary the terms of any order made under either of the next preceding sections, as it may deem just.

The powers conferred on the Board may be exercised in respect of an electric street railway system which a corporation has authority to construct, the location and plans of which have been approved by the Board, notwithstanding that no part or that part only of the system has been constructed, and such powers may also be exercised notwithstanding that a corporation has the exclusive right to build and operate surface railways within the municipality or any part of it.

This act shall not come into force until a day to be named by the Lieutenant-Governor by proclamation.

Toronto Railway Single Truck Cars.

About 50 single truck cars have just been turned out of the Toronto Railway Co.'s shops for use on its own lines in the city. In general design they closely resemble the large double truck cars which have been turned out from time to time from the company's shops. The side sills are reinforced with steel side plates, as in the larger cars, and both ends have enclosed vestibules much larger than the platforms of the older type of single truck cars built some few years ago. In conformance with the railway company's standard practice, the cars are semi-convertible for use in summer traffic. The trucks are new in the company's practice, the design resembling the frame and spring rigging of a locomotive, this construction being calculated to minimize the swaying motion incidental to single truck cars. Among the new features of construction embodied in these new cars may be mentioned the front door arrangement. It is a swing door operated by the motorman by a handle conveniently located near the controller. The door is glazed in the lower panels in order that the motorman may observe the movements of the alighting passengers.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for Feb., \$473,036; operating expenses, \$290,661; net operating earnings, \$182,375; renewal funds, \$37,935; net earnings, \$144,440; approximate income from investments, \$25,000; net income, \$169,440, against \$348,332 gross earnings; \$212,239 operating expenses; \$136,093 net operating earnings; \$29,770 renewal funds; \$106,323 net earnings; \$20,000 approximate income from investments; \$126,323 net income for Feb., 1911. Aggregate gross earnings for eight months ended Feb. 29, \$3,791,677; net earnings, \$1,339,531, against \$2,708,734 aggregate gross earnings; \$1,096,775 net earnings for same period 1910-11.

Calgary Municipal Ry.—Passenger earnings for March, \$39,436.20; miscellaneous earnings, \$615.10; total earnings, \$40,051.30; operating expenses, \$24,525.71; net operating earnings, \$15,525.59; contingent account, and interest and sinking fund, \$7,271.89; net profit, \$8,259.70, against \$22,493.10 passenger earnings; \$323.15 miscellaneous earnings; \$22,816.25 total earnings; \$11,639.53 operating expenses; \$3,856.69 contingent account, interest and sinking fund; \$7,320.03 net profit, for March, 1911. Revenue per car mile, 28.828c.; expenses per car mile, 17.041c.; gross surplus per car mile, 10.787c.; cost of power per car mile, 4.135c.; proportion of expenses to revenue, 61.2%.

Calgary Municipal Ry.—The annual statement issued by the Calgary, Alta., city council for the year 1911 shows that the electric railway is carried as an asset of \$1,416,120.

Cape Breton Electric Co.—Gross earnings for Feb., \$23,693.29; expenses and taxes, \$15,356.19; net earnings, \$8,337.10; interest charges, \$4,495.83; balance, \$3,841.27; sinking and improvement fund, \$1,140; net balance, \$2,701.27, against \$22,082.92 gross earnings; \$14,212.88, expenses and taxes; \$7,870.04 net earnings; \$4,512.50, interest charges; \$3,357.54, balance; \$1,141.66, net balance for Feb., 1911.

London St. Ry.—Gross earnings for March, \$23,540.98; expenses, \$16,912.69; net earnings, \$6,528.29; deductions, \$2,450, net income, \$4,178.29, against \$21,175.20 gross earnings; \$15,370.73, expenses, \$3,362.72 net income, for March, 1911. Aggregate gross earnings for three months ended March 31, \$68,785.78; expenses, \$48,265.01; net earnings, \$20,520.77; deductions, \$7,176; net income, \$13,344.77, against \$61,080.86 aggregate gross earnings; \$45,065.94, expenses; \$16,014.92 net earnings, \$7,000.05, deductions, \$8,925.80, net income for same period, 1911.

Montreal St. Ry.—Passenger earnings for March, \$422,619.90; miscellaneous earnings, \$5,043.82; total earnings, \$427,663.72; operating expenses, \$270,968.86; net earnings, \$156,695.86; city percentage of earnings, \$34,037.12; interest on bonds and loans, \$15,822.10; rent leased lines, \$661.37; taxes, \$5,000; total charges, \$55,520.59; surplus, \$101,175.27; expenses per cent. of earnings, 63.36, against \$368,079.75 passenger earnings, \$3,912.68, miscellaneous earnings, \$371,992.43, total earnings; \$234,484.22, operating expenses; \$137,508.21, net earnings; \$25,616.79, city percentage of earnings; \$15,498.86, interest on bonds and loans; \$607.10, rent leased lines; \$4,700, taxes; \$46,422.75, total charges; \$91,085.46, surplus; 63.03, expenses per cent. of earnings, for March, 1911. Aggregate total earnings for six months ended March 31, \$2,533,428.96; operating expenses, \$1,569,567.30; net earnings, \$963,861.66; total charges, \$261,301.78; surplus, \$702,559.88. expenses per cent. of earnings, 61.91, against \$2,202,914.82, aggregate total earnings; \$1,370,472.62, operating expenses; \$832,442.25, net earnings; \$229,205.39, total charges; \$603,236.86, surplus; 62.21, expenses per cent. of earnings for same period, 1910-11.

Montreal Tramways and Power Co.—The sale of \$5,000,000 6% collateral gold notes to the National City Bank and Potter, Choate and Prentoy, of New York, was confirmed Apr. 9. They are dated Apr. 1, and mature on Apr. 1, 1915. They were placed on the market, Apr. 11, at about par, with interest; and the issue was considerably over subscribed. The amount realized will be used for the retirement of all the floating indebtedness of the company, and no further financing is contemplated during the life of the notes.

Montreal Tramways Co.—President E. A. Robert is quoted as stating, April 9, that negotiations for the financing of the company's complete programme were proceeding satisfactorily, and he hoped before long to be able to announce that the money necessary was in hand. The additional funds are required for improvements to existing lines and for the building of extensions.

Quebec Ry., Light, Heat and Power Co.—The directors decided, Mar. 29, not to pay any dividend for the present, but to utilize the surplus earnings for the improvement of the lines.

Toronto Ry.—Gross earnings for Feb., \$640,264; operating expenses, \$320,407; net earnings, \$319,838, against \$556,056 gross earnings; \$274,198 operating ex-

penses; \$281,858 net earnings for Feb., 1911. Aggregate gross earnings for two months ended Feb. 29, \$1,296,355; net earnings, \$649,276, against \$1,146,474 aggregate gross earnings; \$579,126 net earnings for same period 1911. The figures quoted cover the earnings, etc., of the Toronto Ry., Toronto and York Radial Ry., and the allied companies.

Winnipeg Electric Ry.—Gross earnings for Feb., \$299,246; operating expenses, \$164,942, net earnings, \$134,304, against \$309,500 gross earnings; \$162,074 operating expenses; \$147,426 net earnings, for Feb., 1911. Aggregate gross earnings for two months ended Feb. 29, \$618,680; net earnings, \$278,325, against \$655,645 aggregate gross earnings; \$305,221 net earnings for same period 1911.

Nelson Street Railway Co., Ltd.

This line, which commenced operation Nov. 9, 1910, ran for 21 days, when an accident caused by running over the belt line extension before the track was properly in shape, together with a serious breakdown in the city's power plant, kept the systems shut down until June 21, 1911, since which time the line has been run steadily. The operating account to Feb. 29, 1912, is as follows:—

Receipts	\$10,253.38
Operating expense	9,037.35
Operating profit	\$1,216.03
Personal injury	\$ 750.00
Repairing wrecked car	1,345.56
	2,095.56

Net loss

Net loss	\$879.53
----------------	----------

No allowance has been made for meeting fund requirements at the rate of \$800 a year for two years, under the debenture deed, nor of depreciation for the same period.

The authorized capital is \$50,000; subscribed, \$34,639; paid up, \$30,309.69; outstanding calls, \$4,329.31. The assets are stated as \$71,245.04, and the liabilities as \$42,937.04.

We are advised that no extensions of the system are contemplated at present.

Electric Railway Notes.

The British Columbia Electric Ry. is having a number of its interurban cars re-modelled.

L. G. Robinson, of the British Columbia Electric Ry. engineering department, has resigned to enter private business.

R. Knight, Superintendent, Edmonton Radial Ry., sent his resignation to the Edmonton, Alta., city council, April 12.

The British Columbia Electric Ry. has received the last of the 25 city cars which it ordered from the J. G. Brill Co. in Dec., 1911.

The Montreal Tramways Co. has received one steel underframe pay-as-you-enter car, from the Canadian Car and Foundry Co., Montreal.

The St. John Ry., St. John, N.B., has ordered six 21 ft. semi-convertible, pay-as-you-enter cars, 32 ft. long over all, from the Ottawa Car Co.

The New Brunswick Public Utilities Commission sat in Moncton, Mar. 28, to settle the Moncton Tramways, Electricity and Gas Co.'s schedule of rates.

The Grand Valley Ry. began re-operating its cars between Brantford and Galt, Ont., Mar. 26, the line having been blocked with snow since early in the winter.

The Toronto city council, April 1, declined to authorize the engagement of Ford, Bacon and Davis, New York, to make a report on the street railway traffic problem in the city.

E. P. Newhall, formerly Western Superintendent, Pacific Express Co., has been appointed in charge of the freight

and passenger departments of the Alberta Interurban Ry., now being organized.

During Feb., only one fatal accident to an employe, connected with the operation of electric railways in Canada, was reported, and four non-fatal accidents. The fatality was due to a rear end collision.

E. L. Milliken, heretofore Superintendent of Lighting, Cape Breton Electric Co., Sydney, N.S., has been appointed Manager, vice H. C. Foss, appointed General Superintendent, Savannah Electric Co., Savannah, Ga.

The Calgary Municipal Ry. has received six 33½ ft. car bodies, 46½ ft. long over all, semi-convertible, pay-as-you-enter type, mounted on 27-G-1 trucks, equipped with Westinghouse 101-B-2 motors, from the Ottawa Car Co.

It was reported during April, that owing to some dispute arising between the Levis County Ry. and the city of Levis, Que., in relation to the company not rebuilding the elevator which connected the upper and lower levels of the city, and which was destroyed by fire last year, that the company would suspend its city car service on May 1. We are officially advised that there is no truth in the report.

H. C. Foss, General Manager, Cape Breton Electric Co., which operates the street railway service in Sydney, the Sydney and Glace Bay Electric Ry., and the ferry service between Sydney and North Sydney, N.S., has been appointed General Superintendent Savannah Electric Co., Savannah, Ga. Both these companies are under the Stone and Webster Corporation's management.

C. W. Moodie, who recently issued a writ against the directors of the Dominion Power and Transmission Co., Hamilton, Ont., for breach of trust, issued a second writ, Apr. 1, for \$2,595.55, alleged to be due on preferred stock he holds. It is stated that on the formation of the present company he declined to exchange his then existing stock, which was bearing interest at 5%, for new stock, with interest at 6%, since raised to 7%, and that his claim is for the difference between the interest on the old and present stocks.

The Dominion Power and Transmission Co. has ordered, from the Preston Car and Coach Co., Preston, Ont., 24 cars, for its electric railway services. The number mentioned is being divided between single and double truck cars, but in what proportion has not, at the time of writing, been decided. The double truck cars, will be 30 ft. over bodies, 43 ft. over all, 4½ ft. wheel base, with 33 in. wheels, with 27-G-1 trucks, and the single truck cars, will be 21 ft. over bodies, 33 ft. long over all, 8 ft. wheel base with 33 in. wheels.

The British Columbia Electric Railway Co. has ordered 24 interurban cars from the St. Louis Car Co., the additional rolling stock, with electrical equipment, representing an outlay of \$250,000. Twenty-two of the cars are intended for passenger service. They will be 50 ft. long, providing seating accommodation for 64 persons, 44 in the main section and 20 in the smoking compartment. They will be of ironclad construction, solid steel riveted plates forming a band around the entire body of the car. The roof will be of the arch type and slat seats will be used for sanitary reasons. The air brake equipment and interior finish and fittings will be in accordance with the latest improvements. The electrical equipment will consist of four 75 h.p. motors. The two baggage cars will be 55 ft. long and similar in construction to the cars now used for the purpose on the company's Fraser Valley branch.

Electric Railway Projects, Construction, Betterments, Etc.

Alberta Interurban Ry.—We are officially advised that rapid progress is being made with location surveys for the first line proposed to be built. Location plans for the first 25 miles out of Calgary, Alta., have been prepared, and application is being made to the Minister of Railways at Ottawa for their approval. The survey work is in charge of K. J. C. Zinck, formerly Assistant Engineer, G.T. Pacific Ry., Winnipeg; H. G. Dimsdale as assistant. A meeting for the formal organization of the company and the authorization of construction was held at Calgary, Apr. 16. (Apr., pg. 196.)

Brandon Electric Ry.—The Manitoba Legislature has amended the company's act of incorporation in various particulars, notably as to the method of organization, power to make regulations for the operation of traffic, and power to make agreements with or to amalgamate with other companies.

A proposition for the incorporation of a company to build an electric railway in Brandon, under the title of the Wheat City Electric Ry., was not proceeded with.

The city council passed a resolution, Apr. 10, approving the agreement with J. D. McGregor, as amended at meetings of the council held Apr. 9 and 10, for a franchise for an electric railway in the city. It was ordered that a bylaw be prepared embodying the provisions of the agreement for submission to the ratepayers upon the earliest possible date. The agreement gives Mr. McGregor an exclusive franchise in the city for 30 years. The bylaw will be voted by the ratepayers May 13.

Mr. McGregor intimated that he expected to be able to acquire the Brandon Electric Light Co.'s plant and franchises for operation in connection with the railway, and he also expected that his company would build radial railways in several directions from the city. (Mar., pg. 147.)

Burrard, New Westminster and Boundary Ry. and Navigation Co.—W. McNeill, Assistant General Manager, Western Canada Power Co., was in Victoria, B.C., Apr. 4, negotiating with the Government for the building of the proposed electric railway from Vancouver to Mission, B.C. The estimated cost of the line and the bridge across the Pitt River near Coquitlam is \$4,000,000, and the company is asking for Government aid to build the bridge. The Premier is said to have promised favorable consideration to the project.

The Board of Railway Commissioners has approved the location plan for the line from Michen to Port Moody, 40 miles.

The annual meeting of the Western Canada Power Co. was held in Montreal, Apr. 3. C. H. Cahan, President, being in the chair. The company has now contracts for the delivery of 15,000 h.p. from its Stave Falls plant. The present plant can be extended to deliver 25,000 h.p. at very little extra expenditure, and there is sufficient water power to enable the plant to be increased so as to deliver 100,000 h.p. A. R. Doble is Secretary of the company and R. F. Hayward General Manager. (Apr., pg. 196.)

Edmonton Radial Ry.—The Edmonton, Alta., city council has given a contract to the E. Manders Construction Co. for grading and paving street railway allowance on certain streets, at an estimated cost of \$30,000. The contractor is to do the excavation, grading, concrete and surface work; the city provides and lays the ties and rails, and the overhead work. It is expected that tenders will be invited at an early date for the construction of additional lines on unpaved streets.

Plans for the proposed new car barns

at Edmonton are being prepared by the City Architect. The building will be 310 x 500 ft., with capacity for about 150 cars. The structure will be of brick with stucco trimmings and with tar and gravel roof, and will be 27 ft. high. At one end of the building offices will be arranged. It is proposed at present to build the office section and about 123 ft. frontage of the barn. (Apr., pg. 196.)

Forest Hill Electric Ry.—The Ontario Legislature has refused to incorporate a company with this title. (Apr., pg. 196.)

Galt, Preston and Hespeler St. Ry.—The town of Berlin wants the G.P. and H.S.R. to exercise running rights over the Berlin and Waterloo St. Ry., owned by the town, and to build from Waterloo to Elmira.

Greenwood-Phoenix Tramway Co.—We are advised that the tunnel, which is 9 x 9 ft., had been driven 3,000 ft. under the hill, between Greenwood and Phoenix, B.C., when work was suspended at the end of Dec., 1911. It was not known when we were advised, Apr. 10, when work would be resumed. (Jan., pg. 38.)

Guelph Radial Ry.—An order is reported to have been given to the Algoma Steel Co. for rails for the extension of the line in St. Pauls Ward, Guelph, Ont.

Hamilton, Grimsby and Beamsville Electric Ry.—Press reports state the project to extend the line from Beamsville into St. Catharines have been abandoned, and that surveys are being made for a new line from Hamilton to St. Catharines. The projected route will probably parallel Barton St. to Winona, then along the present tracks to Grimsby, and following a new route from just outside Grimsby to St. Catharines. (Apr., pg. 196.)

Hamilton Street Ry.—The special railway committee reported to the Hamilton city council, Apr. 2, that the company did not intend to make any extensions or to lay any new track this year. (July, 1910, pg. 683.)

Hamilton, Waterloo and Guelph Ry.—The Dominion Parliament has extended the time for the construction of the company's authorized lines of railway, repealing sec. 4, chap. 106, of the statutes of 1908, and enacting a new section fixing the capital stock at \$9,000,000.

Press reports state that plans have been prepared for the entrance of the company's lines into Toronto, by means of a tunnel, the construction of which is estimated to cost \$7,500,000. Some of those associated with J. Patterson in the promotion of the company stated that the company's engineer was negotiating for the entrance into Toronto, and that the plans included a subway starting from near High Park. (Apr., pg. 196.)

Hull Electric Ry.—Track approaches are being laid to the new car barns at Maniwaki Jct., and a new double switch is being put in at Brewery St. and Avlmer Road, Hull, Que. (Apr., pg. 196.)

International Ry. (British Columbia).—H. T. Thrift, Hazelmere, B.C., is Secretary of the International Ry. and Development Co., which is reported to have under consideration a project to build an electric railway from Ladner, B.C., to Huntingdon, Wash. (Mar., pg. 148.)

Lake Erie and Northern Ry.—The Dominion Parliament has voted a subsidy up to \$6,400 a mile, upon the usual terms and conditions for the building of a line from Galt to Port Dover, not exceeding 58 miles, and from Paris to Ayr, 10 miles.

The approved route of the line is west of the G.T.R. out of Port Dover, crossing to the east side, just south of Simcoe, and across the G.T.R.-Wabash line,

and then making straight for Brantford, passing through Bloomsburg, Waterford, Boston, and Mount Pleasant. The terminal station in Brantford will be on the old G.T.R. station site, Colborne St. There will be a maximum gradient on this section of the line of 1%. The route from Brantford to Galt will pass through Paris, Blue Lake and Glen Morris, and the branch to Ayr will start from Paris. On this section the maximum gradient will be 0.5%. The track will be laid with 80 lb. steel, and the overhead wires, carrying 11,000 volts, will be strung on steel bridges instead of poles. Substations will be built at Simcoe and Waterford, the main station being at Brantford. There will be four heavy bridges on the line, one 475 ft. across the Michigan Central Rd., and the Toronto, Hamilton and Buffalo Ry. at Waterford; a 1,200 ft. trestle at Mount Pleasant, and bridges over the Grand River at Brantford and Paris.

The location plans for the line from Port Dover to Brantford have been approved, and the location surveys north of Brantford are reported to be nearly completed. (Mar., pg. 148.)

Lethbridge Municipal Ry.—A start was made on the grading for the municipal electric railway in Lethbridge, Alta., Apr. 8. The work was started with a public ceremony at the corner of Third Ave. and Thirteenth St. South. Superintendent Reid is in charge of construction and expects to have the first section of the line in operation early in Oct. (Feb., pg. 31.)

London and Lake Erie Ry. and Transportation Co.—The Aylmer, Ont., board of trade passed a resolution, Apr. 4, inviting the company to extend its line from St. Thomas to that place. The company's officials in London are quoted as having stated, Apr. 6, that the extension to Aylmer will come some time, but nothing has been done yet in the direction of making surveys. (Dec., 1910, pg. 117.)

A conference was held in London, April 17, between the company's officers and a deputation from Aylmer and district relative to a proposal to extend the company's line from St. Thomas to Aylmer. W. K. George and A. B. Wood, Toronto, and T. H. Purdon, K.C., London, represented the directors and arranged to go over the proposed route at an early date, and stated that the company would be ready to undertake the building of the line provided arrangements were made for the right of way, and for the guarantee of a certain percentage of bonds.

Medicine Hat, Alta.—A press dispatch of Apr. 13 says the ratepayers voted against granting an electric railway and power franchise to Montreal, Toronto and New York people.

Montreal and Southern Counties Ry.—The Board of Railway Commissioners has authorized the company to build from the G.T.R. property east of Front St., St. Lambert, Que., to the Central Vermont Ry., crossing Victoria Ave., by an overhead bridge. Work is being progressed with rapidly on the new station building in St. Lambert, which it is expected to have completed by May 31. The extension of the line to the Country Club and La Prairie is expected to be finished early in May.

Application was made to the board of control, Apr. 9, to have the company's proposals for an additional right of way so that its lines may be extended to St. Catherine St., Montreal, be dealt with at once.

B. J. Arnold, of Chicago, has been appointed Consulting Electrical Engineer and is considering a comprehensive scheme for the extension of the company's lines. (Apr., pg. 197.)

Montreal Tramways Co.—The Quebec Legislature has confirmed the amalgamation of the Montreal Street Ry. and its various subsidiary companies, under the title of the M.T. Co., and has amended

its charter in various details. It has also confirmed an agreement between the city of Montreal, the M.T. Co., and the Montreal Park and Island Ry. (Apr., pg. 197.)

Mount McKay and Kakabeka Falls Ry.—W. F. Hogarth, President and General Manager, attended a meeting of the Port William, Ont., city council, Apr. 9, and explained the company's plans for entering the city along Neebing Ave. He said the company had also its plans completed for a line to Port Arthur. (Mar., pg. 148.)

Niagara Falls, Welland and Dunnville Electric Ry.—We are officially advised that the company is negotiating with an English firm with respect to the building of its projected line. No construction has yet been undertaken.

The second paragraph in the item on pg. 197 of our last issue contained the names of the officers of the Niagara Welland and Lake Erie Electric Ry., the officers of the N.F. W. and Dunnville E. Ry. are:—President, F. R. Labor, M.P., Dunnville, Ont.; Vice President, Dr. Boulter, Niagara Falls, Ont.; Secretary, F. Misener, Marshville, Ont.; Treasurer, G. H. Bugar, Welland, Ont.; Chief Engineer, J. E. Gardiner, A.M. Can. Soc. C.E., Niagara Falls, Ont.; Solicitor, G. H. Pettit, Welland, Ont. (Apr., pg. 197.)

Niagara, St. Catharines and Toronto Ry.—The St. Catharines, Ont., city council decided, April 2, to obtain counsel's opinion on the question of the franchise held by the company in certain parts of the city. The company contends that the franchise is self-renewing every 20 years unless the city takes over the operation of the line on the expiry of the 20-year period. The present franchise expires Dec., 1913. (Dec., 1910, pg. 117.)

Ottawa and Lake McGregor Ry.—The Dominion Parliament has incorporated a company with this title to build an electric railway from Ottawa to Lake McGregor, Que. (April, pg. 197.)

The Ottawa and St. Lawrence Electric Ry.'s franchise is reported to have been acquired by J. A. Morden and Co., Ottawa, as well as that of the North Lanark Ry., for British financial interests. The company proposes to build a line from Ottawa to Morrisburg, thence along the St. Lawrence River to Brockville, then northerly through Perth and Lanark, to Arnprior, and then along the Ottawa River to Ottawa, a total length of 274 miles. (May, 1910, pg. 455.)

The North Lanark Ry. was incorporated by the Ontario Legislature in 1899 to build a railway from near Mile Lake on the Kingston and Pembroke Ry., to the Canada Atlantic Ry. or the C.P.R., near Arnprior, Ont., the line to be operated either by steam or electricity. In 1903 an amending act was obtained authorizing a change in the location of the line from Blythfield tp. to Ottawa, and authorizing the construction of the line along highways in the event of electricity being used as a motive power. Some surveys were made in 1905, and plans were filed with the Minister of Public Works for Ontario in 1906, but nothing was done.

A meeting of shareholders was held at Arnprior, April 9, for the purpose of passing resolutions for the financing of the construction of the line. (Feb., 1909, pg. 103.)

Niagara, Welland and Lake Erie Electric Ry.—We have been informed that this company has a mile and a half of line "in the town of Welland running as a street railway." (Feb., pg. 91.) See also Niagara Falls, Welland and Dunnville Electric Ry.

North Bay, Ont.—The town solicitor of North Bay, Ont., is reported to be about to apply for a charter to build an electric railway to connect North

Bay with Collander, Trent Mills and Sturgeon Falls.

Ottawa Electric Ry.—It was reported, April 10, that the Dominion Government had declined to grant permission to the company to lay tracks on Wellington St., Ottawa. The object in view in endeavoring to obtain a line on this street is to relieve the present congestion of traffic at the corner of Bank and Sparks streets. (April, pg. 197.)

Port Arthur and Fort William Electric Ry.—It is proposed to change the location of the shops in Port Arthur, Ont., from Elgin St. to River St., and from James St. to Wolseley St. (April, pg. 197.)

Quebec Ry., Light and Power Co.—The mayor of Quebec stated, April 2, that he had been advised instructions had been given for the immediate starting of construction of the line in Lincoln and St. Malo, Que. (Mar., pg. 149.)

Rainy River Radial Ry.—The Dominion Parliament has extended the time within which the company may build its projected lines radiating from Kenora, Ont. (Feb., pg. 91.)

Rainy River Radial Ry.—The Dominion Parliament has voted a subsidy for the building of a line from near Fort Frances to the mouth of Little Grassy River, Ont., not exceeding 50 miles.

Rural Ry. of Manitoba.—The Manitoba Legislature has amended the company's charter in certain details, notably giving power to amalgamate with other companies; to operate on lines in Winnipeg subject to an agreement with the Winnipeg Electric Ry., and subject to the consent of the city. The company is also authorized to build extensions of its lines upon the approval of the Lieutenant-Governor in council, and its capital is increased to \$10,000,000. (Feb., pg. 91.)

St. Thomas St. Ry.—The St. Thomas, Ont., city council, April 10, passed resolutions for the submission of two by-laws to the citizens, one for the expenditure of \$6,000 to build extensions on Ross and William Streets, and the second to expend \$24,000 on the purchase of three new cars, to provide electric equipment for three other cars, and for other improvements on existing lines. (April, pg. 197.)

St. John Ry.—We are officially advised that negotiations have been completed between the company and the New Brunswick Government for crossing the new cantilever bridge to be erected at the reversible falls. The company will have a double track line on the centre of the bridge which will also have a roadway on either side of the tracks for vehicles, and pathways for foot passengers. It is likely that the bridge will be started during the summer.

The General Manager is quoted as having recently stated that ties are on hand for the extension of the tracks to Kane's corner, that the other materials are being delivered and that the extension of the line to Rothesay will be started at an early date. (Dec., 1910, pg. 117.)

Saskatoon Electric Ry. and Power Co.—The provisional directors named in the act of incorporation are:—H. M. E. Evans, W. D. Woodhead, J. H. M. Fmsley, Edmonton, Alta.; B. M. Wakeling, P. D. Tanner, Saskatoon, Sask.

The Dominion Parliament has passed an act confirming the charter of the Saskatoon Power Co. and extending the time within which the development of the water power on the Saskatchewan River might be proceeded with. The S. P. Co. is controlled by H. M. E. Evans of Edmonton, Alta., and others. (April, pg. 197.)

Sherbrooke Ry. and Power Co.—We are officially advised that the press report referred to in our last issue, that the company proposed building a line to

Stanstead, Que., is incorrect. (April, pg. 197.)

Three Rivers Tramway Co.—The Quebec Legislature has incorporated a company with this title to build an electric railway in the city of Three Rivers. (April, pg. 197.)

Windsor, Chatham and London Ry.—The Dominion Parliament has authorized the company to issue bonds for \$25,000 a mile of single track built, and has granted an extension of time for the building of the authorized lines. (Dec., 1910, pg. 1173.)

Winnipeg Electric Ry.—The Manitoba Legislature has authorized the company to sell any part of its undertaking. It also sought power to build elevated and underground lines in the city. This was objected to and after a considerable discussion terms were arranged, and certain extra powers were given. An agreement between the company and the municipal council of Kildonan, as to extensions of lines, etc., was also confirmed.

The Manitoba Legislature has confirmed agreements between the Winnipeg, Selkirk and Lake Winnipeg Ry. company and the town of Selkirk for the sale of power, and with the rural municipalities of Stonewall and Rockwood for the extension of its lines to Stoney Mountain. The W.S. and L.W. Ry. is owned by the Winnipeg Electric Ry. (April, pg. 198.)

Among the Express Companies.

The Canadian Northern Ex. Co. has opened offices at Kingston, Ont., Woodnorth, Man., Munson, Alta., and has closed its offices at Rhein, Sask., at Steep Rock, Ont., and Mistatim, Sask.

E. E. McIntosh, a former C.P.R. brakeman, was recently arrested at Ogdensburg, N.Y., and taken to Toronto, on a charge of stealing 4,000 partially signed bank notes of the Traders Bank from the Dominion Ex. Co., while in transit from Ottawa to Toronto, Mar. 30, 1909.

F. W. Atherton, formerly senior purser on the C.P.R. s.s. Empress of Ireland, who was recently arrested in Chester, Eng., and charged at London with theft of £3,400 from the Dominion Ex. Co., is to be transferred to St. John, N.B., for trial, the alleged theft having been committed within Canadian jurisdiction.

E. P. Newhall, who has been appointed General Freight and Passenger Agent, Alberta Interurban Ry., Calgary, Alta., was connected with the Pacific Express Co. in various capacities for the past 25 years. For the past 12 years he was Superintendent at Toledo, O., and left the company, when the control passed into other hands, in Aug., 1911.

The Board of Railway Commissioners has issued order 16331, Apr. 18, amending order 13357, Mar. 30, 1911, which ordered express companies under its jurisdiction, to collect and deliver traffic, from and to all points within the municipal boundaries or limits of all cities, towns and villages, by adding the following clause:—"Express companies are absolved from making delivery under the terms of this order where the condition of the roads or streets is not in a reasonably passable state for vehicular traffic."

James Bryce, who has retired from the position of Vice President and Manager, Canadian Ex. Co., under the provisions of the pension rules, was born at Galt, Ont., Mar. 30, 1846, and commenced express service with the Canadian and American Ex. Cos. He served at Dundas, Hamilton, Guelph and Toronto, and from 1882 to 1889 was Superintendent, Intercolonial Ex. Co., at St. John, N.B. He was appointed General Superintendent, Canadian Ex. Co., at Montreal in 1889,

and was eventually appointed Vice President and Manager, which position has now been abolished.

Boring Large Bearings at the Halifax Electric Tramway Co.'s Shops.

In The Railway and Marine World for April, the method of boring small journals in use at the Halifax Electric Tramway Co.'s shops, was outlined. A somewhat different method is followed for the larger journal bearings, this process being here described.

As will be remembered, a specially designed and constructed jig was used in the drill press; but in this case a much simpler jig is employed on a 30-in. vertical boring mill. The design of this jig is outlined in the accompanying illustration, where a bearing is shown mounted therein. The 6 3/8-in. boss on the lower face of the jig fits into a corresponding recess in the centre

Chuck to Hold Bearing in Boring Mill.

of the boring mill table, to which the jig is bolted. The jig is made in two sections—one solid with the base, and the other secured to the solid section by bolts, so that the contained bearing may be securely clamped in place for machining.

To catch the falling chips or cuttings, a cylindrical can of sheet iron was made of correct diameter to fit loosely into the hollow spindle of the boring mill table. The upper end is open, and has a flanged edge fitting into a shoulder at the top of the spindle hole. This is placed in position previous to mounting the jig in place on the table. The brass cuttings are thus saved in a very simple manner, much of the usual loss from this source being done away with. This saving is particularly noticeable where the machine is frequently changing from one metal to another, in which case sufficient cuttings will not have dropped between changes to make it worth while cleaning up the shavings from under the mill. This can, being loose, is removable at will.

The jig requires no careful adjusting on mounting, the boss on the base fitting directly into the recess of the table, automatically lining up the jig into a correct central position. Consequently it is almost as convenient to use it for only one journal as for several, the time of setting up being so short.

Canadian Street Railway Association.

PRESIDENT, James Anderson, General Manager, Sandwich, Windsor and Amherstburg Ry.; VICE PRESIDENT, P. Dubee, Secretary Montreal Tramways Co.; SECRETARY-TREASURER, Acton Burrows, Managing Director, The Railway and Marine World.

ASSOCIATION'S OFFICE, 70 Bond St., Toronto.

EXECUTIVE COMMITTEE.—E. P. Coleman, Manager of Railways, Dominion Power and Transmission Co.; H. M. Hopper, General Manager, St. John Ry.; J. E. Hutcheson, Superintendent, Ottawa Electric Ry.; C. B. King, Manager, London St. Ry.; D. McDonald, General Manager, Montreal Tramways Co.; M. N. Todd, President, Galt, Preston and Hespeler St. Ry.

ASSISTANT SECRETARY, Aubrey Acton Burrows, Secretary and Business Manager, The Railway and Marine World.

OFFICIAL ORGAN, THE RAILWAY AND MARINE WORLD.

Brakeshoe Tests.—Some interesting results have been obtained by the Brooklyn Rapid Transit System in a series of tests of brakeshoes conducted by G. L. Fowler. The suggestion was made as a result of these tests that no chemical requirements be introduced into brakeshoe specifications, although it was ascertained that the best results were obtainable if the carbon of the shoe is evenly balanced between the combined and graphitic so that half appears in each form. Close attention should be paid to the condition of the brakeshoe rigging to insure a uniform pressure and wear on each side. Four types, chilled end and unchilled, with steel backs, were tested, the deduction resulting in the conclusion that both the co-efficient of friction and hardness are matters of apparently minor importance. Best results were obtained with the hardness around 275 of the Brinnell scale. Chilled-end shoes had a longer life, but where shoes were purchased on the mileage basis, it was considered preferable to have them unchilled, even at a slightly higher cost, due to greater co-efficient of friction and increased life of the wheels.

Co-operative Tie-treating Plants for the joint use of a group of electric railways which are too small individually to have plants of their own, have been suggested. The suggestion was made by P. P. Smith, Superintendent of Way and Structures of the Indianapolis, Columbus and Southern Traction Co., in a paper read at the Central Electric Railway Association's annual meeting. He did not consider it advisable for a railway having less than 100 miles of track to establish a timber-treating plant, but thought that electric railways in the same territory might co-operate in the construction and operation of such a plant. Not only the treatment but also the purchase and inspection of timber for ties and other purposes could be handled economically through such a central plant.

The Canadian Traffic Bureau has been incorporated under the Manitoba Companies Act with a capital of \$15,000 and office at Winnipeg, to adjust and otherwise handle traffic and railway claims of every nature, and kindred objects. The provisional directors are:—C. R. Blackburn, W. S. Boyd, H. M. Bickford, C. J. Jamieson, N. K. Boyd, Winnipeg.

The fire which occurred at the Oshawa Ry. car barns at the end of Madch, destroyed the entire barn, together with all tools and spare equipment, about one-half of the station building, and two large double truck closed cars, one closed single truck passenger car, one freight shunter and one sweeper. We are advised that the buildings will be immediately replaced by up to date fire proof structures, and new equipment is being secured as speedy as possible. It was reported, Apr. 22, that four convertible cars and a shunter had been ordered in the U.S., it being impossible to obtain delivery as soon as required, if ordered in Canada.

Marine Department

Harbor Improvements, Dry Dock and Ship Repairing Plant at St. John.

The illustration published in The Railway and Marine World's April issue gave a good general idea of the harbor improvements, etc., at Courtenay Bay, St. John, N.B., for which the Dominion Government has awarded a contract to Norton Griffiths and Co., Ltd. (Canada). The works, the whole of which are to be completed by March 30, 1917, embrace:—

The construction of a breakwater 4,570 ft. long, including that of five groynes each 150 ft. long.

The dredging of a channel about 6,800 ft. long and 500 ft. wide at bottom to a depth of 32 ft. below low water, from the main ship channel leading into the St. John River to the head of the breakwater mentioned above.

The dredging of a basin to a depth of 32 ft. below low water in Courtenay Bay.

The construction of about 4,890 lineal ft. of quay walls.

The filling of an area of about 28 acres.

The construction of a dry dock of the first class.

The work on the breakwater, dredging, quay walls and filling is at schedule prices and is estimated to amount to \$7,500,000 as per table appended hereto. The dry dock is to be built under the provisions of the Dry Dock Subsidies Act, 1910, and together with its plant is to be kept in working order and in repair by the contractors during the term of the subsidy. The estimated cost is \$4,500,000, on which the Government will pay a subsidy of 3½% for 35 years. There will be a ship repairing plant in connection, which will also be operated by the contractors.

Tenderers were required to deposit an accepted cheque for \$500,000. One half of the contractor's deposit will be returned if half of the whole work is satisfactorily completed within two years. Ninety per cent. of the progress estimated will be paid weekly and an advance of 50% of the actual cost of material delivered will be made.

Norton Griffiths and Co., Ltd. (Canada) head office is in Vancouver, B.C., with another office at 28 Victoria Square, Montreal. The President is J. Norton Griffiths, member for Wednesbury in the British House of Commons; the Managing Director, W. Burton Stewart, and the Chief Engineer, P. R. Warren. The St. John works will be under the direct charge of G. F. Palmer, C.E., who will have charge of construction, with the title of Contractors' Agent. It is probable that the contractors will sublet the rock excavation and the breakwater. Work will be started almost immediately.

The complete scheme, as laid out for the future, encloses an area of approximately 400 acres by means of a breakwater 4,570 ft. long. The area of the harbor is to be dredged to 32 ft. below low water, and is to be increased later on to 36 ft. The entrance channel, 6,800 ft. long and 500 ft. wide at the bottom, will also be dredged to a similar depth in two operations. In the first operation it is to be dredged to 15 ft. below low water, and its whole length and width, the balance to be done at the second operation. The dredging plant, composed of suction and bucket type dredgers, will be large and modern and capable of dredging to a depth of 65 ft.

A large area will be reclaimed for railway terminals and wharves on the city side of the bay, adjoining the Intercolonial tracks, and according to the

complete plan some 22 berths will be provided, for vessels from 700 to 1,000 ft. long. The present contract includes nearly 5,000 ft. of wharves.

The main entrance to the harbor between this reclaimed land and the end of the breakwater will be about 1,600 ft. The dry dock will be built on the north east side of the bay, but the exact location has not been definitely fixed. This dock will be 900 ft. long, 110 ft. wide at the entrance and 35 ft. depth of water on sill at high water.

A reclamation will be made of sufficient size to allow for a shipyard and repair shops. The plans of the shops show that the plant is to be erected on a large scale, up to date, and equipped with the most powerful of modern machinery, so that the largest ships, such as those which ply between America and Great Britain, may be handled with ease.

The carrying out of the work will be proceeded with as follows: During the first year over 1,000,000 yards of rock will be required to form the breakwater and the rubble slopes around the land to be reclaimed for the site which is to be used for the ship repair yard, and which will adjoin the dry dock. The surface of this reclaimed land will be raised to 10 ft. above high water. The slopes of the breakwater will be 1 to 1 on the harbor side and 2 to 1 on the seaward side. The top level of the breakwater will be 7 ft. above high water and will be 20 ft. wide.

During the second year the dredging of a temporary channel leading to the site of the quay walls near the I.R.C.

will be carried down to 39 ft. below low water and rubble will be deposited 5 ft. deep for the foundation of the crib-work. The cribs, which are to be made of birch timber, will be 48 ft. wide on the base, 43½ ft. high and 120 ft. long. They will be built on a convenient part of the foreshore nearby, floated into position and sunk. The face timbers of the cribs will be 2 ft. thick and the base or platform of the crib will be one foot thick. The upper portion of the cribs will be finished off with a timber platform 10 ins. thick, on which will be constructed a wall or concrete superstructure 26½ ft. high and 18 ft. wide on base.

The filling behind the cribs and portion of land adjoining the quay walls will be reclaimed by depositing the dredgings from the basin. 4,734 lin. ft. of quay wall will be constructed in this way, giving 32 ft. at low water for vessels lying alongside and berths from 700 to 1,000 ft. long. 1,800 ft. of the breakwater will be formed of cribwork and carried out at the same time as the similar work for the quay walls. The superstructure will be of plain and reinforced concrete. The shore end of breakwater for 2,770 ft. will be constructed entirely of rubble.

With the protection of the breakwater completed the dredging of the entrance channel and basin will be carried on with suction and bucket dredges until a depth of 32 ft. below low water has been obtained, the dredged material being used in the reclamation work of the shipyard and berths near the I.R.C.

SCHEDULE OF PRICES FOR BREAKWATER, DREDGING, QUAY WALLS AND FILLING.

Crib work in breakwater, in place, fully bolted and ballasted, and ready to receive concrete superstructure, per c. yd.	146,000	c. yds.	\$ 4 50	\$ 657,000
Pile groynes, in place, fully completed, including stone rip-rapping on the two sides of each groyne, per lin. ft.	750	l. ft.	60 00	45,000
Crib work in breakwater, including piling at outer end of portion of breakwater built of stone, in place, fully bolted and ballasted, per c. yd.	4,000	c. yds.	5 12½	20,500
Concrete footing blocks in breakwater, in place, ready to receive the mass concrete, per c. yd.	11,000	"	10 00	110,000
Mass concrete in breakwater, in place, per c. yd.	30,000	"	8 00	240,000
Reinforced concrete flooring in breakwater, in place, including pillar in centre of crib, all completed, per c. yd.	4,000	"	18 00	72,000
Large stone for covering top and all slopes of breakwater, 2 tons, 3 tons and 5 tons weight, in place, per c. yd.	70,000	"	3 80	266,000
Small stone for breakwater, in place, per c. yd.	190,000	"	2 50	475,000
Dredging for foundation of crib work in breakwater. This only includes quantities below 32 ft. below low water, per c. yd.	65,000	"	0 50	32,500
Stone foundation for crib work in breakwater, in place, per c. yd.	27,000	"	2 00	54,000
Crib work in quay walls, in place, fully bolted and ballasted and ready to receive concrete superstructure, per c. yd.	303,000	"	4 75	1,439,250
Concrete footing blocks in quay walls, in place, ready to receive the mass concrete superstructure, per c. yd.	17,700	"	11 00	194,700
Mass concrete in quay walls, in place, per c. yd.	46,700	"	8 50	396,950
Dredging for foundation of crib work in quay walls, below 32 ft. depth only, per c. yd.	150,000	"	0 60	90,000
Stone for foundation of crib work in quay walls, in place, per c. yd.	73,000	"	2 50	182,500
Bollards in breakwater and quay walls, in place, each.	100	hollards.	146 00	14,600
Dredging channel in Courtenay Bay, per c. yd.	4,000,000	c. yds.	0 31	1,240,000
Dredging basin in Courtenay Bay, material to be used for filling, price to include cost of dredging and cost of filling, per c. yd.	3,500,000	"	0 24	1,200,000
*Rock in channel basin, or under quay walls, removed and placed where directed, per c. yd.	1,500,000	"	0 50	750,000
	1,000	"	20 00	20,000
				\$7,500,000

*The prices for this last item "Rock" to be as per the following scale in accordance with the quantity removed. For any quantity under and up to 1,000 cubic yards, \$20; for any quantity under and up to 5,000 cubic yards, \$15; for any quantity under and up to 10,000 cubic yards, \$12; for any quantity under and up to 20,000 cubic yards, \$10; for any quantity up to and over 50,000 cubic yards, \$8.

tracks towards the head of the breakwater, and also to the site of the dry dock will be proceeded with. The material raised by the suction dredger will be pumped by pipe line on to the site of the ship repair yard or else taken to sea. The dredging for the quay walls

tracks as required, the remainder being taken to sea. The total amount of dredging in channel and basin is 10,000,000 cu. yds.

The construction of the dry dock will then be well in hand. The side walls and bottom will be of 6 to 1 concrete.

and where the concrete and rock join each other a seal of 4 to 1 concrete will be placed right along the sides of the dock. The face work of all concrete or the inside of the dock will be of 4 to 1 concrete 6 in. thick. The copings 3 ft. x 2½ ft., and altars 2½ ft. x 1 ft., will be of the same quality of concrete. A keel block course, 9 ft. wide and two bilge block courses 6 ft. wide by 21 in. thick will be put along the floor of the dock.

The dock will be 900 ft. long with an entrance of 110 ft. and depth of water

Repairing Cracked Valve-Chest Steam Pipe on Car Ferry Scotia.

Somewhat over a year ago the Intercolonial Ry.'s car ferry Scotia, used to ferry trains across the Strait of Canso, met with an accident consisting of a cracked valve-chest steam pipe. The approximate extent of the fracture is shown in the illustration, fig. 1, the view to the left representing the pipe from the steam chest before being repaired.

Fig. 1. Cracked Steam Pipe before and after Repair.

over sill of 35 ft. at high water. An outer caisson stop will be provided which will increase the length of the dock to 923½ ft. The entrance to the dry dock will be closed by a ship caisson 110 ft. wide and 44½ ft. high. The deck will be 15 ft. wide and will have a track to allow railway traffic to be transferred from one side of the dock to the other.

The water from the dock will be discharged into the basin by three electrically driven pumps of the centrifugal type, 54 in. dia., which will empty the dock when full in three hours. The water from the dock will pass through an emptying culvert 12½ ft. x 8 ft. into the suction culvert 20 ft. x 16½ ft. high. The water will then pass through the pumps to a main discharge chamber and then into the non-return valve chamber. From this basin the water will pass through two 10 ft. dia. culverts to the basin. The main pumps will lower the water to the floor level of the dock, the remainder being pumped out by a smaller drainage pump, also of the centrifugal type. The water will be let into the dock through two filling culverts 8 ft. high by 5 ft. wide, situated on each side of the entrance. The emptying and filling culverts will be provided with the necessary penstocks, which are worked electrically. The pump house, near the entrance to the dock, will be 80 x 50 ft., and the floor level 8 ft. above the level of low water.

On the site for the shipyard which is to be reclaimed, repair shops, including machine, platers, boiler shops, etc., will be built and fitted up with machines and tools for repairing vessels.

An order in council has been issued amending article 4 of the bylaws of the pilotage district of Quebec, providing that apprentice pilots after completing their seven years of apprenticeship, with the necessary ocean going voyages, shall hold a mate certificate, coasting, instead of a certificate of first mate seagoing competency.

The pipe, ribbed at four sides, had two adjacent ribs cracked through, the fissures extending a short distance on each side of the ribs, but not meeting, a solid strip intervening between the cracks, as the illustration indicates.

Fig. 2. Supporting Bracket and Boring and Threading Bars.

As too much time would be required to cast and machine a new cylinder and chest, some method of repair had to be immediately improvised, as the ferry must of necessity be kept out of service as short a time as possible. The cylinder was taken to the I.R.C. Halifax

shops, these being the nearest, and the repairing was placed in the hands of W. Peveril, one of the machinists. He devised a method of repair which, considering the limited facilities at hand, was both novel and ingenious. This consisted of boring out the pipe opening from its original 6 ins. to about 7 ins., threading this bore, and fitting in a threaded sleeve having a 5½-in. inside diameter, all as indicated to the right in fig. 1.

This method, after suggesting itself to Mr. Peveril, next required some careful planning before being executed, as the machinery in the Halifax shops is all rather small, with neither a lathe nor boring mill capable of handling anything quite so large. Consequently, special tools, simple in form, had to be made. The more important of these are shown in fig. 2. A supporting bracket of the form indicated was made, of a size to be bolted to the face of the pipe flange. This was bored to a 2 5-16-in. diameter, for a boring bar support, the support being 6 ins. long. A boring bar of the form shown was held in this bracket in a bushing screwed into the bracket bore, and was made a snug working fit in this bushing, so that no play in the bar would exist when working forward during the machining operation. In the forward end of the bar a ¾-in. round boring tool was held radially in the bar by a ½-in. set screw. The bar was driven from the keyway end by an air motor through a train of gears mounted on an improvised wrought-iron frame; these gears were old lathe change gears, pressed into service for the occasion. The bar was fed forward in its supporting bracket by a screw bearing against the rear end from an outside block, temporarily placed for the purpose, the screw being given a turn each revolution of the bar. As previously mentioned, about ½-in. of metal was removed from each side.

A very similar bar was made for the threading, having the same general dimensions, the only difference being that the bushing which supports it in the bracket is threaded, as is also the threading bar body itself. It having been decided that the repair-bushing thread should be 8 per inch, the threading bar body was cut with a corresponding number of threads. Thus, this bar as it revolved, automatically fed forward through its bushing, giving the correct lead to the thread-cutting tool. When the thread had been cut to the required depth, the whole jig with bar was removed, and the bushing turned up and threaded in a lathe, a fit being made to the threaded pipe opening. The introduction of this bushing into place completed the job.

Those who saw the completed job remarked on the excellent manner in which the repair was made, the inspector expressing himself as being well

pleased with the way in which the task had been performed. Had such a plant been at hand it would seem to have been a splendid place to apply oxy-acetylene welding, this having been used to advantage under very similar circumstances on numerous occasions

Keystone Transportation Co. Orders Another Vessel.

The Keystone Transportation Co., Montreal, has ordered a full sized canal steamboat with the following dimensions:—Length over all, 253 ft.; length between perpendiculars, 250 ft.; breadth moulded, 42½ ft.; depth moulded, 20

ft. The vessel is to be practically a duplicate of the company's steamboat *Keystorm*, with such modifications as are required by the builders to meet their standard practice. She will be built on the channel system of framing, having very large fore peak tank and deep water bottoms. The hold will be divided in three compartments by two steel watertight bulkheads. She will be rigged

with two steel masts and three cargo derricks and the necessary winches. Accommodation for the captain will be provided in the texas forward in the usual way. Under the forecabin deck on the port side will be the accommodation for the officers and crew, and on the starboard side commodious quarters will be provided for all departments, both forward and aft; also bathrooms

for officers and crew, including showers for the firemen.

The vessel will be lighted throughout by electricity. The main propelling engines will consist of one set of triple expansion surface condensing engines having cylinders 16, 26 and 44 ins. diam., with a common stroke of 36 ins. The air, feed and bilge pumps will be worked from the main engine. Exceptionally large ballast pumps are being fitted, capable of dealing with the 850 tons of water ballast in about two hours.

The boilers, two in number, will be of the marine Scotch type, 11½ ft. diam. by 10½ ft. long, with a working pressure of 180 lbs. per sq. in. The boilers will be fitted with forced draft. Ash ejectors will be fitted in the stokehold for discharging ashes overboard.

The form of the vessel will be full in order to get the greatest carrying capacity on a canal draft. It is expected she will carry 2,200 gross tons, or 85,000 bush. of grain, through the canals. She will be engaged in the coal and grain trade between Lake Erie ports and Montreal, and is to be delivered in September.

Plans and specifications were prepared by John Reid and Co., Montreal, who will also superintend the construction at Collingwood, Ont.

Vessels Removed from the Register.

The following vessels were removed from the register during Jan., Feb. and March, for the reasons assigned:—Steam—Ahteek, Sault Ste. Marie, Ont., 21 tons, burnt; Albert, Hamilton, Ont., 1 ton, out of existence; Alice Brooks, Owen Sound, Ont., 11 tons, wrecked; Ampere, Hamilton, Ont., 3 tons, broken up; Anderson, Collingwood, Ont., 11 tons, broken up; Argo, Sault Ste. Marie, Ont., 4 tons, sunk; Beatrice, Collingwood, Ont., 21 tons, burnt; Beaver, Hamilton, Ont., 2 tons, out of existence; Chieftain III, Kingston, Ont., 147 tons, sunk in collision; Circe, Collingwood, Ont., 2 tons, out of existence; City of Mount Clemens, St. Catharines, Ont., 69 tons, sunk; Conveyor, Victoria, B.C., 380 tons, dismantled; Distributor, Victoria, B.C., 379 tons, dismantled; Dot, Quebec, Que., 7 tons, broken up; Eagle, Sarnia, Ont., 9 tons, out of existence; Edna, Hamilton, Ont., 8 tons, out of existence; Edna, Sault Ste. Marie, Ont., 7 tons, dismantled; Estella, Collingwood, Ont., 6 tons, abandoned; Fairy, Cobourg, Ont., 15 tons, out of existence; Forrester, Windsor, Ont., 2 tons, out of existence; George Douglas, St. Catharines, Ont., 15 tons, burnt; Gordon Gauthier, Windsor, Ont., 18 tons, burnt; Grace Darling, Collingwood, Ont., 19 tons, abandoned; Hazel W., Sault Ste. Marie, Ont., 3 tons, dismantled; Henrietta, Hamilton, Ont., 2 tons, out of existence; Huron Belle, Collingwood, Ont., 18 tons, abandoned; Inez, Hamilton, Ont., 2 tons, out of existence; Imperial, Sault Ste. Marie, Ont., 22 tons, dismantled; InterOcean, Collingwood, Ont., 98 tons, lost; Iona, Sydney, N.S., 35 tons, sold to foreigners; James Adams, Port Arthur, Ont., 35 tons, broken up; James Leighton, Sarnia, Ont., 14 tons, out of existence; James Norris, St. Catharines, Ont., 34 tons, out of existence; John Hunter, St. Catharines, Ont., 22 tons, out of existence; John Jordan, Sault Ste. Marie, Ont., 3 tons, dismantled; John William, Collingwood, Ont., 10 tons, abandoned; Joe Knight, St. Catharines, Ont., 11 tons, out of existence; Kate, Quebec, Que., 7 tons, out of existence; Kildare, Hamilton, Ont., 4 tons, out of existence; Lady Ida, Port Hope, Ont., 17 tons, out of existence; Lady of the Lake, Owen Sound, Ont., 25 tons, foundered; Lady of the Lake, Victoria, B.C., 13 tons, dismantled; Lewis Shikluna, St. Catharines, Ont., 11 tons, out of existence; Lion, Port Hawkesbury, N.S., 13 tons, broken up;

Louisa, St. Catharines, Ont., 5 tons, out of existence; Maida, Collingwood, Ont., 2 tons, out of existence; Marie, Quebec, Que., 21 tons, out of existence; Mary Beck, Collingwood, Ont., 11 tons, burnt; May Flower, Collingwood, Ont., 17 tons, dismantled; Minto, New Westminster, B.C., 23 tons, abandoned; Mona, Hamilton, Ont., 2 tons, out of existence; Operator, Victoria, B.C., 380 tons, dismantled; Quiddy, St. John, N.B., 10 tons, broken up; Rescue, Collingwood, Ont., 17 tons, abandoned; Rover, Sault Ste. Marie, Ont., 3 tons, abandoned; Sea Gull, Sarnia, Ont., 35 tons, dismantled; Secret, Hamilton, Ont., 6 tons, burnt; Skylark, Brockville, Ont., 27 tons, broken up; Shamrock, Winnipeg, 55 tons, broken up; Spry, Kingston, Ont., 9 tons, broken up; Union, St. Catharines, Ont., 163 tons, sunk; Vandyke, New Westminster, B.C., 157 tons, dismantled; Wales, Sarnia, Ont., 238 tons, out of existence; Winslow, Sarnia, Ont., 193 tons, burnt; Yuba, Barrington, N.S., 6 tons, broken up. Sailing—A. F. Davidson, Annapolis Royal, N.S., 503 tons, transferred to West Indies; Abana, St. John, N.B., 97 tons, condemned; Albatross, St. Catharines, Ont., 317 tons, lost; Alfred, Weymouth, N.S., 29 tons, broken up; Alice M. Pike, Shelburne, N.S., 86 tons, transferred to Newfoundland; Annie Cuthbert, Cobourg, Ont., 36 tons, out of existence; Arginia, Lunenburg, N.S., 90 tons, transferred to Newfoundland; Ayr, St. Catharines, Ont., 299 tons, out of existence; Azov, Hamilton, Ont., 195 tons, sunk; Bonnie Kate, Canso, N.S., 14 tons, sold to foreigners; Brenton, Yarmouth, N.S., 69 tons, broken up; Defiance, St. Catharines, Ont., 89 tons, out of existence; E. R. C. Proctor, Cobourg, Ont., 163 tons, out of existence; Effie May, Lunenburg, N.S., 49 tons, stranded; Emulator, Lunenburg, N.S., 99 tons, stranded; Evolution, Parrsboro, N.S., 173 tons, sold to foreigners; Florence B. W., Halifax, N.S., 24 tons, transferred to Newfoundland; Janet R., Halifax, N.S., 37 tons, transferred to Newfoundland; Kate, Sault Ste. Marie, Ont., 30 tons, burnt; Kittie J., St. John, N.B., 1 ton, broken up; Laura C., Lunenburg, N.S., 249 tons, transferred to West Indies; Laura E. Franklin, Halifax, N.S., 46 tons, wrecked; Messenger, Collingwood, Ont., 94 tons, broken up; Minnie J. Smith, Lunenburg, N.S., 99 tons, transferred to Newfoundland; Mittie, Sarnia, Ont., 18 tons, wrecked; Nina L., Sydney, N.S., 96 tons, lost at sea; Oresa, Halifax, N.S., 14 tons, lost; Pearl, Halifax, N.S., 17 tons, broken up; Rhoda, Liverpool, N.S., 199 tons, lost at sea; Stanley and Frank, Shelburne, N.S., 74 tons, transferred to Newfoundland; Virginia, Lunenburg, N.S., 134 tons, stranded; W. S. M. Bentley, Parrsboro, N.S., 364 tons, transferred to West Indies.

Canadian Interlake Line, Limited.

Canadian Interlake Line, Ltd., has been incorporated under the Dominion Companies Act, with \$2,000,000 capital, and office at Toronto, to operate steam and other vessels, and act as shipowners and shipping agents, and for other purposes. This company is a consolidation of the interests associated with the Merchants Mutual Line, Toronto. The directors are, J. W. Norcross, M. J. Hanney, T. Bradshaw and J. F. M. Stewart, Toronto; R. M. Wolvin, Winnipeg; H. Munderloh, Montreal, and E. H. Ambrose, Hamilton, Ont.

The vessels which will be operated by this company, during the season, are, Acadian and Canadian, formerly owned by the Mutual Steamship Co., Toronto; Renvoyle, formerly owned by Point Anne Quarries, Ltd., Toronto, and A. E. McKinstry, formerly owned by Interlake Transit, Ltd., Toronto, all of which were, last year, operated by the Merchants Mutual Line. In addition to these,

three vessels have been ordered, two of them being built by the Western Dry Dock and Shipbuilding Co., Port Arthur, Ont., and the third by the Clyde Shipbuilding and Engineering Co., Port Glasgow, Scotland. The two first mentioned, which will be named respectively, Calgarian and Hamiltonian, are being built on the Isherwood system, especially for package freight, and will be equipped with engines having cylinders, 18, 38 and 50 ins. diam., by 42 ins. stroke. The dimensions will be, length 250 ft., breadth 42½ ft., depth 26½ ft. They will be practically, duplicates of the steamboat Acadian. The third vessel, which will probably be named Indian, under construction at Port Glasgow, will be of the same dimensions, and will be used for the package freight trade, but she will be equipped with Diesel oil combustion engines with four cylinders 18 by 36 ins. It is anticipated that all the vessels will be ready for delivery by about June 1.

The vessels owned by Canadian Interlake Line, Ltd., will be operated as a part of the Merchants Mutual Line, as will also, the vessels A. E. Ames, Beaverton, H. M. Pellatt, J. H. Plummer, Mapleton and Saskatoon, owned by the Merchants Mutual Line, Ltd.; Scottish Hero, Turret Chief and Turret Court, owned by the Canadian Lake and Ocean Navigation Co., and D. A. Gordon, owned by the International Steamship Co.

It is announced that an issue of \$520,000 first mortgage bonds is being placed on the market, and it is stated that this issue represents 50 per cent. of the value of the vessels owned. The bonds will be for 15 years with provision for retirement at 105, through an annual sinking fund, of the whole at maturity. The annual net earnings are estimated to realize about 3½ times the amount of the annual bond interest, and the insurance carried covers about 150 per cent. of the outstanding bonds.

Dry Dock for Quebec.

The Dominion Public Works Department will receive tenders to July 2 for the construction within four years of a dry dock in the port of Quebec under the Dry Dock Subsidies Act. The dock is to be not less than 1,150 ft., usable length, 110 ft. clear width at entrance, and at least 37 ft. in depth over sill and keel blocks at ordinary high water spring tide, and to be in three compartments.

The dock is to be located either at Lauzon, on the south side of the river, or in the estuary of the River St. Charles, or on the Beauport flats, and tenders are to submit with their proposal a report signed by their engineer, setting forth in detail the respective advantages from the viewpoint of the shipping interests of each of the above mentioned sites; also plans and specifications with full and detailed estimates of cost.

The Government will not build the dock, but will pay a subsidy in aid of the construction, of 3½% per annum for 35 years on an expenditure of about \$5,000,000.

The Dominion Public Works Department received tenders to Apr. 22, for the construction of a single screw steam tug, 80 ft. long.

During Feb., one employe connected with Canadian navigation was killed, and three were injured, the fatality being due to drowning.

A considerable amount of improvement work will be undertaken in Owen Sound harbor during the present season. The cement wharf is to be extended north to the G.T.R. property, the dock on the west side is to be repaired, as is also the North Keppel wharf. The Dominion Government has included \$65,000 for the work in the estimates.

Proposed Sale of Niagara Navigation Co. to the R. & O. N. Co.

The Richelieu and Ontario Navigation Co. has offered to buy a controlling interest in the Niagara Navigation Co., Ltd., at \$200 per \$100 share, payable in cash or in R. and O.N. Co.'s shares at \$120, at shareholder's option, i.e., five shares of R. and O.N. stock will be given for three of N.N. Co. The offer is good until May 4, subject to an extension not later than June 1, in the case of shareholders who, owing to absence, etc., have not an opportunity of deciding within the first mentioned time limit. The R. and O.N. Co. has deposited \$100,000 with the Montreal Trust Co., to be forfeited to the owners of deposited stock if the company fails to carry out its offer. The N.N. Co. directors have issued a circular to shareholders saying they have decided to accept the offer for their own shares, subject to the acceptance of it by holders of 51% of the stock.

The N.N. Co.'s capital stock at the close of the last financial year was \$1,000,000, of which \$701,700 had been subscribed and paid. To pay in part for the purchase of the Hamilton Steamboat Co. and the Turbine Steamship Co. in Dec., 1911, 1981 shares of the N.N. Co. were issued and 1,002 shares were offered to shareholders at par, bringing the capital issue up to \$1,000,000, all of which has been paid up except a very few shares. Power was given at the last annual meeting to increase the capitalization to \$3,000,000, but none of the \$2,000,000 has been issued. The company has paid 8% per annum in half yearly dividends for a number of years.

The N.N. Co. owns eight steamboats. The Cayuga, Chippewa, Corona, Chicora and Ongiara comprised its own fleet up to the end of last year, the three former for the Toronto, Niagara, Queenston and Lewiston run. The Chicora, it is announced, will run between Toronto and Olcott, N.Y., this year, and the Ongiara in ferry service on the Niagara River. The Macassa and Modjeska, bought from the Hamilton Steamboat Co., and the Turbinia from the Turbine Steamship Co., are to run between Toronto and Hamilton.

The N.N. Co.'s directors are:—Sir Edmund B. Osler, President; Barlow Cumberland, Vice President; Hon. J. J. Foy, J. Bruce Macdonald, F. G. Osler and Hon. J. S. Hendrie. The officials are:—B. W. Folger, General Manager; J. M. Sullivan, Secretary; R. H. McBride, Treasurer; J. V. Foy, General Passenger Agent; J. A. Goodearle, General Freight Agent; S. J. Murphy, Travelling Passenger Agent; H. E. Weller, City Ticket Agent, Toronto; W. E. Bishop, General Agent, Hamilton.

A circular addressed to N.N. Co. shareholders, April 22, by the President, Sir Edmund B. Osler, states that in addition to getting 200 for their stock they will receive a bonus of about \$12 for each share held, which will be realized on the 1,981 shares issued in Dec., 1911, as part payment for the Hamilton Steamboat Co. and the Turbine Steamship Co. The owner of these companies, J. C. Eaton, Toronto, decided not to hold the stock, but to sell it at cost, and in order to protect the price of the stock the directors arranged for Mr. Eaton's stock to be taken over through a third party, the benefit of which transaction the shareholders are to receive.

The Livingstone channel, in the Detroit River, which is considered to be the next important channel to the Sault Ste. Marie locks, in the development of lake commerce, will be opened for traffic about July 1. The construction has occupied about five years and cost the U. S. Government about \$10,000,000.

Oil for Fuel on R. and O. N. Co.'s Steamships.

The Richelieu and Ontario Navigation Co. is equipping with fuel oil burning apparatus two of its steamboats, Rapids Queen and Rapids Prince, which run on the St. Lawrence River between Montreal and Prescott, Ont.

The Rapids Queen is being equipped with an English system of burners at Levis, Que., and the Rapids Prince with a United States system at Sorel, Que., the work of installation being done by the company's workmen. The two systems will be tested against each other during the ensuing season and on the results will depend the adoption of oil instead of coal on some of the company's other boats, particularly the Toronto and the Kingston, which run between Prescott and Toronto, and will probably be equipped next year.

The Rapids Queen and Rapids Prince are being fitted with round steel storage tanks in the coal bunker space, capacity of from 25 to 30 tons oil being provided on each vessel.

Merchant Service Guild of British Columbia.

This guild has been formed with headquarters in Victoria to combine the whole of the navigators (commanders, pilots and officers) engaged in the B.C. merchant service, with the object that they shall through the guild be represented in any matters whatsoever connected with their profession, and also to advance and defend the interests and independence of its members, to obtain a voice in the making of the laws under which they are governed, and to promote cordial relations with their employers, the various shipping companies and owners. One of the most important aims of the guild will be to provide those of its members who abide by its constitution and rules, with legal defence in cases involving the cancellation or suspension of certificates.

The fees, etc., are as follows:—Captains and port pilots, entrance fee \$10, annual subscription \$15. Officers, all grades, entrance fee \$5, annual subscription \$10.

Marine Insurance on the St. Lawrence Route

While in Montreal, Apr. 4, the Minister of Marine is reported to have said: "Something must shortly be done if the insurance people persist in discriminating against the route. It may be that a Canadian Lloyd's may have to be established in order to remove what is practically an embargo on the St. Lawrence. The people of this country have spent millions of dollars improving the channel. In spite of all this, and the assurance that the work of improving the water highway to the sea will be continued, the insurance rates have remained stationary. Such discrimination cannot be tolerated forever. How this can be brought about is under our consideration."

The Lake Carriers' Association is being asked to request the U.S. Government to abolish arbitrary closing of the navigation on the Great Lakes, on Dec. 1, each year. It is to be urged that grain, lumber and coal vessels can safely operate up to Jan. 1, if the aids to navigation are allowed to remain.

The canal lock at Black Rock harbor, Buffalo, N.Y., which makes the connection between Lake Erie and the new Erie barge canal, has been completed. It is stated to be the largest inland water lock in the world. The gates are of steel, and will be operated by electricity. The cost was \$1,250,000.

Coast Lake and River Officers for 1912.

The following appointments made by navigation companies engaged in Canadian navigation for their various steam vessels and tugs for the current year, have been officially reported to The Railway and Marine World, by the managements, in addition to those given in our last issue. In the first column is given the name of the vessel, in the second that of the captain, and in the third that of the chief engineer.

Oil Engines Are to Be Used for a fleet of 14 vessels now being built for the Glasgow (Scotland) Motor Coasting Co. Eight of these, of 140 tons each, will have 90-h.p. engines and are intended for traffic on the Forth and Clyde canal. Two others are to be of 230 tons, with 120-h.p. engines, two more of 280 tons with 130-h.p. engines, and two of 360 tons with 160-h.p. engines. The fuel tanks of all will hold oil sufficient for three weeks running. The 140-ton vessels can carry 35 to 40 tons more cargo than similar vessels propelled by steam.

Dominion Marine Association.

PRESIDENT, Jas. Playfair, Midland, Ont.; COUNSEL, F. King, Kingston, Ont.

Great Lakes and St. Lawrence River Rate Committee.

CHAIRMAN, W. F. Wasley, Gravenhurst, Ont. SECRETARY, Jas. Morrison, Montreal.

PRESIDENT, A. A. Heard, Albany, N.Y. SECRETARY, M. R. Nelson, New York.

The Shipping Federation of Canada.

PRESIDENT, A. A. Allan, Montreal; MANAGER AND SECRETARY, T. Robb, 526 Board of Trade, Montreal.

Ship Masters' Association of Canada.

GRAND MASTER, Capt. J. H. McMaugh, Toronto Ont.; GRAND SECRETARY-TREASURER, Capt. H. O. Jackson, 376 Huron St., Toronto.

Atlantic and Pacific Ocean Marine.

The report that the Allan Line had purchased the White Star Line s.s. *Cretic* is incorrect, she having been sold to Italians.

A Vancouver press dispatch states that the Royal Mail Steam Packet Co. will establish a service between Europe and British Columbia, with Victoria as the Canadian port, via the Panama canal.

The first transatlantic steamship scheduled to come up the St. Lawrence this season was the C.P.R. *Empress* of Britain, due to arrive at Quebec, Apr. 26.

The Warren Line, which has been operating a line of steamships between Liverpool, Eng., and Boston, Mass., has been acquired by Lord Furness, of Furness, Withy and Co., and other shipping interests with Canadian connections.

Manchester Liners, Ltd., operating a direct line between Canada and Manchester by the Manchester ship canal, is reported to have ordered a new vessel for the service, in England. This company is controlled by the Furness interests.

Holt and Co., Liverpool, England, operating the Blue Funnel line, on a round-the-world service, calling at Vancouver, are reported to have placed orders for the construction of five steamships for the Panama canal service. They will be about 8,000 tons register, with a speed of 16 knots an hour.

The two vessels which the Cunard Co. recently ordered in Great Britain for its Canadian service, operated as the Cunard-Thomson Line, with Robert Reford Co., as agents, will be named *Andania* and *Alaunia*. They will each be about 520 ft. long and of 15,000 tons register, with accommodation for 425 cabin passengers and 1,600 third-class passengers.

It is reported from Japan that the C.P.R. s.s. *Empress* of China, which was wrecked off Shirahama, Japan, July 26, 1911, and which was floated, early this year, has been declared by the underwriters to be a total constructive loss, and that she will be offered for sale by public auction.

The Canada-Calais Line is reported to have been organized in Chatham, N.B., to carry on a steamship service, chiefly in the pulp wood, hay, and store cattle trade between Chatham and Calais, France. It is stated that a vessel has been secured for the service, which will be commenced shortly, and the trip made every six weeks.

The Government has renewed the mail contract to the Allan Line for 12 months from May 1, for \$600,000 as before, the same arrangement between the Allan Line and the C.P.R. being also continued as heretofore. It is said that this renewal is of a temporary character, as the whole of the mail service is to be put on a new basis entirely.

La Compagnie Generale Transatlantique is reported to have decided to establish a regular steamship service between Canada and France, with Halifax and Quebec as the Canadian ports and Dunkirk and Havre as the French ports. The first sailing was announced to take place from Havre, April 27. S. Cunard and Co., Halifax, N.S., are the company's agents.

We are officially advised that there is no truth in the press reports from the Pacific coast, to the effect that the Canadian Northern Ry. is chiefly interested in the recently inaugurated steamship service between Canada and Australia. While it seems a natural thing, that the company might inaugurate such a service, it is, as yet, some time in the future.

The reports circulated towards the end of last year that the C.P.R. was about to discontinue its service between

the St. Lawrence and Avonmouth, and that the steamships *Montcalm* and *Monmouth*, engaged in that service, were to be sold, was incorrect, as the *Monmouth* sailed from Avonmouth, Apr. 15, and it was announced that the *Montcalm* would follow, May 1.

A Montreal press dispatch states that so far as can be ascertained, proposals are being made by the C.P.R. for the establishment of a steamship service between the Maritime Provinces and the West Indies, and that it will transfer its *Empress* steamships from the Pacific for this purpose, in addition to building large summer hotels at St. John, N.B., Yarmouth, N.S., and in Bermuda and Jamaica.

The European and Brazilian Shipping Co., Ltd., has been incorporated under the Dominion Companies Act, with \$250,000 capital, and office at Toronto, to operate lines of steamers and other vessels, and carry on a general ship-owning and shipping business, throughout the Dominion and elsewhere. The incorporators are:—J. S. Lovell, C. D. Magee, S. G. Crowell, J. F. Lash and others, of Toronto.

In connection with the agreement between the Dominion and the West Indies, announcement of which was made Apr. 9, the Minister of Trade and Commerce stated that the question of improved cable and steamship connection had been carefully considered, and as the agreement had yet to be submitted to the British and West India Governments for consideration, the details could not be made public.

The Quebec board of trade has asked the Minister of Trade and Commerce that all vessels owned or controlled by companies in receipt of Dominion subsidies for the carrying of European mails, be bound, as a condition of the subsidy grant, to carry freight and passengers to and from Quebec at a cheaper rate than to and from Montreal, in proportion to the mileage saved, and also that all freight shippers shall be treated equally as to rates and rebates.

The Ulster Steamship Co., which operates the Head Line of steamships to Canada, in its annual report for the half year ended Jan. 31, showed net earnings of £17,929 9s 10d. The net balance to credit of profit and loss, after paying interest on deposits, income tax, etc., is £16,269 16s 6d, from which £10,000 has been written off for depreciation. A dividend of 5 per cent. for the half year is being paid, leaving £1,394 16s 6d to be carried forward. It was announced that the Dominion Government had renewed the subsidy for the service between Canada and Ireland.

The Allan Line steamships *Alsatian* and *Albanyan*, which are under construction in Great Britain, will, it is expected, be delivered by March, 1913. G. Hannah, Passenger Traffic Manager, Montreal, is reported to have stated recently, in connection with the report, that the company is to remove its Canadian terminus to Quebec, that it is a question whether the two new vessels will be able to come up to Montreal, as they will be of a type that has not yet been up the St. Lawrence, each having four convertible shafts, no other vessel with more than three having come to Montreal as yet.

A Montreal press report states that the C.P.R. has placed orders for building three steamships, larger and faster than the present vessels operating across the Atlantic, for the Canadian-British service. The report continues, "In Kingston, Jamaica, Mar. 6, A. H. Harris, who is an assistant in Vice-President Bosworth's office, and, therefore, in a position to know the company's plans, made the following announcement to the members of the Merchants Exchange, 'The C.P.R. has a record of having the finest ships between Canada and Liver-

pool, and they are now building 30,000-ton boats to travel between Liverpool and Halifax.'" We are officially advised that there is no truth in the report.

The two twin screw steamships which the Cunard Steamship Co. have ordered from Scotts' Shipbuilding and Engineering Co., Greenock, Scotland, for the Canadian trade, will each be about 540 ft. long, 63½ ft. in breadth, 46 ft. deep to shelter deck, and of about 13,000 gross. Accommodation of a superior character will be provided in each for over 500 second class and over 1,500 third class passengers, the latter being all in two and four berth rooms. The equipment will include all the most modern improvements. The machinery will consist of two sets of quadruple expansion engines, balanced, and having cylinders 26 in., 37 in., 53 in., and 76 in., in diameter, respectively, and a stroke of 54 in. Steam will be supplied by five double-acting high service speed.

The Central Vermont Transportation Co. has ordered two steamships for its service between Providence, R.I., and New York. They are chiefly designed for passengers, but some express freight will also be carried. They will be of steel, built to Lloyds' requirements for the highest class, with double bottoms, subdivided by steel watertight bulkheads. The machinery will consist of two sets of triple expansion engines, balanced on the Yarrow, Schlick and Tweedy system, boilers of the return fire tube type with forced draught, supplying steam at 180 lbs. pressure. They will be 332 ft. long and 66 ft. wide at the widest part of the deck, and of twin screw type, designed for a speed of 20 miles an hour. The passenger accommodation is to be of the most up-to-date description, for about 500 first class and 200 second class passengers.

Maritime Provinces and Newfoundland.

A. McDougall, Maitland, N.S., has been appointed inspector of hulls for Nova Scotia, vice Capt. Seeley, deceased.

The Victoria Steamship Co., Ltd., North Sydney, N.S., has increased its capital stock from \$12,000 to \$40,000.

N. P. Freeman has been appointed superintendent of the survey and measurement of ships, and surveyor of accommodation for seamen, at Liverpool, N.S.

H. D. Troop, of the old firm of Troop and Son, reputed, in its day, to be the largest owners of sailing ships in the world, died at St. John, N.B., Apr. 1, aged 73.

The Red Cross Line is reported to have chartered the s.s. *Erna*, of St. John's, Nfld., for its Montreal service, this year, on account of the loss of the *Bonavista*.

The Imperial Dry Dock Co. is applying to the New Brunswick Legislature for an extension of time for the commencement and completion of the projected dry dock at St. John.

The Minister of Commons, recently, that tenders would shortly be asked for the construction of a lighthouse to be stationed off Halifax harbor.

A. Boston, Mass., dispatch of April 17 says the Dominion Atlantic Ry. steamships, running between Yarmouth, N.S., and Boston, and which came under C.P.R. control with the D.A.R., have been sold to the Eastern Steamship Co., which has its headquarters in Boston.

The New Brunswick Legislature has before it, Apr. 9, the St. John Canal and Dock Co.'s bill, providing for the construction of a canal from the head of St. John harbor to Marble Cove. The expenditure is estimated at between \$2,000,000 and \$3,000,000, apart from

any expenditure on wharves and other facilities. Consideration was deferred.

The British s.s. *Kamarasca*, under charter to the Dominion Coal Co., arrived at Louisburg, N.S., early in April. She was built at Newcastle, Eng., in 1911, and was for a few months in the East India trade. She has been specially built for the coal trade, with deck hatches arranged for quick loading and unloading. Her dimensions are, length, 398 ft., breadth 52 ft., depth 41 ft., with 8,000 dead weight capacity, and a speed of 13 knots an hour.

The North Sydney, N.S., board of trade is complaining that while vessels of no matter what tonnage, only pay \$5 tonnage dues on entering Sydney, they are obliged to pay at the rate of 1c a ton on entering North Sydney, some vessels paying as much as \$130 a trip. A resolution was passed that steps be taken to have the port placed on an equal footing with Sydney and asking that the statute of 1879 respecting the appointment of harbor commissioners for North Sydney be repealed.

Island Fisheries, Ltd., has been incorporated under the Dominion Companies Act, with \$20,000 capital, and office at St. John, N.B., to carry on a general fishing business, and in connection therewith, to own and operate steam and other vessels. The incorporators are:—P. P. Russell, G. D. Grimmer, St. Andrews; A. Wooster, S. D. Guptill, Grand Manan, N.B.; W. McLure, Pictou; W. H. Starratt, Halifax, N.S.; H. H. Acorn, Souris, P.E.I.; C. F. Matlage, New York, and A. E. Richards, Hamilton, Ont.

The preliminary enquiry into the loss of the British s.s. *Isleworth*, which ran on the rocks off Chebucto Head, Halifax, recently, has been held by Capt. W. R. Lugar, who found that the loss was due to the crippled condition of the vessel, several blades having been stripped off her propellers, due to contact with ice, thus making her unmanageable. The report will be forwarded to England, where a further enquiry will be made, as the vessel is on the British register. She was under charter to the Dominion Coal Co.

Prof. A. R. Kirkpatrick of Queen's University, Kingston, Ont., was visiting various points in Nova Scotia and Prince Edward Island, early in April, for the purpose of investigating their possibilities as terminals for the proposed car ferry service between the mainland and the island. Richibucto, Brule and Pictou on the main land, and Summerside, West Cape, Charlottetown, Carleton, Tormentine, and other points on the island were visited, and he is reported to have stated that with car ferries of the proper design and strength, it would be possible to carry on a service throughout the winter, the conditions being no worse than have already been overcome in Canada and elsewhere.

Province of Quebec Marine.

H. Labelle, chief grain inspector for the port of Montreal, died there, recently, aged 78.

The sheds which the Montreal Harbor Commissioners are erecting on the Victoria wharf, are expected to be completed and ready for occupation by July.

C. C. Ballantyne, one of the members of the Montreal Harbor Commission, has announced that he will retire from the board in September, to devote his time to his private affairs.

The Postmaster General advised the Quebec board of trade, Apr. 9, that the Minister of Railways and Canals, the Chairman of the National Transcontinental Ry. Commission, the Chairman of the Quebec Harbor Commission, and

himself would inspect the port towards the end of the month, with a view to arranging for the early carrying out of the proposed harbor improvements and railway terminals.

The Quebec board of trade council, decided, Apr. 5, to memorialize the Dominion Government regarding winter navigation of the lower St. Lawrence, laying special stress on the records made during the past winter by the steamships *Montcalm* and *Mahone*, and the possibilities, should such service be undertaken by larger and stronger vessels. The council will also take up with the Government the question of deepening the channel below Quebec.

Ontario and the Great Lakes.

John White, a former harbor master at Midland, died there, Apr. 10, aged 67.

The Port William Coal Dock Co., Ltd., has increased its capital stock from \$200,000 to \$500,000.

A report from Deseronto states that the Government will dredge the harbor to a uniform depth of 15 ft.

The Hamilton city council has appointed H. S. Wallace as its representative on the Hamilton Harbor Commission.

The Keystone Transportation Co., Montreal, has ordered the construction of an additional steamboat in Collingwood.

Interests allied with the Canadian Northern Ry., are reported to be negotiating for the purchase of the Rideau Lakes Navigation Co.

The Department of Railways and Canals received, Apr. 26, tenders for improving the lower extreme to lock 15 of the Cornwall canal.

It is reported that the Department of Railways and Canals will shortly enter into a contract with the Ontario Government for the lighting of the canals system by electricity.

The Niagara, St. Catharines and Toronto Navigation Co.'s steamboat *Dalhousie City*, entered Toronto harbor, from Port Dalhousie, Apr. 10, being the first vessel of the season.

Peter Paton, heretofore Travelling Western Representative, Northern Navigation Co., Winnipeg, Man., has been appointed Assistant to the President, with office at Sarnia, Ont.

The Toronto and Niagara Navigation Co., Ltd., has been incorporated under the Dominion Companies Act with an authorized capital of \$2,000,000, to do a general steamboat business.

New rules for the regulation of pleasure craft in Toronto harbor, provide for the carrying of various lights on small vessels, according to class, any infringement making the offender liable to fine or imprisonment.

Press reports state that some of the C.P.R. vessels operating on the Great Lakes will be equipped with wireless telegraph apparatus before going into service this season. It is stated that the Marconi system is to be adopted, and that the shore station will be near Midland.

Consequent on the removal of the headquarters of the C.P.R. Upper Lakes Service, from Owen Sound to Port McNicoll, it is announced that the s.s. *Manitoba* will call at Owen Sound, en route to Sault Ste. Marie, on Wednesday in each week, and that no call will be made on the return trip.

Up to April 15 no official announcement had been made by the Minister of Railways and Canals as to what action it had been decided to take on the Dominion Marine Association's request for the earlier opening of the St. Lawrence canals and their continuous operation during the navigation season.

The Toronto Board of Trade's marine section has elected the following officers:—Chairman, F. Barlow Cumberland; Deputy-Chairman, J. T. Mathews; Secretary-Treasurer, F. G. Morley; Executive Committee, Capt. S. Cragle, E. Rogers, R. E. Gibson, A. A. Wright, F. Plummer and G. Sommerville.

The Toronto Harbor Commission has estimated the total revenue for the current year at \$55,377, and the expenditure at \$54,750. The expenditures include repairs to Centre Island, Brock St., and other wharves, as well as development, surveys and organization, dredging, etc. A contract for dredging has been let to J. E. Russell.

Sir Robert Perks, of the Ottawa and Georgian Bay Ship Canal Co., was in Montreal, Apr. 10, in connection with the company's business, and is reported to have stated that work could be started and carried on very expeditiously, once the contract for the construction of the canal was awarded. He expected that the whole work could be completed within five years of its commencement.

The Citizens Coal and Forwarding Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of \$40,000, and office at Gananoque, to carry on a wholesale and retail coal and lumber business, and to act as wharfingers and forwarders. W. J. Gibson, A. N. Robinson, W. T. Sampson, C. J. Wilson, D. Bain, M. McParland and R. B. Cowan, Gananoque, Ont., are provisional directors.

The Canadian steamboat *Wasaga*, which sank, after burning, off Copper Harbor, in Lake Superior, in 1909, and which has since constituted a menace to navigation, is to be dynamited, the U.S. War Department having awarded a contract for the work, for \$3,500. The vessel was a wooden freighter, formerly known as *Wissahickon*, built in the U. S., and owned by the Collingwood Shipping Co., Collingwood, Ont.

In connection with recent reports to the effect that the Farrar Transportation Co. was about to be absorbed by the Playfair interests, T. I. Thompson, President, is reported to have stated that although the interests named had been seeking to obtain a controlling interest of the company's stock, there would be no merger. The prospects for the year were good, and it had been decided to build another vessel, probably in 1913.

The Northern Navigation Co., has placed the contract for the construction of its new vessel, with the Western Drydock and Shipbuilding Co., Port Arthur. The contract price is quoted as \$750,000, and she is to be ready for launching, June, 1913. She is to be built on similar lines to the company's s.s. *Hamonie*, with steel hull, equipped with four cylinder, triple expansion engines, supplied with steam by four Scotch boilers. Her dimensions will be, length 385 ft., beam 52 ft., depth 28½ ft.

The work of restoring the highways in the neighborhood of Holland Landing, which were cut for the construction of the Newmarket canal, has been completed, and it is stated that the locks and other works are to be put in as good condition as possible, so that should work be resumed at any future time, the expenditure already made will not be entirely wasted. The completion of the canal was suspended recently by the Government on account of the alleged impracticability of the scheme through lack of water.

The Northern Navigation Co., which is now a subsidiary of the Rochelle and Ontario Navigation Co., has ordered from the Western Dry Dock and Shipbuilding Co. another steamship for the Sarnia-Port Arthur-Port William route. The new vessel is to be 385 ft. long, 52 ft. beam and 29 ft. depth of hold. The general layout will be similar to the

Hamonic, except that she will have one more deck for passenger accommodation which will give her about 290 state-rooms, which is about 125 more than the Hamonic has.

A North Bay, Ont., deputation waited on the Dominion Government recently to urge the immediate commencement of canalizing the French River, a part of the proposed Georgian Bay canal scheme. The portion of the work which is being urged covers about 60 miles of the river, and in the total length of 82 miles there is a rise of 72 ft., necessitating the construction of three locks, and the estimated cost of that portion is \$14,000,000. The canal would leave Lake Nipissing almost opposite North Bay and enter Georgian Bay a few miles north of Key Harbor.

The lake freighter Toiler, equipped with internal combustion engines, descriptions of which have been given in *The Railway and Marine World*, is reported to have been sold to Jas. Playfair, President, Inland Lines, Ltd., and Northern Navigation Co. The Toiler was built at Wallsend-on-Tyne, Eng., and brought to Canada last year, and was operated as a grain carrier towards the end of last season. She is the first vessel of the kind to have crossed the Atlantic under her own power, and although of slow speed, is stated to have been a distinct success as an experiment.

The Northern Michigan Transportation Co., Chicago, Ill., will operate its steamboat Missouri, between Chicago and Collingwood, Ont., this season, the first sailing from Collingwood taking place on July 3, and further sailings on Wednesday in each week, leaving Chicago on Saturday in each week. The route to be followed is along the eastern shore of Lake Michigan, Mackinac Island, Sault River, and through the north channel of the Georgian Bay, calling at Little Current, Killarney and Parry Sound. The steamboat Missouri was built in 1904, her dimensions being length 225 ft., breadth 40 ft., depth 16 ft., tonnage, 2,434 gross, 1,484 register.

It was announced at a meeting of the Toronto Harbor Commissioners, Apr. 2, that the Dominion Government will undertake a number of improvement works in the harbor, this season, at an approximate expenditure of \$238,517. They include protection for the reclaimed lands, about 46 acres, at the new western channel, construction of the island breakwater from west of the eastern channel along the shore to west of Centre island, the dredging of the eastern channel to 25 ft., and the renewal of the superstructure of the western channel pier. It was also stated that the new western channel would be completed this season, including a new lighthouse.

The Rainy River Navigation Co. has announced that it will not operate its vessels between Kenora and Rainy River points, this season. G. A. Graham, Manager, is reported to have stated that the company had made every effort to develop trade in the face of many difficulties, such as low water, the lack of a lock at the Long Sault rapids, etc., and it was hoped to continue the service, if the Government subsidy for carrying mails between Kenora and other points on the route, had been re-voted for this year, but as this had not been done, the service would be discontinued. The local board of trade will probably see if some arrangement cannot be arrived at for a continuance of the service.

The Mathews Steamship Co., Toronto, recently ordered another vessel to be built at Sunderland, Eng., for the lake and canal trade. J. T. Mathews, who recently returned from England, stated that delay had occurred in delivery, owing to the coal strike there, but he ex-

pected that she would arrive on this side about the end of June, or early in July. She has been named Easton, and is equipped with engines having cylinders, 17, 28 and 46 ins. diam., by 33 ins. stroke, supplied with steam by two Scotch boilers, 12 by 11 ft. The construction will be with double bottom, and she is fitted with steam steering gear, steam winches, electric light, etc. Her dimensions are, length 257 ft., breadth 42½ ft., depth 18 ft.

The Thousand Island Steamboat Co. received over 6,000 suggestions for naming its new steamboat now being built at Toledo, Ohio. The one selected, is Thousand Islander, which was proposed by many contestants. Miss E. Walsh, of Kingston, Ont., was the first to send in this name, and receives the \$25 prize. As the vessel will be on the U. S. register, and will run in international waters, the management has awarded an additional prize of \$30, divided equally between the second and third proposers of Thousand Islander, viz., G. H. Dreybus, Traffic Agent, International Ry. Co., Buffalo, N.Y., and R. L. Jackson, chief clerk to General Agent, New York Central Lines, Watertown, N.Y. The Thousand Islander is nearing completion and will appear on the river early in June.

It is reported from Hamilton that the Mackay-Hall Steamship Co. is being organized for the operation of steamboats on the Niagara route and the Great Lakes. It is stated that the steamboats Massachusetts and Robert R. Rhodes have been purchased from the Gilchrist Transportation Co., Cleveland, Ohio, and that four other steamboats, at present operating between Montreal and the Great Lakes, will also be taken over by the new company. A. D. Mackay, Hamilton, and F. E. Hall, Montreal, are stated to be the promoters of the company. The steamboat Massachusetts was built in 1882; dimensions, length 235 ft., breadth 36 ft., depth 25 ft.; tonnage, 1,415 gross, 1,041 register. The Robert R. Rhodes was built in 1887; dimensions, length 246 ft., breadth 40 ft., depth 21 ft.; tonnage, 1,576 gross, 1,286 register; both are wooden vessels.

The Dominion Government has issued orders for the compilation of detailed plans and specifications for the proposed Welland canal route, and, it is stated, tenders will be called for in June, allowing about two months for the preparation and submission of same. The estimated cost of the work on the Ten Mile creek route is \$45,000,000. The recent estimates included \$200,000 for preparatory work. It is reported that the preliminary plans show seven locks with lifts of 46½ ft. each, 800 ft. long and 80 ft. wide, that the width of the canal at the bottom will be about 150 ft., that lock 1 will be at McCalla's Grove, which will be the site of the harbor, that the canal will cross the Queenston road, near Homer and will cross the present canal at lock 11, where the new lock 3 will be built, that the new canal will again cross the present canal near Marlatt's Pond, and that the depth of water in the locks will be 30 ft., and in the canal, 25 ft.

The Canadian opposition to the proposal of the Chicago drainage district to take an increased flow of water from the Great Lakes, through its canal, were heard by the U. S. authorities at Washington, recently. It was declared that the depth of water in the Montreal harbor would be affected 10¼ ins., if the proposal were carried into effect, and that last year, under the then existing conditions, two ocean-going vessels sacrificed 8,340 tons of cargo capacity, through low water. Arguments were also presented showing the effect on water levels in Kingston and Toronto harbors, and the lake levels generally. The following made representations:—F. King, counsel, Dominion Marine Asso-

ciation, who also filed a protest from the Kingston board of trade; A. A. Allan, Allan Steamship Line; F. E. Meredith, Shipping Federation of Canada; D. Seath, Montreal Harbor Commission; R. W. Reford, Montreal board of trade; F. S. Spence, Toronto Harbor Commission, and G. T. Blackstock, K.C., representing various Niagara River interests.

Manitoba, Saskatchewan and Alberta.

A paper on the navigability of the Red River was read before the Grand Forks, N.D., Commercial Club, recently, by E. F. Chandler of North Dakota University. He contended that tests had proved that for a considerable portion of the year the river was navigable, while trade would be suspended for the remainder. To overcome the difficulties caused by floods and low water, he mentioned the construction of controlling works at the outlet of Red Lake, which would partially, at any rate, equalize the flow of the river and prevent low stages to some extent, thus diminishing the suspension of traffic. Another plan proposed was the installation of a series of locks and dams, so arranged as to raise the water levels about three feet throughout the length of the river, at extreme low stages. The fall of the river between Grand Forks and Winnipeg is 75 ft., so that few dams would be required for the purpose. The lower section, near Winnipeg, has already been improved by the construction of the St. Andrews lock and dam. It is stated that the construction of three 8 ft. or 10 ft. dams would be sufficient to extend slack-water navigation as far as Grand Forks.

British Columbia and Pacific Coast Marine.

I. E. Lowe, Ladysmith, has been appointed a commissioner for the pilotage district of Nanaimo, vice W. C. Fraser.

Capt. W. S. French, R.N.R., who was well known as a navigator of the Yukon River some years ago, died at Vancouver recently, of pneumonia.

The C.P.R. s.s. Princess Patricia, which has been equipped with oil-burning apparatus, will be placed on the Vancouver-Nanaimo route early in May.

The Union Steamship Co.'s s.s. Chelohsin, which recently arrived at the coast from Ireland, struck a rock in the Skeena River, Apr. 1, and had to be beached.

The G.T.P. Coast Steamship Co.'s s.s. Prince Albert, in leaving Victoria harbor recently, struck a rock off Shoal Point, and was taken to Esquimalt for repairs.

The Coutli Tug and Barge Co., Ltd., has been incorporated under the British Columbia Companies Act, with \$100,000 capital, and office at Vancouver, to carry on a general tug and navigation business.

Capt. E. McCoskrie, formerly master of the C.P.R. s.s. Amur, but who has for the past few years been engaged in private business, has been appointed as the first harbor master of Prince Rupert.

The C.P.R. British Columbia Coast Service will commence a direct steamship service, early in May, between Victoria and Tacoma, calling at Seattle. The s.s. Iroquois will be placed on the run, daily, except Sundays, between these points.

The C.P.R. British Columbia coast steamships Princess Victoria and Princess Patricia (formerly Queen Alexandra), are being fitted at Victoria with the oil burning equipment. The steamships Charmer and Princess Ena are also being overhauled at the same port.

The Western Canada Lumber Co. is

having a steam tug named Dreadful built on the Thames, Eng., for the towing of logs from Comox to Howe Sound. She is 125 ft. long, and will cost about \$60,000. She was expected to leave England during April for Vancouver.

The steamer Jessie Mac, owned by Capt. John McDawen, Vancouver, has been sold to H. Eaden for \$10,000. She was built at Vancouver in 1905, and is equipped with engine of 8 n.h.p., driving a screw. Her dimensions are, length 61.5 ft., breadth 16 ft., depth 7.5 ft.; tonnage 57 gross, 39 register.

A. A. Watson, a well-known ship-builder on the Pacific coast, died recently at Victoria, aged 79. He was born in Scotland, and settled in Vancouver Island, then a Crown colony, in 1863. He designed and built a number of stern wheel steamboats for river service, and was at one time in the Canadian Pacific Navigation Co.'s service.

A press report from Victoria states that a company has been formed in England, and the capital subscribed in London and Paris, to build a floating dry dock for Vancouver. It is stated that the dock will have a lifting power of 15,000 tons, will be so constructed that it can be used in sections for small vessels, and will be 600 ft. long, 80 ft. wide and 55 ft. deep.

The Marine Transportation Co., which has recently been formed for the purpose of operating the s.s. Rupert City, which it has acquired, will, it is reported, shortly order, or purchase, a vessel in Great Britain, to run in conjunction with it. The officers appointed to the Rupert City are given as:—Capt. Stewart, secretary, Vancouver Shipmasters' Association, captain; J. Johnson, chief engineer.

It is reported from Vancouver that the Port of Vancouver Drydock Co., formerly the Imperial Car, Shipbuilding and Drydock Co., has secured a considerable British and French backing, and has placed an order for the construction of a drydock and machinery, in Glasgow, Scotland. It is stated that the plant will be located at Roche Point on Burrard Inlet, where about 500 acres are reported to have been secured for the purpose, and for business sites, and that the dock will be built so that it can be enlarged, the plans showing a length of 650 ft., and a width of 35 ft., with a lifting capacity of 15,000 tons.

Capt. C. H. Nicholson, Manager, G.T.P. Coast Steamship Co., has replied to the complaints of the Shipmasters' Association, as to the alleged danger caused by the location of the company's oil storage tanks on the water front at Vancouver, that before construction was undertaken, the plans were submitted to the local building inspector and the Fire Underwriters, and approved by them, that the whole construction is absolutely fireproof, and that as the oil used would have to be heated to 250 deg. F. before it would ignite, sparks from locomotives, even if they could reach the oil, would not constitute a danger.

The British s.s. Rupert City, which has been lying idle at Vancouver for over a year, is reported to have been sold to S. P. Dunlevy, Vancouver, for \$50,000. It is stated that she will be overhauled and operated in the freight trade between Vancouver, Tacoma and Portland, and Mexican ports. She was formerly known as the Powhatan, and was built at Barrow, Eng., in 1886, her dimensions being, length 310 ft., breadth 38.2 ft., depth 25.3 ft.; tonnage, 2,536 gross, 1,640 register. She is equipped with quadruple expansion engines with cylinders 18, 18, 38 and 60 ins. diam. by 42 ins. stroke, of 254 n.h.p. She was engaged in the Chinese coolie service with Mexico for several years, and on the stoppage of that service, was laid up at Hong Kong, and was later operated in

the Prince Rupert trade, by Mackenzie Bros., of Vancouver, and later, for the remainder of her charter period, in the coal trade to Alaskan ports.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

18. Mar. 28. 47. British Columbia, Vancouver Island, west coast Kyuquot sound, Kokshittle arm, uncharted rock, buoy established. 48. British Columbia, Vancouver Island, east coast, Moresby passage, Canoe rock, light established on beacon. 49. British Columbia, Active pass, Galiano Island, Mary Anne point, white sector inserted in light. 50. British Columbia, Baynes sound, Denman Island, red sectors inserted in light.

19. Mar. 30. 51. Ontario, Lake Ontario, east end, Little Cataraqui bay, range lights established near Portsmouth. 52. Ontario, Lake Ontario, chart, Main Duck Island to Presqu'île, issued. 53. Ontario, Niagara River, Cnippawa, Hog Island, lighthouse established. 54. Ontario, Lake Huron, north channel, Blind river, buoyage.

20. Apr. 10. 55. Nova Scotia, Cape Breton Island, east coast, Sydney harbor, southeast bar, red sector inserted in light.

21. Apr. 15. 56. Ontario, Lake Ontario, Toronto harbor, range lighthouses under construction at the new western entrance, temporary lights. 57. Ontario, Lake Erie, Rondeau harbor, gas lighted beacon established on west breakwater pier. 58. Ontario, Lake Huron, shoal water in the entrance to Goderich harbor, caution. 59. Ontario, Georgian Bay, Owen Sound, back range light again in operation.

22. Apr. 18. 60. Ontario, River St. Mary, St. Joseph Island, Sailors Encampment range, front light again in operation. 61. Ontario, Lake Superior, Thunder Bay, Hare Island reef, change in position of gas and bell buoy, caution.

Telegraph and Cable Matters.

The Great North Western Telegraph Co. has closed its offices at Embro and North Augusta, Ont., and Longue Pointe, Que.

N. R. Duetta has been appointed agent, Great North Western Telegraph Co., at Trenton, Ont., vice A. Christie. This is a new telegraph office.

The Canadian Northern Telegraph Co. has opened offices at Woodnorth, Man., Munson, Alta., and has closed its offices at Steep Rock, Ont., and Mistatim, Sask.

G. Marconi, who was in Canada during April, in connection with the Marconi Wireless Telegraph Co.'s affairs, has been made a life member of the Italian senate.

W. R. Thom has been appointed agent, Great North Western Telegraph Co., at Cobourg, Ont., vice F. M. Hawley, who has resigned after a number of years in the company's service.

The Dominion Government has commenced a night lettergram service over its telegraph lines, similar to the service adopted some time ago by private companies throughout the continent.

The Marconi Wireless Telegraph Co. of America has absorbed the United Wireless Telegraph Co., and settlements have been made in the actions by the former company for infringement of patents.

The annual convention of the Association of Railway Telegraph Superintendents will be held in New York, June 4 to 7, when a comprehensive programme of business and entertainment has been arranged, including a visit to the T. A. Edison Co.'s works at Orange, N.J.

L. DeForest, at one time of the Dominion DeForest Wireless Telegraph Co.,

and now of the American DeForest Wireless Telegraph Co., and a number of his associates have been arrested in the U.S. on charges of misusing the mails by misrepresenting conditions in connection with his company.

In response to a question in the British House of Commons, Apr. 2, the Postmaster General stated that the Government was not in favor of a state owned cable across the Atlantic, nor of granting a subsidy for the laying of one. If, however, any company offered to lay a cable and carry messages at a lower rate than now charged, the proposal would be welcomed.

W. J. Camp, Assistant Manager, C.P.R. Telegraphs; W. W. Ashald, Superintendent of Telegraphs, G.T.R.; Montreal; E. D. Hubbard, General Foreman, G.T.R., Battle Creek, Mich.; T. Rodger, Inspector of Telegraphs, G.T.R.; and A. D. Smith, Northern Electric and Manufacturing Co., Montreal, were among those who attended the recent joint meeting of the eastern and western divisions of the Association of Railway Telegraph Superintendents at Chicago, Ill.

The following changes have been made on the C.P.R. Telegraphs, Western Lines —C. K. Brown has been appointed Inspector of Telegraphs, District 1, Saskatchewan Division, Moose Jaw, vice C. Fraser, who has been transferred to District 2, Regina, succeeding S. M. Thurston, appointed Circuit Manager at Moose Jaw; L. A. Hutton has been appointed Inspector of Telegraphs, District 2, Alberta Division, Calgary, vice C. H. Powell, who has been transferred to District 1, Medicine Hat, succeeding J. J. Schetgen, appointed chief operator at Calgary.

The Western Union Telegraph Co., which controls the Great North Western Telegraph Co., has instituted a pension scheme for its employees, which provides, that after 20 years service, and up to and including the 25th year, the pension will be 1% of the average salary for the last preceding 10 years, multiplied by the number of years service; after 25 years, and up to and including the 35th year, 1½% addition for each year; from the 35th to 40th years, 2% additional for each year and after 40 years service 50% of the average salary for the last preceding 10 years. The minimum pension is to be \$25 a month, except when otherwise directed, and no pension is to exceed \$100 a month.

The Saskatchewan Elevator Co., Ltd., has been incorporated under the Dominion Companies Act, with \$250,000 capital, and office at Winnipeg, Man., to carry on a general grain and elevator business, and to take over as a going concern the Saskatchewan Elevator Co., Ltd., of Saskatchewan.

The Keewatin and Western Construction Co. has been incorporated under the Manitoba Companies Act, with office at Winnipeg and authorized capital of \$100,000, to carry on a railway and general contracting business. The provisional directors are:—F. G. Thompson, D. S. Johnston, J. C. Kyle, H. Henry, J. B. Henderson, Winnipeg.

Bell Telephone Co.—At the annual meeting in Montreal recently, C. F. Sise, President, stated that the net revenue for 1911 was \$1,425,835, out of which \$1,000,000 had been paid in dividends. The number of instruments earning rental was 153,959, and the system comprised 58,300 miles of wire, of which 4,167 miles were added during 1911. After all deductions there was a balance of \$120,415 to be carried forward. The following were re-elected for the current year:—President, C. F. Sise; Vice President, Hon. Robt. Mackay; other directors, T. N. Vail, R. Archer, W. R. Driver, H. Paton, C. Cassils, H. B. Thayer, L. B. McFarlane and Z. A. Lash, K.C.

Cantilever Framed Steamships for the St. Lawrence Coal Trade.

Furness, Withy & Co., of West Hartlepool, Eng., Montreal, etc., are having built at Middlesbrough, Eng., by Sir Raylton Dixon & Co., Ltd., two steamships, Lingan and Hochelaga, which have been specially designed to meet the requirements of the Dominion Coal Co.'s trade from Sydney, N.S., to Montreal, and are of the latest improved type of patent cantilever construction with top-side water ballast tanks with which most of the vessels in this trade are fitted.

Their principal dimensions are 388 ft. 3 ins. by 52 ft. by 29 ft. 9 ins. moulded, and have a deadweight carrying capacity of about 7,600 tons each on a light draft of water. They are being constructed to the highest class British Corporation, and are of the single deck type with poop, bridge and forecstle.

Each vessel has 11 hatchways, four holds absolutely free from all obstructions, such as beams, pillars or web frames, and perfectly self-trimming owing to the sloping sides of the top-side tanks at each side of the ship, and of the total amount of about 2,400 tons of water-ballast which the vessel can carry, about half will be in the top-side tanks.

They each have 12 derrick posts and 20 derricks, 4 boats, hand and steam

Comparative Costs of Fuel on Ocean Steamships.

In view of the interest at present being taken in the use of fuel oil for steamship operation, the following figures, which have been quoted in London, Eng., for a trip between Liverpool and New York, with the s.s. Lusitania as a basis, are given:—

Coal, 5,500 tons, at 18s 6d	£5,087 10 0
312 firemen, at 25s a week	390 0 0
	£5,477 10 0
Oil, 3,300 tons, at 26s	£4,292 0 0
27 firemen, at 25s a week	33 15 0
	£4,325 15 0

Canada Shipping Act Amendments.

The Dominion Parliament has passed a bill providing for the repeal of sec. 100, chap. 113 of 1906, and sec. 7, chap. 65 of 1908, and for the insertion of a new section 100, as follows:—

"The foregoing provisions as to masters and mates shall not apply to pleasure yachts not carrying passengers or goods for hire, nor to steamships of not more than five tons gross tonnage, nor to barges nor other vessels having neither masts, sails nor rigging, and not being steamships, nor ships employed solely in fishing, nor to sailing ships of

The Steel Co. of Canada, Ltd. Annual Report.

Following are extracts from the report for the year 1911:—

The net profits after expending \$404,453.11 for repairs, maintenance and improvement on plants and machinery were \$1,373,522.81. These profits have been dealt with as follows:—

Interest on bonds and mortgage and cost of underwriting and stamping bonds	\$ 434,100.40
Dividends on preferred stock	454,741.00
Credited to fund for depreciation, renewal and improvements of plants	100,000.00
Carried to credit of profit and loss account	337,681.41
	\$1,373,522.81

The amount now at the credit of depreciation, renewal and improvement of plants fund is \$204,071.11, and at the credit of the profit and loss account, \$583,599.74.

Your directors feel that the statement is a very satisfactory one when it is taken into consideration that the past year was one of great depression in the U.S. iron and steel business. The demand in Canada for our various products was excellent, but an abnormal percentage was supplied from the U.S. at exceptionally low prices, owing to the depression referred to, particularly pig iron, bars and wire products. The prices on bars were

The s.s. Lingan, for the St. Lawrence Coal Trade.

steering gear and are equipped with 10 steam winches, steam windlass, etc., and all the latest and most modern appliances for the rapid handling of cargo.

They have triple expansion engines, having cylinders 26, 44, and 73 by 48 ins. stroke, supplied with steam by three large single-ended boilers working at 130 lbs. pressure.

The trials passed off most successfully, a speed of over 12 knots being attained.

Examinations for Inland Masters and Mates.

Following the suggestions made by the Dominion Marine Association to the Minister of Marine in February in reference to changes considered necessary in examinations for masters' and mates' certificates for inland waters, the whole question is under the Department's consideration with a view to afford better facilities to candidates and to organize a better system of examinations, which will, no doubt, be to some extent, in harmony with the Association's suggestions.

The Department has pro tem opened a school for the education of candidates at one of the ports and is willing to consider the question of assistance to the various technical schools, of which three have now been opened at large ports. These schools intend giving courses in navigation, etc., to those desiring to undergo examinations for marine certificates, both officers and engineers.

not more than 100 tons, registered tonnage, propelled by auxiliary power other than steam, employed partly in fishing and partly in the carriage of freight."

This exempts sailing ships fitted with auxiliary power from having to employ certificated masters or mates. Such vessels would be exempt under the previous law if employed solely in fishing. As they are engaged in carrying cargo, when not fishing, the law has been amended in this respect. Sec. 104 is also repeated and replaced by a new section, as follows:—

"Whenever any master or mate or second mate proves to the satisfaction of the Minister that he has, without fault on his part, lost or been deprived of any certificate required under this part, the Minister may, upon such terms and conditions as he deems fit, cause a copy or duplicate of the original certificate to be made out and certified as aforesaid, and to be delivered to such master, mate or second mate."

Under previous conditions, one half the full fee was charged for a duplicate certificate, which was considered excessive. Under the amendment the Minister can fix what he considers to be a reasonable fee.

The Dominion Government has included in the supplementary estimates \$50,000 for the improvement of Goderich harbor. It is stated that this will be spent on the continuation of the present north-west breakwater.

so low that only the largest plants in the U.S. could produce them at a cost which would give a meagre margin of profit. In pig iron prices were still worse. Few, if any, of the U.S. furnaces made money, as pig iron was being sold below the average furnace cost, and the prices for export to Canada were cut from 50 to 75c a ton below those for their home market. Not only have we had to contend with the low prices on pig iron, but the Government regulations as to rebates on iron entering into agricultural machinery are so framed, that it practically prohibits the makers of agricultural machinery from using Canadian pig iron even in the machines where the material which enters into them is not subject to rebates. To enable us to run our plants full and absorb our overhead charges, and thereby secure the greatest economy, we were forced to sell goods at a very small profit.

In the trust deed for the bond issue provision was made for an additional issue of \$650,000.00 of bonds, the proceeds of which were to be used for providing further working capital. These bonds were sold during the year, and the total bond issue is now \$7,500,000.00, as compared with \$6,850,000.00 as shown on the previous statement.

The matter of the growth of Canada, and the necessity of our being able to take care of the increased consumption of iron and steel commodities, has been one that has had the serious consideration of your directors and officers, and it was decided, to enable us to take care

of this increased demand, that considerable additions must be made in machinery equipment at our various plants, and that a blooming mill, billet mill, and rod and bar mill should be built at Hamilton, together with two more 50-ton open hearth furnaces. The mills and open hearth furnaces are under construction, and we hope to have them in operation next fall. The new machinery referred to is being installed. The mills will be of the most up-to-date design, and should enable us to produce bars at a lower price than we have heretofore. To help defray the cost of these extensions and improvements the sale of \$500,000.00 of bonds has been arranged for.

Canadian Westinghouse Company Ltd.

Following are extracts from the annual report for the year 1911.—

The net profits were \$1,010,153.56, an increase of 45% over 1910, the year of previous maximum. From the year's profits regular quarterly dividends at the rate of 6% per annum, and bonus dividends aggregating 2%, (making a total for the year of 8%), have been paid, amounting to \$350,128. \$100,000 has been added to the general reserve for depreciation of property and plant, increasing that reserve to \$500,000. \$50,000 has been added to the reserve for inventory adjustment, which now totals \$100,000, and which should be adequate to safeguard the possibility of decrease in market values of either raw materials or finished product. A reserve of \$50,000 has been created for an insurance fund, the directors having in mind the advisability at some future date of the company carrying certain special lines of its own insurance risks. Pursuant to previous policy, against items not immediately productive from a manufacturing standpoint included in property and plant account, \$135,794.05 has been written off. The remaining balance, \$324,231.51, has been carried forward to the credit of profit and loss account, which shows as of Dec. 31, 1911, a total unapportioned surplus of \$1,050,844.73.

The year opened with a number of large contracts on hand well advanced through their design and into their manufacturing stages, which situation, taken along with a constant influx of new business in large quantities, produced a condition tending to bring about more than ordinarily satisfactory returns for the year. The volume of output increased approximately 40% over the previous year, and the high standard previously set up in design, engineering application, and quality has been fully maintained.

In accomplishment of the foregoing, the extensions to plant have been an important factor. The extensions to warehouse, foundry and pattern building were completed early in 1911, and the plant has been further increased this year by a new main machine shop aisle, which is now nearing the stage of completion looking toward the installation of the necessary machine tool equipment. Coincident with all these extensions the former boiler plant has been rebuilt with all modern labor-saving apertures in a manner to correspond with the added requirements of present plant additions and as well to permit installation of extra units should further factory extensions require. The construction of these buildings has been carried out on the same lines of solidity and permanency in general plan and in execution of detail as marked the original buildings, and the construction of all additions has been carried forward without interruption to manufacturing operations in the existing plant, due to the engineering skill embodied in the original layout of the building scheme.

In accordance with established conservative custom, the business of the

year has absorbed ample charges to cover maintenance and renewal accounts, expenditures for development work in both engineering and manufacturing lines, and amounts representing concurrent loss in value on those special manufacturing appliances where the decrease in values is at a more rapid rate than ordinary depreciation.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time, we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

H. D. Bayne, Special Agent, Canadian General Electric Co., has sent his friends a wall hanger, "Suggestions for 1912," containing as usual a number of excellent maxims.

The McKeen Motor Car Co., Omaha, Neb., has opened an office in the Hudson Terminal Bldg., 30 Church St., New York city, with S. D. Barnett as Eastern Representative.

Robert W. Hunt, and Co. Ltd., engineers, inspection, testing, analyses and consultation, with head office in Montreal and branch in Toronto, have opened an office at 415 Bank of Ottawa Building, Vancouver, B.C., under the management of G. E. Herrmann.

The McKeen Motor Car Co., Omaha, Neb., has received an order from the Weatherford Mineral Wells and North Western Rd. for two 70-ft. motor cars. There are now 122 McKeen motor cars in service in the United States, Mexico and Australia.

The Independent Pneumatic Tool Co., Chicago, Ill., has issued catalogue 9, describing Thor air tools. It contains 118 pages of matter copiously illustrated. Copies may be obtained of the Canadian agents, H. W. Petrie, Ltd., Toronto and Vancouver.

"American Vanadium Facts," for March, issued by the American Vanadium Co., Pittsburgh, Pa., refers especially to the useful strength of steel, the rail problem and the adoption by the American Locomotive Co. of chrome Vanadium for heat treated steel for locomotive crosshead keys.

"Brownhoist Patent Suspended Bins," issued by the Brown Hoisting Machinery Co., Cleveland, Ohio, describes the bin fully and shows a number of installations of it and also of several Brownhoist machines which work in connection with the bin in power plant installations. It contains considerable interesting matter on handling coal and ashes in power plants, and illustrates a suspended coal bin installed for the Winnipeg Electric Ry.

The Brown Hoisting Machinery Co.'s catalogue D 1912 fully describes and illustrates its overhead, or tramrail, system of handling all kinds of material, which is being adopted by modern industrial plants and railways. It has proved that a great saving can be made by its adoption by both large and small installations. The list covers electric mono-rail man trolleys, patent steel-plate equalizing trolleys, and electric hoists, with all the necessary equipment, and instructions for ordering.

The name of the Advance Machine Works, Ltd., Walkerville, Ont., manufacturers of Northern cranes and hoists in Canada, has been changed to Northern Crane Works, Ltd. They will continue the manufacture of cranes, hoists, etc., as heretofore. They have

recently completed a new plant in Walkerville, and report a large number of contracts in progress covering electric travelling and hand power travelling cranes and electric hoist work, also an increasing demand for Northern patented type E electric travelling cranes.

The Dominion Marine Department has ordered 40 buoy lanterns from the Safety Car Heating and Lighting Co., of New York and Montreal. These lanterns have been developed by this company to meet the demands of Lighthouse Bureau requirements. They are supplied with improved flashing mechanism capable of giving a double characteristic; that is, one second light, one and one-half seconds dark, one second light and five seconds dark; the short and long dark periods alternating with one second light periods intervening. They are known as 200 mm., and will be used for coast, harbor and river lighting.

The American Boiler Manufacturers' Association at its recent convention at New Orleans, La., authorized the secretary of the Supplymen's Association to publish a list of boiler manufacturers in the United States and Canada. This list comprises 1,000 names of boiler manufacturers, which have been verified through mercantile agencies, and by direct correspondence, and will be of interest to manufacturers of tools used in boiler shops, material men, mechanical engineers, and boiler buyers. The book is also arranged with a column in which the credit rating and financial responsibility can be inserted. It can be obtained, price \$5, from F. B. Slocum, Secretary, Supplymen's Association, Continental Iron Works, West and Calyer Sts., Brooklyn, N.Y.

The U.S. district court at Milwaukee, Wis., has appointed receivers for the Allis-Chalmers Co., the receivership being of a friendly nature and necessary to complete the company's organization. Under the reorganization plan the bondholders and preferred and common stockholders agreed to give up their securities and to accept instead preferred and common stock in a new company. The elimination of the bonds, \$11,148,000, relieved the company from a heavy burden of fixed charges. New capital amounting to \$5,192,000 was raised by assessment on the outstanding preferred and common stock of the old company. The result is that the company will be placed in a far stronger position than it ever was before. Allis-Chalmers-Bullock, Limited, Montreal, is a Canadian company, and entirely distinct from the Allis-Chalmers Co., but it will doubtless benefit materially by its U.S. ally's reorganization.

The agency business formerly carried on by Eadie-Douglas, Limited, at 304 University St., Montreal, has been reorganized and the name changed to Douglas-Milligan, Limited, with H. P. Douglas, President; G. M. Milligan, Vice President, and E. M. Watson, Secretary-Treasurer. The Toronto branch in the Confederation Life Building is under the management of W. F. Gouinlock, and the company has agents in the other principal cities. Its agencies include B. F. Sturtevant Co., Boston; Keystone Fireproofing Co., New York city; Leeds Forestry Co., Leeds, Eng.; McFarlane-Douglas, Ottawa; Terrano Jointless Flooring; Alphonse Custodis Chimney Construction Co.; Edward Darby and Sons Co., Inc., Philadelphia; Avery Scale Co., North Milwaukee; Esco preservative steel paint; Preservo and Ceresit waterproofing; Reliance ball bearing door hangers; De La Vergne Machine Co.; Jewett Refrigerator Co.; Etcher Wyss and Co.; Richardson-Phoenix Co.; Roberts Manufacturing Co.; Nelson valves; N.S. gauges; Sweet's separators; Metropolitan injectors; Blackburn-Smith feed water filters.

Canadian General Electric Co's Annual Report.

Following are extracts from the report for the year 1911:—The profits, \$1,405,889.70, were the largest in the company's history, recent additions to plant and equipment having permitted of manufacturing in greater volume without materially increasing overhead expense account. There has been written off for depreciation \$353,721.63, and interest on borrowed capital the sum of \$162,422.66 has been paid, leaving a balance of \$889,745.41. Deducting from this amount dividends on preference and common stock at the rate of 7% per annum, amounting to \$525,109.37, there remains a net balance of \$364,636.04, which has been carried to the credit of profit and loss. This sum added to the balance to the credit of that account at the end of 1910 makes a present balance of \$675,779.35, which together with the

New Fishery Protection Vessel for Service on Pacific Coast.

TENDERS are invited and will be received by the undersigned for the design and construction of the above vessel up to noon 17th June, 1912.

General particulars and a guidance print showing the typical nature of the vessel required, for information in preparing a design, may also be obtained on application to the undersigned.

The vessel is to be delivered free of all charges at H.M.C. Dockyard, Esquimalt, the time of delivery to be stated in the tenders. Special consideration will be given to early delivery.

An alternative tender may be submitted if so desired, using Diesel Heavy Oil Engines as the motive power for propulsion, but such engines would be required of the 2 cycle reversible type, designed to use Texas and other heavy oils.

The Department does not bind itself to accept the lowest or any tender, the awarding of the contract will depend on the suitability of the design for the service required as well as a consideration of the tender price.

The tenderer should also state for what price two vessels of the type proposed will be supplied.

A certified cheque payable to the Deputy Minister of the Naval Service, amounting to \$10,000, must accompany design and tender, as a guarantee that the contract will be undertaken if awarded. If two vessels are decided on a further deposit of \$10,000 will be required.

G. J. DESBARATS,

Deputy Minister of the Naval Service.
Department of the Naval Service,
Ottawa, 9th April, 1912.

reserve fund of \$1,669,531.95 makes a total surplus of \$2,345,311.30.

The volume of business transacted being much larger than in previous years, the current liabilities have necessarily increased, in order to take care of work in progress, but against these current liabilities current assets amount to \$7,926,840.96.

During the year the company acquired the property and assets of the Sunbeam Incandescent Lamp Co. of Toronto, and contracts have been let for additions to the buildings and equipment which will double the capacity of this plant. A new stores building at the Peterborough

Department of Railways and Canals, Canada SAULT STE. MARIE CANAL. NOTICE TO CONTRACTORS.

SEALED TENDERS, addressed to the undersigned and endorsed "Tender for Widening Lower Entrance Channel-way, Sault Ste. Marie Canal," will be received at this office until 16 o'clock on Friday, May 10th, 1912.

Plans, specifications and the form of the contract to be entered into, can be seen on and after the 10th April, 1912, at the office of the Chief Engineer of the Department of Railways and Canals, Ottawa, and at the office of the Engineer in Charge, Sault Ste. Marie, Ont., at which places form of tender may be obtained.

Parties tendering will be required to accept the fair wages schedule prepared or to be prepared by the Department of Labour, which schedule will form part of the contract.

Contractors are requested to bear in mind that tenders will not be considered, unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signature, the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque for the sum of \$2,500.00, made payable to the order of the Minister of Railways and Canals, must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work at the rates stated in the offer submitted.

The cheque thus sent in will be returned to the respective contractors whose tenders are not accepted.

The cheque of the successful tenderer will be held as security, or part security, for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order,

L. K. JONES,

Secretary.

Department of Railways and Canals,

Ottawa, 8th April, 1912.

Newspapers inserting this advertisement without authority from the Department will not be paid for it.—21126.

works, 325 x 80 ft., is being erected, and plans have been accepted for the erection of a new plant in Toronto for the ornamental iron, bronze, and art metal department, the growth of which has surpassed expectations. With the above extensions and additions the manufacturing facilities will enable the company to materially increase its production.

The real estate owned is carried on the books at a valuation far below market values, the appreciation being conservatively estimated at upwards of \$500,000. It was proposed to write this up to more nearly its present price, but the directors have decided to allow this asset to continue to remain on the books at the present low valuation.

The directors have passed a bylaw providing for increasing the authorized capital stock to \$12,000,000, of which increase shares to the par value of \$1,900,000 will be offered to all holders of ordinary shares of record on April 20, 1912. The growth of business renders this policy advisable, and the only extra charge to the company will be the difference between the rate of dividend paid to the shareholders and the rate of interest paid to the company's bankers.

Department of Railways and Canals. LACHINE CANAL.

Leasing of Government Sheds at Montreal.

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Sheds," will be received until 16 o'clock Wednesday the 1st May, 1912, for the leasing for a period of five years of the following Government sheds or space in same at so much per square foot, viz.:—Flour Sheds Nos. 1, 2, 3, 4 and 5, and Shed No. 1 and part of Shed No. 2 on St. Gabriel Basin.

Possession of Sheds to be had on or about the 1st May next, with the exception of Flour Shed No. 3, which will not be available until about the 1st October.

Full particulars and all necessary information may be obtained at the office of the Superintendent Engineer of the Canals of the Province of Quebec, No. 2 Place d'Armes, Montreal.

The Department does not bind itself to accept the highest or any tender.

By order,

L. K. JONES,

Secretary.

Department of Railways and Canals,

Ottawa, 20th April, 1912.

Newspapers inserting this advertisement without authority from the Department will not be paid for it.—21791.

SIMPLE

EFFICIENT

ACCESSIBLE

SCHMIDT SUPERHEATER

25° COAL SAVING MEANS 33 $\frac{1}{3}$ ° INCREASED HAULING CAPACITY

Superheated Steam Locomotives show a saving of 25 per cent. in coal burned over saturated steam locomotives developing the same power. Basing the amount of coal burned upon the amount that it is possible to fire per hour, this means an increased hauling capacity of 33 $\frac{1}{3}$ per cent.

Consider, for example, the maximum amount of coal possible to fire per hour at 6,000 lbs. At 4 lbs. of coal per horse power hour ($\frac{6000}{4}$) we obtain 1500 horse power hours per hour. At 3 lbs. of coal per horse power hour or a saving of 25 per cent. ($\frac{6000}{3}$) we obtain 2000 horse power hours per hour.

2000 — 1500 equal 500 horse power hours per hour increase.

$\frac{500}{1500} = \frac{1}{3}$ or 33 $\frac{1}{3}$ per cent. increased power, or *hauling capacity*, developed with the same amount of coal burned.

St. Ry. & Lt. & Power Co., Columbia, S.C.; Aurora, Elgin & Chicago Ry., Chicago, Ill.; Wichita Falls Traction Co., Wichita Falls, Tex.; Ottawa Electric Ry. Co., Ottawa; Bloomington & Normal Ry. & Lt. Co., Bloomington, Ill.; Corsicana Transit Co., Corsicana, Tex.; Compania Electrica y de Ferrocarriles, Mexico; The Milwaukee Elec. Ry. & Lt. Co., Milwaukee, Wis.; Springfield Street Ry. Co., Springfield, Mass.; Lynchburg Traction Co., Lynchburg, Va.; Chicago & Southern Traction Co., Chicago, Ill.; Calumet & South Chicago Ry. Co., Chicago, Ill.

THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

G. C. ROYCE, West Toronto, Ont.

Let us quote you on your requirements.

EDISON BSCO

PRIMARY BATTERY

The ideal tower battery for a mechanical interlocking plant should be capable of maintaining a uniform voltage under constant discharge and of delivering comparatively high discharges without injury; their condition should be plainly indicated by the appearance of the cell; they should not be affected by slight variations in temperature and they should operate from one renewal period to the next with no expense for maintenance.

The Edison BSCO cells, we believe, possess these qualities more completely than any other type of Primary Battery. The uniformly good service that they can be depended on to furnish from the day set up until the full capacity is consumed, with no attention whatever, makes them the logical cells for this service.

One series of Edison BSCO cells will usually displace a two or three series gravity battery in towers where the ampere discharge is not high. For plants where the demand on the battery is heavy, the multiple series system of hooking up should be used, the number of series being governed by the current demand of each particular plant. In this way extremely long life can be obtained, and you enjoy a feeling of security, knowing that the all important requisite, viz., sufficient voltage to operate all functions without failure, is guarded by a battery of proven reliability—one that will not be affected by momentary heavy discharge, evaporation, buckeled plates, etc. And as time passes this feeling of security strengthens and you realize that whatever else goes wrong you have a battery that can be depended on to do its work day in and day out without failure.

YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference

work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost \$1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. Read This

This is what Mr. J. P. Murphy, G.S. for the L.S. & M S. Ry., says about Bowser Systems:

"In the handling of oils the Bowser System is being used extensively, and with it, at every engine house where it has been installed we have been able to decrease our forces two men, one night and one day, as it has been entirely possible to have the supply man deliver the oils in addition to his other duties. The pumps are located so the oils and supplies are delivered over the same counter."

The Bowser always economizes. It saves its own cost and then continues to pay a remarkable dividend as long as you use it.

Let us send you our new Railroad Book listing all the outfits and explaining their adaptability, Free. Ask for Book No. 18.

NEW 8-FEED DETROIT LUBRICATORS

DETROIT LUBRICATOR COMPANY.

DETROIT, U. S. A.

Largest manufacturers of lubricating devices in the world.

The new 8-feed Detroit Locomotive Lubricator is used on superheater Mallet compound locomotives. The six outside feeds lead to the high pressure steam chests, the high pressure cylinders and the low pressure steam chests.

The two middle feeds can be used for two air pumps, or for one pump and an intercepting valve, or for one pump and a mechanical stoker.

A half turn of the oil control valve permits of all the feeds being started or stopped instantly without disturbing the adjustment of the feed regulating valves. A quarter turn cuts off all but the two middle feeds.

The new Detroit Locomotive Lubricators give greater oil mileage, easier control and better lubrication than any other lubricators on the market. Our circular tells why.

Johnson Car Replacers

Type Z left hand

Straddles the rail—needs no spikes, clamps or fasteners.
Rests on rail both front and rear.
Adjusts itself to different heights of rail.
Forms a friction grip with rail during the operation.
Brings rails to gauge during replacement.
Distributes the load on the Rail, not one or two ties.
Special types for Steel-ties and Street Car Rails.

The Johnson Wrecking Frog Co.

CLEVELAND, OHIO, U.S.A.

R.H. Hopkins & Co., Montreal, Selling Agents

Type Z right hand

CHICAGO RAILWAY EQUIPMENT CO.

Our "PC Creco" Brake Beams are for use on new heavy steel passenger equipment and withstand a load of **40,000 lbs.** with 1-16 in. deflection. Greater capacity if desired, without increase in Diamond Special depth of strut or change of adjustable brake head.

CANADIAN OFFICE, 22 ST. JOHN STREET, MONTREAL.

PROFESSIONAL CARDS.

THE RAILWAY AND MARINE WORLD is especially adapted for the publication of professional cards of engineers, inspectors, analysts, electrical experts, naval, grain elevator and other architects, solicitors, etc., who desire to bring themselves under the notice of the management and officials of the various steam and electric railway, steamship, grain elevator, telegraph, telephone and power companies throughout Canada, as well as the locomotive, car and ship-builders, contractors and promoters of railway enterprises. THE RAILWAY AND MARINE WORLD is the only medium through which all these important classes can be reached.

Rates will be quoted on application.

"BROWNHOIST" LOCOMOTIVE CRANES

"Brownhoist" Crane Coaling Engine on N. Y., N. H. & H. R. R. from cars on side track.

A RAPID AND ECONOMICAL METHOD of handling coal from car to engine or from car to coal tipple. The crane coals the engine while it is being cleaned on the ashpit. It cleans the pit, placing the ashes into the car. Many roads use the crane to fill the pockets on their coal chutes. Time and money are saved on both of these methods of coaling an engine.

ON CONSTRUCTION WORK the crane is a labor saver. The crane excavates, drives piling with a pile-driver, handles construction material of all kinds, switches the cars, places heavy steel structures, and does all the lifting and moving of material.

AROUND THE SHOP AND YARD the crane handles ALL material. It can be equipped with either grab bucket, bottom block, or lifting magnet. Either one is easily and quickly applied.

"Brownhoist" Cranes are built for hard and continuous service.

M-22 Brake Valve, used with AMM Automatic Brake Equipment with Straight-Air Features.

Six important advantages of the Westinghouse AMM Brake Equipment, with Combined Automatic and Straight Air Features, are listed below:

1. Flexibility and promptness of straight air operation on a single car, or the head car only of a train.
2. All the features of straight air, and, in addition, an automatic brake for safety.
3. Both straight air and automatic operation by the movement of one brake valve handle.
4. Both straight-air and automatic operation without interference with or sacrificing any of the normal functions of either.
5. In emergency, the straight air feature is obtainable through the brake valve to the brake cylinder, thus insuring a **maximum** and **maintained** pressure in the brake cylinder at the time most needed, regardless of the condition of the triple valve.
6. Adaptable to cars used in switching service, or for occasionally handling freight or other cars equipped with automatic brakes.

STREET RAILWAY MOTORS

IN SNOWSTORMS AND BLIZZARDS

THE WINONA INTERURBAN RAILWAY COMPANY.

Allis-Chalmers Co.,
West Allis, Milwaukee, Wis.

Warsaw, Indiana. Feb. 25/12

Dear Sirs:--No doubt you will be pleased to learn of the successful operation of the R-75 Motors during the recent snowstorm and blizzard which we have had in this part of the country.

We have encountered snow drifts from two to six feet deep on our system. The cars equipped with the R-75 Motors going through drifts for two days without any attention whatever and giving us no trouble whatever, not loosing a single armature or field coil during this severe service. When we were able to get the cars in for inspection we found the motors absolutely dry inside and the oil boxes with no moisture whatever. However, we did have one motor with the motor cover lost off, and when this motor was discovered we found the shell one-third full of water. This was taken out of the motor and same put back into service.

The service which the R-75 motors have given us during the past week satisfies me that these motors will work under any existing conditions.

Yours truly,
(Sgd) Chas. Sigler.

SAWS C M C SAWS

CMC No. 621 CAR RIPPING SAW

WE illustrate our latest improved Car Rip Saw, designed for the heaviest class of work and especially suitable for the heavy work of CAR SHOPS and SHIP YARDS.

It is of massive construction throughout. This feature, combined with its improved design, recommends itself to those requiring a heavy saw for hard work.

Two of these machines have just been sold to one of our largest railways for their new car shops.

The Arbor is of large diameter and runs in self-oiling bearings. The table is adjusted vertically by the hand wheel shown. A 32-in. Saw is regularly supplied with the machine.

FAIRBANKS - MORSE

Combined Gasoline Engine and Pump

Our Water Station Equipment will reduce your expenses, such as attendance, maintenance and fuel cost to a minimum. A great advantage in this system, whether for railroads water station or for town waterworks, is the little attendance necessary. A section foreman or a station agent can look over the engine and start it before taking up his other duties.

We contract for complete erection of these tanks and the furnishing of pumping machinery.

Titanium Steel Rails

Possess Unusual Durability

It has been proved beyond the shadow of a doubt that Titanium Alloy makes much better open hearth and Bessemer steel, and, therefore, when properly made, must result in stronger, safer and more durable rails.

The increased resistance to shock and abrasion resulting from the greater purity and ductility of the Titanium steel not only makes the rail less susceptible to heat and cold, expansion or contraction and consequent breakage, but it permits a substantial increase in the percentage of carbon by preventing the brittleness otherwise induced by the higher carbon content.

The Boston Elevated has just found that Titanium Open-Hearth rails are 41 per cent. more durable than the plain Open-Hearth. Many other roads report higher percentages.

READ THIS!

Prof. Henry M. Howe

the well known author of "The Metallurgy of Steel," says:

"Titanium * * * has a stronger affinity for oxygen than have the other well known de-oxidizers; * * * it probably gives the slag such a consistency that it separates more completely from the molten iron."

TITANIUM

The Wonder-Working Alloy prevents defects in rails

for the simple reason that it effectively removes slag and gases that cause defects. It leaves the metal clean and pure—ready to make sound, healthy rails that you can depend on absolutely. Their extra cost is only about \$2 per ton.

Write for Booklet No. 30, giving detailed facts and diagrams which prove conclusively that Titanium Rails safeguard your passengers and your profits.

READ THIS!

A prominent Rail Maker Says:

"I have treated during the past two years in the neighborhood of 3,000 tons of steel rails with small percentages of ferro-titanium, proportioned to, and with the result of eliminating, the 0.25 to 0.30 per cent. oxide of iron and slag which has been found in such rails prior to such treatment; also the included gases and also slag, the resulting products being practically free from all impurities."

Output of Titanium Steel in 1910—326,300 gross tons. The 1911 output was 410,600 gross tons.

Titanium Alloy is made for Canadian consumption by Electro Metals, Ltd., Welland, Ont.

The Statement of a Railroad Storekeeper

Here is a report made by Mr. J. P. Murphy, General Storekeeper for the L.S. & M.S.R.R.:—

"In the handling of oils the Bowser System is being used extensively, and with it, at every engine house where it has been installed, we have been able to DECREASE our forces TWO MEN, one night and one day, as it has been entirely possible to have the supply man deliver the oils in addition to his other duties. The pumps are located so the oils and supplies are delivered over the same counter."

The above is copied verbatim from his report to the convention. This shows the economy of the Bowser System under actual working conditions.

Why can't you save the labor of *two men* and maintain absolute accuracy in your oil department?

Marine Oil Storage

There is no place where more scrupulous care should be used than on steam ships, etc., not alone for the sake of cleanliness and economy, but a dirty engine-room is always a constant fire hazard.

Battery of Cut 64'S

The Bowser System has been especially designed for marine use. When desired the pumps are trimmed in polished brass to harmonize with the fittings in the engine-room.

Why not get our literature on this matter and see just how much improvement can be made in handling your oil? Ask for catalogue No. 18.

S. F. Bowser & Co., Inc., Toronto, Ont. 66-68 Frazer Avenue

For twenty-seven years manufacturers of self-measuring oil pumps and tanks, gasoline and oil storage systems, self-registering pipe line measures, oil filtration and circulating systems, etc.

THE SIMMEN SYSTEM

of Railway Signalling and Train Despatching

Despatcher's Table

THIS system combines all the features of Telephone Train Despatching with Remote Control Block Signals. A permanent record in the despatcher's office is automatic and continuously made and shows the exact position of trains at all times.

All signals from the despatcher are made direct to train crew (without any intermediary).

Switches on despatcher's table are interlocked and clear opposing signals are rendered absolutely impossible. The track capacity is increased and double-tracking may be delayed correspondingly. Passing sidings being all in electric communication with the despatcher become equivalent to telegraph stations with day and night operators.

NORTHEY-PLUMMER, LIMITED

Confederation Life Chambers,

TORONTO

OXYACETYLENE and all systems of WELDING and CUTTING PLANTS.

For welding steel, cast iron, copper, brass, lead, aluminum. For cutting steel and wrought iron. It helps you to KEEP YOUR SCRAP HEAP CORNER EMPTY.

Have your broken castings repaired. Do not lose time waiting for new castings. They can be repaired by welding the cracks and broken parts by the autogenous welding process and made as good as new.

Blow holes in rough or machined castings of any metal filled up. Holes drilled by mistake filled up. Broken or cracked gasoline engines and automobile cylinders welded. Broken or cracked pulleys, gear wheels, etc., welded. Flanges welded on pipes. Metal added on parts worn out by friction. Teeth renewed on broken gear wheels. **Transformer tanks and all kinds of tanks entirely made by welding, absolutely water or oil tight and to stand pressure.** Cutting steel or wrought iron of any thickness and in any position.

Cracks, pitting and corrosion in marine boilers can be welded by this process.

Fire boxes can be cut out with great speed.

OXYGEN

of guaranteed purity made by the Claude Process. The largest and most up-to-date plant now in operation on this continent. Is supplied at a low price to all users of the process.

¶ The set-in back and the steel lug save one pound of unnecessary metal.

The Unbreakable Brake Shoe

EFFICIENCY

The steel reinforcement is solidly embedded in the cast iron, being conformed with inward curve, and setting vertically. This strengthens and holds the shoe intact, permitting wear to wafer thinness without breakage.

SAFETY

The lug and insert are one solid unbreakable piece of steel, made accurately and fitting perfectly and quickly. No wrecks from dropping shoes.

ECONOMY

More shoes per ton and more wearing material—that wears —per shoe. Improved service. Better price.

¶ Worn to a wafer, the shoe remains intact, 100% efficient, giving maximum wear and minimum scrap.

Why the C. P. R. North Toronto Route to Ottawa and Montreal is the Logical One

The train leaves as follows:

Leave North Parkdale	- - -	9.15 p.m.	Arrive Ottawa, 6.50 a.m.
Leave West Toronto	- - -	9.30 p.m.	Arrive Montreal, 7.00 a.m.
Arrive North Toronto	- - -	9.40 p.m.	Daily.
Leave North Toronto	- - -	10.00 p.m.	Will Stop at Westmount.

Electric Lighted Compartment Cars and Standard Sleepers for both points.

- ¶ The North Toronto route is over an hour faster and overcomes a long hill climb for the train out of Toronto, obviating any inconvenience and ensuring early arrival at Montreal and Ottawa.
- ¶ The roadbed has been improved till it is unexcelled in Canada.
- ¶ The equipment is "Canadian Pacific Standard," a synonym for the "best" and attentive porters, ensure efficient service.

The Stuffy Sleeping Car Problem Solved

In 1785 Van Marum observed that oxygen gas through which an electric spark had been passed possessed a peculiar smell and at once tarnished a bright surface by mercury, but it was not until the year 1840 that the attention was again called to this fact by Schonbein. This celebrated chemist showed that the peculiar strong-smelling substance, to which he gave the name of ozone, was capable of liberating iodine from potassium iodide and of effecting many other oxydizing actions.

Researches, however, conducted with the greatest care, have shown that ozone is nothing more than concentrated oxygen. As the ozone exists naturally in the atmosphere, it has been rightly designated nature's disinfectant, and possessing this extraordinary advantage over all other disinfectants, that, while destroying the deleterious matter or organisms in the atmosphere, it imparts at the same time to the air certain positive properties, rendering it more healthful and invigorating for respiration.

Ozone is possessed of a very powerful and penetrating odor and very slight traces of this gas can be readily detected by the sense of smell. It has the power of oxydizing or destroying any offensive germs which the air may contain, and it is the most powerful oxydizer known.

The ozonair system of ventilation consists briefly of withdrawing the air supply from as clean and pure a source as possible and removing the smuts and other solid floating matter by means of a filtering screen. The clean air is then passed into a mixing chamber where it is purified and partially sterilized by means of ozone. From the chamber it is distributed by means of ducts to the various parts of the car.

The method of treatment imparts an artificial sense of coolness to the atmosphere, which is most refreshing in the hot weather. The distribution is scientific and practical. Draughts are avoided, and the amount of air and also the strength of the added ozone can be adjusted at will, so that the atmosphere in the car can be varied at any time. No complicated plant is required, the whole working is automatic and depends on the manipulation of two or three ordinary electric switches.

Write for Ozonair Booklet.

RAND**DUPLEX
POWER-
DRIVEN****COMPRESSORS**

In buying Rand Compressors you buy future machines, not low price, but high grade, high efficiency, large capacity machines, that mean sustained economy.

Saving in power consumption, breakages and delays are more important considerations than a slight saving in first cost.

See Rand designs, then compare with other constructions. No unnecessary weight, but judicious distribution of metal.

Superintendents of Motive Power, Fuel Agents, Officials in Charge of Operation

Should investigate the merits of the Dearborn Method of Water Treatment.

It is inexpensive—costs less than any other method.

It is effective—the waters requiring treatment are analyzed, and the Treatment made to meet the actual requirements.

It accomplishes—the removal and prevention of scale—stops leaks—prevents corrosion—overcomes all foaming trouble.

The benefits—life of boiler tubes greatly lengthened—expense for boiler work reduced to minimum—mileage between boiler washings increased—large saving in fuel effected by having boilers free from scale. All the troubles due to bad water overcome and service generally improved.

Experts furnished to instruct in application of Treatment.

June, 1912.

The Construction of the Algoma Central and Hudson Bay Railway.

By R. S. McCormick, M. Am. Soc. C.E., Chief Engineer.

The construction of the Algoma Central and Hudson Bay Railway was originally begun in the spring of 1900 by the old Lake Superior Corporation, under the management of F. H. Clergue, and a land grant and subsidy was granted at that time by the Dominion Parliament.

Construction was carried on until the spring of 1903, at which time there was graded a continuous line from Sault Ste. Marie, Ont., to a connection at Josephine Jct., 170½ miles north, with a line extending down to Lake Superior, at Michipicoten Harbor. This section, 20 miles long, was built in 1899-1900 to gain access to valuable iron mines in this territory, owned by the corporation. The grading on the main line was not completely finished, however, as financial misfortunes overtook the corporation and track was only laid to about 55 miles north of Sault Ste. Marie. A large number of bridges and trestles between this point and Josephine Jct. were also not built but otherwise the line was completed to sub-grade. Between 1903 and 1908 additional track was laid to carry the end of steel to mile 68, but no other work was done north of this point.

In 1909 active measures were begun to complete the A.C. and H.B.R. by an English syndicate, which had, in the meantime, secured control of the Lake Superior Corporation, including the Algoma Steel Co., the railways and other transportation and industrial interests, at Sault Ste. Marie. Before undertaking the completion and proposed extension of the railway, a report was made for the management on the whole project by F. H. McGuigan, of Toronto, formerly of the G.T.R. He reported favorably on the completion of the line and on its extension to connect with the National Transcontinental Ry.

The necessary financial arrangements being successfully completed, the first work undertaken was the locating of a line to connect the old grade near Hawk Lake with the C.P.R. This was accomplished by the location and construction of 30 miles of line from Hawk Lake Jct. to Hobon on the C.P.R. S. Keemle, Toronto, was in charge of the locating party on this work. A 0.6% compensated 6° maximum curve line was secured at a cost of about \$38,000 a mile complete, including track and structures. In May, 1910, a contract was let to the O'Boyle Bros. Construction Co., of Sault Ste. Marie, Ont., for this section, and on July 1, 1910, another contract was let to the same contractors for the completion of the main line from mile 68 to Josephine Jct., mile 170½, including re-grading at points where cuttings had slid in, bringing up settled embankments, all the bridging (excepting Montreal River), track laying and ballasting.

In the meantime a spur line of 9½ miles was located from a point 17 miles from Michipicoten Harbor on the line extending from the lake to the mines, northerly, to a new Magpie iron mine. This construction, including track laying, and the ballasting, was also let to the O'Boyle Bros. Construction Co., and in May, 1910 active work was started on this section.

The railway company also started work to repair and re-tie that section of the 20 miles extending from Michipicoten Harbor to Josephine Jct. known as the Josephine branch, being the upper 10 miles of the line which had been wholly unused for over eight years, and which was in wretched shape, as the ties were rotten, and very little ballast having originally been put on when first constructed it was necessary to re-ballast the whole section. The railway company did this work with its own forces with some help from the O'Boyle Bros. From May, 1910, to Aug., 1911, the work on the main line, north from mile 68 and south from Josephine Jct., the grading of the Hawk Lake-Hobon sec-

and 2.5% flat, with the traffic. The first 4½ miles to the crossing of the Magpie River was light work, except for some heavy side cutting descending the slope to cross the river, at which point the adverse grade of 1.5% compensated was located. From the river crossing, however, to the mine the line is heavy, and at mile 7½ there is a timber trestle 900 ft. long, 80 ft. high, on a 12° curve and a 1.75 grade. Up to this point the grade is 2% maximum, from here to the mine site it is 2½%, 12° being the maximum curve. Very large expenditures are being made by the company in opening the mine, and in addition to a plant for treating the siderite ore, a model mining town is being built. This branch is laid with 80 lbs. A.S.C.E. rail with Seller's shoulder tie plates on all curves and is most substantially built in all respects, excepting that timber and piles were used in bridging.

On July 15, 1911, the sub-contractors on the Hawk Lake-Hobon section finished the grading. Murdock Bros. had the lower 19 miles, and Cavicchi and Pegano the upper 11 miles. The work was quite heavy, the grading quantities being 732,933 cu. yds.; classified 261,269 cu. yds. solid rock; 94,378 cu. yds. loose rock, and 377,286 cu. yds. common excavation. In addition there was 20,178 cu. yds. over break in rock cuttings. About 3,000,000 ft. b.m. of bridge timber and 40,000 lin. ft. of piling was also used on this work. Other items of grading, etc., included 1,500,000 cu. yds. overhaul, 170,000 ft. b.m. culvert timber, 220,000 lbs. bridge iron, 231 cu. yds. dry stone masonry, 423 cu. yds. cement masonry and other small items. The rock work was exceptionally well done, as the specifications only allowed common excavation for over break and all the time the work was in progress this was enforced. On final estimate, however, a fair amount of over break was given as solid rock. Track laying and some ballasting was done this year and the bridge work was completed. On Jan. 10, 1912, track was connected up, giving railway connection from the C.P.R. into the mines of the Michipicoten district. Some ballasting was also done this year.

Work on the main line completion progressed slowly from June, 1910, to May, 1911, at which time track had reached the Montreal River, mile 91½ north of Sault Ste. Marie. Here a steel viaduct 1,550 ft. long and 130 ft. high, situated at the head of a falls 150 ft. high, had to be built. This viaduct was designed in 1902 by Boller and Hodge, of New York city, and a contract was arranged at that time with the Canadian Bridge Co. for its erection. Due to the suspension of this work the contract was never carried out, and upon taking up the work to complete same the writer awarded another contract to the Canadian Bridge Co. There is 1,745 tons of steel in this viaduct, and the alignment being on a curve at each end it was a very interesting job of erection. The viaduct consists of tower girders supported on steel legs, with concrete pedestal piers with end abutments. There are thirteen 30-ft. tower girders and one 40 ft. situated on an island in the middle

Algoma Central and Hudson Bay Railway and Algoma Eastern Railway.

tion, the building of the Magpie branch and the rebuilding of the ten miles of the Josephine branch, proceeded with the usual ups and downs peculiar to railway construction work in such a country. Poor labor, generally a lack of same, bush fires, whiskey and all the troubles incident thereto, known only to the experienced, were faced and fought.

By Aug. 1, 1911, the Magpie branch was completed, at a cost of practically \$275,000. The line was built on a 1.5% compensated grade against the traffic

of the river. The intermediate girders consist of one 85 ft., five 75 ft., ten 60 ft., and two 30 ft. spans. The structure is designed under the Dominion Government specifications, class 1 loading, and is a splendid piece of work. Due to

A.C. and H.B. Ry. Erection of Viaduct at Montreal River.

some poor work in concreting the piers and having to re-build some, the erection was slow. However, track was laid over this viaduct and track laying proceeded north of it in Oct., 1911.

At the date of writing track is at mile 104½. At the north end track laying has progressed to mile 117 to date, leaving a gap of 12½ miles, which, it is expected, will be finished by the middle of June. The principal reason for the slow progress made in track laying is on ac-

ish Columbia fir, it is necessary to build these bridges from end of steel. The old line from Sault Ste. Marie to Hawk Lake Jct. is through a most difficult country to build in, and the location secured, while good work on the whole, shows it. The line to Hawk Lake Jct., with the new extension, and on to Michipicoten is badly handicapped with heavy grades and sharp curvature, 1½% uncompensated grades and 12° maximum curves. To improve this, grade and alignment would require extensive re-locating, hence, for the present, this is not contemplated. The route is very picturesque and travellers have a treat in rugged scenery awaiting them on the opening up of the Algoma Central for traffic, north of Sault Ste. Marie.

While the above work was progressing south of the C.P.R. main transcontinental line a location was made north to the National Transcontinental Ry. at the new town of Hearst (or Grant) the first division point west of Cochrane and 101 miles north of the C.P.R. This location is on the same grades and curvature as the Hawk Lake-Hobon section, viz., 6.6% compensated grade and 6° maximum curves. Louis Whitman, locating engineer, had charge of the location, with Sanford Hazelwood and W. H. Wilkie in charge of the parties. The route traversed by this line is through rough country for 30 miles north of the C.P.R., north of this the line enters the great clay belt of Northern Ontario and the grading is light. The south 30 miles, however, brings up the average cost of this line to about \$30,000 a mile, including track and structures.

The crossing of the C.P.R. and the Canadian Northern Ontario Ry. (under construction) is made at grade. There are very few bridges on this 100 miles, and none at all of any size excepting some bay crossing of Oba Lake, where four pile trestles are driven, one of them being 1,302 ft. long with deck 10 ft. above the water. The balance of the bridging consists of pile structures, the largest, the crossing of the Mattawishiquia river, near Hearst, at the junction with the National Transcontinental Ry., being 700 ft. long.

The grading quantities on this 100 miles will be, approximately 360,000 cu.

perior Construction Co. for the construction of the section complete, including grading, bridging, track laying and ballasting. To date 60% of the grading is completed, and it is expected track laying will be started about June 15 at

A.C. and H.B. Ry. Viaduct and Falls of Montreal River.

Hobon and reach the C.N.O.R. crossing in October, thus placing the A.C. and H.B. Ry. in a position to deliver construction material and supplies to the contractors for this line at Oba.

Explorations for further extensions of the A.C. and H.B. Ry. to the north of the National Transcontinental Ry. have been made. A copper metallic circuit telephone line has been constructed from Sault Ste. Marie, through to Michipicoten Harbor and extensions to the mines and north to Hobon and Hearst (Grant) will be made this summer.

At Sault Ste. Marie, new terminals, consisting of a modern locomotive house, machine shops, stores and office building and a new terminal station and office building are all contracted for and the work started. This work involves the expenditure of about \$500,000, and includes an extension of the main line to reach nearer the centre of the city of Sault Ste. Marie, and a new yard at Tagoma, the industrial centre, where extensive alterations and additions to the terminal facilities are being made. The company will also build a large coal and ore dock at Michipicoten Harbor, in the near future.

The above work has all been in charge of the writer, as Chief Engineer, since the beginning, with a staff of division and resident engineers. G. F. Horsey and C. Le B. Miles have charge of the work at the north end, and L. C. Maxwell and J. A. Hedgecock at the south end as division engineers. W. C. Franz is General Manager and G. A. Montgomery, Superintendent of the A.C. and H.B. Ry., as also of the Algoma Eastern Ry.

A.C. and H.B. Ry. Montreal River Viaduct and Yard.

count of the excessive amount of bridging and trestling on this line.

Between Sault Ste. Marie and Josephine Jct. there are about 16,000,000 ft. b.m. of bridge timber in 140 structures, besides 100,000 lin. ft. piling. Some of these bridges are very large, and as all the bridge timber used, excepting a few thousand feet cut in the country, is Brit-

yds. solid rock; 250,000 cu. yds. loose rock; 1,500,000 common excavation, and 3,500,000 cu. yds. overhaul. There will be about 80,000 lin. ft. piling and 1,500,000 ft. b.m. bridge timber, besides other lesser items. Corrugated ingot iron pipe is used in culverts, no concrete at all, and a few native timber culverts. In Aug., 1911, a contract was let the Su-

Driving Wheel Speeds.—A simple method of determining driving wheel speeds is given by the Baldwin Locomotive Works, as follows: To obtain revolutions per mile, divide 1,680 by the diameter of the driving wheel in feet; to obtain revolutions per minute, multiply the speed in miles per hour by 28, and divide the product by the diameter of the driver in feet.

The Construction of the Algoma Eastern Railway.

By R. S. McCormick, M. Am. Soc.C.E., Chief Engineer

The original charter for this railway, of 855 miles, now being completed from Sudbury to Little Current on Manitoulin Island, Ont., was obtained by F. H. Clergue at about the same time as the Algoma Central and Hudson Bay Ry. project was launched, a land grant

the 20 mile section from Little Current to the main shore at Whitefish, and in March, 1911, another contract was let to the Superior Construction Co. for the balance of the work from Whitefish to Crean Hill, 42 miles. The grading work on this 62 miles is practically complete and track laying was recently started at Espanola. The 62 miles of track will be laid and ballasted about Oct. 30 next.

The country traversed by this railway is almost wholly unsettled and south of

one 176 through rivetted truss at the second crossing of the Spanish river at Espanola (built in 1901) and two 100 ft. girder spans at two other points, together with a 36 ft. deck girder span on concrete at an overhead crossing of the Government trunk road near Espanola. These major structures are supplemented by a number of timber trestles and pile bridges. At Little Current, in order to cross the channel in front of the town, through which there is considerable vessel traffic, a bridge, some 600 ft. long, is required with a draw span. This will be erected this year.

The traffic expected for this railway consists of ore, pulp and paper, coal and the products of Manitoulin Island, which, previous to the construction of this line, was entirely dependent on water communication with the mainland. This island is 90 miles long, averaging 8 to 12 miles wide and is capable of great development. The population at present is about 20,000 and at least one-half the island is fine agricultural land, particularly adapted to hay and stock raising. The construction of the Algoma Eastern Ry., formerly known as the Manitoulin and North Shore Ry., has been most eagerly looked forward to for years by the Manitoulin Islanders.

The writer has been in charge of the completion of this line as Chief Engineer since the work started, with B. E. Barnhill as Division Engineer, and headquarters at Sudbury.

A.C. and H.B. Ry. Trestle at Mileage 104.9 from Sault Ste. Marie.

and subsidy accompanied the granting of the charter.

Actual construction of this line was delayed from year to year, after the first section of 13 miles, extending from Sudbury to Gertrude Mine, was constructed in 1900-1901. An extension of ten miles from Gertrude Mine to Crean Hill was built in 1909, carrying the end of steel 23 miles west of Sudbury, where connection was made with a spur track connecting with the C.P.R. at Victoria Mine station. This spur, three miles long, is owned by the Canadian Copper Co. and connects the Crean Hill mine with the C.P.R. This 23 miles of line passes through the richest nickel district in the world, the famous Sudbury district and practically the entire revenue derived from its operation is for handling the ore from the Creighton and Crean Hill mines to the Canadian Copper Co.'s roasting yards at Copper Cliff.

In 1909-1910 surveys were undertaken to locate a line extending this railway to Little Current, on Manitoulin Island. A party, in charge of Louis Whitman, locating engineer, was started at Little Current on a route over which the writer had run a line for the old Sault Company in 1900. This line traversed the islands, and along the shore of the north channel to the mainland at the mouth of the Whitefish river, where it cut through a range of high rock hills facing the lake, thence to a connection with the C.P.R. at Espanola, on the Spanish River. A short section of 1½ miles of this original surveyed line was built in 1901, connecting the Spanish River Pulp and Paper Co.'s plant on the Spanish River with the C.P.R. Sault Ste. Marie branch. This little section or spur was built by the Sault Company and turned over to the C.P.R. to operate, under an agreement contemplating the ultimate completion of the whole project.

When the writer took charge of the work, a location was pushed through to connect with the Sudbury end at Crean Hill, 62 miles from Little Current. A maximum 1.25% compensated grade and a maximum 11° curve (with a 12° curve near Whitefish) was secured at a cost of about \$32,000 a mile complete, including track ballast and buildings. In July, 1910, a contract was let to the O'Boyle Bros. Construction Co., of Sault Ste. Marie, Ont., for the construction of

Espanola is very rugged. From the Whitefish river to Little Current the scenery is most picturesque, as the line follows close to the water and winds around the headlands and bays of the section of the north channel known as the Bay of Islands. The grading on this section, while practically all solid rock, was not excessive in cost, averaging about \$20,000 a mile, including bridging. From Espanola easterly to the junction with the old line at Crean Hill the line passes over a better country, but, from an agricultural point of view, of little value.

An under crossing of the C.P.R. Sault Ste. Marie branch is obtained near the village of Nairn Centre, where the Algoma Eastern Ry. passes under the C.P.R. embankment, the tracks of the

A.C. and H.B. Ry. Alice Lake Trestle, Magpie Branch.

latter company being carried over on a 27 ft. 7 ins. skewed deck plate girder span on concrete wing abutments.

The bridging on the entire line from Sudbury to Little Current is light for such a country. The steel structures consist of one 105 ft. and one 60 ft. deck plate girder spans on stone abutments and centre pier at the Vermillion river crossing, 17 miles west of Sudbury; one 180 ft. through rivetted truss span at the Spanish river crossing, mile 42;

Dominion Government Railway to Hudson Bay.

Tenders were received, May 16, for 40 sets of switches and frogs at present required for the line.

Specifications and plans are reported to have been completed for the second section of this line, and Ottawa press reports state that tenders for its construction are to be invited at an early date. The section will be 120 miles long, and will carry the line to the point at which the route is common, whether the terminal on the bay is at Port Nelson or Fort Churchill. With a view of determining this, it has been decided to send out a further exploratory expedition, by the Dominion Government s.s. Minto.

In addition to the work on the bay at the two ports, the expedition will report as to lighthouses and other aids to navigation necessary in Hudson Strait. (May, pg. 240.)

The 24-Hour Time System in which the hours of the day and night are numbered from 0 to 24, beginning at midnight, is to be adopted on the French Government railways, beginning with next summer's schedule.

Diaphragm Between the Cab and Tender on C. P. R. Passenger Locomotives.

Although the discomforts experienced by the engineer and fireman in severe weather have long been recognized by different railways, up till recently no definite steps have been taken to improve their conditions of operation by protecting them in some measure from the inclemencies of the weather, and the extreme cold found in certain localities during the winter.

The Canadian Pacific Ry. has solved this problem in a large measure in the manner indicated in the accompanying illustrations, figs. 1 to 3. The rear end of the cab, instead of being left open and unprotected except for the canvas drop in general use, is completely closed in by the arrangement shown, the rear end only having an opening in the centre, in line with the coal door opening of the tender. Around the contour of this opening there is a diaphragm ring similar to that found on the end of vestibule coaches, only not as deep. This ring may be seen to the best advantage in fig. 3, where it will be noticed that it is rivetted to the rear wall of the cab to form an integral part thereof.

A corresponding diaphragm ring slightly smaller is held in close contact with this cab ring by four plungers carried in the front wall of the tender, and which project back into the coal space, as may be seen to the left in fig. 3. The construction of this plunger may be seen in fig. 1 of the diaphragm mechanism. The plunger, guided in a bushing in the tender wall, bears against a coiled spring in a pipe barrel, being thereby kept at all times in its forward position, holding the two diaphragm rings in close contact.

Provision for taking up the angular movement between locomotive and tender when taking a curve or when swaying on rough track, is provided for in a simple manner, as may be seen from fig. 1 in the section of the diaphragm mechanism. In the first place, the connection between plunger and tender diaphragm ring is made with a ball and socket joint which allows the necessary angular movement at that point. Attached to this tender diaphragm ring there is a plate cut out to the contour

the walls of the entrance into the coal spaces by means of springs at each of the hinges, so that the locomotive on rounding a curve compresses the springs

parts is supported from the plungers, which have a fixed position outside of their sliding movement. From the ball and socket joint on the outer end, alignment of the tender diaphragm ring is maintained; while the side flaps for keeping a tight connection along the sides of the passage into the tender, are

Fig. 1—C.P.R. Diaphragm Connection between Engine and Tender.

on one side and releases them on the other, maintaining a tight connection between the cab and the entrance into the coal space. At the hinged joint, the hole in the flap part of the hinge is elongated to allow for relative side movement when rounding a curve. A loose

held in contact by the angular coiled springs bearing on the ball and socket joint of the plunger. The connection between engine and tender is by this means kept quite tight. The only opening to the rear is the shovel opening at the lower edge of the coal doors, the

Fig. 2—Entrance and Steps of Diaphragm Cab.

of the opening into the tender coal space. The vertical faces of this plate carry eight hinges—four on each side—attached to which are two vertical plates at right angles, bearing against

Fig. 3—Top and Rear View of Diaphragm Connection.

unhinged joint is left along the top edge of the opening, as there is but little relative movement between the two.

It will thus be seen that the whole weight of the tender diaphragm ring and

latter only requiring to be opened when it becomes necessary to pull down coal from the top of the pile. Even that operation is made unnecessary except when the coal shifter with which all

these diaphragm cabs are equipped, is out of order, which is sometimes the case from their freezing up.

The old entrance through the rear of the cab is replaced by a door opening in the side of the cab near the rear end, as shown in fig. 2. Inset steps, built into the sides of the cab walls, which are continued down below the cab floor an amount sufficient to embody the steps,

lead into the cab through this side entrance, replacing the former offset steps at the rear end of the cab.

A number of passenger locomotives have so far been equipped with this new diaphragm cab, most of those now in service being on the three runs of the Montreal-Toronto line. Their introduction has met with great favor from all concerned with their operation.

The Oxy-Acetylene Process in the Railway Shop.

By Frederick H. Moody, B. A. Sc.

The technical press has been devoting considerable space during the last few years to the uses of the oxy-acetylene process in the railway shop, more particularly on locomotive repair work where work must be produced expeditiously so that the earning power of a locomotive on the road might not be lost during the period that would be required to make the customary repairs. Most of these articles describing the advance of the subject, and its all round usefulness, have dealt with the practice followed in the United States, the instances cited coming for the most part from the same place. While the practice on both sides of the line is identically the same, the progress made in Canada concurrently with that in the United States, ought to be described in order to emphasize the fact that equally extensive repair and general work is being undertaken on this side of the line, and that the process where installed has been developed to an equal degree.

Modern conditions of keen competi-

fractured place, heat alone entering into the operating mediums, with no pressure involved.

A fusion of the metals subjected to the oxy-acetylene flame causes the molten portions of the parts to commingle to form the union. This flame is said to have a temperature in excess of 6,000 degs. Fahr., formed by the mixing in the proper proportions of oxygen and acetylene gas at the tip of a torch. This very high temperature is the result of the fact that acetylene gas has more weight per given volume than any other combustible gas, and is the closest approach to gaseous carbon known to chemistry. In consequence, the temperature of combustion is very high and intense heat is generated.

Two systems of operation are employed on this continent—the high and the low pressure. It is the former of these two that is in most general use, the acetylene gas being led to the nozzle of the torch under an appreciable pressure instead of the oxygen, which is

groove thus formed is filled with the same metal under the torch.

The general consensus of opinion among the users of the oxy-acetylene process seems to be that a long period of trials and tribulations is almost invariably experienced before satisfactory results can be obtained. The earlier experiences often lead to a desire to reject the process in favor of the older methods of repair, so discouraging are the results obtained in the earlier stages. In most instances, where the operator perseveres, very satisfactory results are the outcome, and the oldest users are for the most part the most enthusiastic advocates.

A few examples of the use of the process and the results obtained, as they have come under the notice of the writer, will undoubtedly prove of interest. In the C.P.R. shops at West Toronto, the process has been carried to as fine a stage of development as is generally to be found in the railway repair shop. Here, the locomotive shop has been piped throughout with acetylene, with connections at convenient points, these connections being painted red for identification purposes to prevent confusion with the air piping.

In these shops, a great variety of work is handled, though the principal work is that of patching up boilers, for which the oxy-acetylene process is peculiarly adapted. The accompanying illustrations show two instances where heavy repairs were made unnecessary. In fig. 1, the front end of the inside sheet at the bottom of the water leg near the mud ring had been so reduced in thickness, from the attacks of acid water accumulating in the interior at that point, that the plate was considered

Fig. 1—Patching the Inside Sheet of the Firebox by the Oxy-Acetylene Process.

Fig. 2—Repairing the Front Tube Sheet by the Oxy-Acetylene Process.

tion involving the introduction of more efficient, and in some cases scientific, management, require that the methods of doing work must be constantly being improved in order that the quality of the work may be raised, and at the same time have the cost of production decreased—improvements in both directions. Oxy-acetylene would seem to be doing all this, with a saving of time, less waste, increased output and greater efficiency. This is emphasized by the speed with which a crippled locomotive may be taken into the repair shop and be completely repaired in a remarkably short time as compared to former methods. In addition, there is the factor of making many complicated repairs that would not be considered possible by the older methods, or, if considered possible, would not be deemed worth while from the poor quality of job that would result.

The term "welding," as applied to the oxy-acetylene process, is somewhat a misnomer, as dictionaries define it as "to press or beat into intimate and permanent union," neither of these actions entering into the process, it being purely autogenous, more metal building up the

under pressure in both systems, drawing the very low pressure acetylene along with it to the point where it ignites. The Academy of Science in France determined that the proper proportions for the two gases to give the best results was one of acetylene to a little more than one and a quarter of oxygen.

Impurities in either of the gases tend to produce inferior work, and the intensity of the flame is decreased so out of proportion to the amount of the impurities that the cost of the work increases very rapidly. This makes good gas a prime requisite. Impurities in the acetylene are largely due to the heat evolved in the acetylene generator after it has been in operation for some time. This internal heat produces other hydrocarbons in the gas, giving the resulting flame a carbonizing effect that will harden the weld and make it brittle.

There are two classes of welds. The first, for very thin plate, requires the addition of no extra material at the weld, the edges being brought into intimate contact and fused together. The second class, for heavier plates, requires that the contact edges be chamfered, and the

dangerous. Under former conditions, this would have required a patch to cover this part of the firebox, a construction that in itself is objectionable from the fact that it makes a double thickness wall through which the heat has more difficulty in penetrating, and, in consequence, that part of the inside sheet is particularly liable to further damage from burning. The oxy-acetylene process solved the difficulty. The original piece that had been corroded was first of all cut out by the oxy-acetylene flame, removing the whole area that was affected. The oxy-acetylene flame in removing the injured piece cuts it out perfectly clean, the flame penetrating a small incision made at one end, cutting along at a rapid rate with a narrow cut. The holding staybolts are drilled out and the damaged portion removed. Another piece of good plate is then cut to the shape of the removed portion, and the staybolt holes laid out and drilled or punched to make it in every way a counterpart of the removed piece. The joining edge of this plate, as well as the good edge of the side sheet, are chamfered, and the new piece bolted in place

as indicated. With the torch and a piece of filling wire, the joining crack is filled up, making a perfect joint with nearly unit strength. The staybolt holes are then tapped from the outside sheet, and the bottom rivet holes reamed through the mud ring, when, with the insertion of the staybolts and rivets, the firebox is again ready for service.

The front tube sheet in fig. 2 is similarly treated. The lower part, containing 19 tube holes, became eaten away, and would have required a whole new tube sheet had it not been amenable to the oxy-acetylene process. The latter method was used. Twelve bridges were cut across with the flame, and the rivets at the bottom driven out, removing the section. A new piece, similar in every particular, was then bolted in position, and the chamfered edges of the flanges and bridges were filled in by the torch, making a perfect weld. The rivet holes and tube holes then required reaming out.

The firedoor opening, from the repeated working action due to alternately heating and cooling, frequently breaks across, or checks at the rivet holes. Such injuries are repaired in the same manner as above, by the cutting out of the injured piece and welding in a new piece.

Numerous other parts of the boiler are amenable to the oxy-acetylene torch. Patches may be made in almost any part of the boiler, interior or exterior, as the foregoing examples indicate. A novel use of the torch for repair work on the boiler came to notice recently at the West Toronto shops. After nearly every trip on the heavy Muskoka run in the summer, it was found that the large superheater flues leaked at the front tube sheet, and required to be caulked before further service could be had out of them. The idea of welding them to the sheet suggested itself, and on trial was found to be so successful that all the flues are now welded into place, and no trouble is experienced with leaky superheater flues.

Cast iron parts of the locomotive can likewise be welded. At West Toronto recently, a steam pipe crack some 2 or 3 ft. in length was satisfactorily welded. From Montreal comes a report of the broken flange of the cast iron cylinder being mended. One of the cover studs, on being screwed into the cylinder head, broke inwards a piece from the cylinder bore, the broken fragment measuring about 2 ins. along each edge. This was satisfactorily welded into place. Greater welds than this on cylinders have been reported.

The steel underripping of the locomotive may also be repaired. At the West Toronto shops, links, spring hangers, motion work parts, etc., are being repaired.

Frames are rarely welded by this process of autogenous welding, these for the most part being fixed with thermit. An instance of the use of the oxy-acetylene process on frames occurred recently on a G.T.R. locomotive that broke down near Orillia and was repaired at that point. It was an old 8-wheeler with the driving wheel jaws integral with the top rail, and bolted to the lower rail by flanges from the jaws. Front and rear of one of the driving wheel journals and on each side of the locomotive, these jaws had broken, making four breaks in all. These were put in good order by welding with oxy-acetylene.

In car repair work, an instance occurred recently that demonstrated the value of this new process. Heating coils have a marked tendency to break along the original weld of the pipe, which, if even for a short distance, destroys the coil. These coils cost \$65 to replace, but can be repaired in a very short time at small expense by the oxy-acetylene flame.

Around the shop itself, among the tools, there are numerous places where

it can be used. One particularly useful purpose to which it is applied is that of welding high-speed steel ends on to soft-steel bodies, effecting a material saving over solid tools, and at the same time presenting a means of utilizing the used up old tool end stubs.

In electric railway work, another field is presented, but this end does not seem to have been developed to the same extent as in steam railway practice. One instance in Canadian electric railway practice came to notice recently, in which a considerable saving was effected, as the part repaired was one that involves a very important item of expense in electric railway rolling stock maintenance. The article referred to is the motor shell. These shells frequently have one of the pinion shaft lugs broken off, causing the discarding of the shell. By the oxy-acetylene process, these broken off lugs can be welded on to give a cast-

Folding Washstand for Canadian Pacific Railway Sleeping Cars.

For a great many years there has been practically no change of importance in the interior arrangement of sleeping car washrooms other than the constantly improving refinement in interior finish of the room and parts, with the addition of a few added comforts. But in so far as any change from conventional lines is concerned, there has been but little development, the changes for the most part being those of refinement alone, with nothing radically new involved.

A departure from this state of affairs that has great bearing on comfort to the travelling public has been embodied in the washroom construction of the sleeping car *Sicamous*, recently built at the C.P.R. Angus shops, Montreal, this innovation taking the form of a folding washstand. It only requires mentioning to bring to the minds of all, the limitations to the present washstand system in the smoking compartment. For a period extending over about half an hour in the morning, the washstands are the scenes of great activity following the call to rise. This rush period over, there is but little further requirement for washing facilities, except at odd times

Fig. 1—Folding Washstand for C.P.R. Sleeping Cars.

ing as strong as it was before the fracture. Such repairs have been made for the Montreal Tramways Co.

While the foregoing examples do not cover a great many different parts, they are varied sufficiently to show the possibilities of the system; and, what is even more important from the standpoint the writer had in mind when planning this article, it shows the extent to which the process has been introduced in Canada, and that Canada is doing work that is equal to any that is being done abroad or to the south.

Largest Non-articulated Locomotives.—What is said to be the largest non-articulated locomotive ever constructed has recently been delivered to the Chicago, Burlington and Quincy Rd. by the Baldwin Locomotive Works, on an order of five. These locomotives, of the 2-10-2 type, are replacing 2-6-6-2 type ones of the same power on that road, which is significant of a return to solid wheel base locomotives. The total weight of this locomotive is 378,700 lbs., of which 301,800 lbs. is on the drivers. The average weight per driving axle is in excess of 60,000 lbs. The locomotive wheel base is 39 ft. 8 ins., with a solid driving wheel base of 21 ft. 7 ins.

The Intercolonial Ry. has substituted the a la carte system for the table d'hôte system on its dining cars.

throughout the day, for which purpose a single basin would prove ample. But under the standard arrangement the three stands are there all day, and, what is more important, occupying valuable space in the smoking room, which is always in great demand during the daytime and evening.

The idea was conceived of utilizing the greater part of this space to advantage as seating room by making two of the three washstands convertible into seats, the third stand made stationary, providing sufficient washstand capacity for the light hours. The construction and arrangement of the folding or convertible stand as installed in the *Sicamous* is shown in the accompanying illustrations. The construction and operation of the parts is shown in fig. 1; the folding washstand open in fig. 2; the same stand converted into an upholstered seat in fig. 3, and the permanent washstand in fig. 4. Referring first to fig. 1, the construction will be examined. Swinging on trunnions at their ends, there is a seat and a seat back, both so arranged that they may be swung around through a right-angle turn, catches in these two positions of each, locating the seat and back in their open or closed positions as desired. The seat contains no features of peculiar interest other than the soiled towel basket attached to the seat bottom, and which is

thrown into position by the act of opening the stand. When used as a seat, this basket is underneath and out of sight.

The seat back, containing the two basins, is unique in design. Its front is leather upholstered like the seat, but the rear face of the back contains the basins with the necessary pipe connections ingeniously arranged. In the wall out of which the basins swing, there are

hose connection draws the water off into a sloping drainage pan beneath, passing out of the car from this point in the usual channels. As fig. 2 indicates, the basin, table, and all the fittings are nickeline, and in almost every particular resemble the permanent basins of the C.P.R. standard practice.

At the top of the seat back there is a hinged flap under the mirror which, when lowered on the seat top when the

Fig. 2—Folding Washstand Open for Use.

Fig. 3—Folding Washstand as a Seat.

the usual faucets (see also fig. 2), but from the fact that the basins are not permanently located, there cannot be a solid pipe connection from the faucets to the basins. This is taken care of very simply by having a small diameter pipe so located that when the basins are swung into their operative position, this pipe will slip into another pipe of somewhat larger diameter connecting with

latter is up, finishes off the seat in such a manner as to give it a permanent appearance as fig. 3 shows.

The impression might be gathered that in the construction of the basin in the seat back in this manner the water might leak over into the interior of the leather upholstery and destroy or damage it. However, the construction is such that the water will have difficulty in working through, and any that does manage to find its way through the crevices will quickly be dried up by the heat of the steam in the coils under these convertible seats.

The one permanent wash basin is shown in fig. 4, this basin being the one nearest the smoking compartment entrance, so that the convertible seats are in the desirable location beside the window. An intervening wall between this basin and the seats protects the occupants from splattering water.

The one car equipped has been so successful that others with this installation are planned, and cars being remodelled are having the smoking compartment changed to meet this new arrangement. The seating capacity is nearly doubled, making the arrangement particularly desirable on such runs as that taken by the Sicamous, which operates on the Montreal-Chicago run, the sleeping car running through partly in the daytime for the convenience of through travellers.

Leaky Roofs of Box Cars.—To determine the facts of a common complaint that considerable damage is caused from leaky box car roofs, two Atchison, Topeka and Santa Fe Ry. officials at Springfield, Mo., made an inspection of a number of such cars recently during a severe rainstorm. Of 52 cars examined, 38 were found to be leaking through the roof and 7 through the sides. In all there were 152 leaks, an average of 4%. The cars examined were representative of most of the leading roads, indicating that this trouble is quite general. It is estimated that not much more than 10% of the box cars in service are proof against leaks.

Fig. 4—Permanent Washstand Adjoining the Folding Ones.

the basin. The fit between the two pipes is of necessity very loose, but splashing is prevented by having the smaller pipe enter the larger as far as the swinging construction will permit. Both hot and cold water connections are handled in this manner—the faucets stationary with intermediate loose joint. The waste stopper is in the swinging basin table, the waste pipe leading back from the centre of the basin to the rear of the swinging part, where a rubber

Delaware and Hudson Co's. Annual Report.

The annual report of the Delaware and Hudson Co., which owns the Québec, Montreal and Southern Ry., and the Napierville Jct. Ry. in Canada, for the year 1911, shows a net revenue of

\$116,710.26 from its coal mining department, and a net revenue from the operation of its railway department of \$8,663,647.35. After providing for bond interest, etc., the net income carried to profit and loss is \$5,237,680.87, equal to 12.32 per cent. on capital account. Dividends at the rate of 9 per cent. are provided for the current year out of profit and loss.

The report contains the following information relative to the Canadian lines:—

The Quebec, Montreal and Southern Ry. shows an increase in operating revenues for 1911 of \$73,435.58 as compared with 1910. The operating expenses show an increase of \$108,632.73, making a decrease in net operating revenues of \$35,197.15. The net income, independent of interest charges due the D. and H. Co. was \$136,819.80, a decrease of \$41,736.94. The decrease in net operating revenues is due largely to the extraordinary charges for maintenance during the year, there being an increase of \$14,878.81 in ties and \$22,198.54 in bridges, trestles and culverts. The Frappier bridge burned twice in Aug., making necessary heavy temporary repairs. Maintenance of equipment shows an increase of \$14,519.35 due to repairs and renewals of steam locomotives and freight train cars. The Napierville Junction Railway shows an increase in operating revenues for 1911 of \$1,386.28 as compared with 1910. The operating expenses show an increase of \$5,821.45, making a decrease in net operating revenues of \$4,435.17. The net income was \$21,910.09, or 3.65 per cent. on the capital stock outstanding. The decrease in net operating revenues is due largely to an increase in amount paid for injuries to persons.

The total assets of the company are \$17,198,620.23, the Canadian lines being valued at \$6,308,139.79. The stocks owned by the company include \$1,000,000 common stock of the Quebec, Montreal and Southern Ry., \$600,000 common stock of the Napierville Jct. Ry.

No separate statistical figures are given for the Canadian lines.

Railway Mechanical Methods and Devices.

Multiple Drilling Machine at the Central Vermont Railway Shops.

The accompanying illustrations show a multiple drilling machine of rather unique construction, which is in regular service in the C.V.R. car shops at St. Albans, Vt., and is giving excellent satisfaction for strap work and such commonly occurring members. The interesting feature lies in the fact that the feed is hydraulic, the table feeding upward by hydraulic pressure against the drill heads.

Rear and side views of the machine

Fig. 1—Multiple Drilling Machine with Hydraulic Feed.

are given in fig. 1, and in fig. 2 the press is shown as installed. The construction can be seen to better advantage by an analysis of fig. 2. Two 2½-in. forged rods, A, bolted to faced spots on a cast-iron base, B, carry on their upper ends a cross-arm, C, which is machined on its front face, and on the top and bottom edges. The supports, B, are bolted to the lower edge. The front face has a bolt head groove in the centre of a wide

tween the centre bearings, and two on each side between the outer bearings, making seven in all. The drive is through a pulley from the main drive shaft overhead. The cross rail is braced in position by two wrought iron straps, E, from the rear, attached to the outer edge of the base casting, which is imbedded in the floor level with its upper face.

The drill table F is vertically guided on the supporting rods A by bearings G, on a face casting to which the table is bolted as indicated. These guiding bearings are of such ample proportions as to insure a rigid support to the table, which is free to be moved vertically through

is provided to shift the slotted link from side to side to give the required pump plunger stroke, which, by this means may be regulated at will. It is by means of this that the rapidity of the feed is regulated.

The pump itself is contained in a small tank which acts as a reservoir for the water forced by the pump under the drill table plunger. On releasing the pressure under this plunger by shutting off the pump, accomplished by throwing the lever into its uppermost position, which moves the link C into line with the pump plunger, the water runs back into the reservoir to be used again indefinitely.

Mould for Forming Piston-rod Packing at the Pere Marquette Railroad Shops.

The Pere Marquette Rd., in its St. Thomas, Ont., shops, has a novel method of casting metallic piston-rod packing rings which is peculiarly its own. It is essentially a die-casting process, and the methods involved are almost identical with those used in that industry.

A couple of the packing rings, freshly cast, as they come from the moulds, are shown on the stand at A in fig. 1. This illustration shows the assembled machine ready for use, while in fig. 2 the details of the device are emphasized.

Referring to fig. 2, it will be noticed that the body casting A contains a plunger rod B, with a mandrel end C. Fitting over this mandrel end are two die rings, D and E, forming with the mandrel an annular cavity, F, the shape of the completed packing ring. These two rings, D and E, are held together against the shoulder of B by a taper key fitting through the diametral slot G.

To provide for pouring, there are small channels on the inner faces of D and E. When ready for pouring, the plunger B is forced to the right by the lever H (B in fig. 1), bringing D and E into the opening I, thereby aligning

Fig. 2—Installation of Multiple Drilling Machine.

channel running the full length of the face. Fitting into this recessed face, there are drill heads, D, held in place by bolts in the before-mentioned bolt groove. These drill heads are adjustable within the ranges on the cross head face, so that any hole spacing may be provided for. A drive shaft mounted in bearings on the top of this cross arm, carries adjustable bevel gears mating with the bevel gears on the upper ends of the drill spindles. The bearings mounted at intervals along the top form the limits of movement of the different drill heads; there are three heads be-

chine is provided with a pump, the arrangement of which is shown in fig. 2. A pump rod, A, connects to one end of a link, B, the other end of this link B being suspended by another link, C, from the end of the top cross bar of the drill. The suspended link B is in form like the link of the Stephenson motion, from the fact that it is slotted and has a sliding block in that slot, this block being attached to the upper end of the pump piston rod, the latter receiving its motion therefrom. The lever D, with its attached bell crank and short link from the bell crank to the suspending link C,

Fig. 1—Mould for Piston Rod Packing with Samples of Work.

them perfectly. A V-shaped cut-out, J, in the face of A, registers with the pouring holes in D and E. To facilitate the handling of the outer section E of the mould, it is attached to a long handle K (C of fig. 1). Removing key G and forcing to the right, releases the cast ring.

The packing rings thus formed are quite clean, and ready for service, the finished faces of the mould making it unnecessary to further finish the rings. Two smaller rings of half the width, and with an outside diameter equal to the inside diameter of this bevelled one, are

cast in a similar manner. These, when slit with a saw, are placed inside this bevelled ring, and over the piston ring. The three being made of bearing metal, are soft, and readily form into a steam-tight joint when compressed by the gland.

The drilled hole for guiding is usually put through with a 1½-in. drill. This is followed by a coreremoving process with the tool indicated in fig. 2. This tool is shown on the drill table at B in fig. 1. Referring to fig. 2, it will be noticed that the tool body is a cut-away

the reamer at C, fig. 1. This completes the machining of the pin holes in the end of the side rod.

Superheater Flue Roller at the Michigan Central Railroad Shops.

The accompanying illustration shows a simple construction of superheater flue roller as made by J. Sumner, toolmaker at the Michigan Central Rd., St. Thomas, Ont., shops. The device consists simply of two steel rings, A and B, held parallel at a definite distance apart by five shoulder bolts C. Intermediate to these shoulder bolts are five radial slots in which hardened carbon steel rollers are free to slide radially. A long driving pin, with a taper of 1 in 24, introduced

Fig. 2—Details of Piston Rod Packing Mould.

Tools for Boring Side and Connecting Rods at the G.T.R. Point St. Charles Shops.

The method of boring side and connecting rods, and the tools employed, as practised at the Grand Trunk Ry. Point St. Charles shops, Montreal, are shown in the accompanying three illustrations. A side rod as mounted for machining is shown in fig. 1. This rod, mounted as indicated, is first drilled at both ends

Fig. 1—Boring the Ends of a Side Rod.

to give the central guiding holes for the tools to follow. The two drilling heads are rapidly adjusted for the standard lengths of rods to be machined, by having gauge plugs, as at A, fig. 1, tapered and fitting into corresponding tapered holes through the drill head carriage and supporting cross arm. These holes have been carefully located, drilled and reamed for locating the two heads in drilling the ends of practically all the standard lengths of side and connecting rods. In consequence, the setting up of the job requires no special attention, the standard length being absolutely determined.

shell, A, with two vertical faces, to which are bolted by bolts in slots, tools B, projecting a short distance below the lower edge of the shell wall. Through the centre of this shell there is an elongated guide tit, C, of a diameter cor-

Fig. 2—Tool for Coring Rod End.

Fig. 3—Tool for Boring Rod End.

responding to the diameter of the drilled hole in the end of the rod to be machined. The upper end of this guide bar, above the shell, has a taper shank fitting the spindle of the drill head. The tool, held in the drill spindle by this taper shank, and guided in the rod being drilled by the lower tit end, cuts down into the metal of the rod end, a core of the metal being thus removed without chipping the metal into cuttings. This cutting tool forces its way through the metal quite rapidly, saving considerable time, and leaving a block of metal that is useful in the blacksmith shop for making up small forgings.

The next operation is that of boring out the cored holes to a slightly larger size, that being the operation shown in process in the drill in fig. 1. The tool employed is shown in fig. 3. A taper-shank body, A, carries in a cross slot two cutters, B, each of these cutters bearing at the inner end on a taper pin, C. The two cutters are held up against their seats by the two set screws, D. The taper pin C is tapped to receive a threaded screw, E, the latter seating in the recess F in one side of the tool body. The taper pin C also has a squared hole, G, in its outer end, by means of which it is drawn into the body, forcing out the cutters into the correct location. This tool finishes the hole to the approximate size, only requiring to be reamed out with

Superheater Flue Roller.

in the central opening, forces the rollers out on the tube walls, in the usual manner. The ring B has a cut-out on one side as at E, in order that the tool may clear the adjacent flue. The ring A has a diameter 1-32 in. less than that of the flue, thereby acting as a guide for the whole device in entering.

The National Association of Station Agents will assemble at Chicago on Sept. 7 and travel by special train over the Minneapolis, St. Paul and Sault Ste. Marie Ry. to Duluth, spending Sept. 8 there, then going via M.S.P. and S.S.M.R. to Winnipeg, staying there a day, and then via C.P.R. to Vancouver, where the convention, etc., will occupy three days. From Vancouver a steamboat will be taken to Seattle, the train being sent on via C.P.R. and Northern Pacific. From Seattle the party will return to Chicago via Chicago, Milwaukee and St. Paul Ry., making some stops en route. The trip will occupy about three weeks.

Canada Northwest Land Co.—Follow—are the officers and directors for the current year, who were re-elected at the annual meeting recently:—President, Sir Edmund B. Osler; Vice President, W. D. Matthews; other directors, F. S. Meighen, J. M. McIntyre, Sir Thos. G. Shaughnessy, Sir Thos. Skinner, Lord Strathcona, Sir Wm. C. Van Horne.

The Abolition of the Common Drinking cup on all trains and at all railway stations in Idaho, Washington, Montana, Minnesota and North Dakota was agreed upon at a recent conference of representatives of the boards of health of those states.

The Little Salmon River Viaduct, National Transcontinental Railway.

By R. F. Uniacke, M. Can. Soc. C.E., Bridge Engineer, N.T.R. Commission.

The act of Parliament authorizing the construction by commission, of the Eastern Division of the National Transcontinental Ry., provides for a location from its eastern terminus, Moncton, through the central part of the Province of New Brunswick, and through the Province of Quebec by the shortest available route to the city of Quebec. At the time of the inception of the Intercolonial Ry., New Brunswick had been thoroughly explored before the final location was adopted, and the controversy of the routes has been fought out over both these great public undertak-

struction. The valley of the Little Salmon River, 185 miles from Moncton, presented one of the obstacles to be overcome, as the grade development showed a crossing over 4,000 ft. long, with a height of 200 ft. above the water line. The description of the design and construction of this viaduct the writer has undertaken to present in this paper.

The line approaches the west end of the structure with a 6° curve through a rock cutting and crosses on a tangent bearing N. 10° —27 ft. W., the grade rising 0.40 ft. per hundred. The layout consists of 24 towers 58 ft. 9 in. centres

through girder system. In high trestle construction, where the use of false work is out of the question, the most economical layout is that of an intermediate span as long as can be handled with a well designed traveller working from grade, so as to reduce the number of high towers, their pedestals and foundations. Spans of 60 ft. with 40 ft. towers are generally employed where deck girders are used, spaced 9 ft. c. to c., and bridge ties resting on the top flanges. Owing to the through girder system having a spacing of girders $17\frac{1}{2}$ ft. c. to c., spans of 100 ft. are handled, since the bearings of the traveller rest on the flanges, thus giving that much more base to brace the traveller in handling loads. The stability of the erection outfit is amply provided for so that in this case girders weighing 30 tons were placed in position. It certainly gives a feeling of safety to see from the car

Little Salmon River Viaduct, National Transcontinental Railway.

ings. Three routes were located for the Intercolonial, known at that time as the frontier, the central, and the Baie des Chaleurs routes, and of these, on the recommendation of the Chief Engineer, and owing to Imperial considerations, since a subsidy aid had been granted by the Home Government, the Baie des Chaleurs route was adopted.

The engineers of the Transcontinental had located two lines, one known as the river route, following the St. John River, north from Fredericton, and the other the central route; the latter was adopted as fulfilling more closely the provisions of the act. That a railway has now been constructed along this route having a ruling 0.4 compensated grade, with a maximum curvature of 6° , is owing in a large measure to the advance in modern bridge and high viaduct con-

and 25 intermediate spans 100 ft. 3 ins. c. to c., the end spans being 100 ft. 10 $\frac{1}{2}$ ins. centre of bent to outer end of steel; all the tower spans are alike and also the intermediate spans, except that the masonry ends are extended to give the required bearing. The towers and bracing are made alike as much as possible, necessitating one set of templates only for the spans and parts of towers which duplicate each other. A through girder system of construction was adopted, the girders being spaced $17\frac{1}{2}$ ft. c. to c., while the floor beams with gussets were spaced 14 ft. c. to c., along the plate girders. The east end span is on a spiral to a 6° curve and in consequence the girders are deflected at this abutment 1 ft. 3 ins. off the tangent to the structure produced. There were several reasons which led to the adoption of a

window the flanges of a heavy steel girder, and that this is not altogether sentiment is shown by the fact that instances of derailment are recorded, in which the car held to the roadway by the lateral resisting power of these girders.

SUBSTRUCTURE.—The approach at the east end being through a rock cutting, in order to avoid building the steel work on a curve, and also to utilize the material in the cutting without waste, an abutment of reinforced concrete placed on top of the rock fill was decided on. A buried pier built from the original surface at this point would have been over 100 ft. high, difficult to design and build, and very costly. This was avoided by the use of a bank abutment. The concrete was reinforced to prevent danger of cracks from settlement in the

bank, and in order to give time for the bank to settle the ends of the girders were temporarily supported by a crib work of square timber, before building the permanent abutment.

In the design of the pedestals and west abutment, borings and test pits were first made to determine the character of the soil. This proved to be of compact sand, gravel and hard pan, so that no piling was required, the footings being designed to distribute the load at a pressure of from 2.5 to 4 tons per square foot. The four pedestals near the water line at the banks of the river were built with curved cutwaters, the axis of piers being parallel to the direction of the current, forming suitable ice-breakers. The anchor bolts for pedestals consisted of two rods, 2 ins. in diameter, the lengths varying according to the uplift to be resisted. These rods were anchored at the bottom by spacers of 10 in. channels and washers, the concrete being built around them. In order to give room for a little variation in their position, conical forms were set around each bolt, a lip being left at the top extending beyond the base plate of column through which these voids were filled with grout after the steel was erected. The west abutment or buried pier was about 40 ft. in height above the footing course, and in order to reduce the pressure on the soil and allow the embankment to run through and surround it, an arched void was left in a longitudinal direction. No difficulty was experienced in building to this design.

In laying out the work no triangulation was required and an ordinary steel tape was used, the writer's experience being that, as provision is made in the girders for expansion, a slight variation in the position of the anchor bolts is permissible, providing the expansion slots are made longer than the theoretical length requires. The chief difficulty consists in maintaining the anchors in a vertical position and protecting them from rough usage from swinging buckets of concrete and other causes.

CONCRETE.—The materials used in the concrete were Portland cement, sand and gravel, the two latter being obtained on the bank of the river near the

found to contain 6% of soluble matter, which was eliminated by thorough washing, and a mixture of one part cement, two parts sand, and four parts gravel, varying from the size of a pea to 3 ins., was obtained. As the sand was not of the best quality, the use of 1-2-4 mixture was ordered in shafts of pedestals, since they have to sustain a high concentrated

and must have acquired its final set within 10 hours, the briquettes being kept in a damp closet for 24 hours and afterwards immersed in water until time of breaking.

It is the writer's practice on receiving notice that a consignment of cement is to be shipped to a contractor to send an inspector to the mills to draw

Fig. 1—General View.

load on a comparatively small volume of concrete. The concrete used in the buried pier and foundations was a 1-3-5 mixture. In obtaining a proper facing mixture the coarser material was kept away from the forms by the use of perforated spades, pushed down and drawn back while the mixture was still plastic.

samples from the bags as they are being loaded into the cars; one bag in 40 is sampled, both doors of the car sealed with the N.T.R. lead seal and the sample cases forwarded to the cement testing laboratory in Ottawa, in charge of a chief cement inspector attached to the Bridge Engineer's office. The seal being

Fig. 2—100 ft. Girder Raised.

Fig. 3—100 ft. Girder Ready to Place, Erection Struts in Position.

bridge site. In this locality good sand is very difficult to obtain and, after a test of sand from several pits, the local material was selected, the sieve test showing after the gravel was screened out:

Retained on 20 mesh sieve	64%
Retained on 30 mesh sieve	17%
Retained on 50 mesh sieve	15%
Retained on 74 mesh sieve	2%
Retained on 100 mesh sieve	2%

100%

After treating the finer residue with a 20% solution of sulphuric acid, it was

This method was found more satisfactory than that of attempting to bond a facing mixture into the body as required in some specifications.

CEMENT.—The following description of the method adopted for sampling and testing the cement used on all structures under construction on the N.T.R. may be of interest. The cement specifications are standard, and the governing tests are for fineness, specific gravity, soundness, time of setting, and tensile strength. The cement shall not acquire its initial set in less than 45 minutes

intact on arriving at the bridge site is a notice to the field inspector that the car has been sampled by the Bridge Department. The preliminary tests for soundness are made at once, the mills are notified to hold the cars if these results appear doubtful, and the final record covering the full 28 days tests is generally completed and the contractor advised of the acceptance soon after the cars are on the work. In mills where the records have been continuously good, the contractor has been permitted to use the cement on completion of the

seven days test, in some cases where work would be held up for want of cars, but always at the contractor's risk and subject to the 28 days tests; in no case where this has been allowed has the result proved a mistake in judgment. A cement sampling record slip is enclosed in the sealed sample case giving all information as to shipment. Copies of the final test record are furnished to the district engineer as well as to the mills for comparison with the manufacturer's tests, and the records are compiled in loose leaf books for future reference.

up channel section; but the saving in weight of details and simplicity in shop work fully compensates for the extra main material. In the light of column tests it is reasonable to expect that the reduction in unit stresses for the increase of radii length would not be justified by practical tests. The metal is used mostly in directly resisting the primary stresses, as very little is required for secondary purposes (viz., lattice tie plates, etc.), and in this way a stronger column is obtained. The section used has also the advantage of

timber erected in place, and to carry out the amounts on the estimated quantities furnished, viz., steel 14,000,000 lbs., timber 520,300 ft. b.m. After the tender is awarded the bridge company submits stress sheets and details for approval before ordering the material from the mills.

FLOOR.—The rails were directly supported by 8 in. x 12 in. x 14 ft. bridge ties resting on the steel stringers, every fourth tie being 16 ft. long to support the plank footway placed outside the guard timber for the convenience and

Fig. 4—100 ft. Girder in Place.

Fig. 5—Working Platform of Traveller.

By means of these records and a system of reports from the field inspectors of the arrival of cars, it is an easy matter to trace any car and identify its contents after being piled in the cement storage house at the bridge site.

DESIGN.—The Dominion Government specifications were strictly adhered to in the proportioning of the members. The compression members were figured for the pin ended formula of these

continuous webs in each direction, which are greatly superior to the easily bent lattice bars, and moreover the interior of the column is much more accessible to the paint brush for shop and field coats. The section is symmetrical on both axes, having therefore its centre of gravity in the centre of the section, and no eccentric loading is induced from the girders. The small amount of redundant metal means uni-

safety of the section men. An outside guard timber 8 in. x 9 in. dapped 1 in. over the ties, which were spaced four inches apart in the clear, the ties were secured to the stringers by $\frac{3}{4}$ in. hook bolts, and the guard timbers bolted through the tie with one $\frac{3}{4}$ in. bolt in every fourth tie. A steel guard rail 60 lbs. to the yard will be placed inside the gauge line, and 8 ins. therefrom in the clear, these guard rails coming together

Fig. 6—Rivetting Galleries.

Fig. 10—Placing Last Girder Span.

specifications. In the tension members of the towers a limiting length of 200 l/r was used to avoid sagging of members, to make them capable of resisting compression and to give initial stiffness. The use of bulb angles in the sway bracing of towers makes a very stiff and economical section and avoids breakages in shipment, the great fault in box laced section of light angles. Traction and wind were figures as called for in the specifications.

The posts viewed from the stress sheets do not appear to be economical, because of their relatively small radius of gyration when compared with a built

formity of stress in the columns, and simplicity in the make up will decrease the cost of maintenance.

TENDERS.—In calling for tenders for the steel work our usual practice was followed of furnishing bridge companies with a general design and details of girders and towers, together with a printed form of tender in which was filled in the estimated weights of steel, and number of feet b.m. of timber in the floor. With this system all bridge companies bid on the same basis, and are not required to make a single drawing to submit with tenders, but merely to fill in the unit prices for steel and

at the centre of the track one rail length beyond the end of the bridge and being protected by a cast steel point fitting the rail section and spiked to the road bed ties.

ERECTION.—Actual erection began July 27, 1910; the steel was all assembled and last span swung Feb. 8, 1911, and all riveting and painting fully completed by Aug. 19, 1911. Material was unloaded at a siding at the west end and handled by a two boom derrick car in the storing yard. A light standard gauge locomotive with lorry cars handled the material from the storage yard to end of steel. The main feature of the

erection outfit was the 30 ton two boom erection derrick, travelling on the top flanges of the girders, the trucks of the traveller running on 115 lb. crane rail, the base of which rested on timber temporarily secured to the girder flanges. This derrick was self-propelling by means of a chain and sprocket connecting the trucks with the erecting engine, which consisted of two 10 x 12 in. cylinders—2 drum—4 spool hoist. The 115 ft. booms were box section composed of 4 36 in. x ¼ in. web plates at centre section and tapering at the end, connected with four 3½ x 3½ x ¾ angles. This section was found to weigh actually less than a latticed section and the combined unit stresses from compression and bending were very much reduced. The writer was told that the men working on the traveller, and assembling, were very enthusiastic over the ease with which the big machine handled its work. The wind at the deck of the trestle was very strong, and was generally blowing at right angles to the bridge, but the work was practically never held up on account of too much wind. The use of the erection struts is shown in fig. 2; after a tower and its girders were assembled the erection struts were removed and used again to stiffen the first bent of the next tower until it too was connected and self sustaining. The hook bolts temporarily connecting the ends of three struts with the columns proved very efficient.

Another important feature was the use of riveting bridges for convenience and safety of the men in assembling, riveting, and painting. By reference to figs. 6, 7 and 8, the method of handling them will be plainly seen. They were carried along the top of the trestle by the two boom yard derrick car, and after being secured to the top flanges of girders by hooks, the cages were

and delivering same to traveller, and driver for light locomotive. The riveting gangs averaged 302 rivets a day of 10 hours per gang, a rate which would probably have been reduced by 50% if ordinary staging had been used, instead of the riveting cages.

The accompanying table showing progress of erection indicates rather remarkable time, considering the force employed. A pair of 100 ft. girders

Fig. 7—Method of Raising and Moving Rivetting Galleries.

were swung and bolted in their final position in 37 minutes, and floor beams and stringers assembled in half a day.

PAINTING.—One coat of black metalastic paint was used in the shop, with a coat on each contact surface before assembling. Two field coats were applied, the first metalastic brown, and the final coat acheson graphite. Rivet heads and shop marks were touched up before applying the field coats. The use of a different shade for the first field coat was a great help to the inspector, to enable him to see that the several coverings were properly applied.

THE INSPECTION of this work covers mill, shop, and erection inspection, all in accordance with the Dominion Government specifications of 1908. The bridge company, on being advised of the name of the inspection company, which is to do the inspection, is required to furnish it in triplicate with copies of all mill orders; one copy is furnished the bridge engineer, and one copy is sent to the inspection company's representative at the mills where the material is to be rolled.

The inspector then makes arrangements to be present at the rolling of the material which is being furnished on these orders, making complete surface inspection of every piece, measuring it for width and for length, and gauging the thickness. Specimens are then selected from the material so inspected by the representative of the inspection company, taken from each heat of steel which has been rolled into the material furnished on his particular order. These test pieces so selected are then forwarded to the machine shop to be properly prepared, that is to say, machined on both edges and straightened true. The test pieces so prepared are then sent to the testing laboratory at the mills, where the same are measured and broken in the testing machine, in the presence of the inspector. The results of this test piece have to conform with the requirements of the specifications, that is to say, the tensile strength has to be within the limits, also the elongation and reduction of area of the steel. The inspection company, in addition to witnessing the pulling of these test pieces previously selected by their representative, also secures from the rolling mills a certificate of the chemical

analysis which may be found in the steel so tested. Frequently the inspector requires drillings to be taken from the test pieces at the mills, so as to check up the accuracy of the reports presented to him by the rolling mill company. Test pieces and material which they represent are identified by melt numbers.

As soon as the surface inspection of the material has been made, and the tests have proved satisfactory, the inspector then undertakes to see that the material is properly loaded in the cars ready for shipment to the bridge works. Full descriptive reports are then made out by the inspection company, showing the number of pieces and the size and length of each piece so shipped from the steel works, together with the results of tests. These reports are then sent forward to the bridge engineer.

SHOP INSPECTION.—As soon as the material has been received at the bridge works, the same is then unloaded, and when work is ready to commence, the various pieces of material which go to make up a full sized member are brought into the shop. The representative of the inspection company is present to see the laying off of the material, the first step in the preparation for punching. The punching is then witnessed by the inspector to see that punches and dies of the correct size are used, as required by the Dominion Government specifications. The inspector then further sees that the material, as soon as it is punched, is properly assembled, and that a sufficient number of bolts are used, so as to insure perfect fit and matching of all holes, prior to the same being riveted. The process of riveting is also supervised; and, lastly, the finished member is checked over to see that the measurements and clearances are correct, and that construction is in full accordance with the shop drawings submitted by the bridge com-

Fig. 8—Rivetting Gallery in Position at Top Tower.

lowered or raised by hand, as required, the free end of the tackles being on the platform, so that the riveters could slack away themselves.

The erection staff varied from 60 to 80 men, of which but 6 were employed on the big traveller, 1 subforeman and 14 men were used to assemble the steel work, and the rest formed from 2 to 6 gangs of riveters, also crew for derrick car used for unloading material in yard,

Fig. 9—Method of Erection.

pany and approved by the bridge engineer.

The painting, which is also a very important part of the work, is then closely supervised, to see that the temperature in which the material is painted is suitable for such painting, also that the material so painted is stored under cover until such paint has become thoroughly dry.

After all these several stages of con-

struction have been witnessed, and also the final checking up of material, full detail reports are made out showing what material has been constructed during the week, also what other material is under course of construction, and what material has been shipped, also commenting on any errors that may have been discovered and how the same have been remedied, with a report in addition as to what future progress would be expected.

Inasmuch as this material was purchased on a pound price, the inspection company had special representatives at each of the bridge plants, estimating the weights of all material entering into the various bridge members, so as to check up against the actual weights furnished by the bridge company. If the actual weights are in excess of 2%, as allowed by the Dominion Government specifications, such weight is cut down to the estimated weight, made up by the inspection company, based on an allowance of 2%.

INSPECTION OF ERECTION.—As soon as the bridge companies have made shipment of their first carload of material, and the erection gang of the bridge company has arrived at the bridge site, on the order of the bridge engineer, an inspector is immediately dispatched by the inspection company to such site. He supervises the erection of the entire structure from start to finish, seeing that the same is carried out in strict accordance with the requirements of the specifications. As the work progresses, the inspector takes at least three photographs each week, showing the progress that has been made, and also keeps an account of the labor expended in connection with the erection of the particular bridge on which he is engaged. To show that the photographs are taken weekly, a special sign is furnished by the inspection company, on which the name of the structure appears, together with the date on which the photograph was taken. This is embodied in the photograph. Weekly reports are furnished by the inspector, and the bridge engineer is kept advised as to all movement or delays that might occur at the erection site in connection with such structure. On completion of the bridge, the inspection company then reports that the work has been carried on to the satisfaction of its inspector, and such report is forwarded to the bridge engineer, who, himself, or his representative, then makes final inspection of such bridge structure, after which payments for the completed work are made. In all the various departments of inspection at the mills, at the bridge shops, and on erection, only men who have had long experience and training in that particular class of work are engaged.

Throughout all the various courses of construction a private stamp is used, bearing the trade mark of the inspection company, together with a number representing the inspector who has used this particular stamp. This serves as a means of identification, so that the inspector at the shop, and also at the field may see that the material has been inspected and accepted. By this means if any faulty or defective workmanship should show itself, the inspector who passed this particular piece of work can be easily located by the number which he carried affixed to his stamp.

COST AND ESTIMATES.—In the final estimates the actual amounts and cost under the several items are:

Substructure—	
1,757 cu. yds. 1-2-4 Concrete at \$15.00	
6,524 cu. yds. 1-3-5 Concrete at 11.00	
4,597 cu. yds. Excavation at 1.00	
10,534 cu. yds. Excavation at 2.50	
Superstructure—	
Steel 13,991,310 lbs. at 4.68 cts.=\$654,793.31	
Timber 518,041 ft. B.M. at 4.60 cts.== 23,829.89	
	\$678,623.20

Progress estimates were paid monthly on the superstructure according to the following basis:

	Unit.	Rate.
Steel	100 lbs.	\$ 4.68
Timber in floor	M.B.M.	46.00
SCHEDULE FOR MONTHLY ESTIMATES.		
Steel provided	100 lbs.	\$2.00
Steel manufactured	100 lbs.	1.00
Steel delivered at site	100 lbs.	.40
Steel assembled	100 lbs.	.98
Steel riveted	100 lbs.	.15
Steel painted and fully completed 100 lbs.		.15
Timber delivered	M.B.M.	\$ 4.68
Timber framed and placed	M.B.M.	\$40.00
		6.00
		\$46.00

This basis of payment was considered a fair and equitable distribution of cost throughout the different stages of manufacture. It is the result of experience on many bridges previously built by this and other bridge companies on the described method of working and specifications, and the writer believes may fairly be used in other similar cases, as proportionate cost data.

The work was carried out under the general direction of the writer from the Bridge Engineer's Office in Ottawa, W. A. Duff, A.M. Can. Soc. C.E., Assistant Bridge Engineer, having charge of the general design and details. The Dominion Bridge Co., Ltd., Montreal, were the contractors for the steel, which was efficiently carried out, F. P. Shearwood, M. Can. Soc. C.E., having charge of the design for the bridge company.

The design and layout for the erection and the traveller were made under the direction of Jas. Finley, superintendent of erection, who was responsible for the successful carrying out of the erection. also E. W. Nichols, foreman on erection.

The substructure was completed by Powers and Brewer, subcontractors under Willard Kitchen Co. The construction and laying out of this part of the work was performed under the direction of C. O. Foss, M. Can. Soc. C.E., District Engineer. Although the work was prosecuted in all seasons of the year there has been no accident or casualty of any kind.

The foregoing paper was read before the Canadian Society of Civil Engineers recently.

C. P. R. Observation Cars on the Austrian State Railways.

The Canadian Pacific Ry. has made a contract with the Austrian Government for the supply and operation of ten observation cars on the more picturesque sections of the Austrian State Railways, through the Austrian Alps, Switzerland is also interested in the new project, as arrangements have been made whereby the cars will run through to Zurich, on the main line to Vienna through that point. The service to be introduced would seem to be meeting with great popularity, for it has already been suggested in the Hungarian Parliament that pressure be brought to bear at Vienna so that this service may be extended to include Budapest, the capital of that part of the dual empire.

When it was decided that an observation car service would be a desirable adjunct to the service in the Tyrolean sections of the state railways, consideration was given to the designers that were considered the most capable of undertaking such an installation. The result was that the C.P.R., on account of its varied experience in the handling of observation traffic through the Rocky and Selkirk Mountains, was considered the best fitted to undertake such a task.

While the cars will be altered slightly to meet local conditions, they will follow very closely in design the standard platform observation cars that have met with such success on the C.P.R., the principal difference being that they are to have platforms at each end, as on these Austrian lines there are no ready means of turning cars of the length contemplated. In width and height the cars will be somewhat smaller than the standards on which they are being modelled, necessitated by the smaller clearance lines followed on the Continent. In length, they measure 22 1/2 metres (74 ft.), making what are said to be the longest 4-wheel truck cars in Europe. The seating capacity per car is to be 32, which may be used by either first or second class passengers for the additional fare of 5 kronen (\$1). This price will include the use of a stenographer and typewriter, and an interpreter capable of speaking in the principal languages of cosmopolitan intercourse, and in addition, the cars are to be equipped with medicine chests.

The cars are being built at the Nesselsof works in Austria, from designs worked out in the C.P.R. mechanical department at Montreal, under the supervision of H. H. Vaughan, Assistant to the Vice President, who was in Vienna last year making final arrangements for the construction of the cars to meet the local conditions under which they are to be operated.

The service to be given this summer will comprise three lines—Zurich to Innsbruck, Vienna to Innsbruck, and Salzburg to Trieste. These three lines, as well as any to be added in the future under the present arrangement, are to be operated from the new C.P.R. offices in Vienna, under the supervision of G. McL. Brown, European Manager, C.P.R., in London.

Grain Shipments by Rail.

The following shipments of grain from Fort William and Port Arthur, Ont., were made during the close of navigation from Dec. 1, 1911, to Apr. 30, 1912.

	Bush.

The Grand Trunk Railway Co.'s Semi-Annual Meeting.

Following are extracts from the report for the half year ended Dec. 31, 1911, presented at the semi annual meeting in London, Eng., April 18:—

Following is a comparison of the half year's revenue account with that of the corresponding half year in 1910:—

1910.		1911.	
£3,699,899	Gross receipts	£4,135,755	2 3
	Deduct—		
2,790,686	Working expenses		
	75.21%, compared		
	with 75.43% in 1910	3,110,870	14 2
£ 909,213	Net traffic receipts....	£1,024,904	8 1
38,426	Balance of income		
	from rentals, outside		
	operations, and car		
	mileage	11,675	19 3
£ 947,649	Total net revenue..	£1,036,580	7 4
16,013	Add—		
	Received from International Bridge Co....	16,012	16 7
6,507	Interest Central Vermont Ry. bonds.....	6,506	14 3
70,941	Interest on securities controlled lines and St. Clair Tunnel bonds acquired by issue of G.T. 4% debenture stock...	72,780	0 3
40,146	Balance of general interest account	53,175	10 4

£1,081,256 Net revenue receipts..£1,185,055 8 9
Following are the net revenue charges
for the half years of 1910 and 1911:—

1910.		1911.	
£	77,603	Rents cleared lines	£ 77,603 0 9
	525,749	Interest on debenture stocks and bonds	560,314 10 9
	32,332	Interest on debenture stock and bonds of lines consolidated with G.T.R.	32,419 6 1
	40,080	Canada Atlantic Ry. deficit	32,286 2 6
Cr.	3,863	Detroit, Grand Haven, and Milwaukee Ry. deficit	6,641 5 8
		Toledo Saginaw, and Muskegon Ry. deficit (1908-9-10) (1911)	8,901 3 8
£	695,291		£ 713,165 9 5
	385,965	Leaving a surplus of	466,889 19 4

£1,081,256	£1,185,055 8 9
Adding the balance of £11,660 10s 9d	
at credit of net revenue account on	
June 30, 1911, to the above surplus of	
£466,889 19s 4d, the total amount avail-	
able for dividend is £478,550 10s 1d,	
from which the directors recommend	
the payment of the following dividends	
for the half year:—	

4% guaranteed stock	£215,619	5	5
First preference stock	85,420	15	0
Second preference stock	63,210	0	4
1½% on third preference stock....	107,469	10	9

£471,719 11 6

Leaving £6,830 18s 7d to be carried forward.

Following is a comparison of receipts for the half years ended Dec. 31, 1911 and 1910:—

Description of receipts.	1911	1910	Increase
	£	£	£
Passengers	1,239,376	1,127,908	111,468
Mails and express ..	206,563	197,414	9,149
Freight and live stock..	2,541,350	2,254,619	286,731
Other receipts	148,486	119,958	28,528
	4,135,775	3,699,899	435,876

The working expenses, excluding taxes, were £3,021,115 or 73.04% of the gross receipts, as compared with £2,704,091 or 73.09%, in the corresponding half year, an increase of £317,024, but a decrease of 0.05% in proportion to gross receipts.

The gross receipts show an increase of £435,876, or 11.78%; the working expenses, including taxes, an increase of £320,185, or 11.47%; and the train mileage an increase of 825,372 or 8.55%.

The total charges to capital account were £1,007,041 4s 5d. Of this, £655,-270 8s 5d was for the acquisition of

£400,000 Ottawa Terminal Ry. first mortgage bonds and £255,600 G.T. Pacific Terminal Elevator bonds; and £155,545 4s 10d for discount and commission on 4% debenture stock and 4% guaranteed stock sold during the half year.

The expenditure on capital account in respect of new works, double track and land purchased was:—

New works	£177,194	18	10
Double track	261	2	10
Land purchased	18,769	19	6

No additions to the rolling stock at expense of capital were made during the half year. Ten freight locomotives and 926 steel underframe box cars were purchased, and six first class, five baggage, and two cinder cars were built in the company's shops during the half year on revenue account.

TRAFFIC STATISTICS.				
	1911	1910	Increase.	Decrease.
Passengers carried	6,813,784	6,097,437	716,297	
Average fare per passenger	43¢ 65d.	44¢ 40d.		0 75d.
Tons of freight and live stock	10,261,656	8,890,164	1,371,492	
Average rate per ton	59 44d.	60 87d.		1 43d.
Tons carried one mile	1,778,513,307	1,538,361,407	240,151,900	
Earnings per train mile	94 71d.	91 97d.	2 74d.	
Following is a comparison of the revenue expenditure, including taxes, for the half year ended, Dec. 31, 1911 and 1910:—				
	1911	1910	Increase.	Decrease.
Maintenance of way, and structures	\$51,729	\$62,719		10,990
Maintenance of equipment	792,660	647,680	144,980	
Traffic expenses	131,323	116,768	14,561	
Conducting transportation	1,415,843	1,256,911	158,932	
General expenses	99,555	90,014	9,541	
Taxes	89,755	86,594	3,161	
Total	\$3,110,871	\$2,790,086	320,185	
Percentage of gross receipts	75 21	75 43		0 22
Expenditure per train-mile	71 24d.	69 37d.	1 87d.	

The average rate per ton per mile on the entire freight business was 0.70c, compared with 0.71c in the corresponding half year.

The train mileage compares with that for the half year ended Dec. 31, 1910, as follows:—

Description of mileage	1911	1910	Increase
Passenger	4,617,360	4,423,504	193,856
Freight	5,595,218	4,974,601	620,617
Mixed trains	267,353	256,454	10,899
Total	10,473,931	9,654,559	825,372

CANADA ATLANTIC RAILWAY.

Following are the results for the half year compared with the results for the corresponding period of 1910:—

1910.		1911.
£198,239	Gross receipts	£229,494
179,763	Working expenses	198,902

£ 18,476	Net traffic receipts	£ 30,592
4,474	Balance of income from rentals, outside operations, and car mileage	2,876

£ 22,950 Total net revenue.....£ 33,468
The interest charges were £65,754,
against £63,030 There was a net

against 163,030. There was a net revenue deficiency of \$32,286, compared with \$40,080 in 1910. The number of passengers carried was 323,372, against 287,943, an increase of 14.04%; and the passenger receipts, including mails and express, were \$54,818, against \$48,808, an increase of 12.31%. The quantity of freight moved was 844,169 tons, against

720,415 in 1910, an increase of 17.18%; and the receipts from freight traffic were £157,036, against £130,875, an increase of 19.99%.

GRAND TRUNK WESTERN RAILWAY.

Following are the results for the half year compared with the corresponding period of 1910:—

1910.		1911.
£640,798	Gross receipts	£708,057
502,464	Working expenses	526,537
£138,334	Net traffic receipts.....	£181,520
	Balance of income from rentals, outside opera- tions, and car mileage.	
Dr. 49,409		Dr. 45,351

£ 88,925	Total net revenue.....£136,169
----------	--------------------------------

The net revenue charges were £92,187, against £92,150, so that there was a net revenue surplus of £43,982, and deducting therefrom the debit balance of £31,461 at June 30, 1911, there remains a net revenue credit of £12,521, which is carried forward. The number of passengers carried was 1,155,745, against 1,079,337, an increase of 7.08%; and the passenger train receipts, including mails and express, were £269,342, against £242,899, an increase of 10.89%. The quantity of freight moved was 1,330,855 tons, against 1,642,548, an increase of 11.46%, and the receipts from this traffic were £417,855, against £379,704, an increase of 10.05%.

DETROIT, GRAND HAVEN, AND MILWAUKEE
RY.

Following are the results for the half year compared with the corresponding period of 1910:—

1910.		1911.
£215,501	Gross receipts	£252,248
174,021	Working expenses	197,233
£ 41,480	Net traffic receipts	£ 55,016
	Balance of income from rentals, outside opera- tions, and car mileage..	
Dr. 636		Dr. 24,675

£ 40,844	Total net revenue ..	£ 30,340
----------	----------------------	----------

The net revenue charges were £36,981, the same as in 1910. There was therefore a net revenue deficiency of £6,641, as compared with a surplus of £3,863 for the corresponding period of 1910. The number of passengers carried was 510,170, against 478,246, an increase of 6.67%; and the passenger receipts, including mails and express, were £84,328, against £74,673, an increase of 12.93%. The quantity of freight moved was 1,368,368 tons, against 1,079,293 in 1910, an increase of 26.78%; and the receipts from freight traffic were £144,124, against £120,432 in 1910, an increase of 19.67%.

GRAND TRUNK PACIFIC RAILWAY

The rail has now been laid over the summit of the Rocky Mountains through the Yellowhead Pass, 44 miles west of Fitzhugh, and nearly half way between that place and the next divisional point, Tete Jaune Cache, which it is expected will be reached in June, thus completing 1,100 miles west from Winnipeg. From Prince Rupert, on the Pacific coast, the difficulties with the tunnels, to which reference has been made in previous reports, have been overcome, and the line is now laid to the crossing of the Skeena River, 164 miles east from Prince Rupert. The bridge over the Skeena River is under construction, and when completed the way will be clear to lay the track to Aldermere, 245 miles east from Prince Rupert. It is expected the bridge will be completed by July. The grading of nearly all the branches has been completed, with the exception of about 50 miles on the Calgary branch. About 500 miles of branches already graded are waiting for the rail, which the Canadian steel companies have been unable to deliver.

REPORTS OF OFFICIALS.

THE CHIEF ENGINEER, H. R. SAFFORD, reports under date of Feb. 23: The length of the G.T.R. maintained and operated during 1911 has been increased to 3,545 miles. in comparison with 3,536

Recent Provincial Legislation.

The following acts affecting transportation interests were passed by the legislatures of the provinces named at the sessions recently closed:—

Manitoba.

BRANDON ELECTRIC RY.—Amending powers.

CANADIAN NORTHERN RY.—Authorizing guaranteeing of securities for extension of branches.

ELKHORN NORTHERN RY.—Incorporation.

MANITOBA NELSON RY.—Act of incorporation, and a second act repealing the first one.

PUBLIC MARKETS CO.—Incorporation, etc.

PUBLIC UTILITIES.—Creating public utilities commission.

RAILWAY TAXATION ACT.—Amending act.

RURAL RY. OF MANITOBA.—Extending time for construction, etc.

TELEGRAPHS AND TELEPHONES.—Amending act respecting government telephone and telegraph system.

WINNIPEG ELECTRIC RY.—Respecting company's powers.

WINNIPEG NORTH EASTERN RY.—Extending time for construction, etc.

WINNIPEG RIVER RY.—Extending time for construction.

WINNIPEG, SELKIRK AND LAKE WINNIPEG RY.—Confirming agreements between company and the municipalities of Selkirk, Stonewall, and Rockwood.

WINNIPEGOSIS AND NORTHERN RY.—Act of incorporation, and a second act amending the first.

New Brunswick.

BUCTOUCHE AND REXTON RY.—Extending time for construction.

CANADIAN PACIFIC RY.—Confirming agreement between the Dominion Government, the city of St. John and the C.P.R., as to exchange of properties and construction of wharves, etc.

CANADIAN TERMINAL RY.—Extending time for construction.

CENTRAL AND NORTH EASTERN RY.—Incorporation.

FREDERICTON AND GRAND LAKE COAL AND RY. CO.—Amending act of incorporation.

MIRAMICHI BAY SHORE RY.—Incorporation.

MAINE CENTRAL RD.—Conferring certain privileges and franchises.

NEREPIS AND LONG ISLAND RY.—Incorporation.

NEW BRUNSWICK RY.—Authorizing Government to purchase lands from the company and to sell them to settlers.

NORTH SHORE RY. AND NAVIGATION CO.—Incorporation.

ST. JOHN AND QUEBEC RY.—Act of incorporation; act confirming agreement between the company and Dominion Government, and amending certain statutes, granting aid toward the building of a railway along the St. John Valley, and authorizing the town of Woodstock to aid the company in building its shops there.

ST. JOHN DRY DOCK.—Amending acts relating to proposed Imperial Dry Dock in St. John.

ST. JOHN RY.—Authorizing extension of railway into Kings County.

SAINT CROIX DOCKS AND RY. CO.—Incorporation.

SIMONDS PARISH.—Authorizing the parish to grant permission for building of lines on highways.

SUSSEX STUDHOLME AND HAVELOCK RY.—Incorporation.

Nova Scotia.

COMMERCIAL CABLE CO.—Ratifying agreement between the company and the town of Guysboro.

INTERCOLONIAL RY.—Respecting aid granted by Sydney for extension of I.R.C. into the town.

MARITIME TELEGRAPH AND TELEPHONE CO.—Amending powers.

NORTH MOUNTAIN RY.—Extending time for constructing the Dominion Atlantic RY.'s North Mountain branch.

Ontario.

BERLIN AND BRIDGEPORT ELECTRIC RY.—Authorizing extension of line.

BRUCE MINES AND ALGOMA RY.—Extending time for construction and authorizing extension of line.

DUNNVILLE, WELLANDPORT AND BEAMS-VILLE ELECTRIC RY.—Extending time for construction.

GLENGARRY AND STORMONT RY.—Incorporation.

HUMBER VALLEY ELECTRIC RY.—Incorporation.

IRON RANGE RY.—Extending time for construction.

KAWARTHA TRANSPORTATION CO.—Incorporation.

LAKE SEUL RAT PORTAGE AND KEEWATIN RY.—Extending time for construction.

LAND GRANTS TO RAILWAYS.—With respect to land grants made to railways, and terminating unavailed grants.

LINDSAY AND MINDEN RY.—Incorporation.

MIDLAND TERMINAL RY.—Authorizing an extension.

MONARCH RY.—Extending time for construction.

MORRISBURG AND OTTAWA RY.—Extending time for construction.

MOUNT MCKAY AND KAKABELEA FALLS RY.—Extending time for construction.

NIAGARA FALLS, WELLAND AND DUNNVILLE ELECTRIC RY.—Extending powers.

NORTH MIDLAND RY.—Extending time for construction.

OTTAWA, SMITHS FALLS AND KINGSTON RY.—Extending time for construction and changing name.

PORCUPINE RAILWAY BILL ELECTRIC RY.—Incorporation.

PORT ARTHUR.—Approving bylaw re electric railway extensions.

RAILWAY ACT.—Amending Ontario Railway Act.

RAILWAY AND MUNICIPAL BOARD ACT.—Amending Ontario Railway and Municipal Board Act.

SIMCOE RY. AND POWER CO.—Extending time for construction.

SUDBURY-COPPER CLIFF SUBURBAN ELECTRIC RY.—Incorporation.

TEMISKAMING AND NORTHERN ONTARIO RY.—Amending powers as to construction, etc.

TORONTO.—Granting certain powers with respect to electric railways.

TORONTO SUBURBAN RY.—Extending time for construction, and authorizing extension of lines.

WHARVES AND HARBORS.—Respecting companies for construction of wharves and harbors.

Quebec.

ARGENTEUIL RY.—Incorporation.

BAGOTVILLE AND ST. LAWRENCE RY.—Incorporation.

GUELPH PATENT CASK CO.—Authorizing company to build and operate railway and branches.

MONTREAL AND NORTHERN COLONIZATION RY.—Extending time for construction.

MONTREAL TRAMWAYS CO.—Amending charter powers. A second act, among other things, confirmed agreement between town of Montreal West, the Montreal Tramways Co., and the Montreal Park and Island RY.

NORTH EASTERN RY.—Extending time for construction, and changing name to the North RY.

OTTAWA, ABITIBI AND HUDSON BAY RY.—Incorporation.

QUEBEC AND LAKE ST. JOHN RY.—Providing for rearrangement of finances.

QUEBEC AND SAGUENAY RY.—Extending time for construction.

QUEBEC CENTRAL RY.—Amending charter, and a second act confirming agreement with C.P.R.

RAILWAY SUBSIDIES.—Authorizing

grants of land in aid of building of certain lines.

THREE RIVERS TRAMWAY CO.—Incorporation.

Saskatchewan.

CANADIAN NORTHERN RY.—Two acts authorizing guarantee of certain securities, and amending a previous act guaranteeing securities.

CANADIAN NORTHERN SASKATCHEWAN RY.—Act incorporating company, and an act to authorize guaranteeing certain securities.

CANADIAN PACIFIC RY.—Confirming agreement with the Saskatoon city council.

GRAND TRUNK PACIFIC SASKATCHEWAN RY.—Act of incorporation and an act authorizing guaranteeing bonds.

GRAND TRUNK PACIFIC BRANCH LINES.—Amending act guaranteeing bonds.

SASKATOON ELECTRIC RY. AND POWER CO.—Incorporation.

SASKATOON STREET RY.—Incorporation.

SASKATOON TRANSFER RY.—Incorporation.

WATROUS RADIAL RY.—Incorporation.

Railway Route Plans Approved.

The following route plans have been approved by the Minister of Railways since those published in the Railway and Marine World for May, pg. 237:—

ALBERTA INTERURBAN RY.—April 26. From Calgary to Carbon, about 69 miles.

CAMPBELLFORD, LAKE ONTARIO AND WESTERN RY. (C.P.R.).—April 26. Revision of line between Belleville and Agincourt, Ont.

CANADIAN NORTHERN MONTREAL TUNNEL AND TERMINAL CO.—April 30. Line and tunnel in Montreal approved to LaGauchetier St.

CANADIAN NORTHERN ONTARIO RY.—April 26. St. Eustache to St. Jerome, Que., about 16 miles.

April 26. In the vicinity of Pembroke, Ont., about 10 miles.

CANADIAN PACIFIC RY.—April 26. Revision of Gleichen to Shephard branch, Alberta, mile 0 to 16.

April 26. Swift Current to Camrose branch from mile 154 to 190.

April 30. From mile 115, Cascades sub-division along the north shore of Burrard Inlet to a point in North Vancouver district, about 21 miles.

CENTRAL RY. OF CANADA.—April 26. Between Hawkesbury and South Indian, Ont., 36 miles.

KETTLE VALLEY RY.—April 26. Pen-tiction to Osprey Lake, 39 miles.

NIAGARA, WELLAND AND LAKE ERIE RY. April 26. In town of Welland, Ont., and vicinity.

PACIFIC AND HUDSON BAY RY.—April 26. Kimsquit to Nataklus Lake, about 110 miles.

Canadian Railway Club.

The following officers were elected at the annual meeting in Montreal recently:—

PRESIDENT, J. Coleman, Supt. Car Dept., G.T.R.; FIRST VICE PRESIDENT, R. W. Burnett, General Master Car Builder, C.P.R.; SECOND VICE PRESIDENT, W. McNab, Principal Asst. Engineer, G.T.R.

EXECUTIVE COMMITTEE, D. Crombie, Assistant to General Transportation Manager, G.T.R.; C. Murphy, General Superintendent of Transportation, C.P.R.; R. M. Hannaford, Assistant Chief Engineer, Montreal Tramways Co.; G. I. Evans, Mechanical Engineer, C.P.R.; J. A. Isherwood, Prof. Keay, McGill University.

AUDIT COMMITTEE, E. B. Tilt, Engineer of Tests, C.P.R.; J. A. Duffie, Chief Clerk, Master Mechanic, G.T.R.; W. Robb, Canuck Supply Company.

SECRETARY, J. Powell, Chief Draughtsman, G.T.R.; TREASURER, W. H. Stewart, Chief Clerk to Assistant to Vice President, C.P.R.

Recent Dominion Legislation.

The following acts affecting transportation interests, in addition to those given on pg. — of our — issue, were passed at the Dominion Parliament's recent session:—

ALABAMA TRACTION, LIGHT AND POWER Co.—Incorporation.

ALBERTA, PEACE RIVER AND EASTERN RY.—Extension of time for construction.

BRITISH COLUMBIA AND DAWSON RY.—Extension of line for construction.

CANADA SHIPPING ACT.—Amending act.

CANADIAN NORTHERN RY.—Extending time for construction of certain lines, and authorizing building of additional branches.

CANADIAN NORTHERN ALBERTA RY.—An act to aid construction of the line, and a second act with respect to aid granted.

CANADIAN NORTHERN MONTREAL TUNNEL AND TERMINAL Co.—Respecting company's powers.

CANADIAN NORTHERN PACIFIC RY.—Granting subsidy in aid of construction.

CANADIAN PACIFIC RY.—Granting extension of time for construction of certain lines, etc.

DRY DOCKS.—Amending act granting subsidies in aid of building dry docks.

ESQUIMALT AND NANAIMO RY.—Extending time for building certain lines, and authorizing building of additional lines.

GATINEAU AND UNGAVA RY.—Extending time for construction and changing company's title to Ottawa and Ungava RY.

GRAND TRUNK RY.—Respecting company's finances.

HAMILTON, ONT.—Providing for appointment of harbor commissioners.

KOOTENAY CENTRAL RY.—Extending time for construction.

KETTLE VALLEY RY.—Extending time for construction and authorizing building of additional lines.

MANITOBA AND NORTH WESTERN RY.—Extending time for construction, etc.

MEXICAN INTERURBAN ELECTRIC TRACTION Co.—Changing name to Mexican Interurban Electric Ry., etc.

MEXICO NORTH WESTERN TRANSPORTATION Co.—Changing name to Mexican North Western Pacific Ry.

MONTREAL HARBOR.—Authorizing additional advances to Montreal Harbor Commission.

MONTREAL AND LAKE VICTORIA RY.—Incorporation.

MONTREAL CENTRAL TERMINAL Co.—Two acts amending powers.

MONTREAL, OTTAWA AND GEORGIAN BAY CANAL Co.—Extending time for construction.

ONTARIO AND OTTAWA RY.—Amending powers.

OTTAWA AND LAKE MCGREGOR RY.—Act of incorporation, and a second act amending powers.

OTTAWA, BROOKVILLE AND ST. LAWRENCE RY.—Extending time for construction.

OTTAWA, MONTREAL AND EASTERN RY.—Two acts amending powers.

PACIFIC, TRANS-CANADA AND HUPSON BAY RY.—Incorporation.

PRINCE EDWARD AND HASTINGS RY.—Incorporation.

QUINZE RIVER AND OTTAWA RY.—Incorporation.

RAILWAYS AND BRIDGES.—Granting subsidies in aid of construction.

RAINY RIVER RADIAL RY.—Extending time for construction.

REVELLON FIRES TRADING Co.—Amending powers.

ST. CLAIR AND ERIE SHIP CANAL Co.—Extending time for construction.

ST. JOHN AND QUEBEC RY.—Granting aid towards construction of bridges, and confirming agreement with the Province of New Brunswick regarding construction and operation of railway.

SASKATCHEWAN CENTRAL RY.—Extending time for construction.

SASKATCHEWAN POWER Co.—Confirming charter.

TEMISKAMING AND NORTHERN ONTARIO RY.—Confirming agreement with G.T.R. for running rights.

UNITED GOLD FIELDS OF B.C.—Extending time for building authorized railway, etc.

VANCOUVER, FRASER VALLEY AND SOUTHERN RY.—Extending time for construction, etc.

WESTERN DOMINION RY.—Incorporation.

WINDSOR, CHATHAM AND LONDON RY.—Amending powers.

WINNIPEG AND ST. BONIFACE, MAN.—Incorporating harbor commissioners for district.

Joliette and Lake Manuan Colonization Railway.

In reference to the article on this line published in our last issue we are officially advised that A. M. Laredo purchased his three fourths interest in the charter, July 26, 1911.

We are also officially advised that the company has 30 miles of line located northerly from Joliette passing through the villages of St. Felix de Valois, St. Jean de Matha, and Ste. Emelie de L'Energie, and four miles north of the latter place into the Laurentian Mountains. From Ste. Emelie de L'Energie to St. Zenon, 12 miles, this being the mountain section and chiefly rock. From St. Zenon to St. Michel des Saints the line passes through a good farming section. St. Michel des Saints is a flourishing village established 52 years ago and situate 60 miles north of Joliette. From St. Michel des Saints to Waymontachene on the National Transcontinental Railway, 90 miles, the line follows contiguous to fine water stretches, and large lakes passing through the virgin forest with a wealth of lumber, magnificent scenery and ideal summer resorts, with excellent hunting, shooting and fishing. There is an abundance of lumber and pulp wood, with good agricultural land. The line when completed will also serve the following villages contiguous to it on each side, namely:—St. Ambrose, de Kildare, Radstock, St. Melanie, Ste. Beatrix, St. Alphonse, St. Come, St. Damien, and St. Ignace. With the advent of the railway, other parishes will be opened up between St. Michel des Saints and Waymontachene. There are at present several saw mills and creameries in operation along the line, besides a large pulp and paper mill up north. Contiguous to the line are deposits of white marble, asbestos, mica and iron, with large quantities of sand and gravel.

The general route map for the whole distance to the N.T. Ry. has been approved by the Minister of Railways; plans and profiles for the first 30 miles have been sent to Ottawa and the remainder of the line is being surveyed as rapidly as possible. The contractors for the first 60 miles are the Enterprise Construction Co. of New York and Ottawa, with headquarters at St. Felix de Valois, P.Q. The contractors intend covering the first 30 miles shortly with men, teams and other plant between Joliette and Ste. Emelie de L'Energie, in order to reach the latter place as expeditiously as possible with the track.

The track will be laid with 80 lb. rails instead of 65 lb. as originally intended. Considerable ties were taken out during the past winter. The line is expected to be completed before the National Transcontinental Ry. is connected up. The ruling gradient on the first 30 miles is 1 ft. per 100 ft. for 1½ miles; otherwise the gradient does not exceed 0.65 per 100 ft. From miles 30 to 42, mountain section, the ruling gradient is 1.50 per 100 ft. for short distances, with easy gradients at intervals between the 1.50 per 100 ft. grade. North it is not expected to exceed 0.50 per 100 ft. The

maximum curvature is 8°. At mile 20.5 the Black River is spanned with 2 half deck plate girders of 55 ft. each, with concrete abutments and one pier.

J. N. Patton, M. Can. Soc. C.E., is Chief Engineer, and H. S. Dickson, Division Engineer, both with headquarters at St. Felix de Valois, Que.

Canadian Northern Railway Earnings, Expenses, Etc.

Gross earnings, working expenses, net profits, increases or decreases, compared with those for 1910-11, from July 1, 1911:—

Earnings.	Expenses.	Net Earnings.	Net Increase
July \$1,475,900	\$1,114,300	\$361,600	\$13,400
Aug. 1,420,600	1,105,900	314,700	51,700
Sept. 1,576,400	1,157,000	419,400	38,200

St. John and Quebec Railway Construction.

The entire plans for the projected railway provide for a line from St. John, N.B., to Quebec, passing through Maine, and giving, it is claimed, the shortest and most direct connection. The plan is divided up into three sections, and includes the line known as the St. John Valley Ry., the Aroostook Valley Electric Ry. in Maine, and the old Quebec and New Brunswick Ry. in Quebec.

The first section of the line is in New Brunswick and extends from St. John along the St. John River Valley to Grand Falls. The contract for its construction has been arranged between the New Brunswick and Dominion Government, and has been let to the St. J. and Q. Ry. Co., which will sublet it to construction companies. The plans for the line from St. John to Grand Falls show that the starting point of construction will be from a junction with the Intercolonial Ry. at Rothesay, thence across the Kennebecasis River, and the St. John River to Hampstead tp. Thence the route follows the windings of the river, keeping on the south bank to Northampton, where it bends away towards the International boundary, returning close to the bank in Andover tp., and on to Andover.

The New Brunswick Government aids the construction by a guarantee of bonds of \$25,000 a mile, and the Dominion Parliament has voted a subsidy of \$3,200 a mile, but which may be increased to \$6,400 a mile, in proportion as the cost of construction exceeds \$15,000 a mile. The Dominion Parliament has also voted \$1,000,000 towards building three bridges on the line, viz.:—one across the Kennebecasis River at Perry Point, one across the St. John River at the Mistake, and the third across the St. John River near Andover. The Dominion Government has also arranged to lease the line, as soon as it is completed, for 99 years, to operate it as part of the Intercolonial Ry., and to pay 40% of the gross earnings. The agreement provides that the rental shall be used for the retirement of the bonds issued with the provincial guarantee, and that any surplus shall be paid to the company for 15 years, after which the money is to be used to meet the interest and principal of the bridge bonds, and any balance to be paid to the company.

The agreement with the Dominion Government provides that the bridges shall be built by a separate company, and the New Brunswick Legislature has under consideration a measure incorporating the St. John and Quebec Bridge Co., with A. R. Gould, President, St. J. and Q. Ry., as its principal promoter. Other legislation to carry out the agreement between the two Governments and the company is pending in New Brunswick.

The second section of the line is being proposed to be built under the charter the Aroostook Valley Electric Ry., incorporated in the State of Maine. This provides that the company may acquire the C.P.R. Aroostook branch, terminating at Presque Ile, Me., and connect it with the electric railway running from that town to Washburn, about nine miles. The company proposes to build branches from Washburn northerly to Caribou and into New Sweden tp. The line to the Quebec boundary leaves Washburn, follows the valley of the Little Salmon River, crosses the Fort Kent branch of the Aroostook Valley Ry. and proceeds westerly to the Allagash River, at the boundary between tps. 14, ranges 11 and 12, the St. John River in tp. 15, range 13, and reaches the International boundary between Maine and Quebec, in tp. 14, range 16.

The third section runs from the International boundary to the Intercolonial Ry., the plan showing that the surveyed route passes through Casgraine,

(in which the line crosses the National Transcontinental Ry.), Bourdages and St. Clair tps. to Montmagny station.

We are officially advised that contracts for grading, track laying and ballasting have been let as follows:—Fredericton to Woodstock, 62 miles, Quebec Construction Co., Montreal; Woodstock to Centreville, 23 miles, Kennedy and McDonald, Antigonish, N.S. It is reported that a further contract has been let to J. H. Corbett.

A prospectus was issued in London, Eng., May 10, by the St. J. and Q.R. Co., through the Bank of Montreal, offering £873,285 1st mortgage 4% debenture stock, unconditionally guaranteed as to both principal and interest by the New Brunswick Government, the price of issue being 98½%.

The Death of James Osborne.

Just after The Railway and Marine World's last issue had gone to press came the unexpected news of the death of Jas. Osborne, General Superintendent, British Columbia Division,

P260 The late James Osborne.

C.P.R., which occurred at his home in Vancouver on May 1.

When a change in the B.C. General Superintendency was decided on early in the year, Vice President and General Manager Bury selected Mr. Osborne for the position, personally visiting Toronto and offering him what is undoubtedly the blue ribbon of the company's general superintendencies, owing to the fact that a general superintendent at Vancouver has so many duties to perform in addition to mere operation and maintenance, and that additional responsibility is thrown on him by the remoteness of his location from headquarters. With the great development going on in British Columbia, and the important changes which will follow the opening of the Panama Canal, the position of General Superintendent at Vancouver is of more than usual importance, and it was given to Mr. Osborne, not because he was the senior general superintendent in the service, but more particularly on account of his peculiar fitness for it, his great capacity for work, and his indomitable devotion to the company's interests.

He only arrived at Vancouver on February 15, and had just got settled in

a beautiful home on Shaughnessy Heights, entering on his work with characteristic ardor and being most enthusiastic about it. In a personal letter to the Managing Director of The Railway and Marine World, written a few weeks before his death, he said:—"We have had delightful weather since our arrival here, and I like the country, its people, and the work very much. The development is marvellous."

Towards the end of April Mr. Osborne went all over the division on an inspection trip, during which he caught a severe cold. Returning to Vancouver on April 27, he at once went to bed, but no serious results were feared, until erysipelas set in and he failed rapidly, dying on May 1.

His body left Vancouver on the following day on his private car, which was attached to the Montreal express, accompanied by Mrs. Osborne, his younger son and three daughters, the older son being resident in Toronto. The funeral took place in Montreal May 6, a large number of the company's officials and others attending. The body was cremated at Mount Royal cemetery, in accordance with his expressed wish.

Mr. Osborne was born at Montreal, Sept. 19, 1861, and entered railway service Oct., 1874, since when he was, to Aug., 1877, junior clerk, Mechanical Superintendent's office, G.T.R.; Sept., 1877, to July, 1883, chief clerk, Works Manager's office, G.T.R.; July, 1883, to June, 1886, chief clerk, Mechanical Superintendent's office, C.P.R.; June, 1886, to Sept., 1887, chief clerk, Assistant General Manager's office, C.P.R.; Sept., 1887, to Apr., 1890, Car Accountant, C.P.R.; Apr., 1892, to Apr., 1896, Superintendent Car and Fuel Service, C.P.R.; Apr., 1896, to Mar., 1899, Assistant to Vice President, C.P.R.; Mar., 1899, to May, 1901, General Superintendent, Western Division, C.P.R., Winnipeg; May, 1901, to May, 1903, General Superintendent, Atlantic Division, C.P.R., St. John, N.B.; May, 1903, to Dec., 1906, General Superintendent, Eastern Division, C.P.R., Montreal; Dec., 1906, to Feb., 1912, General Superintendent, Ontario Division, C.P.R., Toronto. Feb. 1 to May, 1912, General Superintendent, British Columbia Division, C.P.R. He was President of the International Association of Car Service Officers for 1895-96.

C.P.R. Irrigation Work Contracts.

A. S. Dawson, M. Can. Soc. C.E., Chief Engineer, Department of Natural Resources, C.P.R., reports the awarding of three large contracts in connection with construction in the eastern section of the company's irrigation block.

Grant Smith and Co. and McDonnell, of Vancouver, have been given a contract running into over \$500,000, for the construction of a large reinforced concrete aqueduct, two miles long, near Brooks, Alta., which will take the next two summers to complete.

Janse Bros. and Boomer and Hughes, of Calgary, Alta., and Seattle, Wash., have been given a two year contract, amounting to about \$300,000, for the construction of a very large number of reinforced concrete structures on the canal system in the section of the irrigation block lying between Bassano and Brooks, Alta., and the Bow and Red Deer rivers.

The Canada Foundry Co. has been given a contract for supplying and erecting 30 steel bridges over the main canal system, containing about 1,500,000 lbs. of steel, which, with masonry abutments, will provide practically permanent structures.

Work on all of these contracts will be commenced in the immediate future, and several hundred men, large numbers of teams and an elaborate construction plant will be required for their completion.

Grade Separation in North Toronto.

The plans for the construction of the Canadian Northern Ry. line across North Toronto are bound up with the question of the separation of the grades, with which the C.P.R. is also concerned. The C.P.R. was originally across the north portion of Toronto, and access was finally obtained into the Union Station by a line from Leaside Jct., thence over the old Credit Valley Ry., or the old Toronto, Grey and Bruce Ry. to Toronto Jct, now West Toronto. The section of line from Leaside Jct. to Toronto Jct. has always been used for freight traffic, and recently it has also been used for certain passenger trains. The extension of traffic necessitated changes, and, in conjunction with the city council, plans were discussed for the elimination of level crossings.

The coming of the Canadian Northern Ry. altered the situation. The C.N.R. proposed to run a line from near Leaside across the Don Valley to Davenport road, and there connect up with the right of way which it had acquired from the Electric Development Co. After considerable negotiations and discussion between the several interests, and before the Board of Railway Commissioners, the two railways agreed upon a plan for the construction of joint tracks from Yonge St. to Avenue Road, with a joint station. This arrangement has been approved of by the Board of Railway Commissioners, with the understanding that the plans for the subways on Yonge St. and Avenue Road be submitted to the board. The C.P.R., it is said, will carry out the joint section of the work, and it is stated a start is to be made at once.

The question of what would be done west of Avenue road was discussed at great length, and finally a compromise plan was prepared by G. A. Mountain, Chief Engineer for the board. This plan, which has been accepted by the railways and the city, has been approved by the board. It provides for the elevation of the tracks from the end of the Avenue road section, westerly to Davenport road, whence they approach the level on a descent of 0.5%. Davenport road and Poplar Plains road are to be deflected into one subway, and Huron street is to be closed. Provision is made for approaches to 18 industrial spurs. Most of these spurs will be on a 2% gradient, while one will have a 3% gradient.

Toronto Viaduct and Union Station.

The Board of Railway Commissioners, sitting at Toronto May 24 approved of the G.T.R. plans for a viaduct along the Toronto water front and for a new union station on Front St., between York and Bay Streets, and rejected the plans submitted by the C.P.R. and by the Board of Trade. The Vice Chairman of the Board of Railway Commissioners stated that work must proceed at once, and Chief Engineer Safford of the G.T.R., said his company was willing to rush the work as much as possible, but he thought it would take three years to complete it.

The G.T.R. plans provide for a station with ten through tracks and no stub tracks. The station building will be 3½ or possibly four stories high and is expected to cost \$2,500,000, which is to be borne by the C.P.R., the G.T.R., and the Canadian Northern Ry. The cost of the viaduct is estimated at \$6,500,000, of which the city is to contribute a third.

H. A. Everett, President London, Ont., St. Ry., is reported to be in poor health, but it was denied, May 17, that as a consequence he had resigned the presidency.

The Death of Chief Commissioner Mabee.

Closely following the tragic death of C. M. Hays, and the short fatal illness of James Osborne, the public were further shocked early in May by the death of James Pitt Mabee, Chairman of the Board of Railway Commissioners.

Mr. Mabee was taken ill on April 30, while presiding at a sitting of the board in Toronto. That evening he went to St. Michael's Hospital, his own physician, and a surgeon who was called in, recommending an operation for appendicitis. At first he was rather opposed to having it done, but consented early the following morning, when it was performed, and it was found that gangrene had set in. Two days later a second operation became necessary to relieve paralysis of the bowel, due to the gangrene condition. This, however,

P275 The late J. P. Mabee.

was also unavailing, and he died on May 6, following a collapse due to heart failure.

His death, the news of which was received with the greatest regret throughout the entire country, was followed by the most unanimous expression by public men and the press in regard to his ability, to the great services he had rendered Canada, and to his fairness to the various conflicting interests. He was buried May 8 at his birthplace, Port Rowan, Ont., the body being taken from Toronto on a special train, accompanied by a large number of prominent public men, railway officials, etc.

He was born at Port Rowan, Ont., Nov. 5, 1859, and was educated at the Port Rowan high school, and matriculated, Nov., 1877. He was called to the Ontario Bar, Nov., 1882, and from 1882 to 1887, practised at Listowel, Ont., and from 1887 to Jan. 1, 1905, at Stratford,

Ont. From Jan. to Nov., 1905, he practised at Toronto, as a member of the firm of Beatty, Blackstock and Co., during which time he was Chairman of the Canadian section of the International Waterways Commission. He retired from private practice, and resigned the chairmanship mentioned, Nov., 1905, on his appointment as a Justice of the High Court of Ontario. From Mar., 1906, to Mar., 1908, he was a member of the Statute Revision Committee, and on Mar. 21, 1908, was appointed Chairman of the Board of Railway Commissioners.

Mr. Mabee, who was a widower, left a young son and daughter.

C.P.R. Mechanical Conference.

A conference of officials of the C.P.R. Mechanical Department was held at Angus shops, Montreal, May 6 to 8, H. H. Vaughan, Assistant to the Vice President, presiding, the others present being C. H. Temple, Superintendent of Motive Power and Car Department, Western lines, Winnipeg; R. W. Burnett, General Master Car Builder, Montreal; C. Kyle, General Master Mechanic, Eastern lines, Montreal; H. Osborne, Superintendent Locomotive Shops, Montreal; G. I. Evans, Mechanical Engineer, Montreal; J. Burns, Master Mechanic, Montreal; C. C. Ord, Master Mechanic, McAdam Jct., N.B.; H. G. Reid, Master Mechanic, North Bay, Ont.; A. Dixon, General Foreman, Locomotive Shops, West Toronto; S. Phipps, Master Mechanic, Vancouver; R. Preston, Master Mechanic, Winnipeg; A. T. Shortt, Master Mechanic, Calgary, Alta.

A large number of questions were thoroughly discussed. A dining car was placed near the shops to serve luncheon for those attending the conference, and at its conclusion a dinner was held held at the Engineers' Club, Montreal, H. H. Vaughan, president of the club, occupying the chair. A visit was paid to the Montreal Locomotive Works.

Western Canada Railway Club.—At the recent annual meeting in Winnipeg, the following officers and committees were elected for the current year:—President, S. J. Hungerford, Superintendent of Rolling Stock, Canadian Northern Ry.; Vice President, T. Duff Smith, Fuel Agent, G.T. Pacific Ry.; Secretary, W. H. Rosevear; Treasurer, E. Humphrey; Executive Committee, R. R. Neild, J. G. Legrand, A. McCowan, L. O. Genest, A. H. Eager, L. Kon, W. Carter; Audit Committee, W. S. Fallis, E. O. Balleine and J. B. Parker.

Embargos Against Traffic.—The Board of Railway Commissioners has called on railway companies to show cause at the sittings at Ottawa, June 18, why an order should not be made prohibiting any railway company from issuing an embargo against any traffic for longer than four days without first giving the board at least 10 days previous notice of its intention to issue such embargo, and the reason why such embargo is to be issued.

A Winnipeg press report states that the G. T. Pacific Ry. is about to start operating a passenger train service between Winnipeg and Fort William, Ont.

The Railway Storekeepers' Association held its ninth annual convention at Buffalo, N.Y., May 20 to 22, when, among the subjects dealt with, was that of line inspection, by J. H. Callaghan, General Storekeeper, C.P.R., Montreal.

The Michigan Central Rd. was fined \$10,000, May 9, in the U.S. District Court at Chicago, for violation of the laws against rebating. The company pleaded guilty to the charge, which was stated to have been carried on under the guise of advertising theatrical companies. An indictment against W. H. Underwood, Assistant General Passenger Agent, M.C. Rd., Chicago, Ill., in the same connection, was quashed.

Appointment of President Grand Trunk Ry. and Grand Trunk Pacific Ry.

A. W. Smithers, chairman of the Board, G.T.R., arrived in New York, May 17, on the s.s. Mauretania, from England, and was met by W. Wainwright, Vice President, who has had chief charge of the company's affairs since C. M. Hays' death, and by D. E. Galloway, assistant to the president. After spending a day or two in New York, Mr. Smithers proceeded to Montreal and visited Ottawa, and on May 24 announced that E. J. Chamberlin, Vice President and General Manager G.T.P.R., had been appointed President of both the G.T.R. and G.T.P.R., to succeed Mr. Hays, and had also been elected a member of the G.T.R. board. At the same time it was announced that W. Wainwright, heretofore Second Vice President G.T.P.R., had been appointed First Vice President, and M. M. Reynolds, heretofore Third Vice President, had been appointed Second Vice President, and also a director.

Mr. Smithers also gave out the following statement:—"In making the announcement with regard to the late Mr. Hays' successor, the chairman wishes to take the opportunity of congratulating the Vice President, W. Wainwright, on the completion of his 50 years' connection with the company, during which time he has continuously rendered important and faithful service, and the chairman desires to especially recognize the readiness with which, at his request, Mr. Wainwright handled the company's affairs in the circumstances arising from the lamented death of Mr. Hays. The chairman is pleased to announce that the board has made certain arrangements with Mr. Wainwright in recognition of his valuable services which Mr. Wainwright informs the chairman have given him great pleasure and gratification."

E. J. Chamberlin was born in 1852 at Lancaster, N.H., and entered railway service in 1871, since when he has been consecutively, to 1872, timekeeper in car shops, Central Vermont Rd.; 1872 to 1875, clerk in Paymaster and Superintendent of Transportation's office, same road; 1875 to 1876, corresponding secretary to General Superintendent, same road; 1877 to 1884, private secretary to General Manager, same road, St. Albans, Vt.; Apr., 1884, to Sept., 1886, Superintendent, Ogdensburg and Lake Champlain Rd., and Central Vermont Line steamships running between Chicago and Ogdensburg; Sept. 1, 1886, to Oct., 1905, General Manager, Canada Atlantic Ry. After the absorption of the C.A.R. by the G.T.R. he was connected with lumber, contracting and mining interests for some years, and on Jan. 25, 1909, was appointed Vice President and General Manager, Grand Trunk Pacific Ry., on the resignation of F. W. Morse.

The events of the past few weeks have shown the utter unreliability of much of the so called "news" published in the daily papers. On May 3 evening papers published a Canadian Press dispatch from London, Eng., stating that Sir Thos. Tait had that day been chosen to succeed the late C. M. Hays. Sir Thos. Tait was at the time in New Brunswick, in connection with the construction of the Fredericton and Grand Lake Ry., of which he is president, and on returning to Montreal stated that he knew nothing whatever about the matter. It would appear that there was no foundation for the dispatch quoted, and that it was probably manufactured.

On May 15 the Toronto Globe announced, under flaring head lines, that Hon. G. P. Graham, M.P., ex-Minister of Railways and Canals, had been offered the position, and added:—"Mr.

Smithers is now on his way to Canada to consult with Mr. Graham as to the vacancy."

Mr. Graham, who was in Ottawa that day, is reported to have stated to a press

P276 E. J. Chamberlin,
President, Grand Trunk Railway and Grand
Trunk Pacific Railway.

representative that there was no truth in the report, and that the presidency had not been offered to him.

On arrival at New York Mr. Smithers is reported as saying:—"The use of cer-

P277 W. Wainwright,
Vice President, Grand Trunk Railway, and
First Vice President, Grand Trunk
Pacific Railway.

tain names in connection with the presidency was absolutely unauthorized. By unauthorized I mean not only that no officer of the G.T.R. has given out any

statement tending to show that any person was likely to get the appointment, but I mean that even the facts did not authorize any announcement."

Such positive announcements in the daily papers as those above quoted, following so closely after the sheaf of bogus news and alleged dispatches published at the time of the Titanic disaster, naturally cause a feeling of distrust of any "news" published, and the publishers of reputable papers should take steps to prevent a repetition of such frauds on the public. The announcement that Sir Thos. Tait had been appointed was not given even as a report, or rumor, but on the authority of a Canadian Press dispatch. If the management of that association does not deal with the member of its staff who sent the bogus news, the daily paper publishers should take the matter up.

The announcement that Mr. Graham had been offered the position was made positively by the Toronto Globe on its own authority, and was followed by a lengthy eulogy of him. It would appear to have been a pure invention, and as apparently it was not subsequently corrected in any way, except by a press dispatch from Montreal saying that G.T.R. officials there did not credit it, the Globe must assume full responsibility for it. What was the object of publishing such a statement? Was it simply to create a sensation for the day, or was it a deliberate attempt to boom Mr. Graham for the position? The incident tends to throw a doubt on newspaper statements generally, and to justify the inference that some of them are edited without any regard for the truth of the matter they publish.

Operation of U.S. Trains in Manitoba by U.S. Crews.

Under an agreement between the Canadian Northern Ry. and the Midland Ry. of Manitoba, the latter a subsidiary of the Great Northern Ry. (U.S.A.), the Great Northern and the Northern Pacific Rys. started on May 1 operating their trains from the international boundary to Fort Garry union station, Winnipeg, with United States crews, having their headquarters at Crookston, Minn. Previously the trains had been brought in by C.N.R. crews. The alteration led to difficulties, the C.N.R. men protesting at being removed to other runs, and against the operation of trains in Canada by U.S. crews. The Department of Labor was advised and steps taken to appoint a conciliation board. It was reported May 12 that an arrangement had been reached between the two companies, but the C.N.R. men demanded to be reinstated in their old positions. On May 15, the Board of Railway Commissioners issued an order preventing the C.N. Ry. and the Midland Ry. of Manitoba, under a penalty of \$100 a day, carrying out any of the provisions between them after May 20, unless and until it received the sanction of the Governor-in-Council on the Board's recommendation. Sir W. Mackenzie, President C.N.R., arrived in Winnipeg, May 15, and discussed the matter with the various interests. As a result the situation as it existed prior to May 1 was restored, and the G.N. Ry. and N.P. Ry. trains between the boundary and Winnipeg are being operated by Canadian crews, though it is said the latter have become employees of the Midland Ry. of Manitoba.

The question of the future operation of the trains into Winnipeg will be discussed later on by the officials of the different lines, and will also come up again before the Board of Railway Commissioners.

Birthdays of Transportation Men in June.

Many happy returns of the day to—
Jas. Anderson, Manager, Sandwich, Windsor and Amherstburg Ry., Windsor, Ont., and President, Canadian Street Railway Association, born at Ayr, Ont., June 20, 1851.

W. C. Bowles, General Freight Agent, Western Lines, C.P.R., Winnipeg, born at Montreal, June 3, 1875.

J. H. Boyle, Assistant Superintendent, District 4, Eastern Division, C.P.R., Ottawa, born at Waterloo, Que., June 26, 1869.

F. P. Brady, Member, Government Railways Managing Board, and General Superintendent, Government Railways, Moncton, N.B., born at Haverhill, N.H., June 22, 1853.

H. W. Brodie, General Passenger Agent, Lines West of Revelstoke, C.P.R., Vancouver, B.C., born at Fredericton, N.B., June 8, 1874.

A. H. N. Bruce, M. Can. Soc. C.E., Chief Engineer, Quebec and Saguenay Ry., Quebec Ry., Light, Heat and Power Co., etc., Quebec, Que., born at Ballyscullion, Ireland, June 18, 1854.

A. E. Doucet, M. Can. Soc. C.E., District Engineer, National Transcontinental Ry., Quebec, born at Montreal, June 9, 1860.

E. W. DuVal, Superintendent, District 4, Manitoba Division, C.P.R., Souris, born at Toledo, Ohio, June 5, 1885.

G. H. Eaton, Assistant Master Car Builder, Western Lines, C.P.R., Winnipeg, born in Staffordshire, Eng., June 9, 1860.

J. M. R. Fairbairn, M. Can. Soc. C.E., Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal, born at Peterboro, Ont., June 30, 1873.

A. A. Goodchild, Auditor of Stores and Mechanical Accounts, C.P.R., Montreal, born at Peckham, London, Eng., June 3, 1866.

J. A. Heaman, Division Engineer, G.T. Pacific Ry., Fitzhugh, Alta., born at Memphis, Tenn., June 3, 1874.

H. W. Harding, Local Secretary, Canadian Northern Ry., London, Eng., born there June 6, 1869.

Hon. J. D. Hazen, M.P., Minister of Marine, Ottawa, born at Oromocto, N.B., June 6, 1860.

L. R. Johnson, Assistant Superintendent Motive Power, C.P.R., Eastern Lines, Montreal, born at Abingdon, Berks, Eng., June 22, 1855.

L. K. Jones, I.S.O., Assistant Deputy Minister and Secretary, Department of Railways and Canals, Ottawa, born at Port Hope, Ont., June 9, 1849.

A. C. Lytle, Assistant Superintendent of Construction, Montreal Tramways Co., Montreal, born at Hemmingford, Que., June 6, 1854.

R. S. McCormick, M. Am. Soc. C.E., Chief Engineer, Algoma Central and Hudson Bay Ry. and Algoma Eastern Ry., Sault Ste. Marie, Ont., born at Quaker City, Ohio, June 22, 1873.

D. McDonald, General Manager, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., June 17, 1859.

S. J. McLean, Dominion Railway Commissioner, Ottawa, born at Quebec, June 14, 1871.

J. V. McNab, Resident Engineer, C.P.R., Saskatoon, Sask., born at Ayr, Ont., June 11, 1884.

C. E. McPherson, Assistant Passenger Traffic Manager, Western Lines, C.P.R., Winnipeg, born at Chatham, Ont., June 7, 1861.

W. R. MacInnes, Freight Traffic Manager, C.P.R., Montreal, born at Hamilton, Ont., June 7, 1867.

H. J. Maguire, District Baggage Agent, Pacific Division and B.C. and Pacific Coast Service, C.P.R., Vancouver, B.C., born at Toronto, June 16, 1881.

G. Manson, Assistant to Vice President C.P.R., Winnipeg, born at Thurso, Scotland, June 8, 1863.

J. D. Morton, Assistant Comptroller, Canadian Northern Ry., Toronto, born at London, Ont., June 15, 1857.

L. Mulkern, District Freight Agent, C.P.R., London, Ont., born there, June 18, 1871.

H. A. Pepler, District Master Mechanic, C.P.R., Montreal, born at Richmond, Que., June 25, 1873.

F. Price, Superintendent Car Service, G.T.R., Montreal, born there June 11, 1864.

Allan Purvis, Manager of Interurban Lines, British Columbia Electric Ry., New Westminster, B.C., born at Batavia, Java, June 29, 1864.

D. I. Roberts, General Manager, Quebec, Montreal and Southern Ry., and Napierville Jct. Ry., Montreal, born at Waynesburg, Pa., June 27, 1853.

Jas. Stephenson, ex Chief Superintendent, G.T.R., now of Clevedon, Somerset, Eng., born at Weston Super Mare, Eng., June 2, 1837.

W. Webber, General Agent Passenger Department Atlantic Steamship Service, C.P.R., Montreal, born at Liverpool, Eng., June 10, 1872.

Around the World by C.P.R. and Trans-Siberian Ry.

The C.P.R. has made arrangements by which it can now sell around the world tickets over the Trans-Siberian Ry., connection being made by its Trans-Pacific steamships at Yokohama, Kobe, Nagasaki and Shanghai, with the various routes of the Trans-Siberian. At fares varying according to route, passengers may leave the C.P.R. steamships at Yokohama or Kobe, travel by Japanese railway to Tsuruga on the north coast of Japan, thence by steamer to Vladivostok, where the Trans-Siberian rails begin, or they can go by rail from Yokohama or Kobe to Shimonoseki, and take steamer to Dairen (Dalny), close to historic Port Arthur, and then begin the rail journey, joining the main line of the Trans-Siberian at Kharbin, or, leaving the C.P.R. at Nagasaki, they may take the Japanese railway to Moji, and then steamer to Dalny, or, again, they may use the C.P.R. ships to Nagasaki or Shanghai, and steamer direct from either of these ports to Vladivostok.

T. E. McNair, City Passenger Agent, C.P.R., Amherst, N.S., writes:—"Please find enclosed money order for \$1, for which continue my subscription to your valuable Railway and Marine World. It certainly is worth more for the information it contains."

The Lewis Construction Co., Ltd., has been incorporated under the Ontario Companies Act, with \$40,000 capital, and office at Toronto, to build railways, bridges, viaducts, docks, wharves, etc., and act as general contractors. The provisional directors are, E. C. Lewis, W. Middlemist and H. A. Hawley, Toronto.

Norton, Griffiths and Co., Ltd., contractors, etc., passed a bylaw at a special meeting of shareholders in Vancouver, B.C., May 10, increasing the number of directors from five to ten, of whom four must be residents of England, and six residents of Canada. Two directors shall form a quorum. F. Carter-Cotton, of Vancouver, is President, and F. Molyneux, Secretary.

The Union Contract Co., has been incorporated under the Dominion Companies Act, with a capital of \$250,000 and offices at Montreal, to carry on a general engineering and contracting business, particularly the building of wharves, docks, tunnels, bridges, etc. The provisional directors are: R. S. Stackhouse, R. Chenevert, G. H. Semple, W. G. Phillips, R. E. Allen, Montreal.

Canadian Freight Association.

T. Marshall, Chairman, has removed his office from the union station, Toronto, to the Canadian Express Building, Montreal, it being considered that Montreal is more suitable than Toronto, on account of the C.P.R. and G.T.R. headquarters being there. The Association's freight inspection department still has its offices in Toronto union station, in charge of P. K. Perry, Chief Inspector.

A press dispatch from Montreal, May 12, published in daily papers, stated that the Inland Navigation Co., Canadian Lake Line, Merchants Mutual Line and Jaques Line had withdrawn from the Canadian Freight Association, as they objected to freight rates forced by the Association and that a rate war was anticipated unless a compromise could be effected.

The facts are that the Inland Navigation Co. never was a member of the Association, but the management informs us that its relations with the Association have always been satisfactory. The Jaques Line has not withdrawn from membership. The Canadian Lake Line and the Merchants Mutual Line have withdrawn, contending that they get no benefit by being members. The question of rates has positively nothing to do with the matter and there is no prospect of any rate war.

Certain agreements are made every year with the lake and rail members of the Association, and the water lines which are not members, in regard to rates, and this agreement is carried out in a satisfactory manner. The withdrawal of the water lines above mentioned from the Association does not in any way disturb the agreement in regard to rates.

The water lines have a separate organization, the Lake Freight Association, of which H. A. Young, Traffic Manager, Canadian Lake Line, is Secretary with office at Toronto. The members of this Association are the Canadian Lake Line, Inland Navigation Co., Jaques Line and Merchants Mutual Line.

C.P.R. Colonization Plans.

Sir Thos. G. Shaughnessy is reported to have announced, May 5, that the company will select from its unsold lands farms of 160 acres each in Manitoba, Saskatchewan and Alberta, 25 farms in all; put up houses and buildings, with the necessary fencing; provide the necessary implements for working them, and suitable live stock. These farms will be offered to selected experienced men to be operated as mixed farms, on the condition that when a man has demonstrated his ability as a practical farmer, he will be permitted to purchase the property at cost, payable in six or eight instalments, with 6% interest. During the earlier part of the term, the company's representative will direct the general course of operations on the farms. The company has also arranged to put in operation a plan under which approved farmers, on making a purchase of lands from the company, will be granted a loan of \$2,000 towards erecting the buildings, fences, etc. This money is to be repaid along with the cost of the land with 6% interest, the payments being spread over a period of 10 years. \$500,000 has been appropriated, to be expended during this year. It is proposed to spend \$1,000,000 in 1913, and \$5,000,000 annually thereafter until the available lands are occupied.

H. Doughty, formerly Superintendent, Regina, Sask., Municipal Ry., is now engaged on Lethbridge, Alta., Municipal Ry. construction.

Railway Rolling Stock Notes.

The Intercolonial Ry. has received five consolidation locomotives from the Canadian Locomotive Co.

The Canadian Northern Ry. recently completed 35 cabooses out of an order of 50 at its Winnipeg shops.

The Grand Trunk Pacific Ry. has received seven first class cars from the Canadian Car and Foundry Co.

The Algoma Central and Hudson Bay Ry. has received one 10-wheel locomotive from the Canadian Locomotive Co.

The Dominion Bridge Co. recently ordered a Lidgerwood flat car, 30 tons capacity, from the Canadian Car and Foundry Co.

The Temiskaming and Northern Ontario Ry. has ordered four steel under-frame conductors' vans from the Canadian Car and Foundry Co.

The Esquimalt and Nanaimo Ry. is reported to have purchased 60 logging cars of modern construction, equipped with automatic unloading apparatus, for use on its Cowichan River line.

The G.T.R. has recently placed orders for the following rolling stock:—2,000 box cars and 250 refrigerator cars, with the Canadian Car and Foundry Co., Montreal, and 1,000 box cars, 500 automobile cars, 250 refrigerator cars, 1,000 steel hopper bottom coal cars, in the U.S.

The Canadian Northern Ry., between Apr. 15 and May 15, ordered 50 cabooses from its Winnipeg shops, 450 box cars from the Canadian Car and Foundry Co., 300 box cars from the Crossen Car Co., 25 consolidation locomotives from the Canada Foundry Co., and 100 box cars elsewhere.

A press report, towards the end of April, stated that the C.P.R. had placed an order for the building of ten sleeping cars in the U.S. We are officially advised that the order referred to was placed in Dec., 1911, and noted in our issue of Jan., 1912. The cars mentioned are of the C.P.R. standard type, 72 ft. long.

The 2,000 wooden box cars referred to in our May issue as having been ordered by the C.P.R. at the Angus shops are to be constructed with the new reinforced end designed by R. W. Burnett, General Master Car Builder. This construction uses rolled sections for end posts with 1½ in lining and no sheathing outside of the ends. The cars are also to have the new C.P.R. metal ladders.

The C.P.R., between Apr. 17 and May 13, received the following additions to rolling stock:—128 box cars, 14 vans, 4 first class cars, 2 superintendents' business cars, 6 sleeping cars, one T3 locomotive, and 4 G2 locomotives, from its Angus shops, Montreal; 581 box cars, 30 flat cars, from the Canadian Car and Foundry Co.; 8 D4 and 2 D10 locomotives from the Montreal Locomotive Works, and 292 box cars and 90 tank cars from the American Car and Foundry Co.

The question of establishing a more frequent service on the Temiskaming and Ontario Ry., between Golden City and Timmins, on the Porcupine subdivision, is under consideration. S. B. Clement, Chief Engineer and Superintendent of Maintenance, has been looking into various types of motor cars in operation in the U.S., and also the gas electric car which has been put in operation on the Quebec and Lake St. John Ry., and it is probable that an order of one car will be placed in the near future.

The C.P.R., between Apr. 17 and May 13, ordered the following additions to rolling stock:—109 vans, 2 suburban

cars, 5 refrigerator cars, 9 stock cars, 5 flat cars, 10 sleeping cars, 5 dining cars, 20 first class cars, 10 tourist cars, 20 baggage and express cars, one G1 and 10 P1 locomotives, from its Angus shops, Montreal; 1 coal car and 85 box cars from the Canadian Car and Foundry Co.; 25 N3 locomotives, 25 D10 locomotives from the Montreal Locomotive Works, and two tank cars from the American Car and Foundry Co.

Following are the chief details of the two six wheel switching locomotives, type U3, which the C.P.R. is building at its Angus shops, Montreal, as mentioned in our last issue:—

Weight in working order	137,000 lbs.
Weight of tender loaded	90,000 lbs.
Weight of tender light	44,000 lbs.
Heating surface, firebox	138 sq. ft.
Heating surface, tubes	1,406 sq. ft.
Heating surface, total	1,544 sq. ft.
Grate area	29 sq. ft.
Tubes, no. and diar.	232 2 ins.
Firebox	Radial stayed
Boiler, type	Straight top
Boiler, pressure	200 lbs.
Wheel base	11 ft. 6 ins.
Cylinders, diar. and stroke	18 by 26 ins.
Valves	Piston 11 ins.
Valve gear	Walschaert
Driving wheels, diar.	52 ins.
Axles, driving	8½ by 10 ins.
Axles, tender	5 by 9 ins.
Air brakes	Westinghouse E. T. 6
Lubricators	Canadian. Detroit 22

Following are the chief details of the 25 consolidation superheater locomotives which the C.P.R. is having built by the Montreal Locomotive Works, as mentioned in our last issue:—

Weight on drivers, in working order	105,000 lbs.
Total weight of engine in working order	220,000 lbs.
Total weight of engine in working order	220,000 lbs.
Weight of tender, loaded	134,000 lbs.
Tender capacity, water	5,000 imp. gals.
Tender capacity, coal	12 tons
Heating surface, firebox	165 sq. ft.
Heating surface, tubes	2,620 sq. ft.
Heating surface, total	2,785 sq. ft.
Heating surface, superheater	437 sq. ft.
Grate area	40 sq. ft.
Tubes, no. and diar.	270 2 ins., 24 5 ins.
Driving wheel base	16 ft. 6 ins.
Total wheel base, engine	25 ft. 5 ins.
Total wheel base, engine and tender	55 ft. 9½ ins.
Boiler, type	Extended wagon top
Superheater	Vaughan and Horsey, boiler tube
Stayings	Radial with cross stays
Cylinders, diar. and stroke	23½ by 32 ins.
Boiler pressure	180 lbs.
Driving wheel diar. outside	63 ins.

The Canadian Northern Ry. has ordered 25 consolidation locomotives, in addition to the 20 ordered at the end of 1910, now in course of delivery, from the Canada Foundry Co. Following are the chief details:—

Tractive effort	45,000 lbs.
Weight in working order	215,000 lbs.
Weight on drivers	190,000 lbs.
Weight on leading truck	25,000 lbs.
Wheel base, driving	16 ft. 6 ins.
Wheel base, total	25 ft. 5 ins.
Cylinders, diar. and stroke	24 by 32 ins.
Boiler, type	Extended wagon top
Boiler, pressure	180 lbs.
Boiler, outside diar. of first ring	72 ins.
Firebox, length and width	110 by 64 ins.
Firebox, water space	
.....front 5½ ins., sides and back 4½ ins.	
Tubes, no. and diar.	272 2 ins.
Valves	Piston, 12 ins.
Driving wheels, diar.	63 ins.
Driving wheels, thickness of tires	3¼ ins.
Driving journals	10 by 14 ins.
Truck wheels, diar.	30 ins.
Truck journals	6 by 12 ins.
Tender wheels, diar.	33 ins.
Tender journals	5½ by 10 ins.
Capacity, water	6,000 imp. gals.
Capacity, coal	10 tons

Rutland Rd—The application for the issue of receivers' certificates, for the purpose of paying taxes, pay rolls, etc., due the Rutland Rd. by purchase from the New York. New Haven and Hartford Rd., to acquire a controlling interest in New York Central and Hudson River Rd., came before the Public Service Commission at Albany, N.Y., May 2. The application was opposed by S. Untermyer, New York, on behalf of 17,000 shares of minority stock.

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:—

Freight Rates from Hinton West.

16242. April 2. The petitions of the residents of Resplendent and Moose Lake, B.C., and Fitzhugh, Prairie Creek, Edmonton, Edson, and Hinton, for an order directing the Grand Trunk Pacific Ry. to open for traffic its railway from Prairie Creek west; it is ordered that the G.T.P.R. cease discriminating in the carriage of freight traffic in favor of its contractors as against the general public over its railway from Hinton, Alta., west thereof; and that for every case of default in complying with the terms of this order and the continuation of the discrimination complained of, the company shall be subject to a fine of \$100.

Rates on Anthracite Coal from Niagara Frontier.

16276. April 11. Re consideration of protest of Canadian Retail Coal Dealers' Association and others against the proposed tariffs of railway companies advancing rates on anthracite coal from the Niagara frontier to Canadian points, to take effect May 1. It is ordered that the effective dates of the following tariffs, namely:—Michigan Central Rd. C.R.C. no. 1874. Grand Trunk Ry. C.R.C. no. E 2376, as amended by supplement 1; Wabash Rd. C.R.C. 566, as amended by supplement 1, be postponed from May 1, pending a decision by the board.

Rates on Rope from Montreal.

16314. April 12. Re application of the Consumers' Cordage Co., Ltd., of Montreal, for an order disallowing supplement 6 to G.T.R. special commodity tariff, C.R.C. no. E. 1432, and supplement 5 to C.P.R. special commodity tariff, C.R.C. no. E. 1286, advancing from Jan. 29, 1912, the rates on rope, in carloads, from Montreal, to the fifth class basis, and re order 15844, Jan. 27, 1912, postponing the operation of the said schedules until further order. It is ordered that the said supplement may become effective June 1.

Rates on Cornmeal from Montreal.

16394. April 25. Re application of Transportation Bureau of Montreal Board of Trade, under sec. 315 of the Railway Act, for an order directing the Canadian Pacific Railway Company to adjust its rates on corn brought into Montreal via Detroit or Georgian Bay elevator ports, and on cornmeal shipped from Montreal to St. John, N.B., and other stations in the Maritime Provinces, so that the combined tolls charged on the corn to Montreal and the cornmeal from Montreal to said destinations in the Maritime Provinces will not be on any higher basis than the combined tolls charged on the corn to and the cornmeal from Ontario points to the same destinations in the Maritime Provinces, and re the direction that the railway companies show cause why the wheat and oats rates should not apply on corn shipments from Detroit and Georgian Bay ports to Montreal, and, also, why the C.P.R. rate on cornmeal from Montreal to St. John should not be 15c. per 100 lbs. It is ordered that the application be dismissed.

Rates on Wire Fencing.

16395. April 23. Re application of Canadian Freight Association for an order rescinding order 6844, Apr. 6, 1909, in so far as it relates to commodity rates on wire fencing and netting, in carloads from Hamilton, Windsor and Walkerville to points east of Toronto as provided in said order. It is ordered that the application be refused.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John Improvements.—The site chosen for the new elevator to be built at St. John, N.B., is at the northeast corner of the dividing line between the land leased to the company by the city and what is known as the 400 ft. strip. This is on the western side of the harbor, and not far from the present elevator. The work will probably be gone on with this year, but we have been advised that neither this nor the capacity of the elevator have been definitely decided.

Quebec.—While in Quebec, May 2, D. McNicoll, Vice President, made an inspection of the company's property there in connection with the plans for improvements which are under consideration. It is said that the works will include the provision of a yard for freight cars west of the station, the building of a roadway to connect with the Louise embankment, the enlargement of the yards and a new freight shed at the Palais. The question of building a new passenger station is held in abeyance.

Ottawa.—In connection with the project for a tunnel in Ottawa, a proposed change is under consideration. The suggestion is to carry the tunnel down Wellington street as far as Bank street, skirt round the cliff, and then run southwesterly to the union station. It is stated that this would give a shorter and less expensive route than the original one of running the tunnel right down under Wellington street to the union station.

Smiths Falls, Ont.—Arrangements are being made to do away with the foot bridge across the tracks at George St., Smiths Falls, Ont., and to replace it by a subway under the tracks, 110 ft. long, 10 ft. wide and 7 ft. 6 in. high.

Campbellford, Lake Ontario and Western Ry.—The Board of Railway Commissioners has approved location plans for the line from mileage 88.21 to 106.17, mileage 124.83 to 125.5; revised location plans from mileage 127 to 134.68, and from mileage 134.68 to 155.67, and has authorized the crossing of the Kingston and Pembroke Ry. at mileage 24.8, the Canadian Northern Ontario Ry. at mileage 87.86, and the Central Ontario Ry. at mileage 88.09, in all cases from Glen Tay. The latter is to be an overhead crossing.

The Montreal papers stated recently that a contract had been let to Larkin and Sangster, St. Catharines, Ont., for boring a 900 ft. tunnel on the new lake shore line, 15 miles out of Smith's Falls. We are officially advised that the reports are incorrect.

Construction on the line was started May 1, two camps having been opened, one at Trenton, and the other at Bayside, six miles from Belleville. The latter is McRae and Campagne, who have a sub-contract for three miles. The general contractors and the company's engineers are establishing their headquarters at Agincourt, about ten miles out of Toronto.

D. McNicoll, Vice President, and other C.P.R. officers, after inspecting the Kingston and Pembroke Ry. terminals in Kingston, Ont., May 17, went by automobile to Belleville. It is said that the object of the trip was to look into the question of the construction of a branch line from Belleville to Kingston, but it is not probable that this will be built until after the line from Glen Tay to Leaside is built.

Georgian Bay and Seaboard Ry.—The opening of the entire line for general traffic took place May 4. The company's fleet of vessels arrived at Port McNicoll from Owen Sound May 2, and the first one sailed May 4. Trains from Montreal branch of the Montreal-Toronto line at Bethany Jct., and those from Toronto, join the new line at Cold-

water Jct., proceeding to the new port, Port McNicoll, on Victoria Harbor.

A meeting of shareholders will be held at Montreal, June 30, to authorize the issue of additional bonds for the completion and equipment of the line.

It is proposed to add an additional storage capacity of 2,000,000 bush. to the capacity of the grain elevator at Port McNicoll.

Lake Superior Division Second Track.—We are officially advised that while some surveys have been made with a view to a revision of grades and the building of a second track, etc., along the Lake Superior division, nothing definite has yet been decided upon.

Port William, Ont.—A portion of the double deck bascule bridge under construction over the Kaministiquia River at Port William, fell during a gale, April 27. The three shore spans on the island side were completely demolished.

The erection of the new 1,000 ft. freight shed on the Kaministiquia River is being proceeded with.

It is proposed to erect a new breaking elevator at Port William.

Freight Yards at Kildonan, Man.—The Board of Railway Commissioners has authorized the C.P.R. to expropriate lands in Kildonan parish, and part of n. w. $\frac{1}{4}$ sec 17, tp. 11, r 4 east of the principal meridian, for the purpose of establishing yards.

We are officially advised that the new clearing yard which is to be constructed will be about five miles east of Winnipeg. The original main line runs north from Winnipeg to East Selkirk, and from that point turns east. A few years ago a cut-off was built from Winnipeg to join the original main line at Molson, a distance of 38 miles. This cut-off is now used as the eastbound main track, and the old original main line via East Selkirk is used as the main westbound track between Molson and Winnipeg. The new yard will be between the two main lines mentioned. It will be approached from the east by tracks leaving the main line, just west of the crossing of the Canadian Northern Ry., and will connect with the C.P.R. Lac du Bonnet branch, by three tracks, at the west.

The yard will be of the gravity type, receiving tracks on one side of the hump, and classification and departure tracks on the other side. These facilities will be constructed for both east and westbound movements. The ground selected for the work is quite level, and consequently does not naturally lend itself to the grades required. Grading, for the yard, therefore, will be quite heavy, consisting of about 2,000,000 yards to take care of about 100 miles of track.

The ultimate layout will probably require two full circle roundhouses with the necessary tracks, ash pit, coal chutes, etc., to serve them. This year, however, only a 30-stall standard brick roundhouse will be built.

A grain elevator will be erected on the north side of the yard, with storage for 1,000,000 bush., and cleaning facilities for 100 cars a day.

Gimli Branch.—Vice President Bury is quoted as stating that the President had authorized the immediate starting of construction on the extension of the branch now ending at Gimli, Man., northerly to the Icelandic River.

Winnipeg Station.—In a recent interview, Vice President Bury is quoted as stating that the company's station at Winnipeg will be greatly enlarged. Plans had previously been prepared for additions, but these are being revised in order to provide ample accommodation for future requirements. As soon as the new plans are completed, the work will be put in hand and pushed to completion as fast as possible.

Saskatoon, Sask.—Press reports state that the company has purchased for \$90,000 a property on which to erect a large office building.

Weyburn-Lethbridge Line.—We are officially advised that a contract has been let to J. Timothy, Edmonton, for grading, etc., on the section from Stirling, easterly, for 25 miles. A large quantity of contractors' plant and equipment has been delivered, and work has been started.

Alberta Ry. and Irrigation Co.—Division Engineer Brooks, and other C.P.R. officials, arrived in Lethbridge, May 10, to make an inspection of the line with a view of bringing it up to the C.P.R. standard. It is proposed to cut out some of the gradients, to generally improve the roadbed, and to lay heavier steel. The fact that the C.P.R. line from Weyburn joins the A.R. and I. Co.'s line at Stirling, makes it important that the line be put in a position to carry the heavier traffic which it is proposed to run over it.

Alberta Central Ry.—A meeting of shareholders will be held in Montreal, June 4, to approve of the lease of the company's railway, in process of construction, to the C.P.R., to arrange for an issue of bonds for the purpose of constructing and equipping the line.

D. F. McArthur, the general contractor, is quoted as stating that the grading for the line from Red Deer west to Rocky Mountain House, will be completed early in June, and that by the end of June the steel bridge over the Red Deer River will be finished. It is expected to have track laid on this section of the line early in the fall.

Strathcona-Edmonton High Level Bridge.—Four spans of this bridge across the Saskatchewan River have been completed, and the fifth is well advanced. False work is being erected for the succeeding spans.

Kootenay Central Ry.—Grading is reported to have been completed to 42 miles from Golden, B.C., and track is being laid.

Three Forks - Bear Lake - Kaslo.—A press report states that the line between Three Forks and Kaslo, B.C., will be connected up this season, and that Anderson and Co. have been increasing the number of men employed. This work, one report adds, involves the completion of the Bear Lake spur, at present under construction from Three Forks, the standardization of the Kaslo and Slocan Ry., for which an agreement was approved by the British Columbia Legislature at the recent session, and the building of about eight miles of new track.

British Columbia Second Track Work.—F. F. Busteed, who is in charge of this work, with headquarters at Kamloops, B.C., is quoted as stating that the location of the new grade has been practically completed between Ruby Creek and Spence's Bridge, and a lot of survey work has been done between that point and Kamloops. In many places the new location is several miles from the present route. There are two survey parties engaged east of Revelstoke, and another will be put in the field shortly. No work will be undertaken until the full data have been secured.

Coquitlam Shops, Etc.—Construction has been started on the first quarter of a 48 stall roundhouse at Coquitlam, Sanford, Gordon and Son being the contractors. The section will have a frontage of 165 ft., by 90 ft. depth, and will be 318 ft. from end to end at the rear. A boiler house 48 by 49 ft. will also be erected by the same contractors. (May, pg. 228.)

A. E. WILKINSON, Division Freight Agent, Intercolonial Ry., Halifax, N.S., writes:—"I have always been interested in The Railway and Marine World, finding its articles very interesting."

National Transcontinental Railway Construction.

The commissioners received tenders to May 31 for the construction of 200 ton mechanical coaling plants, with sand-houses and track approaches at Moncton, N.B., Napadogan, N.B., Edmundston, N.B., Grant, Ont., Calvert, Ont., and Armstrong, Ont. Tenders were also received to May 31 for the construction of a 1,000 ton coaling station with inclined trestle approach at Cochrane, Ont.

Tenders were also received to May 31 for the erection of station and other buildings required on the following sections of the line:—Sec. 13, Moncton, N.B.; section 14, from Langelier to Chapais, Que.; sec. 15, from Monk to Parent, Que.; sec. 16, from Fowke to Clarke, Ont.; sec. 17, from Carling to Murphy, Ont.; sec. 18, from Collins to Gordon, Ont.

The question of the provision of terminal facilities for the N.T.R. at Quebec, which was taken under consideration by the present Government after its accession to office in Sept., 1911, and by R. W. Leonard, who now constitutes the commission, is apparently being settled on a new basis. The following statement was given out, May 3, at Quebec by the Minister of Railways and Mr. Leonard:—"At the last Cabinet Council meeting, before the Hon. Mr. Pelletier left Ottawa, the question of the terminals at Quebec was fully considered, and it was then officially declared that a decision would be taken here today. The visit which we have made has confirmed us in the opinion that the ideal place to enter the city, especially for passenger traffic, is to pierce a tunnel from Wolf's Cove to St. Malo, and to have a union passenger station at the Palais. The Champlain market site will be utilized for local freight. There is no room on the Champlain market site for big elevators, and the place is too narrow. The railways here must soon handle a great part of the through grain traffic, and an elevator of some 10,000,000 bush. capacity is necessary. It should be built in such a way that other units may be added, so as to handle from 20,000,000 to 30,000,000 bush. In order to do this, there must be space to move about. The Government has bought, in St. Malo, 200 acres of fine property, which will be used for a car yard. As to the work shops, the site already chosen at St. Foye, near the bridge, is a very good one, and has been finally decided upon. We will have car ferries, which will take care of the traffic, pending the completion of the Quebec bridge. The work will be begun as soon as the plans are completed, and will be brought to a satisfactory completion without delay."

The locomotive shops at Transcona, Man., have been completed, inspected by the Government engineers and taken over from the contractors, Haney, Quinlan and Robertson.

R. W. Leonard arrived in Montreal, May 16, after having completed an official inspection of the sections of the line under construction east and west of Quebec. There is a gap of 32 miles to be completed between Quebec and the New Brunswick boundary. West of Quebec the line is completed for 100 west of La Tuque. There are about 200 miles to be completed between the end of track and Cochrane, Ont., which it is expected to have done by the end of 1913. The line from Cochrane to the junction with the Lake Superior branch, G.T. Pacific Ry., is expected to be completed this year. Arrangements are reported to have been made by which the C.P.R. will connect with the line at Grand Falls, N.B., for hauling lumber and the operation of a mixed service between Quebec and La Tuque.

Grand Trunk Pacific Railway Construction.

At the Fort William terminals of the G.T.P. branch line from the National Transcontinental Ry., a large force is working on the 2,500,000 bush. addition to the elevator, which it is expected to have completed by the fall. All the piles have been driven, and the concrete is being placed. It is expected to make a start on the new coal docks, and to carry out other improvements during this year.

Work is being proceeded with on the Harte-Brandon branch in Manitoba. We are officially advised that nothing definite has been decided with reference to the extension of the line from Canora, Sask., in the direction of Hudson Bay.

In regard to work in Saskatchewan the Provincial Premier is reported to have stated, May 1, that he had been advised that the company will lay nearly 400 miles of steel in the province this year. The branches from Regina to the International boundary, from Regina to Moose Jaw; to Prince Albert, and from Biggar towards Calgary, will be completed, the latter probably beyond the boundary into Alberta. Reports from Regina state that one track laying outfit started work there, and by May 8 had laid 20 miles on the line towards the International boundary.

In Alberta a second track laying outfit started work at mileage 102 on the line from Tofield towards Calgary, and was reported to have laid 25 miles of track to May 8.

In connection with the plans for station and terminal facilities in Calgary, an agreement has been reached, and is awaiting final ratification between the company, the city and the Dominion Government. It provides for the sale of the N.W.P. barracks by the Government to the company for \$150,000. The company is to transfer a portion of the land so acquired for street purposes, pay for the moving of the barracks, and provide some buildings for other purposes, pave an avenue, and contribute \$25,000 towards the erection of an additional span on the traffic bridge over the Elbow River, connecting East Calgary with the city. On the site of the present barracks the company contracts to build a station facing Eighth Ave., at a cost of between \$275,000 and \$300,000; and suitable freight sheds on the south side facing Muth Ave. The plan of the lay out of the property shows that the line will cross the Elbow River at its confluence with the Bow River, and that tracks will extend to Sixth St. The station building will be 150 by 100 ft., and the freight shed will be 700 by 50 ft. There will be three passenger platforms, the central one 40 ft. wide, and one at each side 25 ft. wide.

Plans are before the Minister of Railways for a line from Calgary to Coutts, but owing to some objections a new survey is being made, and in connection with this an effort is being made in Great Falls, Mont., to have an arrangement made by which the line will be extended into that place.

It is expected that building operations will be started shortly on the hotel in Edmonton, Alta., for which plans have been prepared by Ross and McFarlane, Montreal.

A tracklaying outfit has started operations from the present end of track near the Alberta-British Columbia boundary, and it is expected that track will be laid to Tete Jaune Cache by July 1. Another tracklaying outfit has started working easterly from the present rail head 164 miles out of Prince Rupert. P. Welch is quoted as stating on his return from a trip east from Prince Rupert, that a train service would shortly be extended to the Skeena River crossing, and that grading was well advanced right along to Fraser Lake.

We are officially advised that a con-

tract has been let to the British North American Construction Co., Vancouver, for preliminary work on the construction of dry docks and wharves at Prince Rupert, B.C. The contract covers the supply of materials, the erection of platform and piers, and launching platform. These are to be built with creosoted piles and lumber. Mr. Dow, the President of the company, is in direct charge of the work, the engineers for the railway being Kirby and Donnelly. W. T. Donnelly arrived at Prince Rupert, May 1, to take charge of the work. The lumber is being delivered.

A. W. Smithers, Chairman of the Board, G.T.R., is reported to have stated at Montreal, May 25, that after consultation with officials he felt justified in stating that the whole of the track between Moncton, N.B., and Prince Rupert, B.C., would be laid by the autumn of 1914.

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—A meeting of shareholders was held in Montreal, May 27, to issue bonds and authorizing the form of mortgage to be given to secure them.

Algoma Central and Hudson Bay Ry.—Algoma Eastern Ry.—There have been deposited with the Secretary of State at Ottawa agreements made between these two companies and the Superior Rolling Stock Co., dated May 15, covering the conditional sale of certain rolling stock.

Canada Southern Ry.—At the annual meeting to be held at St. Thomas, Ont., June 5, the shareholders will be asked to ratify the action of the directors in authorizing the execution of a mortgage to secure an issue of \$40,000,000 of bonds at not exceeding 5% interest, of which amount it is proposed to issue \$22,500,000 at once with the Michigan Central Rd.'s guarantee for the purpose of refunding the first and second mortgage bonds due Jan. 1 and Mar. 1, 1913, respectively, and to cover the cost of improvements already made or to be made to the company's property.

Canadian Northern Alberta Ry.—There has been deposited with the Secretary of State at Ottawa a supplemental trust mortgage dated April 20, between the C.N.A. Ry. Co., the British Trust Co., the National Trust Co., the Dominion of Canada, and the Canadian Northern Ry. Co., securing an issue of first mortgage debenture stock guaranteed by the Dominion. The original mortgage deed is dated Mar. 22, 1911.

Canadian Northern Pacific Ry.—An issue of \$1,375,000 of 4% bonds guaranteed by the province of British Columbia has been placed on the London, Eng., market.

Canadian Northern Ry.—A lease of railway rolling stock and equipment series C 1, 1912, from the Imperial Rolling Stock Co., to the C.N. Ry., dated Apr. 27, has been filed with the Secretary of State at Ottawa.

Canadian Pacific Ry.—Application has been made to the London, Eng., Stock Exchange for the listing of \$18,000,000 of ordinary stock, and \$1,000,000 additional 4% perpetual consolidated debenture stock.

Dominion Atlantic Ry.—Estimated passenger earnings for Apr., \$42,320.94; freight earnings, \$50,839.04; total, \$93,159.98, against \$82,400 total earnings for April, 1911.

The Grand Trunk Ry. recently made an issue in London, Eng., of \$1,500,000 perpetual 4% consolidated debenture stock at 98½, the proceeds of which are to be applied to general purposes.

G.T.R. Car Trust Notes.—Blair and Co., New York City, have purchased from the G.T.R. \$4,000,000 4½% car

trust notes, maturing serially in from six months to ten years. The proceeds will be used by the railway company to pay for 3,000 steel underframe box cars, 1,000 50 ton all steel coal cars, 500 automobile cars and 500 refrigerator cars which are under order. The banking firm will shortly offer these notes for public sale. A copy of the agreement made between the G.T.R. Co., Blair and Co., and the Bankers Trust Co. has been deposited with the Secretary of State at Ottawa.

Intercolonial Ry.—The earnings for April are reported as \$1,006,000, an increase of \$87,000 over those for Apr., 1911, and the highest yet reached in one month.

Percé Marquette Rd.—The receivers have been authorized to issue \$605,000 April 30.

Quebec Central Ry.—Gross earnings for March, \$92,320.81; expenses, \$63,729.33; net earnings, \$28,591.48, against \$100,818.63, gross earnings; \$65,999.03, expenses; \$34,819.60, net earnings for March, 1911. Aggregate gross earnings for nine months ended March 31, \$960,069.97; expenses, \$669,434.59; net earnings, \$290,635.38, against \$860,360.39, aggregate gross earnings; \$595,560.14, expenses; \$264,800.25, net earnings for same period, 1910-11.

Quebec Oriental Ry.—Owing to the fact that a quorum of bondholders was not present Apr. 16, the meeting of holders of first and second 5% first mortgage Matapedia section gold bonds was adjourned to May 14, at the company's offices, London, Eng.

River and Rail Coal Co.—The Grand Trunk Ry. is reported to have acquired control of the properties of this company in Belmont county, Ohio, through a syndicate. The company has outstanding \$17,971,942 of stock, and is placing on the British markets a further issue of \$7,500,000. The company will, it is said, continue to be operated as a separate undertaking, but its output will be taken almost entirely by the G.T.R., and allied companies. (May, pg. 246.)

Rutland Rd.—There has been filed with the Secretary of State at Ottawa an agreement between G. T. Jarvis and others, the vendors; the Guaranty Trust Co. of New York, trustees, and the R. Rd. Co., dated Apr. 1, respecting the title of the company's lines in Canada.

Temiscouata Ry.—Net profit for Mar., \$3,059.

White Pass and Yukon Route.—Total earnings for three months ended Mar. 31, \$48,569, against \$68,960 for same period 1911.

The Chicago, Milwaukee and St. Paul Ry. has removed its ticket office in Winnipeg from Douglas St. to Government St.

Port Arthur, Ont., citizens, on May 22, by an almost unanimous vote, carried the bylaw confirming the agreement with F. M. Brown and others, of Halifax, N.S., for the establishment of car works.

The Grand Trunk Pacific Ry. Co. ordered some little time since 40,000 tons of steel rails, 60 lbs., from the Algoma Steel Co., for G.T.P. branch lines, deliveries of which are now being made at Fort William.

Work was started, May 1, on laying out the site for the new union stock yards at St. Boniface, Man., by the Public Markets Co., in which the C.P.R., the Canadian Northern Ry. and the G.T. Pacific Ry. are jointly interested.

The Minister of Railways is reported to have announced at Moncton, N.B., May 10, that it was proposed to put a Sunday train on the Intercolonial Ry. between Halifax, N.S., and Montreal, but that nothing had been decided as to running one to and from St. John, N.B., also.

Grand Trunk Ry. Betterments, Construction, Etc.

Southern New England Ry.—The Railroads Committee of the Massachusetts Legislature decided, May 17, to report favorably on the company's bill asking for power to extend its lines into Boston.

Work was started May 10 on the construction of the line from Palmer, Mass., to Providence, R.I. The initial work consists of the building of a temporary bridge 2,800 ft. long across the New York, New Haven and Hartford Rd. freight yards at Woonsocket, R.I., near where the line enters the state from Blackstone, Mass. Ten car loads of machinery and six steam shovels have been delivered for the grading contractors, who are preparing to start operations.

Central Vermont Ry.—The Board of Railway Commissioners has approved of the proposed connection of the company's lines with the C.P.R. spur into the military camp at Farnham, Que.

Surveys are being made for second track work on the line in New Hampshire, and for a connecting link starting from White River Jct. passing through Manchester, Concord and the southern towns of the state. G. M. Thompson, formerly of the Boston and Maine Rd., is in charge of the work.

Back Cove Bridge, Portland, Me.—The company is renewing the swing bridge at Back Cove one mile west of Portland on the main line between Portland and Montreal. The swing which is being replaced consisted of a 186 ft. pony lattice equal arm swing, supported at the centre on a granite pier, and the ends on piled bents. It was built in 1893. The new work comprises the construction of two end piers for new swing. These new piers will be located behind the existing piled bent supports, thus avoiding during construction the interference of the operation of old swing. This necessitates a longer new swing, but it will be less expensive than attempting to locate new piers on existing site of end supports. The new swing will be 225 ft. long. For economical design the track will be permanently raised 3 ft. It is also the intention to add a 22 ft. granite course to the pivot pier, as high tide now washes the present top of pier. The rest piers will be built by sinking a double wall timber caisson. There is an average of 30 ft. of water at the site of new piers, and about 45 ft. to rock. The rock is overlaid with a layer of soft blue clay and sand. The caisson timbers will be framed on a wharf close by. The cutting edges and lower wall timbers will be put together and floated to site, and the remainder of the caisson will be built up in place and sunk by filling in between double walls with concrete to rock. Excavation will be done inside the caisson by the orange peel bucket. Divers will be employed to level off bottom and underpin and seal cutting edges. The construction of piers has been let to the John S. Metcalf Co., Montreal. The contract for the fabrication and erection of the new swing has been let in the U.S. As before stated, it will be a single track swing span 225 ft. centre bearing type. The work is under the supervision of H. R. Safford, Chief Engineer.

Montreal Track Elevation.—The question of elevation of tracks in Montreal is still before the Board of Railway Commissioners. The city council representatives are not prepared to undertake to contribute more than \$2,000,000 towards the cost of the work, and the company's representatives state that it is not a sufficient proportion to pay for the benefits that would accrue to the city.

Bay City, Mich.—A contract is reported to have been let for the concrete work for the piers and abutments of the new bridge at Bay City, Mich., which has a total length of 1,300 ft.

Mainly About Transportation People.

SIR THOMAS G. SHAUGHNESSY sailed from New York for England, May 8.

SIR H. MONTAGU ALLAN left Montreal, for England, May 12, where he joined Lady Allan.

A. S. RAY, C.P.R. Agent, Bristol, England, arrived in Montreal, May 15, on a business trip.

A. A. ALLAN, of the Allan Steamship Line, with Mrs., and Miss H. Allan, arrived in England, May 5, on a visit.

SIR DONALD MANN returned to Toronto, via New York, May 19, from England, after an absence of about four weeks.

L. E. MORIN, paymaster on the Quebec canals for the Department of Railways and Canals, died in Montreal, May 17.

F. A. MCHUGH, who was engaged in railway contracting in the west since 1883, died at Calgary, Alta., May 6, aged 61.

L. W. PERRY, who resigned his position as Divisional Car Foreman, C.P.R., West Toronto, a short time ago, was 16 years in the service.

G. F. SNYDER, who had been for over 50 years in the G.T.R. service as station agent prior to retiring in 1908, died at Montreal, May 7.

A. SHAUGHNESSY, son of Sir Thos. G. Shaughnessy, President, C.P.R., was married to Miss S. P. Bradford at Woodstock, Tenn., April 30.

H. B. SPENCER, Superintendent, C.P.R., Ottawa, returned home recently after a six weeks vacation, very much improved in health, and resumed duty.

MR. FITZGERALD, a member of the C.P.R. office staff at Yokohama, left Montreal, May 15, to return to Japan, after a holiday trip to England.

F. W. PETERS, the newly appointed General Superintendent, Pacific Division, C.P.R. arrived in Vancouver, May 10, and took over the duties of the office.

JAS. FLYNN, a yard master employed on the Montreal Harbor Commissioners' lines, was killed by a shunting engine near the Donaldson Line pier, May 10.

E. H. KEATING, M. Can. Soc. C.E., formerly Manager, Toronto Ry., has been elected a member of the council of the Institute of Civil Engineers, England.

F. W. THOMPSON, Vice President, Ogilvie Flour Mills Co., Montreal, who died in London, Eng., May 7, was President of the Keystone Transportation Co.

W. A. COATES, Freight Traffic Manager of the Robert Reford Co., has resumed duty at the company's Montreal office, after spending the winter in Europe.

A. W. DEACON, town ticket agent, G.T.R., Stratford, Ont., and H. L. Jackson, ticket agent, C.P.R., Brussels, Ont., have joined the Canadian Ticket Agents Association.

S. MCINTOSH, who died at Martintown, Ont., May 6, aged 86, was a member of the family from which sprang the McIntosh Bros., railway contractors, Milwaukee, Wis.

D. W. HAYES, agent, G.T.R., London, Ont., was presented with a gold chain and locket, May 13, by the staff at Guelph, Ont., from which point he was recently transferred.

THOS CROCKER, for many years foreman tinsmith, G.T.R. car shops, Point St. Charles, Montreal, died there May 6, aged 76. He had been on the pension list for about four years.

HON. J. D. HAZEN, Minister of Marine and Fisheries, was elected President of the North American Fish and Game Protective Association at the annual meeting at Boston, Mass., recently.

W. PERRY, Montreal, who celebrated his 75th birthday May 3, installed the water supply on the G.T.R. from Mont-

real to Levis, and the first water supply plant for the C.P.R. at Winnipeg.

HUGH SUTHERLAND, General Executive Agent, Canadian Northern Ry., who, with Mrs. Sutherland, spent most of the winter in Europe and Egypt, returned to Winnipeg towards the end of April.

D. FINLAY, Canadian Northern Ry., construction foreman at Stettler, Alta., was killed in the yard there recently in a collision between the motorcycle, which he was driving, and a freight engine.

A. R. MCLENNAN, who died at Cornwall, Ont., recently, aged 72, was for many years engaged in railway contracting in the Maritime Provinces, Quebec, Ontario, Manitoba, Minnesota and Wisconsin.

A. B. MANSON, S. Can. Soc. C.E., who has been appointed City Engineer of Stratford, Ont., was until recently on the engineering staff of the Canadian Northern Ontario Ry.'s Montreal-Port Arthur line.

W. R. DAVIDSON, Trainmaster, G.T.R.,

P278 Louis K. Jones, I.S.O.,
Assistant Deputy Minister and Secretary,
Department of Railways and Canals.

London, Ont., met with a painful accident at Hamilton recently, when a heavy steel rail dropped on his foot. An examination showed that no permanent injury will result.

JAS. BRYCE was presented with a service of silver plate and an address by Canadian Express Co. employees in Montreal, May 14, on his retirement from the office of Vice President and Manager.

TRAFFORD JONES, of Canadian Brake Shoes, Ltd., Montreal, and formerly of the Canadian Northern Ry.'s mechanical department, Toronto, was married at Toronto recently to Madeline, youngest daughter of Alfred W. Smith.

A. R. G. HEWARD, formerly Assistant Secretary, C.P.R., Montreal, collapsed on McGill St., Montreal, May 16, and died, aged 52. He was in C.P.R. service for about 30 years, and retired at the end of 1911, on account of ill health.

E. C. HAWKINS, Chief Engineer Copper River and Northwestern Rd., of Cordova, Alaska, who died in New York April 10, aged 52, built the White Pass

and Yukon Ry. In our last issue he was erroneously referred to as A. Hawkins.

W. E. DUPEROW was presented with a Morris chair by the ticket agents of Victoria, B.C., on his leaving that city for Vancouver to take up duty as General Agent, G.T. Pacific Ry. Passenger Department.

C. R. BOUCHER, who died at Sault Ste. Marie, Ont., April 26, was engaged in supervising the building of bridges on the Algoma Central Ry. He was previously engaged on the construction of the Temiskaming and Northern Ontario Ry.

Miss A. I. Hendry, daughter of J. HENDRY, President Vancouver, Westminster and Northern Ry., Vancouver, B.C., was married in London, Eng., May 14, to E. Hamber, manager of the Dominion Bank in London, Eng., and formerly of Winnipeg.

L. CHIPMAN, engineer in charge of a locating party on the Edmonton, Dunvegan and British Columbia Ry., was drowned in the Athabasca River near Mirror Landing, early in April. The news was not reported in Edmonton until the end of the month.

JUSTICE A. A. DOBSON, of the Manitoba Court of King's Bench, has been appointed Public Utilities Commissioner for that Province, County Judge Cumberland, of Brandon, who was first appointed to the position, having decided to retain his seat on the bench.

H. R. NAYLOR, who was recently appointed shop foreman, C.P.R., West Toronto, was born in Hull, Eng., Aug. 30, 1885, and commenced railway service there with the North Eastern Ry. He entered C.P.R. service in Feb., 1909, and was, from Mar. 1911, to Apr., 1912, steam heat inspector.

J. LONSDALE DOUPE, whose resignation as General Townsite Agent, Department of Natural Resources, C.P.R., Calgary, Alta., was announced in our last issue, has entered the real estate and agency business, having incorporated the Western Land and Townsite Co., Winnipeg, of which he will be manager.

R. TINNING, Travelling Freight Agent, G.T.R., Toronto, who retired under the provisions of the pension rules, after 50 years' service, May 1, was entertained to dinner by his associates on the local staff, recently, and presented with a diamond and pearl pin and a purse of gold, and a silver purse for Mrs. Tinning.

D. F. MAXWELL, who has resigned as Chief Engineer, Fredericton and Grand Lake Coal and Ry. Co., Fredericton, N.B., is one of the incorporators of the St. Croix Ry. and Dock Co., which is promoting a bill in the New Brunswick Legislature for railway and dock development in the neighborhood of St. Croix, N.B.

F. E. TRAUTMAN, editor of the Times-Journal, Fort William, Ont., has resigned and, it is reported, has been appointed on the staff of Geo. Bury, Vice President and General Manager, C.P.R. Western Lines, Winnipeg. Press dispatches state that Mr. Trautman will have charge of an office which will supply news of the C.P.R. system to the newspapers.

H. L. MALTBY, formerly chief clerk in the C.P.R. engineering offices, Montreal, died there recently after a lengthened illness. Before entering the C.P.R. service he was associated with H. J. Beemer in his railway enterprises, and was appointed guardian of the Ottawa and Gatineau Ry. by the banks, prior to its becoming merged with the Ottawa Northern and Western Ry., and being transferred to the C.P.R.

The estate of the late SIR ROBERT G. REID, founder of the Reid Newfoundland Co., has been held liable for succession duties in the province of Quebec, for \$108,857. The estate in Quebec was

valued at \$1,789,926, on which the duties were \$136,000. The executors paid \$40,000, and disputed liability as to the balance, on the ground that certain bonds and securities were not legitimately chargeable with succession duty in the province. Judgment has been given in favor of the Crown.

A. J. WOLFE, whose appointment as Roadmaster, White River subdivision, Lake Superior Division, C.P.R., White River, Ont., was announced in our last issue, was born in Essex county, Ont., Jan. 18, 1885, and entered railway service in 1903, since when he has been, to Mar., 1905, laborer, M.C.R.; Mar., 1905, to Feb., 1909, section foreman, extra gang foreman and yard foreman, same road; Feb., 1909, to Mar. 27, 1912, yard foreman, snow plough foreman, extra gang foreman and general foreman, Sudbury subdivision, C.P.R.

HON. F. COCHRANE, Minister of Railways, started from Ottawa, May 1, on an inspection trip over the Canadian lines. He travelled to Quebec and thence he went over the lines in the continental Railway to Moncton, from thence he went over the lines in the Maritime Provinces. The programme for the rest of the trip includes a trip over the National Transcontinental Railway to the end of track, and then an inspection of the various lines right out to the Pacific coast, particularly where construction is in progress.

E. D. BRONNER, who has been appointed General Manager, Michigan Central Rd., Detroit, Mich., was born at Buffalo, N.Y., Feb. 19, 1859, and was educated at the public schools and the U.S. Naval Academy, Annapolis. He entered railway service in 1880 as draughtsman in the Car Department, Canada Southern Ry., and was appointed General Foreman, M.C.R. car shops, Detroit, Mich., Feb. 1, 1890, Master Car Builder, May 6, 1896, and Superintendent of Motive Power, Feb. 1, 1900, which position he held to May 15, the date of his present appointment.

ALEX SHIELDS, who resigned his position as General Master Mechanic, Canadian Northern Ry., a short time ago, and whose election of president of the Railroaders' Investment Co., has previously been mentioned in these columns, received a number of presentations on leaving the service, including a mahogany cabinet of solid silver from C.N.R. officers, a diamond ring from the locomotive engineers, a gold chain and locket from the machinists, and also gifts from the company's employees at Saskatoon and Edmonton. He has also been elected a director of the Consolidated Land Co.

A. HATTON, who was recently appointed Superintendent of Car Service, C.P.R. Western Lines, Winnipeg, was born in London, Eng., Apr. 12, 1869, and was from 1888 to 1891 in Central Ontario Ry. service; 1891 to May, 1896, operator, C.P.R.; May, 1896, to Sept., 1901, dispatcher, C.P.R.; Sept., 1901, to Jan., 1907, Chief Dispatcher, C.P.R., Fort William, Ont., Kenora, Ont., and Cranbrook, B.C.; Jan., 1907, to Feb. 12, 1912, Inspector of Transportation, C.P.R. Western Lines. He was then appointed acting Superintendent of Car Service, Western Lines, and was subsequently confirmed in that position.

GEORGE BLACK, Road Foreman of Locomotives, G.T.R., Stratford, Ont., who had been suffering for some time from gall stones, but shrunk from the advised operation on account of his inherent dread of the operating table, having finally decided to undergo the operation towards the end of April, died from heart failure, Apr. 28. He was born in Lincolnshire, Eng., and entered railway service there, with the Great Northern Ry., as engine wiper, and was later a spare foreman. In Canada he has been employed as a wiper, foreman, locomotive

driver, and from Oct., 1902, to Apr. 28, 1912, as Road Foreman of Locomotives, G.T.R., at Stratford, Ont. He was 48 years of age.

J. C. HOLDEN, whose appointment as Division Engineer, Manitoba Division, C.P.R., Winnipeg, was announced in our last issue, was born at St. John, N.B., Feb., 1876, and educated at Bishop's College school, Lennoxville, Que., and Royal Military College, Kingston, Ont. His service covers reconnaissance work for the Militia Department in the summer of 1896; harbor improvements and survey at St. John, N.B., Sept., 1896, to Jan., 1897, and during the summer of 1897, preliminary surveys, Intercolonial Ry.; Jan., 1898, to Apr., 1903, reconnaissance, preliminary, location and construction work, C.P.R.; Apr., 1903, to 1907, Resident Engineer, Maintenance of Way, C.P.R.; 1907, to Apr., 1912, Assistant Engineer of Maintenance of Way, C.P.R.

F. W. HUNTINGTON, General Agent, Passenger Department, C.P.R., Minneapolis, St. Paul and Sault Ste. Marie Ry., and Duluth, South Shore and At-

P279 A. S. Goodeve,
Member of the Board of Railway Commissioners.

lantic Ry., Philadelphia, Pa., died there, May 11, after having undergone an operation for gall stones. He was born in 1854, and entered railway service at 15 years of age, going through active ticket office experience with the Chicago, Milwaukee and St. Paul Ry., in Minneapolis, Minn., subsequently serving with the Great Northern Ry., the Pennsylvania Rd., and the C.P.R. He was in C.P.R. service for about 18 years as Travelling Passenger Agent, and latterly as General Agent, Passenger Department at Philadelphia, Pa.

R. COLCLOUGH, who has been appointed Assistant Superintendent, Halifax and St. John District, Intercolonial Ry., Moncton, N.B., was born at Bic. Que., Feb. 24, 1871, and educated at Rimouski college and Laval University, whence he graduated with the degree of B.A. in 1888. He entered the I.R.C. service, Dec. 9, 1889, since when he has been; to Nov., 1892, clerk in Chief Superintendent's office, Moncton, N.B.; Nov., 1892, to Nov., 1901, private secretary to Chief Superintendent, General Manager, General Superintendent and

Manager; Nov., 1901, to Oct., 1902, chief clerk, Manager's office; Oct., 1902, to June, 1911, clerk in General Manager's office, and office of Managing Board; June 1, 1911, to May 1, 1912, chief clerk in General Superintendent's office.

H. H. ADAMS, whose resignation as General Manager, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., to accept the presidency of the Kansas City Terminal Ry., Kansas City, Mo., was announced in our last issue, was born at Detroit, Mich., Aug. 13, 1876, and entered railway service July, 1899, as rodman and draughtsman, M.C.R. After serving in various capacities in the engineering department, he was appointed Assistant Chief Engineer, Mar., 1902; secretary to the General Superintendent, Nov., 1902; Assistant Superintendent, Canadian Division, M.C.R., Jan., 1904; General Superintendent, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., Oct., 1909, and General Manager, same road, Oct., 1910. He left Hamilton, May 6, to take up his new duties.

A. S. GOODEVE, whose appointment as a member of the Board of Railway Commissioners was announced in our last issue, and whose portrait appears in this issue, was born at Guelph, Ont., Dec. 15, 1860, and educated at the Guelph public and high schools. He is a graduate and medallist of the Ontario College of Pharmacy, and was in business as a druggist at Chesley, Bruce County, Ont., from 1884 to 1896. He went to Rossland, B. C., in 1896. In the same business, and was for three years a member of the city council, and mayor in 1899-1900. In 1902 he was Provincial Secretary of British Columbia; 1909-10, member of the B.C. Forestry Commission; elected to the Dominion Parliament for Kootenay, in 1908, and made Conservative Western whip, and assistant chief whip in 1911.

C. G. WASHBON, whose appointment as Resident Engineer, C.P.R., Winnipeg, was announced in our last issue, was born at Morris, N.Y., Nov. 27, 1887, and was educated at the Rensselaer Polytechnic Institute, Troy, N.Y., taking the four years' civil engineering course. He entered railway service in the summer of 1906, as rodman, C.P.R., Winnipeg, and also served with the C.P.R. in the summer of 1907. In the summer of 1908, he was engaged on location work with the Buffalo, Rochester and Pittsburgh Ry., at Dubois, Pa., and continued in the same service in 1909; 1909, to Apr., 1910, in charge of construction of Twin Tree Lumber Co.'s logging railway, Maplesville, Ala.; Apr., 1910, to Apr., 1912, transit man, C.P.R., Brandon, Man. He is a member of the Delta Tau Delta fraternity.

J. W. EBER, who has been appointed General Superintendent, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., entered railway service in 1890, since when he has been, to 1902, rodman, draughtsman, transitman and Supervisor of Track, West Shore Rd.; 1902 to 1904, in charge of the main line division, New York Central Lines, Albany, N.Y.; 1904 to 1905, Division Engineer, Rome, Watertown and Ogdensburg Division, New York Central Lines; 1905 to 1909, Assistant Engineer of Maintenance of Way and Engineer of Track, of the entire New York Central system, his territory covering nearly 4,000 miles of road; 1909 to 1910, Superintendent, New York Central Stockyards and Terminals, Buffalo, N.Y.; 1910 to May 14, 1912, Superintendent, Adirondack Division, New York Central Lines, Utica, N.Y.

R. H. L'HOMMEDIEU, who has resigned as General Manager, Michigan Central Rd., Detroit, Mich., was born at Cincinnati, Ohio, Dec. 29, 1850, and entered railway service in 1870, since when he has been, to 1872, apprentice in locomotive shops, Cincinnati, Hamilton and Dayton Ry.; 1872 to 1873, clerk, Division Superintendent's office, Chicago,

Burlington and Quincy Rd.; 1873 to 1879, Trainmaster, Michigan Central Rd.; 1879 to 1890, Superintendent, Western Division, M.C.R., Chicago, Ill.; Sept., 1890, to Apr., 1896, Assistant General Superintendent, same road; in Apr., 1896, he was appointed General Superintendent, and was subsequently appointed General Manager. He has been appointed Assistant to the Vice President, M.C. Rd., Detroit, Mich., and will take up his duties after a short vacation.

C. R. HEATH, whose appointment as Superintendent of Water Service, Grand Trunk Pacific Ry., Melville, Sask., was announced in our last issue, was born at La Salle, Ill., Oct. 3, 1873. He comes of a railroad family, though his present position is practically his first railway work. On leaving school he was engaged in irrigation construction work in Colorado, until 1902, when he was appointed engineer of construction, National Construction Co., South Bend, Ind., remaining there until 1907, when he engaged in private business as consulting engineer, making a specialty of water supply, especially in regard to the western plains section of the North American continent. Immediately prior to his present appointment he was engaged, from the latter part of 1911, in special water service work for the G.T. Pacific Ry.

JULES HONE, who has been appointed Dominion Government director, G.T. Pacific Ry., to succeed A. Brunet, was born at Montreal, Sept. 8, 1874, and entered C.P.R. service in the Car Accountant's office, Montreal, Mar. 14, 1889, where he continued until July, 1890, since when he has been, to Aug., 1891, secretary to Manager of Transportation, Montreal; Aug., 1891, to the summer of 1892, in city ticket office, Montreal. 1892, to July 4, 1893, chief clerk, city ticket office, Ottawa; July 4, 1893, to June 21, 1896, assistant to chief clerk, city ticket office, Montreal; June 21, 1896, to Nov. 1, 1903, ticket agent, Windsor Hotel, Montreal; Nov. 1, 1903, to 1906, City Passenger, Freight and Steamship Agent, Quebec; 1906, to Apr., 1911, City Passenger and Ticket Agent, Quebec, since which latter date he has conducted a general ticket agency in partnership, in Quebec and Montreal.

W. E. DUPEROW, who has been appointed General Agent, Passenger Department, G.T.R., G.T. Pacific Ry. and G.T. Pacific Coast Steamship Co., Vancouver, B.C., was born at Stratford, Ont., Sept. 4, 1872, and entered transportation service, Nov. 3, 1893, since when he has been, to Oct. 15, 1894, in G.T.R. service at Seaforth, Ont.; Oct. 15, 1894, to June 1, 1896, ticket clerk, G.T.R., London, Ont.; June 1, 1896, to July 11, 1898, ticket clerk, G.T.R., Toronto. July 11, 1898, to Aug. 1, 1899, theatrical and excursion clerk, District Passenger Agent's office, G.T.R., Toronto; Aug. 1, 1899, to Apr. 19, 1902, chief clerk, same office; Apr. 19, 1902, to Feb. 15, 1907, General Manager, Secretary and Treasurer, Huntsville, Lake of Bays and Lake Simcoe Navigation Co., Huntsville, Ont.; Feb. 15, 1907, to June 1, 1910, Travelling Passenger Agent, G.T.R., Toronto; June 1, 1910, to Apr. 15, 1912, City Passenger and Ticket Agent, G.T.R. and G.T.P.R., Victoria, B.C.

The body of C. M. HAYS, President, G.T.R. and G.T.P.R., who was lost in the Titanic disaster, was recovered by the Mackay-Bennett cable steamship Minia, and landed at Halifax, N.S., on May 6, where it was received by D. H. Hays, a brother, H. G. Kelley and R. S. Logan, Vice Presidents, G.T.R.; Dr. J. A. Hutcheson, Chief Medical Officer, and other officials. It was immediately placed on a special G.T.R. train which had been waiting at Halifax for several days, and which reached Bonaventure station, Montreal, May 7, where it was met by a large number of the

company's chief officials. The funeral, which, at Mrs. Hays' request, was of as private a nature as possible, took place the next day to Mount Royal Cemetery. The G.T.R. offices were closed for a portion of the afternoon so that the heads of departments, etc., might attend, and there were a number of other prominent citizens present, including a representative of the Governor-General.

J. A. HEAMAN, whose appointment as Division Engineer, Grand Trunk Pacific Ry., Fitzhugh, Alta., was announced in our last issue, was born at Memphis, Tenn., June 3, 1874, and educated in the public schools and Collegiate Institute, London, Ont., and McGill University, Montreal. He entered railway service Apr., 1901, since when he has been, to Apr., 1902, instrument man, G.T.R. double track construction; Apr. to Nov., 1902, Resident Engineer on Construction, G.T.R.; Nov., 1902, to Nov., 1903, Resident Engineer on Maintenance, G.T.R.; Nov., 1903, to May, 1905, Assistant Engineer, G.T. Pacific Ry. location east of Winnipeg; May, 1905, to Nov., 1907, Assistant Engineer in charge of location and construction, National

P280
G. S. Hodgins, M. Am. Soc. M.E., Consulting Engineer, National Transcontinental Railway.

Transcontinental Ry.; Nov., 1907, to Oct., 1908, Assistant District Engineer, National Transcontinental Ry.; Oct., 1908, to June, 1910, Assistant District Engineer, G.T. Pacific Ry., June, 1910, to Apr., 1911, District Engineer, G.T. Pacific Ry.; Apr., 1911, to Apr., 1912, Office Engineer, G.T. Pacific Ry.

G. A. KEEFER, M. Can. Soc., C.E., who died at Victoria, B.C., May 19, was born at Cornwall, Ont., Sept. 10, 1836, and educated at St. Catharines, Ont., and Upper Canada College. He entered railway service in 1853, and to 1857 was engaged on survey work between Montreal and Cornwall for the G.T.R.; 1857 to 1861, engaged in architecture and work on the Victoria Bridge; he was later engaged under his uncle, the late Samuel Keefer, on the Brockville and Ottawa Ry., and was subsequently, to 1875, with the Belleville Grand Jct. Ry. and the Belleville and North Hastings Ry., of which latter he became Chief Engineer. From 1875 to 1885 he was on survey work on the C.P.R. in the Rocky Mountains, on behalf of the Government; 1875 to 1885, Railway Inspector for the

Government, in British Columbia; 1887 to 1899, in private practice; 1899 to the date of his death, Resident Engineer, Dominion Public Works Department, New Westminster, B.C. He was a son of the late G. K. Keefer, a well known civil engineer of Thorold, Ont., and a nephew of T. C. Keefer, C.M.G., Hon. M. Can. Soc. C.E., of Ottawa.

G. O. SOMERS, General Freight Agent, Chicago Great Western Rd., Chicago, Ill., is reported to be about to resign, in order to enter business in Toronto. He was born at Barrie, Ont., July 10, 1860, and entered railway service in 1875, since when he has been, to 1879, telegraph operator, Northern Ry.; assistant agent, relief agent, station agent and clerk to Superintendent, same road; from 1880 to 1882, he was in other business in Chicago; 1883 to 1885, successively, clerk in General Freight Department, acting General Baggage Agent and chief clerk, General Passenger and Ticket Department, C.P.R., Winnipeg; 1886, chief clerk, general passenger and ticket office, Michigan Central Rd., Chicago, Ill.; 1887, Travelling Passenger Agent, Duluth, South Shore and Atlantic Ry., Marquette, Mich.; 1887 to Sept., 1894, successively, chief clerk, general passenger and ticket office, chief clerk, general traffic department, and Assistant General Freight Agent, Great Northern Ry.; in Sept., 1894, he was appointed General Freight Agent, Great Northern Ry., and later transferred to a similar position on the Chicago Great Western Rd.

A. J. ISBESTER, who has been appointed Assistant District Engineer, Port Arthur District, Canadian Northern Ontario Ry., Port Arthur, is a son of the late Jas. Isbester, one of the first contractors on the C.P.R. He was born at Ottawa Dec. 18, 1879, and educated at Ottawa Collegiate Institute and Toronto University, graduating in 1902. His railway service is from May 1 to Sept. 30, 1900, rodman, Algoma Central and Hudson Bay Ry.; May, 1902, to Jan., 1903, instrument man on construction of Ottawa Northern and Western branch, C.P.R., from Gracefield to Maniwaki; Jan. to Dec., 1903, transitman in the prairie provinces and British Columbia, and Resident Engineer, Yorkton extension, C.P.R.; Jan. to June, 1904, transitman, C.P.R. Toronto-Sudbury branch between Romford Jct. and Byng Inlet; July, 1904, to Mar., 1906, Resident Engineer on construction, same branch; Apr., 1906, to Mar., 1909, Assistant Engineer in charge of tracklaying, trestles, ballasting, etc., same branch; May, 1909, to June, 1911, engaged in contracting on the National Transcontinental Ry.; July, 1911, to Mar., 1912, Division Engineer, Port Arthur District, Canadian Northern Ontario Ry., Port Arthur.

W. PHILLIPS, who has been appointed European Traffic Manager, Canadian Northern Ry. and Canadian Northern Steamships, Ltd., London, Eng., was born at Toronto, Jan. 31, 1870. He entered transportation service Apr., 1886, since when he has been, to Mar. 31, 1896, in G.T.R. offices, Toronto; Apr. 1, 1896, to Feb. 28, 1902, North West Agent, North West Transportation Co., Winnipeg; on Jan. 1, 1907, he was also appointed General Agent, Chicago Great Western Ry.; and on Apr. 1, 1900, North West Agent, Northern Navigation Co., there, which positions he held to Feb. 28, 1902; Feb. to Apr., 1902, General Agent, Freight and Passenger Departments, Canadian Northern Ry., Toronto; Apr., 1902, to May, 1911, General Eastern Agent, Canadian Northern Ry., Toronto; Nov., 1906, he was also appointed General Freight and Passenger Agent, Canadian Northern Ontario Ry., and in Apr., 1910, also acting Traffic Manager, Canadian Northern Steamships, Ltd., and in Apr., 1911, this latter position was changed to General Freight and Passenger Agent, Canadian North-

ern Steamships, Ltd.; May, 1911, to May, 1912, he was General Freight Agent, Canadian Northern Ontario Ry., Central Ontario Ry., Bay of Quinte Ry., Irondale, Bancroft and Ottawa Ry., and Niagara, St. Catharines and Toronto Ry. and Navigation Cos., and General Freight and Passenger Agent, Canadian Northern Steamships, Ltd., Toronto.

F. W. PETERS, who has been appointed General Superintendent, British Columbia Division, C.P.R., Vancouver, was born at St. John, N.B., Mar. 25, 1860, and entered railway service in 1873, as telegraph operator with engineers on construction, Intercolonial Ry., and from 1873 to 1876 acted as agent at Jacquet River and other points, same road; 1876 to 1878, assistant agent at Newcastle, N.B., same road; 1878 to 1880, agent, Chatham Jct., N.B., same road; 1880 to Nov., 1881, relieving agent, Chicago and Grand Trunk Jct. Ry., Fort Gratiot, Mich.; Nov., 1881, to May, 1882, billing clerk, local freight office, C.P.R., Winnipeg; May, 1882, to Apr., 1889, agent, C.P.R., Brandon, Man., April to June, 1889, agent, C.P.R., Fort William, Ont.; June, 1889, to Nov., 1896, Local Freight Agent, C.P.R., Winnipeg; Nov., 1896, to 1899, District Freight Agent, West Kootenay District, C.P.R., Nelson, B.C.; 1899 to Dec., 1900, Assistant General Freight Agent, same territory, Nelson, B.C.; Dec., 1900, to July, 1901, Assistant General Freight Agent, Pacific Division, C.P.R., Vancouver, B.C.; July, 1901, to Dec. 31, 1902, General Freight Agent, same division, C.P.R., Vancouver, B.C.; Jan. 1, 1903, to Mar. 1, 1908, Assistant Freight Traffic Manager, Western Lines, C.P.R., Winnipeg; Mar. 1, 1908, to May, 1912, Assistant to Second Vice President, and on the abolition of the numerical designations of the Vice Presidents, Assistant to the Vice President, C.P.R., Winnipeg.

LOUIS K. JONES, I.S.O., Secretary Department Railways and Canals, who has also recently been appointed Assistant Deputy Minister, and whose portrait appears in this issue, was born at Cobourg, Ont., June 9, 1849, and educated at Trinity College School, Weston, Ont., and Trinity College University, Toronto. He entered government service as clerk to the secretary of the Canal Commission, in 1870, and joined the staff of the District Engineer on the construction of the Intercolonial Ry. in the Miramichi district, Newcastle, N.B., in 1871. In 1874 he was appointed secretary to Colliwood Schreiber, on the latter's appointment as Chief Engineer, Intercolonial Ry., with headquarters at Ottawa, and remained in that position until the completion of the road, continuing with Mr. Schreiber on the latter's appointment as Chief Engineer and General Manager of the government railways, and from 1880, on Mr. Schreiber's additional appointment as Chief Engineer on construction of the C.P.R., during the building of a portion of that road by the government, Mr. Jones was Assistant to the Chief Engineer and General Manager, government railways. From 1888 to 1891, in addition to performing his departmental duties, he was secretary to the arbitration board which dealt with the C.P.R. claim against the government in connection with the Ondaerdonk section of the road, involving some six or seven million dollars. From 1893 to 1897 he was chief clerk, Department of Railways and Canals, and in 1897 was appointed Secretary of the Department. He was awarded the Imperial Service Order for long and faithful service.

W. WAINWRIGHT, Vice President, G.T.R., who has been promoted from Second Vice President to First Vice President, G.T. Pacific Ry., and whose portrait appears in this issue, was born at Manchester Eng., Apr. 30, 1840, and entered railway service, Jan., 1858, with the Manchester, Sheffield and Lincoln-

shire Ry., serving successively as junior clerk in the Chief Accountant's office, senior clerk in the same office, secretary to Assistant General Manager, and secretary to General Manager. In 1862 he joined the G.T.R. staff, serving one year as senior clerk in the Accountant's office, three years as secretary to the Managing Director, six years as senior clerk to the Managing Director, and in charge of the car mileage department, eight years and five months as General Passenger Agent; May, 1881, to May, 1890, Assistant Manager; May, 1890, to May, 1896, Assistant General Manager; from Apr., 1883, to Sept., 1895, also General Manager, North Shore Ry.; May, 1896, to July, 1907, General Assistant; Dec., 1900, to July, 1907, also Comptroller; July, 1907, to Jan. 7, 1910, Fourth Vice President; Jan. 7, 1910, to Oct. 2, 1911, Second Vice President, also Second Vice President, G.T.P.R.; Oct. 2, 1911, appointed Vice President G.T.R., on the abolition of numerical designations, which position he continues also to hold. On the death of C. M. Hays, recently, he was placed in chief charge of the G.T.R. affairs, pending the appointment of a president. He is a director of the Guarantee Co. of North America; director, Montreal Telegraph Co.; Vice President, Richelieu and Ontario Navigation Co.; Vice President, Grand Trunk Insurance and Provident Society; director, Canadian Express Co., and of various G.T.R. subsidiary lines. He was for eight years in command of a company of artillery in the old Grand Trunk Brigade, and retired with the rank of captain on its disbandment.

GEO. SHERWOOD HODGINS, who has recently been appointed Consulting Mechanical Engineer, National Transcontinental Ry., with headquarters at Ottawa, as mentioned in our last issue, is the third son of Dr. J. George Hodgins, of the Ontario Educational Department. He was born at Toronto and educated at Upper Canada College and at the School of Practical Science, Toronto. He began work in the Canadian Locomotive and Engine Co., of Kinston, Ont., in June, 1881. After working there for some years he became chief draughtsman. While in the service of this company he inspected and selected machinery and other equipment in England which the company contemplated buying. In 1884 he began railway work, entering the office of the Master Mechanic of the Ontario and Quebec Division, C.P.R., at Toronto. In 1886 he was transferred to the Pacific Division as Locomotive Foreman at Vancouver. In 1890 he returned to the Ontario and Quebec Division. From 1898 to 1900 he was Locomotive Inspector for the whole C.P.R. system and superintended the construction of locomotives and cars which were built in the U.S. He also tested locomotive performance on the road over the various divisions and did other mechanical engineering work for the company. In 1900 he returned to the locomotive works at Kingston as Mechanical Engineer, and when these works closed down for a time he went into technical journalism in New York City, being connected in an editorial capacity with The Railroad Digest, The Railroad Gazette, Railway Machinery, and Railway and Locomotive Engineering. Last year he gave up editorial work and went abroad for the summer, returning at the close of 1911. He is a member of the American Society of Mechanical Engineers, the Master Mechanics' Association, the Canadian Society of New York and the University of Toronto Club of New York. In 1890 he married the youngest daughter of the late Mr. Justice Patterson, of the Supreme Court of Canada. Although he lived for some time in the U.S., he has not given up his Canadian nationality.

Great Northern Railway Lines in Canada.

Midland Ry. of Manitoba—Midland Great Northern Ry.—The company began operating its trains over its own line into its own freight terminals and its passenger trains into the Fort Garry union station at Winnipeg, May 1. The line is being used by the G.N. Ry. and the Northern Pacific Ry., and the entry into the union station is obtained by an agreement with the Canadian Northern Ry.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—Press reports state that the contractors on the line at Hope, B.C., were directed by the Chief Engineer, May 9, to proceed with the rock work at once. This refers to the building of the line through the Coquihalla River valley.

Vancouver Improvements—The pile driving for the dock on Burrard Inlet, Vancouver, has been completed by the Chase Co., which had the contract, and the contractors for the concrete work, Cummings and Keihl, of Seattle, Wash., have started work. The dock will be 350 ft. wide and 450 ft. long, and will consist of two slips each 75 ft. wide, the intervening space of 200 ft. being filled so as to permit the laying of tracks and the building of two sheds each running the full length of the dock.

The plans for the terminals on False Creek, Vancouver, for the joint use of the G.N. Ry. and the Northern Pacific Ry., which are being worked out, will mean a great change in the appearance of the locality. Measuring from Main St. to the extreme east end of the area embraced in the scheme, the distance is about a mile. In breadth, from Prior St. to Seventh Ave. the distance is about 3,500 ft. In the centre of this, there is a basis 4,300 by 1,600 ft. wide reserved by the city. This is to be bulkheaded with concrete and dredged so that it will be navigable at all times of day and at all seasons of the year. About this basin the yards, shops, freight sheds, repair tracks, store houses, passenger tracks and station are to be located. There is ample room for all of these which will be sufficient for transacting an enormous business. The passenger station is 250 by 160 ft. It will house all of the offices of the company. The plan provides for the construction of an express house 600 ft. long, one freight house 2,000 ft. long, another 1,950 ft. long, 10 tracks for the receiving of trains and the distribution of cars, team tracks, freight house tracks, repair tracks, a round house and turn table, passenger tracks, coal supply, water tanks, oil tanks, industrial tracks, coach tracks, and three overhead crossings.

NOTICE TO CONTRACTORS.

TENDERS will be received by the undersigned for the substructures and superstructures of ten (10) bridges over the Fraser, Thompson and North Thompson Rivers on that section of the Canadian Northern Pacific Railway between Port Mann and the Yellowhead Pass, Province of British Columbia.

Tenders are to include any or all portions of the construction or the delivery of metalwork only.

Detailed drawings, specifications, and forms of contract may be obtained on or after June 5th, 1912, at the office of the Consulting Engineers, Waddell & Harrington, Winch Building, Vancouver, B.C., upon the payment therefor of fifty (50) dollars. This amount will be refunded to those who bid on the work, upon the return of the bidding papers in good condition.

Total work to be completed before June 1st, 1913.

Tenders to be received at the offices of the undersigned, Metropolitan Building, Vancouver, B.C., not later than noon of July 8th, 1912, and to be enclosed in sealed envelopes marked "Tender for Bridge Construction."

The lowest or any tender not necessarily accepted.

MACKENZIE, MANN & COMPANY, LTD.

Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Central and Hudson Bay Ry., Algoma Eastern Ry.—J. A. HEDGECOCK, Assistant Engineer in charge of terminal work, has also been appointed Bridge Engineer, vice C. R. Boucher, deceased. Office, Sault Ste. Marie, Ont.

British Columbia Electric Ry.—ALLAN PURVIS, formerly Local Manager, Fraser Valley Branch, has been appointed Manager of Interurban Lines. Office, New Westminster.

E. STERLING, heretofore Division Trainmaster, New Westminster, has been appointed Superintendent, District 2, covering Lulu Island and Eburne-New Westminster lines; District 3, covering Fraser Valley Branch. Office, New Westminster.

W. H. ELSON, heretofore Trainmaster, Interurban Lines, New Westminster, Lulu Island and Eburne, has been appointed Superintendent, District 1, covering Vancouver-New Westminster interurban line; District 4, covering Burnaby Lake line; New Westminster city lines and terminals at New Westminster and Carrall St., Vancouver. Office, Vancouver.

Canadian Northern Quebec Ry., Quebec and Lake St. John Ry.—G. SEAMAN, at one time General Roadmaster, Halifax and South Western Ry., Bridgewater N. S., has been appointed Bridge and Building Master, C.N.Q.R. and Q. and L. St. J. R., vice L. P. McGee, acting Bridge and Building Master, assigned to other duties. Office, Joliette, Que.

Canadian Northern Ry.—H. J. COWIE, European Freight Agent, Canadian Northern Ry., and General Freight Agent, Canadian Northern Steamships, Ltd., Liverpool, Eng., has resigned.

W. PHILLIPS, heretofore General Freight Agent, Canadian Northern Ontario Ry., and subsidiary companies, and General Freight and Passenger Agent, Canadian Northern Steamships, Ltd., has been appointed European Traffic Manager, Canadian Northern Ry. and Canadian Northern Steamships, Ltd., in charge of freight and passenger traffic for Great Britain and the European continent. Office, London, Eng.

R. L. FAIRBAIRN, heretofore Assistant General Passenger Agent, lines east of Port Arthur, in Ontario and Quebec, has been appointed General Passenger Agent same territory, including affiliated lines. He has also been appointed General Passenger Agent, Canadian Northern Steamships, Ltd., vice W. Phillips, promoted. Office, Toronto.

F. A. YOUNG, heretofore Commercial Agent, Chicago, has been appointed Division Freight Agent, lines east of Port Arthur and west of Ottawa, including leased and affiliated lines, vice W. Phillips, General Freight Agent, promoted. Office, Toronto.

A. E. HODGINS, heretofore Travelling Freight Agent, Pittsburgh, Pa., has been appointed General Agent there, succeeding R. H. Bell, Commercial Agent, transferred.

R. H. BELL, heretofore Commercial Agent at Pittsburg, Pa., has been appointed General Agent at Chicago, Ill., vice F. A. Young, Commercial Agent, promoted.

C. DYER has been appointed Assistant Local Freight Agent, Winnipeg, vice C. H. Booth, resigned to enter Midland Ry. of Manitoba service, as announced in our last issue.

Canadian Pacific Ry.—The territory of the district master mechanics of the Eastern Division has been re-arranged into three districts, instead of four, as follows—District 1, covering Outremont, Farnham, Sortin, Sherbrooke,

Megantic, Newport and branches, in charge of H. A. PEPLER, heretofore District Master Mechanic, District 2 and Montreal Terminals, Montreal, vice J. D. Wells, who returns to his former position as locomotive driver. Office, Montreal. Districts 2 and 4, covering Ottawa, including Ottawa and New York Ry. junction, Smiths Falls, Glen Yard, Brockville and Prescott, in charge of J. M. BURKE, heretofore District Master Mechanic, District 4. Office, Ottawa.

District 3, covering Quebec, Three Rivers, Hochelaga, Waltham, Manawaki and Laurentian subdivision, and Outremont, as far as locomotives on that run are concerned, in charge of W. BORBRIDGE, as heretofore. Office, Montreal.

W. TANSLEY, heretofore Chief Dispatcher, Havelock, Ont., has been appointed Assistant Superintendent, District 1, Ontario Division. Office, Havelock.

J. W. WANSBOROUGH has been appointed Chief Dispatcher, District 1, Ontario Division, vice W. Tansley, promoted. Office, Havelock.

A. E. STEWART, heretofore District Master Mechanic, District 2, Ontario Division, has been appointed District Master Mechanic, District 2, Ontario Division.

P281 F. W. Peters,
General Superintendent, British Columbia
Division, Canadian Pacific Railway.

vision, West Toronto, has been appointed, temporarily, Superintendent of Construction, with headquarters at Lindsay, Ont.

A. MAYNES, heretofore District Master Mechanic, District 1, Ontario Division, has been appointed District Master Mechanic, District 2, Ontario Division, vice A. E. Stewart, transferred to Construction Department, temporarily. Office, West Toronto.

W. PICKRELL, heretofore acting District Master Mechanic, District 3, has been appointed District Master Mechanic, District 1, vice A. Maynes, transferred. Office, West Toronto.

S. ILLINGSWORTH has been appointed locomotive foreman, West Toronto, Ont., vice W. C. Mayo, promoted.

R. McLAUGHLIN, heretofore fitter, has been appointed assistant night foreman, West Toronto shops.

W. C. MAYO, heretofore night locomotive foreman, West Toronto, has been appointed Locomotive Foreman at Port McNicoll, Ont.

P. WELLIGAN, heretofore clerk in General Baggage Department, Winnipeg, has been appointed General Travelling Baggage Agent, Winnipeg, vice W. E. Allison, promoted.

R. MCPHERSON, heretofore shop foreman at Kenora, Ont., has been appointed shop foreman at Brandon, Man.

W. J. RENIX, heretofore shop foreman at Brandon, Man., has been appointed shop foreman at Moose Jaw, Sask.

T. S. BERTRAM, heretofore night foreman at Kenora, Ont., has been appointed night foreman at Moose Jaw, Sask., vice A. Pentland, transferred.

A. PENTLAND, heretofore night foreman at Moose Jaw, Sask., has been appointed night foreman at Swift Current, Sask.

W. E. ALLISON, heretofore General Travelling Baggage Agent, Winnipeg, has been appointed District Baggage Agent, Alberta Division, vice E. V. Dangerfield, resigned. Office, Calgary.

J. F. SWEETING, heretofore Industrial Agent, attached to the Vice President's office, Winnipeg, has been appointed Industrial Agent for Western Lines, Department of Natural Resources. Office, Calgary, Alta.

JAS. DUFF, A.M. Can. Soc. C.E., has been appointed General Townsite Agent, Department of Natural Resources, vice J. L. Doupe, resigned. Office, Calgary, Alta.

A. CLARK has been appointed storekeeper at East Calgary, Alta., vice J. Paxton, resigned.

S. E. HOLLYMAN, heretofore chief clerk, Division Freight Agent's office, Regina, Sask., has been appointed Travelling Freight Agent, Lethbridge, Alta., vice C. S. Morse, promoted to District Freight Agent, Fort William, Ont., as announced in our last issue.

B. WILSON has been appointed storekeeper at Strathcona, Alta.

P. F. WEISBROD, Trainmaster at Cranbrook, B.C., was on Apr. 17 appointed Trainmaster at Macleod, Alta., vice A. C. Harshaw, transferred; and on May 9 he was appointed Superintendent, District 2, Saskatchewan Division, vice A. E. Stevens, promoted. Office, Moose Jaw.

J. P. KELLY has been appointed acting Locomotive Foreman at Field, B.C., vice W. B. Steeves, resigned.

C. HOOD, heretofore Terminal Trainmaster, Calgary, Alta., has been appointed Trainmaster at Cranbrook, B.C., vice P. F. Weisbrod, transferred.

F. W. PETERS, heretofore Assistant to the Vice President, Winnipeg, has been appointed General Superintendent, British Columbia Division, vice Jas. Osborne, deceased. Office, Vancouver.

A. E. STEVENS, heretofore Superintendent, District No. 1., Saskatchewan Division, Moose Jaw, has been appointed Assistant General Superintendent, British Columbia Division. Office, Vancouver.

Fredericton and Grand Lake Coal and Ry. Co.—H. W. D. ARMSTRONG, M. Can. Soc. C.E., has been appointed Chief Engineer, vice D. F. Maxwell, resigned. Office, Fredericton, N.B.

Delaware and Hudson Co.—W. H. WILLIAMS, Third Vice President, New York, has been elected a director, vice J. J. Astor, deceased.

Grand Trunk Pacific Ry.—E. J. CHAMBERLIN, heretofore Vice President and General Manager, has been appointed President, G.T.P. Ry., and also of the G.T.R., vice C. M. Hays, deceased.

W. WAINWRIGHT, heretofore Second Vice President, has been appointed First Vice President.

M. M. REYNOLDS, heretofore Third Vice President, has been appointed Second Vice President.

JULS HONE, ticket agent, Quebec and Montreal, and formerly City Passenger and Ticket Agent, C.P.R., Quebec, has been appointed Dominion Government director, G.T. Pacific Ry., vice A. Brunet.

C. H. BROWN, heretofore Assistant Trainmaster, G.T.R., Hamilton, Ont., has been appointed a dispatcher, G.T.P.R., at Wainwright, Alta.

In announcing the appointments of W. E. DUPEROW and C. F. EARLE as General Agent, Passenger Department, Vancouver, and City Passenger and Ticket Agent, Victoria, respectively, in our last issue, the former's previous location should have been given as Victoria, as also that of the latter, who remains at Victoria.

The following agents have been appointed—Birmingham, Sask., G. A. Swan; Landis, Sask., F. W. Coulter; Chauvin, Alta., R. E. Patterson; Irma, Alta., R. B. Allen; Edson, Alta., J. S. Doble.

Grand Trunk Ry.—E. J. CHAMBERLIN, heretofore Vice President and General Manager, G.T. Pacific Ry., has been appointed President, G.T.R., and G.T.P.R., vice C. M. Hays, deceased. He has also been elected a director of the G.T.R. Co.

J. MCWOOD, heretofore General Foreman, car shops at London, Ont., has been appointed General Foreman, Car Department, Ottawa Division, vice W. Gillespie, appointed Master Car Builder, Central Vermont Ry., St. Albans, Vt., as announced in our last issue.

H. A. CARSON, heretofore Soliciting Freight Agent, Toronto, has been appointed Travelling Freight Agent, Toronto, vice R. Tinning, retired after 50 years' service.

F. G. GOULD, heretofore rate clerk, District Freight Agent's office, Toronto, has been appointed Soliciting Freight Agent, Toronto, vice H. A. Carson, promoted.

W. KIRKWOOD has been appointed Road Foreman of Locomotives, Middle and Southern Divisions, vice G. Black, deceased. Headquarters, Stratford, Ont.

The following agents have been appointed:—Beauharnols, Que., J. E. Pare; Oshawa Jct., Ont., A. A. Grant; Holland Landing, Ont., F. C. Laver; Guelph, Ont., W. F. Briggs; Gobles, Ont., B. P. Force; London, Ont., freight, D. W. Hayes; Alma, Ont., L. E. Dotzenroth; Goldstone, Ont., H. V. Goodwin; Paisley, Ont., C. E. Brigham; Neustadt, Ont., J. M. Fairweather; Hanover, Ont., J. E. Rlesberry; Warton, Ont., G. E. Smith; Atwood, Ont., F. Anguish; Stoney Point, Ont., H. A. Lampman; Belle River, Ont., F. W. Shearing; Tecumseh, Ont., F. Ouellette; Carlsbad Springs, Ont., F. A. Caillier; Ottawa, Ont., pass., A. G. Munroe; outside agencies, Amherstburg, Ont., A. W. Marsh; Sault Ste. Marie, Ont., E. C. Miller; Toronto, W. J. Hamilton.

Great Northern Ry.—C. R. GRAY, heretofore President, Oregon Trunk Ry., Oregon Electric Ry., and Spokane and Inland Empire Rd., Portland, Oregon, is reported to have been appointed President, G.N.R., vice L. W. Hill, resigned. Office, St. Paul, Minn.

Hudson Bay Ry.—A press dispatch from Le Pas, Man., says Chief Engineer Bruce, of the Dominion Hudson Bay Ry. has resigned. The dispatch is incorrect in regard to title, as J. Armstrong is Chief Engineer.

Intercolonial Ry.—W. A. FITCH, heretofore Chief Dispatcher at Sydney, N.S., has been appointed Assistant Superintendent, Sydney and Oxford District Office, Sydney, N.S.

E. L. DESJARDINS, heretofore Chief Dispatcher, Levis, Que., has been appointed Assistant Superintendent, Montreal and Ste. Flavie District Office, Riviere du Loup, Que.

A. E. WILKINSON, chief clerk, General Freight Agent's office, Moncton, N. B., has been appointed Division Freight Agent at Halifax, N.S., vice E. S. Smiley, assigned to other duties.

J. C. FULMORE, heretofore section foreman, Debert section, has been appointed Trackmaster from Oxford to Pictou, vice A. P. Giles, transferred. Office, Pictou, N.S.

J. HAMILTON has been appointed acting Trackmaster, Newcastle to Campbellton, N.B., during the absence through sickness of G. A. Fewcett.

E. SAVAGE has been appointed acting Trackmaster, Canada Eastern Division, during the absence through sickness of A. Astle.

L. S. BROWN, heretofore Chief Dispatcher, New Glasgow, N.S., has been appointed Assistant Superintendent, Moncton and Ste. Flavie District Office, Newcastle, N.B.

R. COLCLOUGH, heretofore chief clerk, General Superintendent's office, Moncton N.B., has been appointed Assistant Superintendent, Halifax and St. John District Office, Moncton, N.B.

A. P. GILES, heretofore Roadmaster, Oxford Jct., to Stellarton, at Westwell, N.S., has been appointed Trackmaster from Moncton to Newcastle, vice T. McPherson, promoted. Office, Newcastle, N.B.

Intercolonial Ry. and Prince Edward Island Ry.—T. MCPHERSON, heretofore Trackmaster from Moncton to Newcastle, I.C.R., Newcastle, N.B., has been appointed General Roadmaster, I.C.R., and P.E.I.R. Office, Moncton, N.B.

H. W. D. Armstrong, M. Can. Soc. C.E., Chief Engineer, Fredericton and Grand Lake Railway.

Michigan Central Rd.—E. D. BRONNER, heretofore Superintendent of Motive Power, Detroit, Mich., has been appointed General Manager, vice R. H. L'Hon-medieu, resigned on account of ill health. Office, Detroit, Mich.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—C. N. KALK, Principal Assistant Engineer, is in full charge of the Engineering Department, consequent on the recent death of T. Greene, Chief Engineer. Office, Minneapolis, Minn.

New York Central Lines.—J. J. BERNET, heretofore Assistant to the Vice President, L.S. and M.S. Ry., L.E. and W. Rd., L.E.A. and W. Rd., C.C.C. and St. L. Ry., P. and E. Ry., C.N. Rd., M.C. Rd., T. and C. Ry., Z. and W. Ry., and C.I. and S. Rd., has been appointed Assistant Vice President, same companies. Office, La Salle Station, Chicago, Ill.

Northern Navigation Co.—E. C. MILLER, heretofore City Passenger and Ticket Agent, Sault Ste. Marie, Ont., has been appointed District Freight and Passenger Agent, with territory, North Bay to Sault Ste. Marie, Ont., including Sault Ste. Marie, Mich., the Georgian Bay,

Manitoulin Island and MacKinnon Island, Office, Sault Ste. Marie, Ont.

F. MITCHELL, heretofore land steward, Collingwood, Ont., has been appointed Chief of Commissary, with full charge of the cabin departments on all the company's vessels, land stewards' offices at Collingwood and Sarnia, and the operation and linen at the company's laundry, Sault Ste. Marie, Ont. Office, Collingwood, Ont.

Northern Pacific Ry.—C. L. NICHOLS, heretofore General Superintendent, lines west of Paradise, Livingston, Mont., has been appointed General Superintendent, lines east of Paradise, St. Paul, Minn., vice E. C. Blanchard, promoted.

W. H. STRACHAN, heretofore Assistant Superintendent, Lake Superior Division, Duluth, Minn., has been appointed Superintendent at Jamestown, N.D., vice F. L. Birdsall, transferred.

F. L. BIRDSALL, heretofore Superintendent, Jamestown, N.D., has been appointed Superintendent at Missoula, Mont., vice A. M. Burt, transferred.

J. M. RAPELJE, heretofore Superintendent of the Idaho Division, Spokane, Wash., has been appointed General Superintendent, lines west of Paradise, Livingston, Mont., vice C. L. Nichols, promoted.

A. M. BURT, heretofore Superintendent, Missoula, Mont., has been appointed Superintendent, Idaho Division, Spokane, Wash., vice J. M. Rapelje, promoted.

Ottawa and New York Ry.—J. A. MCQUADE has been appointed Chief Dispatcher at Ottawa, Ont., vice E. J. Robertson, resigned.

Pacific Great Eastern Ry.—With reference to the appointments of D'ARCY TATE as Vice President and General Counsel, and JOHN CALLAGHAN as Chief Engineer, we are officially advised that the office of the former is at Victoria, and that of the latter at Vancouver, B.C.

Philadelphia, Baltimore and Washington Rd. (Pennsylvania Rd.)—H. A. HAINES, heretofore Canadian Freight Agent, Pennsylvania Rd., Toronto, has been appointed Division Freight Agent, Baltimore, Md.

Prince Edward Island Ry.—H. MC-EWEN, heretofore Train Dispatcher, has been appointed Superintendent, vice G. A. Sharp, retired. Office, Charlottetown, P.E.I.

W. S. POOLE, Mechanical Superintendent, is reported to have resigned.

Southern New England Ry., Southern New England Rd.—G. C. JONES, General Manager, Central Vermont Ry., St. Albans, Vt., has also been appointed Vice President, S.N.E. Ry., and S.N.E. Rd., in charge of construction and operation. Offices, St. Albans, Vt., and Grosvenor Bldg., Providence, R.I.

Southern Ry.—G. W. CARTER, heretofore City Ticket Agent, Richmond, Va., has been appointed Travelling Passenger Agent, Montreal, with office at 130 St. James St.

Toronto, Hamilton and Buffalo Ry.—J. W. EBER, heretofore Superintendent, New York Central and Hudson River Rd., Utica, N.Y., has been appointed General Superintendent, T. H. and B. Ry. Office, Hamilton, Ont. The resignation of H. H. Adams, General Manager, who was formerly General Superintendent, on his acceptance of the position of President, Kansas City Terminal Ry., Kansas City, Mo., was announced in our last issue.

The Alberta Ry. and Irrigation Company's railway has been taken over by the C.P.R., and is being operated as the Raymond subdivision of district 1, Alberta Division.

The Algoma Steel Co. is arranging to largely extend its plant at Sault Ste. Marie, Ont., and to practically double the capacity of the steel rail mill.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Acadia Coal Co.—The Nova Scotia Legislature has amended the company's powers, and extended the time within which it may build certain railway lines authorized to connect its collieries with the Intercolonial Ry. (Sept. 1910, pg. 725.)

Alberta Interurban Ry.—The general location plan for the first section of this projected railway from Calgary, easterly and northerly to Carbon, Alta., have been approved by the Minister of Railways. The points served by the line on this section are:—Rocky View, Freshford (near), Irricana, Beiseker, and Carbon. This will carry the line to the Kneehills, where there are coal deposits, on which development work is being done.

We are officially advised that the line will be operated by individual power driven cars, no electricity being used at all for motive power purposes. The equivalent officials to station agents will be travelling backwards and forwards over the line in the cars. These officials will receive and deliver the freight out of the cars to each farmer who does business with the company. Each farmer will attend to his own business, giving a registerable lien for one month's freight charges to the company. It is said that this system has been found to work satisfactorily in the Southern States, and that it has been approved by the Dominion Railways Department.

At the shareholders' meeting held recently the various contracts and trust agreements to safeguard the unissued capital, and the contracts for construction were signed. The Land Traction Co., which financed the obtaining of the charters, has undertaken the construction of the line at cost plus 10% and a minor portion of the capital stock of the A.I. Ry. It is proposed by the L.T. Co. to sublet the work.

Following are the directors for the current year:—Vice President, C. S. Drummond, Calgary and London, Eng.; J. R. Sutherland, Winnipeg, Man.; W. F. W. Lent, and Major Duncan Stuart, Calgary, Alta. (May, pg. 251.)

Algoma Central and Hudson Bay Ry.—A contract is reported to have been let to Plant and Wright, for the building of a station at Sault Ste. Marie, Ont., at a cost of \$100,000.

The Board of Railway Commissioners has authorized the building of an additional branch line from the company's Michipicoten branch. (May, pg. 238.)

Argenteuil Ry.—The Quebec Legislature has incorporated a company with this title to build a railway from the boundary between Harrington and Grenville to the canal at Grenville, Que. The provisional directors were named in our April issue.

The Quebec Legislature has voted a grant of 2,000 acres of land a mile for a line of 10 miles from the Grenville canal, going towards Arundel, Que. (April, pg. 181.)

Bagotville and St. Lawrence Ry.—The Quebec Legislature has incorporated a company with this title to build a railway from St. Alphonse or Grand Bay to Murray Bay, Que., with the provisional directors named in our Mar. issue. (Mar., pg. 120.)

Brandon Transfer Ry.—Brandon, Man., ratepayers have passed a bylaw to issue \$12,000 of debentures to pay for right of way for the B.T. Ry., which has been built and is being operated in the interests of the three lines entering Brandon, viz., the C.P.R., Canadian Northern Ry., and Brandon, Saskatchewan and Hudson Bay Ry., a subsidiary

of the Great Northern Ry., U.S. (Nov., 1911, pg. 1035.)

Bruce Mines and Algoma Ry.—The Ontario Legislature has passed an act declaring that notwithstanding any act or default of the company, its charter is still in force; authorizing the issue of bonds for \$35,000 a mile of line constructed or projected, and granting an extension of time for the building of the line from the present northerly terminus at Rock Lake to the C.P.R. between Chapleau and Biscotasing stations, and thence northerly and easterly to Hannah Bay, or some other point on James Bay, Ont. (May, pg. 238.)

Buctouche and Rexton Ry.—The New Brunswick Legislature has extended the time for building the railway from Buctouche to Rexton and thence to Richibucto Head, authorized to be constructed by chap. 91 statutes of 1905. (May, 1905, pg. 181.)

Burrard Inlet Tunnel and Bridge Co.—The North Vancouver, B.C., district council has passed a resolution agreeing to provide a further \$25,000, making its contribution \$125,000, towards the building of the bridge across the Second Narrows of Vancouver Inlet. The West Vancouver municipal council, April 30, discussed the question of the proposed tunnel under the second narrows, which is a part of the plans, and it was stated that while the company had the proposition under consideration the building of the bridge had been given first place. Some of the members of the council urged that the municipality should take up the work if the company did not proceed at once.

Press reports state that it is expected to make arrangements at an early date for the letting of contracts for the building of a line from Eburne to Deepcove, about five miles. (May, pg. 238.)

Canadian Terminal Ry.—The New Brunswick Legislature has extended the time for the building of the railway from L'Etang harbor to the St. Croix River, authorized to be constructed by chap. 60 statutes of 1907. (See Canada Atlantic Terminal Co., May, 1907, pg. 323.)

Central and North Eastern Ry.—The New Brunswick Legislature, in 1890, incorporated a company to build a railway from near St. John through the centre of the province, to a point on Northumberland Strait. At the last session the company's powers were revived, by an act which changed the provisional directors to W. W. Wells, F. B. Black, W. C. Milner, T. E. Murray, W. B. Dickson, W. H. Harrison, F. P. Robinson and H. A. Powell. The last three are new names, and the name of F. B. Black is substituted for that of J. L. Black. The company is given two years from July 1 to make surveys, and construction is to be started in a year thereafter, and completed by July 1, 1917.

We are officially advised that the company is putting in a spur line at McAlpine, Ont., to connect with the C.P.R., in order to facilitate the delivery of construction material. All the construction on the line will be done by the general contractors, C. J. Willis and Sons, and the only work that will be sublet will perhaps be some clearing and grading.

The Board of Railway Commissioners has approved of location plans for the line from St. Eustache to Oka, Que., mileage 16 to 31.

Central Ry. of Canada.—The Minister of Railways has approved route maps from St. Eustache, Que., to South Indian, Ont., 70 miles. The Board of Railway Commissioners has approved plans and profiles of the company's line

from St. Eustache, Que., to Hawkesbury, Ont., and has under consideration the plans and profiles from Hawkesbury to South Indian.

Ties, poles and fence posts are being delivered at McAlpine, Ont., where the company has a spur and siding connecting with the C.P.R. The right of way has been practically obtained from McAlpine to South Indian, and construction has been commenced between McAlpine and South Indian.

There has been deposited in the office of the Secretary of State at Ottawa the deed of trust made between the company and the City Safe Deposit and Agency Co., to secure the company's bonds. A meeting of the holders of bonds under this deed has been called, to be held in London, Eng., July 17, for the purpose of passing resolutions releasing the land grant subsidy for the security thereof upon terms of the bonds being converted into bonds guaranteed by the Dominion, Quebec or Ontario Government, or other consideration, and modifying the conditions under which the proceeds of the bonds are to be applied. (May, pg. 238.)

Chicago, Milwaukee and Puget Sound Ry., Oregon-Washington Rd. and Navigation Co.—It is reported that officers of these two companies have been discussing the basis of an arrangement which will settle various matters in connection with the building of lines in the northwest section of the State of Washington, and the extension of the same to Vancouver and other points in British Columbia. (May, pg. 120, and pg. 121.)

Dominion Atlantic Ry.—In connection with the proposed building of the projected North Mountain branch, we are officially advised that plans and profiles have been approved by the Board of Railway Commissioners. The line will connect with the company's Cornwallis Valley branch at Centreville, N.S., and will run in a generally westerly direction to Weston, about 15 miles. The line will cross 14 public roads at grade, and a resolution authorizing this has been passed by the council of King's County. The maximum gradient will be 1.5%, and the maximum curvature four degrees. The work will be comparatively light, and there will not be any heavy bridge work. Stations will be established at Belltown, Lakeville, Woodville, Grafton, Somerset and Weston. It has not been decided when construction will be started. (May, pg. 253.)

Edmonton, Duvegan and British Columbia Ry.—We are officially advised that D. F. McArthur has the contract for the construction of this line from Edmonton to the Athabaska River, 120 miles. The clearing of the right of the right of way for 70 miles has been let. D. F. McArthur will grade the first 10 miles out of Edmonton. The contracts for the further grading have been let as follows: Porteus Bros, next 10 miles; next three miles, J. F. Casels; next 10 miles, L. A. Johnson. Surveys are practically completed to the crossing of the Athabaska River, 120 miles, but the point of crossing has not been definitely fixed. Further clearing contracts are to be let, as required.

The plans for the entry of the line into Edmonton, and for the terminals, are not settled, but negotiations are in progress with the city and other interests. The steel for 120 miles has been ordered in the U.S., for June delivery. This will carry the line to the Athabasca River, which it is expected to reach by the end of the present season. T. Turnbull is Chief Engineer. (May, pg. 238.)

Elkhorn and Northern Ry.—The Manitoba Legislature has extended the time within which the line authorized to be constructed by chap. 92, statutes of 1910, may be built. (April, pg. 181.)

Eric, London and Tillsonburg Ry.—J. H. Teall, President, is quoted as stating that work on this projected railway will be started at an early date, so that application can be made to the Department of Railways for a contract under the act to aid the building of certain railways, the right to which will expire in August. The route proposed to be followed is from Port Burwell to London, via Corinth, Kingsmill and Belmont. It is expected to have the line built to Aylmer by Aug. 1.

We are officially advised that engineers are making surveys from Port Burwell, passing through Calton, Aylmer, Kingsmill and Belmont, and terminating in London, Ont.

Esquimalt and Nanaimo Ry.—A contract has been let to M. E. Hord, Victoria, B.C., for the construction of a 10 mile section from Courteney, south to Union Bay in the Comox district. Camps are being located on this mileage and every preparation made for pushing the work to a speedy completion. Tenders are reported to be under consideration for the construction of a 10 mile section northerly from McBride Jct., northerly towards Union Bay. This will leave a gap of about 25 miles, the right of way on which is being cleared, for which tenders will shortly be invited. A further section of the line north of Courteney to Campbell River will have to be built, to connect with the section northwest of Oyster River to near Hardy Bay, the route map for which was recently approved. (May, pg. 238.)

Fredericton and Grand Lake Coal and Ry. Co.—We are officially advised that a contract has been let to A. E. Trites, Moncton, N.B., for the construction of the line from Gibson to a connection with the New Brunswick Coal and Ry. Co.'s line at Minto, N.B., 31 miles. The company will supply the ties and bridges, the rails and fastenings, the contractor doing all other work. The track will be laid with 73 lb. steel relaying rails supplied by the C.P.R.

The contract for the steel bridges has been let to the Dominion Bridge Co. as follows:—Nashwaak River, four 80 ft. half deck girder spans; Noonan Creek, one 40 ft. half deck girder span; Burpee Mill stream, one 80 ft. half deck girder span; Little River, two 80 ft. half deck girder spans.

Press reports state that subcontracts have been let for construction as follows:—G. McPhail, Woodstock, N.B., three miles; J. C. Kitchen, Fredericton, N.B., five miles; D. C. Burpee and Son, Gibson, N.B., concrete and mason work.

The plans and book of reference showing the lands to be taken for the construction of this railway from Gibson on the Intercolonial Ry., and a connection with the New Brunswick Coal and Ry. Co.'s line west of Minto, have been deposited with the Commissioner of Public Works at Fredericton, and with the clerks of the peace for the counties of York and Sunbury.

The New Brunswick Legislature amended the charter of the company in certain particulars, details of which have already been given. Sir Thos. Tait is President and H. W. D. Armstrong Chief Engineer. (Mar., pg. 238.)

Gatineau and Ungava Ry.—The Dominion Parliament has changed the name of the company to the Ottawa and Ungava Ry., and extended the time within which the lines authorized to be built by chap. 102, statutes of 1910, may be built. (Dec., 1911, pg. 1137.)

Glengarry and Stormont Ry.—The Ontario Legislature has incorporated a company with this title, C. L. Hervey, A. A. Mellor, Montreal, and T. Burgess, Ottawa, as provisional directors, to build a railway from the C.P.R., on the eastern boundary of the province in Lancaster tp., to the St. Lawrence River, in

Charlottenburg tp., and thence to Cornwall, and branch lines. (Mar., pg. 120.)

Grand Lake and Bell River Ry.—A subsidy has been voted by the Dominion Parliament in aid of the building of a railway from Bell River on the National Transcontinental Ry., along the Bell River to Twenty-one Mile Bay on Grand Lake, or to Rabbit Lake on the Ottawa River, not to exceed 45 miles.

The Quebec Legislature has voted 2,000 acres of land a mile in aid of the projected line, from the National Transcontinental Ry. to Twenty-one Mile Bay.

Great Northern Mining and Ry. Co.—A subsidy has been voted by the Dominion Parliament in aid of building a line from Little River, through Belle Marche, to Eastern Harbor, Cape Breton Island, N.S. (July, 1911, pg. 645.)

The Guelph Patent Cask Co. has been authorized by the Quebec Legislature to build and operate a railway and branches.

Halifax and Eastern Ry.—The Provincial Engineer of Nova Scotia in his annual report for the year ended Sept., 1911, states that early in the year the plans for a large portion of the proposed line from near Halifax to Guysboro, and Country Harbor, etc., were submitted to the company and preparations were made for early construction. The company entered into negotiations with the Dominion Government, with the result that the work was taken over by the Federal authorities, thus relieving the province of all responsibility in connection with this important work. (Jan., pg. 21.)

Howe Sound and Northern Ry.—Tenders are being asked for construction from the end of the present line to mileage 12, from mileage 12 to 24.1, and for a branch line from mileage 2.3 on the present line, for 2.7 miles along the Squamish River Valley. Cleveland and Cameron, Vancouver, B.C., are engineers.

The existing line starts from near Newport, on Howe Sound, B.C., and extends to the Cheakamus River, about 11 miles. The extension of the main line will carry it to near the Green Lake summit, and the work will be fairly heavy. The spur line will give access to the water front on the east side of Howe Sound. The line is used for the purpose of providing shipping facilities for logs, and has power to carry on a general business, for which special rolling stock has been added. (June, 1911, pg. 505. See also Pacific Great Eastern Ry.)

Hudson Bay and Pacific Ry.—An application has been made in the courts in London, Eng., for the compulsory winding up of the company. The matter was allowed to stand over, as counsel for the company stated that arrangements were being made for raising money for construction and other purposes, when the petitioners would be paid off. (May, pg. 238.)

Intercolonial Ry.—We are officially advised that Cavicchi and Pagano have sublet the work on the line from Dartmouth to Deans Settlement as follows:—Mile 1 to 12, D. Washburn, Woodside, Dartmouth, N.S.; mile 12 to 27, G. S. Whitehead Construction Co., Lawrence town, Halifax County, N.S.; mile 34 to 36, W. Waddell, Musquodoboit Harbor, N.S.; mile 36 to 45, Garrett and Campbell, Musquodoboit Harbor, N.S.; mile 45 to 55, McDonald and MacIntosh, Little River, N.S.; mile 55 to 62, Chisholm and McGillivray, Middle Musquodoboit, N.S.; mile 62 to 68, Bellman, Gillis and Co., Deans Settlement, N.S.

Tenders are under consideration for the building of a brick and stone passenger station at Chatham, N.B., and for a standard wooden passenger station and dwelling at Nelson, N.B.

We are officially advised that the route for the proposed cut-off from the new shops at Moncton, N.B., to Sunnybrae, has not yet been finally located, nor the plans decided upon. (May, pg. 238.)

Iron Range Ry.—The Ontario Legislature has extended the time within which the company may build the line authorized by chap. 127, statutes 1907. (Feb., pg. 68.)

Kettle Valley Lines.—The route plan from Penticton to Osprey Lake summit has been approved by the Minister of Railways, while the application for the approval of the route plan from Vernon to Kelowna, B.C., was held over to enable the company and the Canadian Northern Pacific Ry. to come to terms. The Board of Railway Commissioners has approved location plans between mileage 53.92 and 65, west of Midway.

Press reports state that contracts have been let C. H. Williams and Co., six miles; Milligan, Dussault and Co., nine miles, and Porter and Connelly, ten miles, west of Carmi, B.C. This mileage, it is said, will take the line to within 15 miles of the summit. Another report states that G. A. Carlson and Co., Spokane, Wash., have been given a contract for building of 35 miles from above Trout Creek, to Osprey Lake, the work to be completed during 1913. (May, pg. 239.)

Kingston and Pembroke Ry.—It is proposed to expend about \$200,000 upon betterments this year, the principal expenditure being for the relaying of the line from Renfrew, Ont., for 80 miles towards Kingston with new steel rails, 65 lbs., C.P.R. standard section. A considerable quantity of ballast will be added, and a turntable is to be put in at Kingston. (Oct., 1911, pg. 937.)

Kootenay and Alberta Ry.—We are officially advised that the company does not contemplate any further construction this year, beyond the completion of the line started in 1910. This line starts from the C.P.R. Crow's Nest Pass line about a mile west of Pinetree station, and extends southwesterly for about 13 miles to Beaver Creek, the site of the Western Coal and Coke Co.'s mines. Owing to the wet season of 1910, the construction was not completed as was expected. (May, pg. 239.)

Lac Seul, Rat Portage and Keewatin Ry.—The Ontario Legislature has extended the time within which the company may build the lines authorized by chap. 102, statutes 1903. (Mar., pg. 121.)

L'Avenir and Melbourne Ry.—A subsidy has been voted by the Dominion Parliament for building a line from Melbourne to Drummondville, Que., 28 miles, in lieu of the subsidy voted in 1910. (April, 1911, pg. 321.)

Lindsay and Minden Ry.—The Ontario Legislature has incorporated a company with this title to build a railway from Lindsay to Mountain Lake, in Minden tp., with branch lines, and to develop and distribute electric power. The provisional directors are:—J. H. Delamere, M. Brown, J. J. Mortimer, Minden, Ont.; J. W. Wood, Lindsay, Ont.; S. F. Stinson, J. M. Delamere, Toronto. (April, pg. 182.)

Little Nation River Ry.—A land grant of 3,000 acres a mile has been voted by the Quebec Legislature for the projected railway from between Thurso and Montebello to Lake Mlningue, about 30 miles. (Feb., 1911, pg. 155.)

Liverpool to Caledonia, N.S.—The Dominion Parliament has voted a subsidy for the building of a line, not exceeding 30 miles, from Liverpool, via Milton, to Caledonia, N.S. This is a re-vote of a subsidy first granted in 1907. It is available for any company building such a line.

London and Port Stanley Ry.—A representative of a British firm has laid a

proposition for the lease or purchase of the line before the London city council. A proposal from the Lake Erie Coal Co. for the electrification of the line is also under consideration. Press reports state also that G.T.R. officials have been looking over the line with a view to leasing it, but this is denied by the superintendent of the division. (May, pg. 239.)

Maine Central Rd.—By an act passed by last session of the New Brunswick Legislature, the company was given incorporation, with an office in St. Stephen, N.B., and formally vested with the ownership of the line from St. Stephen to Sprague's Mills. This piece of line was built as the Lewy's Island Rd., under an act passed in 1855. The title of the company was changed in 1880 to that of the St. Croix and Penobscot Ry., on the sale of the line and franchises under mortgage it passed under the control of the Washington County Ry., a company organized in the State of Maine, which was subsequently purchased by the M.C. Rd. The line has been operated during recent years as the Washington County branch.

Medicine Hat, Alta.—A bylaw has been passed by the taxpayers of Medicine Hat, Alta., authorizing the construction of a line of three miles, within the city limits, to connect with a three mile line without the city limits, to the Ansley coal mine. The latter section is to be built by the colliery company, and the first section will be controlled by the city. Construction will be started immediately. It is intended to run spur tracks off the line for industrial purposes. (See Ansley Coal Co., April, pg. 181.)

Metabetchouan Ry.—The Quebec Legislature has granted 1,000 acres of land a mile for a line from Lac Bouchette to St. Andre, on the River Metabetchouan, Que.

Michigan Central Rd.—The contract for the erection of the company's new station and terminals at Detroit, Mich., has been let to the George A. Fuller Co. The railway company will do the excavation, put in the foundations, and other preparatory work. It is estimated that there will be 10,000 tons of steel in the new station and train shed; that the station building will cost about \$2,500,000, and the total outlay on the terminals will be about \$6,000,000. (April, pg. 182.)

Midland Continental Ry.—Press reports state that plans have been prepared for a line from Edgeley, N.D., via Franklin, Nortonville and Millerton, to Jamesville, thence to Pembina, at the international boundary, 230 miles. Some grading has been done, and it is reported that contracts will be let at an early date for the completion of the line. F. K. Bull, Racine, Wis., is president, and H. H. Hurning, Edgeley, N.D., is engineer. (Mar., pg. 121. See Winnipeg, Salina and Gulf Ry.)

Midland Terminal Ry.—The Ontario Legislature has extended the time for the building of the line authorized by chap. 105 of the statutes of 1903, and has authorized the building of a line from Midland Harbor southeasterly to the G.T.R., near Coldwater, Ont. (April, pg. 182.)

Minneapolis, St. Paul and Sault Ste. Marie Ry.—Press reports state that a line is being built from Fordville, N.D., westerly via Devil's Lake to Drake, 130 miles, the contractors being Foley, Welch and Stewart. (Mar., pg. 121.)

Miramichi Valley Ry.—The New Brunswick Legislature has incorporated a company with this title to build a railway from Newcastle, or from a junction with the Intercolonial Ry., near Newcastle, along the valley of the Miramichi River to Tracadie. The company is authorized to operate vessels, and to build

docks, wharves and warehouses as a part of its undertaking. The provisional directors are:—Jas. Robinson, E. A. McCurdy, D. Morrison, W. L. Allan, W. A. Park, E. H. Sinclair, Hon. A. Ritchie.

Montreal and Lake Victoria Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from Montreal to the National Transcontinental Ry. at Grand Lake Victoria, Que., and thence to Migiskan River, and on to Hannah Bay, on James Bay, Ont. The railway committee directed that the title of the company as applied for be abandoned, and that the present one be adopted. (See Montreal Transcontinental Ry., April, pg. 182.)

Montreal and Northern Colonization Ry.—The Quebec Legislature has extended the time for the building of the lines mentioned in our Mar. issue. (Mar., pg. 121.)

Montreal to National Transcontinental Railway.—It is reported that F. H. Clergue, Sault Ste. Marie, Ont., is negotiating with the Dominion Government, with the view of obtaining a contract to build a line from Montreal to the National Transcontinental Ry. and thence to the mouth of the Nottoway River on James Bay, for which a subsidy was voted last session. A land subsidy in aid of such a railway has been voted by the Quebec Legislature.

F. H. Clergue is quoted as stating that the first vessel of the Hudson Bay Navigation Co. will sail from Montreal, July 1, for the mouth of the Nottoway River, carrying a party of engineers, explorers, etc. It is proposed to make a thorough examination of the valley of the river, and to make surveys in connection with a projected railway.

While this line is mentioned as being the one in which Mr. Clergue is interested, there is a possibility that he may be looking after the location of a terminal on Hudson Bay for the Algoma Central and Hudson Bay Ry., which has power to extend the line now building to the National Transcontinental Ry. to Hudson Bay. (May, pg. 239.)

Montreal Tunnel Co.—A delegation representing municipalities on the south shore of the St. Lawrence River contiguous to Montreal, waited on the Dominion Government, May 2, to ask that the company's bonds be guaranteed for \$15,000,000 at 4½% for 50 years. The company proposes to bore a tunnel from St. Lambert and Longueuil, under the St. Lawrence River to Montreal, following the line of St. Denis St. to Cote St. Michel. It is proposed to provide accommodation in the tunnel for steam railways and for high speed electric lines. Terminals are to be provided, with a passenger station at the Champ de Mars. Consideration of the application was promised.

Naas and Skeena River Ry.—The Dominion Parliament has voted a subsidy for a line from Nasoga Gulf, or other point on Portland Inlet or Naas River, towards the anthracite coal deposits on the Skeena River, near Groundhog Mountain, B.C., not to exceed 100 miles. (Dec., 1911, pg. 1139.)

Nerepis and Long Island Ry.—The New Brunswick Legislature has incorporated a company with this title to build a line from Welsford on the C.P.R. to the proposed St. John River Valley Ry., between Gagetown and Hampstead, a spur line from near Petersville to the Clones district, and other branch lines. The provisional directors are:—H. M. Woods, J. M. Queen, J. B. M. Baxter, F. C. Taylor, A. R. Slipp. (Apr., pg. 182.)

New Brunswick Coal and Ry. Co.—Traffic on this line was resumed May 13, a temporary pile structure having been put in to replace the span of the Washademoak bridge which was washed out April 10. Owing to the present high water it will not be possible to put in a

permanent span until later in the year. (Sept., 1911, pg. 835.)

Northern Vancouver Island Ry.—Press reports state that T. A. Kelly is making a reconnaissance survey from Rupert Arm on Quatsino Bay, and that a second party is working to meet him from Fort McNeil and Hardy Bay, on Vancouver Island. The survey parties are expected to be in the field for about four months. (Apr., 1911, pg. 321.)

North Shore Ry. and Navigation Co.—The New Brunswick Legislature has incorporated a company with this title to build a railway from near Adamsville, on the Intercolonial Ry., to a connection with the National Transcontinental Ry. near Snowshoe Lake, and from Beersville to Richibucto Head, with a branch line from Harcourt to the Salmon River, and other branch lines. It is also authorized to acquire the North Shore Ry., originally the Beersville Coal and Ry. Co., extending from Adamsville to Beersville, with the branch from Beersville to Mount Carlyle, and operate it in connection with its authorized line as one railway. The provisional directors are:—G. W. Fowler, Sussex, N.B.; M. F. Keith, Moncton, N.B.; A. B. Carson, Rexton, N.B.; H. J. Von Hazen, E. E. Smith, New York City; J. H. Wood, W. A. P. Davis, Philadelphia, Pa. H. J. Von Hazen is one of the principal owners of the present North Shore Ry. (See North Shore Ry., April, pg. 182.)

Northeastern Ry.—The Quebec Legislature has extended the time within which this projected railway may be built, and authorized a change in its title to the North Ry. (Jan., pg. 22.)

Pacific Great Eastern Ry.—P. Welch, Vice President, is quoted as stating that several survey parties are in the field, and that it is expected that the reports will be prepared so that construction can be started at both ends of the line at an early date. Some preliminary construction work is being done at Fort George, the point of junction with the G.T. Pacific Ry. The company has power to take over the Howe Sound and Northern Ry. line, and while negotiations with that object in view have taken place, nothing definite appears to have been settled. Press reports state that there is a difference of \$10,000 between the price offered by the P.G.E. Ry. and the amount which the H.S. and N. Ry. asks. (May, pg. 239.)

Pacific and Hudson Bay Ry.—The Minister of Railways has approved the route plan of this projected railway from Kimsquit to Netal-Kus Lake, B.C. (July, 1911, pg. 647.)

Prince Edward and Hastings County Ry.—The Dominion Parliament has incorporated a company with this title for the purpose named in our April issue. (April, pg. 182.)

Quebec Central Ry.—The Dominion Parliament has voted subsidies for a line from mileage 30 out of St. George to St. Sabine, and thence to Sionne tp., Que., not to exceed in all 51.34 miles.

A subsidy of 3,000 acres of land a mile has been voted by the Quebec Legislature to the Q.C.R. Co. to extend the line from St. George to the boundary line between Dorchester and Bellechasse, 1.50 mile; and of 2,000 a mile to "a company" to extend the Quebec Central Ry. from the Dorchester-Bellechasse boundary, easterly for 20 miles. (Jan., pg. 23.)

Quebec Eastern Ry.—We are officially advised that surveys are being made for the proposed line between Sherbrooke and Quebec, and that it depends entirely upon the completion of these surveys when construction will be started. (April, pg. 182.)

Queen's Central Ry.—The Nova Scotia Legislature has extended the time within which the company may build the line authorized by chap. 166, statutes of

1910. The company has power to build a line from Brooklyn via Milton, to a junction with the Halifax and South-western Ry., between Pleasant River and Caledonia. (Sept., 1910, pg. 729.)

Queen's County Ry.—The Nova Scotia Legislature has extended the time within which the railway, authorized to be built by chap. 174, statutes of 1909, may be built. The company was authorized to acquire the line from Wilkin's Siding on the Halifax and Southwestern Ry., built by the Sable Lumber Co., and to extend it as may be required. (Nov., 1909, pg. 831.)

Quinze River and Ottawa Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from Kipawa northwesterly to the Quinze River, Que., with power to make connection at Kipawa with the C.P.R. (Mar., pg. 121.)

Richmond, Magog and Stanstead Ry.—The Quebec Legislature has granted 2,000 acres of land a mile for a line from Richmond to Stanstead, about 50 miles, with a branch from Cherry River to Waterloo, 20 miles. (May, 1911, pg. 413.)

Richmond-Melbourne-Drummondville.—The Quebec Legislature has granted 2,000 acres of land a mile for a railway from Richmond or Melbourne to Drummondville, Jue.

Rosevale to Moncton, N.B.—A subsidy has been voted by the Dominion Parliament for a railway from Rosevale, Albert County, to Stoney Creek, and thence to Moncton, 22 miles.

St. Agathe des Monts to Howard.—The Dominion Parliament has voted a subsidy for the building of a line from St. Agathe des Monts station, on the C.P.R. Northern Colonization Ry., to Howard tp., Argentine county, 15 miles.

St. Croix Docks and Ry. Co.—The New Brunswick Legislature has incorporated a company with this title to build a line from St. Stephen to Oak Bay, or below the Ledge, on the St. Croix River, and to construct terminals, docks, wharves, etc., there. The provisional directors are:—G. A. Grimmer, D. F. Maxwell, W. H. Berry, F. P. McColl, F. M. Murchie, G. J. Clarke.

St. John and Quebec Ry.—A press dispatch states that an issue of \$4,500,000 of 4% debentures, guaranteed by the province of New Brunswick, has been placed on the London market at 98½.

We are officially advised that contracts for grading, tracklaying and ballasting, have been let as follows: Fredericton to Woodstock, 62 miles, Quebec Contracting Co., Montreal; Woodstock to Centerville, 23 miles, Kennedy and McDonald, Antigonish, N.S. The contracts for the line from Fredericton southerly were under consideration when we were advised, and press reports state that a contract for this work has been let to James S. Corbett and Sons, Ltd. Ross Thompson, Fredericton, is Chief Engineer. (April, pg. 182.)

St. Leonards to Dudswell.—The Quebec Legislature has granted 2,000 acres of land a mile for a line from St. Leonards, on the Intercolonial Ry., to the junction of the Quebec Central Ry. and the Maine Central Ry., in Dudswell tp., Que.

Saskatchewan Central Ry.—The Dominion Parliament has extended the time within which the company may build the line authorized by chap. 160 statutes of 1910. (Dec., 1911, pg. 1141.)

Saskatoon and Hudson Bay Ry.—Press reports state that a committee has been appointed to look after the company's interest in the West, with a view to enabling organization to be completed by the fall. The provisional directors are—F. O. Fowler, Winnipeg; V. T. Bartram, Toronto; C. O. Foss, St. John, N.B.; H.

Pardee, Philadelphia; J. B. Craven, New York city. (July, 1911, pg. 649.)

Saskatoon Transfer Ry.—The plans of this projected railway show lines connecting the C.P.R. with the G.T. Pacific Ry., and the Canadian Northern Ry., and passing through what is being developed as a manufacturing district in West Saskatoon. Two industries are starting up in the district in June, and negotiations are in progress which it is hoped will result in the erection of additional factories in the near future. The factory district will extend the whole way between the lines of the three railways named, and in width from Caledonian to Wabash Avenue, and a site reserved for union stock yards will also be served. The plans of the line have been prepared by T. W. Brown, C.E., and we are advised that it is hoped to complete the organization of the company and to start construction by July. The provisional directors named in the Saskatchewan act incorporating this company are:—C. I. Alexander, L. N. Le Valley, J. G. Hill, Saskatoon, Sask. (April, pg. 182.)

Simcoe, Grey and Bruce Ry.—A subsidy has been voted by the Dominion Parliament for 50 miles of the projected railway between Kincardine and Orillia, Ont., this mileage to include the portion of the line between Owen Sound and Meaford, Ont. (July, 1911, pg. 649.)

Southampton Ry.—Contracts have been let, according to press reports, to Wm. McDonald and Sons, and to McDonald Bros., for the completion of the line from Millville south and southwest to Hawkshaw Bridge, on the St. John River, N.B., 13 miles. G. A. Brown, Millville, N.B., is engineer. The Dominion Parliament has voted a subsidy for a line from Millville, on the C.P.R., to Pokrok Bridge, on the St. John River, N.B., not to exceed 13 miles.

Sussex, Studholme and Havelock Ry.—The New Brunswick Legislature has incorporated a company with this title to build a railway from Havelock to a junction with the Intercolonial Ry. in Sussex parish, King's County. The provisional directors are:—S. A. McLeod, G. B. Jones, J. E. McAuley.

Sydney and Louisburg Ry.—The Nova Scotia Legislature has granted, among other powers, an extension of time for building branch lines. (Oct., 1911, pg. 937.)

Temiskaming and Northern Ontario Ry.—An act has been passed by the Ontario Legislature repealing sec. 5, chap. 18, statutes of 1907, and substituting therefor a section providing that the location of the line and of all branches, the plans of all works proposed, and the bylaws of the corporation, shall be subject to the approval of the Lieutenant-Governor-in-Council. A new section provides that the Commission may make regulations fixing the fares and tolls to be charged, which are to be approved by the Lieutenant-Governor-in-Council before they become operative, and confirming the regulations fixing fares and tolls already made. The act also confirms the agreements made with the G.T.R. and the Canadian Express Co. A summary of the first of these agreements, as confirmed by the Dominion Parliament, was given on pg. 235 of our last issue. (May, pg. 240.)

Toronto, Hamilton and Buffalo Ry.—Engineers are engaged in making surveys of the line in the city, and of the streets in its vicinity, and the city authorities state that they expect shortly to receive a proposition from the company, regarding improvements, which would include the lowering of the streets at the railway crossings. (April, pg. 183.)

Toronto, Lindsay and Pembroke Ry.—The Dominion Parliament has voted a subsidy for a line from Golden Lake to

Bancroft, Ont., not exceeding 51 miles. This is a revote of the subsidy of 1910.

United Goldfields of British Columbia.—The Dominion Parliament has authorized the company to build its projected railway from Frank, Alta., through ranges three or four to Grassy Mountain.

Vancouver Island and Eastern Ry.—The Dominion Parliament has extended the time within which the company may build its projected railway and bridges from Vancouver Island across Seymour Inlet to the mainland, and thence easterly. (Dec., 1911, pg. 1141.)

Western Dominion Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from near Cardston, Alta., via Pincher Creek, to the C.P.R. Crows Nest Pass branch at Lundbreck, thence northerly to Calgary and Edmonton, Alta., and Fort St. John, B.C., with a branch from Pincher Creek to the Old Man River. The provisional directors are:—J. E. Askwith, J. O. Carss, W. R. Askwith, O. E. Culbert, Ottawa; H. McI. McCallum, Regina, Sask.

Press reports state that U.S. capital is being invested in this projected railway, which is said to be a revival of the Alberta Pacific Ry. proposal. Arrangements are said to be nearly completed for surveys from Pincher Creek to Calgary, Alta. H. M. Goodman is reported to be in charge.

A meeting of the shareholders was called to be held in Ottawa, May 21, for organization purposes. This company has power to take over the Alberta Pacific Ry. charter. (See Alberta Pacific Ry., May, pg. 238.)

Winnipeg North Eastern Ry.—The Manitoba Legislature has given the company power to amalgamate with other companies, and has otherwise amended the act of incorporation passed in 1911. The amendments do not affect the company's power to build railways. (Mar., pg. 122.)

Winnipeg River Ry.—The Manitoba Legislature has granted the company power to amalgamate with other companies, and has amended its charter in several particulars. Its power to build railways is not affected by the amendments. (Mar., pg. 122.)

Winnipegosis and Northern Ry.—The Manitoba Legislature has incorporated a company with this title to build a railway from the Porcupine Mountains district, near Steep Rock River, to Dawson Bay, on the west shore of Lake Winnipegosis, and crossing the Canadian Northern Ry. near Mafeking station. The provisional directors are:—B. A. C. Craig, P. A. McEvoy, W. J. Rooney, G. F. Morrison, Toronto. (April, pg. 183.)

Winnipeg, Salina and Gulf Ry.—Press reports state that negotiations are in progress for the sale of \$13,000,000 of the company's bonds in Paris, France, and that construction will be started as soon as the funds are available. Surveys are reported to be completed on about 200 miles of the line in the U.S., and a general contract for construction let to the Brindley Co., New York. H. L. Miller is president, and H. G. Wylie, Salina, Kan., is engineer. (Feb., pg. 68. See also Midland Continental Ry.)

Yukon Railway Extension.—A. Thompson, M.P. for the Yukon district, in an interview at Vancouver, B.C., May 1, said he hoped that the Dominion Government would send out an expedition to make a reconnaissance survey of a route for a railway from the Lynn canal into the interior. The people resident in the territory hoped that in time there would be a railway traversing the Yukon plateau from end to end and connecting with the line proposed to be built by the U.S. Government through Alaska, from Seward to the Yukon River.

Among the Express Companies.

G. L. Misener has been appointed agent, Canadian Ex. Co., at Galt, Ont., vice W. H. Montgomery.

J. W. Herbert has been appointed agent, Canadian Northern Ex. Co., at Regina, Sask., vice W. A. Best, appointed cashier.

The Board of Railway Commissioners has defined the express delivery and collection limits of Sydney, N.S., Toronto, Ont., and Kelowna, B.C.

The Canadian Northern Ex. Co. has opened offices at St. Norbert, Man.; Ceylon, Marcellin and Wroxton, Sask., and has closed its office at Vandura, Sask.

The Board of Railway Commissioners has issued order 16399, dated Apr. 27, ordering express companies to prepare tariffs, or supplement to Express Classification, showing scale of charges for the return of the proceeds of c.o.d.s, upon other than merchandise rate basis, and to file same within three months.

The Dominion Ex. Co. announces that on the opening of navigation on the Muskoka Lakes, it has established waybill offices at Beaumaris, Minett, Port Carling, Port Cockburn, Port Sandfield, Rosseau, Royal Muskoka and Windermere. Shipments to other than regular ports of call on the lakes are accepted at tariff rates to Bala, with the addition of the following rates: For seven pounds or under, 15c.; 7 to 20 lbs., 20c.; 20 to 80 lbs., 25c.; 70 to 100 lbs., 35c.; over 100 lbs., 35c. per 100 lbs. All charges must be prepaid and shipments waybilled to Bala only. Shipments will not be handled on the vessels on Sundays, and money and valuables will not be handled on the lakes. They will be waybilled to Bala and the consignee notified.

Canadian Express Company's Staff.

The superintendents' divisions and route agents territory have been revised as follows:—

SUPERINTENDENTS.

E. ALLEN, Western Division, including Northern and Midland Divisions, except the portion of the division between Belleville and Peterboro and between Whitby and Manilla Jct. Route Agents, agents, and other employees in this territory will report all routine matter to him. Office, Toronto.

H. C. CREIGHTON, Atlantic Division, has charge of all details on Intercolonial Ry. east of Riviere du Loup, and all lines operated by the company in the Maritime Provinces. Office, St. John, N.B.

P. A. PATERSON, Central and Eastern Divisions, including the portions of

Midland Division between Belleville and Peterboro and between Whitby and Manilla Jct., Ont. Office, Montreal.

N. J. ROSS, North Western Division, including main line of the Grand Trunk Pacific Ry. and branches, from Port Arthur, Ont., to Hinton, Alta. Office, Winnipeg, Man.

ROUTE AGENTS.

W. G. BALFOUR, Montreal, routes 3, River Beaudette to Kingston, inclusive; 4, Kingston to Port Union, inclusive; 18, 21, 25, 80, 81, 82, 83 and 109 reporting to Supt. Paterson.

G. W. HICKEY, Hamilton, Ont., 12, 16, 26, 27, east of and including Eastwood, 29, 30, east of and including Simcoe; 31, not including Toronto; 38, south of and including Hespeler; 42, not including Stratford; 47, 106 and 108 reporting to Supt. Allen.

R. H. JONES, Toronto, Ont., 5, not including Toronto and Parkdale; 13, 36, not including Galt; 38, north of and including Guelph Jct.; 39, 40, 41, north of and including Clinton Jct.; 43, 45, 126 reporting to Supt. Allen.

H. N. LINGLEY, Truro, N.S., 57, Amherst to Halifax, both inclusive; 60, 61, 62, 63, 64, 66, 91, 93, 100, 101, 102, 111, 116, 117, 118, 119, 123 reporting to Supt. Creighton.

B. S. MURRAY, London, Ont., 6, not including Stratford; 14, 15, 17, 27, east of and including Nixon; 35, 37, 41, south of and including Brucefield; 103, 124 and 126 reporting to Supt. Allen.

R. H. MCINNES, Montreal, 1, 2, St. Lambert to Island Pond inclusive; 7, 8, 11, 52, St. Lambert to Levis inclusive; 53, 54, 89 and 110 reporting to Supt. Paterson.

G. H. H. NASE, St. John, N.B., 55, 56, 57, Moncton to Aulac inclusive; 58, 59, 65, 90, 92, 93, 94, 95 and 122 reporting to Supt. Creighton.

W. E. NORMAN, Toronto, Ont., 4, west of and including Scarboro; 5, Parkdale only; 18, Lakefield only; 19, not including Port Hope; 20, 22, 23, Woodville to Blackwater Jct.; 32, 33, south of and including Orillia; 48, north of and including Cheltenham; 49, 50, 51 reporting to Supt. Allen.

H. C. M. PORRITT, North Bay, Ont., 23, Lorneville Jct. to Midland, but not including Orillia; 24, 34, 99, 129, 72, Scotia Jct. to Depot Harbor; 130, 131, 132, reporting to Supt. Allen.

A. J. SEATON, Montreal, Que., 2, Montreal to Point St. Charles inclusive; 3, Montreal to Coteau inclusive; 9, 10, 67, 68, 69, 70, 71, 72, Madawaska to Kearney inclusive; 73, 84, 112, 113 and 114 reporting to Supt. Paterson.

F. M. SMITH, Winnipeg, Man., all routes on Grand Trunk Pacific from Port Arthur, Ont., to Hinton, Alta., inclusive, reporting to Supt. Ross.

Telegraph and Cable Matters.

The Great North Western Telegraph Co. has opened an office at Chaudiere Basin, Que., and has closed its offices at Ahmic Harbor, McKellar and Magneta-wan, Ont., and Tracadie, N.B.

C. E. McManus, who has been circuit manager, Great North Western Telegraph Co., Toronto, for several years, has retired on a pension, on account of ill health. He was recently presented with a purse of gold by his associates.

L. A. Hutton, whose appointment as Inspector of Telegraphs, District 1, Alberta Division, C.P.R., Medicine Hat, was announced in our last issue, was born at Winnipeg, Mar. 1, 1883, and entered C.P.R. service, July 26, 1909, as telephone inspector, at Medicine Hat, Alta. He installed the first telephone train dispatching circuit in Alberta, was transferred to Calgary, Aug. 14, 1911, and retained the same position, to Apr. 1, 1912, the date of his present appointment.

Electric Railway Department

The Moose Jaw Electric Ry's Equipment, Plant, Etc.

This company, which is operating at Moose Jaw, Sask., has about eight miles of track, over three miles of which are double tracked. It is expected to build about 2½ miles more. Eight cars are being operated giving a service varying from five minutes on the principal line to ten minutes on the least travelled one.

The cars are single truck, p-a-y-e, manufactured by the Ottawa Car Co.

2 grinders, fitted with carborundum wheels, one single stage engine air compressed. This is to be used for cleaning generators, car motors and general purposes. The building is heated with a fan and vento heaters.

The power house part is 125 x 62 ft., and at the present there are two four cylinder crude oil Diesel engines, direct connected to two 125 kw. 550-600 v.d.c. compound railway generators. These Diesel engines are supposed to be 204 brake h.p. at sea level, and are operated on crude oil, the normal speed being

of another Diesel engine unit direct connected to generator, this unit being of sufficient size to operate one 275 k.w. railway generator.

The total expenditure on the system up to date is about \$350,000, including power house, etc., about \$50,000; power house equipment about \$45,000; rolling stock about \$53,000.

The company officials, etc., are:—President, A. A. Dion, Ottawa, Ont.; Vice President, N. F. Ker, Ottawa; Secretary, D. R. Street, Ottawa; Superintendent, A. Hector Dion, Moose Jaw, Sask.; Accountant, C. E. McGee; Master Mechanic, R. W. Moore; Power House Engineer, G. Connors.

Moose Jaw Electric Ry. Power House Equipment.

They are equipped with two 40 h.p. Westinghouse motors, hand brakes being used. Single end cars are used throughout with the aid of three way Y's at the ends of the lines for turning.

The power house building, at the corner of Fourth Ave. and High St., 250 x 62 ft., one story high, contains the power generating units, as well as a heating plant, smithy, machine shop, car barn and office. The car barn is modern in every way, being exceptionally high and well lighted. A pit extends throughout the barn underneath tracks. Along one

250 r.p.m. This Diesel plant was the outcome of a great deal of study and thought as to conditions existing in Saskatchewan, the coal procurable being exceptionally poor, principally lignite, and imported coal is so expensive that it makes a steam proposition almost out of the question. These engines have been operating 18 hours a day since commencing on Sept. 1, 1911, and there has not been an interruption in service of any kind. The manager advises us that he considers their flexibility really remarkable, it being possible for the engine

London and Lake Erie Railway Co.'s Car Barns.

The plans for that company's new car barn at St. Thomas, Ont., show a building 208½ ft. deep, by a width of 97¼ ft., to the street and of 89 ft. at the rear. The foundations will be of concrete. The basement section will contain boiler and coal room, and the pits under the car tracks. The foundation walls will be 18 ins. thick, and one wall will extend from front to rear down the middle of the building. The area on one side of this wall will not be excavated, tracks being laid on the level; and on the other wall there will be two pits under the car tracks, one extending the entire length of the building, and the other extending half way. This will give accommodation for four sets of tracks inside the barn. The superstructure will be brick, with large window space, and special roofing.

The accommodation on the car floor, in addition to the storage of cars, will consist of a washroom for cars, 67 by 15 ft.; carpenter's shop, blacksmith's shop, mechanic's room, armature room, stock room, and master mechanic's office, these being contained in an area of 12 by 145 ft.; and on the opposite side of the building, in an area 12 by 54 ft. deep, will be the inspector's office, conductors' room, line department room, and sand and coal room. W. G. Murray, London, Ont., is architect.

Western Canada Power Co.—W. McNeill, Assistant General Manager, informed a meeting of ratepayers in New Westminster, B.C., April 30, that sur-

Moose Jaw Electric Ry. Car Barn.

vey a five-ton hydraulic jack is in use for changing wheels and other repair work to cars. One section of rail can be taken out at machine shop doors. A jib crane with trolley can pick up a pair of wheels or motor from pit and transfer to the beam runway in machine shop or transfer to any machine in the shop. The machine shop equipment consists of one geared lathe; one 24 x 30 back geared lathe; one 16 in. swing, 6 ft. bed, back geared lathe. one 24 x 30 back geared shaper with down feed power, all made by the Canada Corporation manufacture. One 5 lb. 26 in. vertical drilling machine,

eer in charge to have engines in operation and voltage on the board in 30 seconds. The photograph from which the accompanying illustration fig. 1 was made was taken when one unit was installed, and the decorations were put up for inauguration day. An eight ton crane spans the entire width of the building, a 50,000 gallon tank is located at the back of the power house, and with this size of tank it has been unnecessary to go into a cooling tower, as the volume of water is sufficient to procure efficient cooling. It is expected the very near future to have under way the installation

veys would be made immediately for the New Westminster-Port Moody section of the proposed Vancouver-Mission electric railway. (Mar., pg. 149.)

It is reported that the C.P.R., Canadian Northern Ry., and the G.T. Pacific Ry. are joining with the Saskatchewan Government in a scheme for the utilization of the South Saskatchewan river, for a water supply for cities and towns in the province, and for railway use. T. Aird Murray, M. Can. Soc. C.E., Toronto, is stated to have been engaged as consulting engineer, and it is estimated that the work will cost about \$20,000,000.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for March, \$491,782; operating expenses, \$307,958; net operating earnings, \$183,824; renewal funds, \$37,935; net earnings, \$145,889; approximate income from investments, \$25,000; net income, \$170,889, against \$363,766 gross earnings; \$229,658, operating expenses; \$134,108, net operating earnings. \$29,770, renewal funds; \$104,338, net earnings; \$20,000 approximate income from investments; \$124,338, net income for March, 1911. Aggregate gross earnings for nine months ended Mar. 31, \$4,283,459; net earnings, \$1,510,420, against \$3,072,500, aggregate gross earnings; \$1,221,113 net earnings for same period 1910-11.

Calgary Municipal Ry.—Passenger earnings for April, \$43,235.45; miscellaneous earnings, \$452.05; total earnings, \$43,687.50; operating expenses, maintenance, etc., \$26,253.33; net earnings, \$17,434.17, against \$25,631.30 passenger earnings; \$730.25, miscellaneous earnings; \$26,361.55, total earnings. \$12,507.21, operating expenses, maintenance, etc.; \$13,854.34, net earnings for April, 1911. Revenue per car mile for April, 31.977c; operating expenses per car mile, 19.216c; surplus per car mile, 12.761c; cost of power per car mile, 4.5c; proportion of expenses to revenue, 60.9%, against 36.983c revenue per car mile; 17.546c operating expenses per car mile; 19.437c surplus per car mile; 6.260c, cost of power per car mile; 67%, proportion of expenses to revenue for April, 1911.

Cape Breton Electric Co.—Gross earnings for March, \$24,409.89; expenses and taxes, \$15,856.32; net earnings, \$8,553.57; interest charges, \$4,495.84; balance, \$4,057.73; sinking and improvement funds, \$1,140. net income, \$2,917.73, against \$24,198.60, gross earnings; \$14,752.20, expenses; \$9,446.40, net earnings; \$4,512.50, interest charges; \$4,933.90, balance; \$1,141.67, sinking and improvement funds; \$3,792.23, net income for March, 1911.

Edmonton Radial Ry.—Receipts for March, \$29,966.20; expenditures, \$35,084.61; deficit, \$5,118.41.

London St. Ry.—Gross earnings for April, \$22,646.78; expenses, \$17,113.33; net earnings, \$5,533.45; deductions, \$2,371.25; net income, \$3,162.20, against \$20,671.96, gross earnings. \$15,684.03, expenses; \$4,987.93, net earnings; \$2,363.05, deductions; \$2,024.88, net income, for April, 1911. Aggregate gross earnings for four months ended April 30, \$91,433.19; expenses, \$65,378.34; net earnings, \$26,054.85; deductions, \$9,547.25; net income, \$16,507.60, against \$81,752.82, aggregate gross earnings; \$60,749.97, expenses; \$21,029.85, net earnings; \$9,363.10, deductions; \$10,950.68, net income for the same period, 1911.

Hamilton St. Ry.—Receipts for quarter ended Mar. 31, \$118,810, an increase of \$30,172 over those for the same period, 1911. The city's percentage and mileage was \$11,384.78, an increase of \$2,312, as compared with the same quarter in 1911.

St. Thomas St. Ry.—It was recently reported that the debenture liability of the City of St. Thomas, Ont., in respect of the street railway, on Dec. 31, 1911, was as follows:—Original issue guaranteed by the city, maturing in 1928, \$50,000. second issue, \$7,428.39. The building of the line through the Ross street subway cost \$6,067.95, but no debentures were issued on account of this.

Toronto Ry., Toronto and York Radial Ry., Toronto Power Co., etc.—Gross earnings for March, \$668,194; operating expenses, \$333,371; net earnings, \$334,823, against \$588,662 gross earnings; \$297,931, operating expenses; \$290,731, net earnings for March, 1911. Aggre-

gate gross earnings for three months ended Mar. 31, \$1,964,549; net earnings, \$984,099, against \$1,735,136, aggregate gross earnings; \$869,857, net earnings for same period, 1911. The gross earnings of the Toronto Ry. alone, for May, were \$421,250.82, on which the city percentage and mileage was \$81,502.31, against \$367,534.65 gross earnings, and \$55,198.12, city percentage and mileage, for May, 1911.

Winnipeg Electric Ry.—Gross earnings for March, \$298,838; operating expenses, \$161,825; net earnings, \$137,013, against \$316,714, gross earnings; \$166,586, operating expenses; \$150,128, net earnings for March, 1911. Aggregate gross earnings for three months ended Mar. 31, \$917,519; net earnings, \$415,338, against \$972,359, aggregate gross earnings; \$455,349, net earnings for same period, 1911.

Street Railway Situation in London, Ont.

In our last issue reference was made to the work of a street railway expert, in London, Ont., in connection with the operation of the street railway, with a view to submitting a report to the city utilities committee, which is discussing the question of purchase on behalf of the city. The franchise granted to the company expires in 1925, and, under its terms, the company is compelled to make certain extensions to its system, and additions to its general equipment. Suggestions as to the acquirement of the property by the city have been under consideration from time to time, and this was thought to be a good time to take the matter up with the company, in view of the heavy expenditure called for under the franchise. The city council, at a recent meeting, decided to give the company ten days' notice that it intended to enforce the terms of the franchise as to new schedules, etc., or, in case of the company's default, to annul the charter. In commenting on this, a local press report stated that it is believed that in the event of the company failing to meet the city's demands, the value of the franchise would be forced down, and the city would get the property for less than it would otherwise cost.

At the recent annual meeting it was announced that the directors had decided on a considerable addition to the steam power plant, and since then, the street railway committee of the city council and the company have come to an agreement as to a number of extensions, details of which we give on another page, under electric railway projects, construction, betterments, etc.

An option was reported to have been held on the stock of the company, at 150, by Hon. Adam Beck, Chairman of the Ontario Hydro Electric Commission, and it is stated that this has been allowed to lapse, on the report on the railway property, made by an engineer of the commission, on Mr. Beck's behalf.

The report, which has not been published in detail, states that the earnings in 1911 were \$279,606, an increase of \$85,000 in six years, and a net increase of \$14,000 over 1910. While the earning power is increasing, the company has, it is said, made no provision for retiring the bonds from 1915 until the end of the franchise in 1925, a matter of \$30,000 a year. Upon this basis, it is stated that the stock is not valued at more than par.

It is reported that another offer will probably be made by private parties.

The municipal scheme, if carried out, involves the electrification of the London and Port Stanley Ry., and its incorporation in the civic system. The railway is owned by the city and leased to the Pere Marquette Rd.

A deputation of the street railway committee of the city council visited Toronto, May 8, to discuss the question

with the Toronto parties interested, but nothing definite was done. It is stated that negotiations are in progress with the Canadian Northern Ry. in connection with the London and Port Stanley Ry.

The Winnipeg Electric Railway Co.

For some time past negotiations have been in progress regarding the transfer of the company's properties to another ownership, but notwithstanding many rumors to the contrary, nothing definite has been done. A bill was introduced in the Manitoba Legislature, last session, for the incorporation of the Manitoba Power Company, with a capital of \$15,000,000, and office in Winnipeg, with power, among other things, to exercise the powers of the Winnipeg Electric Ry. Co., and to take over the whole of the company's properties, and other properties of a similar nature. Among some of the projects which it is stated were to be incorporated under the new company, are the Brandon St. Ry., the Rural Ry. of Manitoba, Winnipeg River Ry., and Winnipeg Northeastern Ry. The proposed incorporators were R. R. Muir, E. B. Reese, D. L. Mather, A. E. Muir and W. R. Mulock.

Considerable opposition was made by the city, and the bill was subsequently withdrawn.

Another bill was introduced for the incorporation of the Winnipeg Electric Co., W. J. Moran, R. D. Guy, E. F. Frith, C. W. Chappell and P. J. Scott being the incorporators, with a capital of \$30,000,000, to acquire stocks of other companies, engaged either wholly or partly in the operation of railway, light heat or similar businesses.

The negotiations between the company and the promoters of the first named bill are being continued, the latter having recently approached the city with a view to reaching a general agreement which would enable the deal to go through.

It is stated that the Winnipeg Electric Ry. may be placed under the jurisdiction of the recently formed Public Utility Commission, and that this would relieve the situation so far as the city is concerned, owing to the litigation with the company, as to poles on the streets, etc.

If an agreement with the city is reached, it is stated that the syndicate, of which E. B. Reese is the head, representing the J. P. Morgan interests, will make a new proposal to the company. A press report recently stated that an appraisal of the properties was being made on behalf of the syndicate.

Canadian Street Railway Association.

PRESIDENT, James Anderson, General Manager, Sandwich, Windsor and Amherstburg Ry.; VICE PRESIDENT, P. Dubee, Secretary Montreal Tramways Co.; SECRETARY-TREASURER, Acton Burrows, Managing Director, The Railway and Marine World.

ASSOCIATION'S OFFICE, 70 Bond St., Toronto. EXECUTIVE COMMITTEE.—E. P. Coleman, Manager of Railways, Dominion Power and Transmission Co.; H. M. Hopper, General Manager, St. John Ry.; J. E. Hutcheson, Superintendent, Ottawa Electric Ry.; C. B. King, Manager, London St. Ry.; D. McDonald, General Manager, Montreal Tramways Co.; M. N. Todd, President, Galt, Preston and Hespeler St. Ry.

ASSISTANT SECRETARY, Aubrey Acton Burrows, Secretary and Business Manager, The Railway and Marine World.

OFFICIAL ORGAN, THE RAILWAY AND MARINE WORLD.

A conference was held at Victoria, B. C., between officers of the British Columbia Electric Ry., and the Provincial Government, May 10, with reference to regulations governing the operation of electric railways and tramways in the province. The company suggests that the present regulations be amended in certain particulars, and the Government promised consideration.

Electric Ry. and the Vancouver board of trade.

Following the passing of an act by the Ontario Legislature, granting, among other things, the right to operate motor busses on the streets, the city of Toronto has authorized the purchase of five double deck motor busses at \$10,000 each. They will be operated from the centre of the city to the Rosedale district.

The Toronto Ry. employees are asking for advances of wages to 28c and 30c an hour, an eight hour day on Sunday with time and a half pay, and free uniforms. The present agreement, which provides for 21c, 23c and 25c an hour, with first year men paying the whole cost of uniforms, second year men paying one half, and third year men having free uniforms, expires June 16.

Jas. Roosevelt, who, in Oct., 1911, was appointed Manager of the Transportation and Sales Departments, British Columbia Electric Ry., Vancouver, with supervision of the company's tram systems, both urban and interurban, on the main land and Vancouver Island, as well as the control of the sale of light and power at all points of the company's territory, has resigned.

W. H. Elson, heretofore Trainmaster, Interurban Lines, New Westminster, Lulu Island and Eburne, British Columbia Electric Ry., has been appointed Superintendent, District 1, covering Vancouver-New Westminster interurban line; District 4, covering Burnaby Lake Line; the New Westminster city lines, and terminals at New Westminster and Carrall St., Vancouver, with office at Vancouver.

The Dominion Power and Transmission Co. has received three double truck city cars for its Hamilton, Ont., service, from the Preston Car and Coach Co. They are 30 ft. long over bodies, with omnibus sides, double ends, 42 ft. long over all, finished inside with cherry, agasote ceilings, $\frac{3}{8}$ in. agasote panelling on the outside instead of wood, which is a new departure, and are mounted on 27-G-1 trucks, with 4 $\frac{1}{2}$ ft. wheel base.

The case of the Winnipeg Street Ry. against the city of Winnipeg came before the Manitoba courts, May 27. The company is applying for a declaration that it has the right to maintain, operate and extend its present overhead system without interference, and for an order to compel the council to remove its poles and overhead system, which are in too close proximity to the company's system. Other orders and injunctions are also asked for, which affect the company's power and gas franchises.

E. Sterling, who has been appointed Superintendent, District 2, covering Lulu Island and Eburne-New Westminster line: District 3, covering Fraser Valley Branch, British Columbia Electric Ry., New Westminster, was born at Thornbury, Ont., Oct. 3, 1875, and entered railway service May, 1891, since when he has been, to Oct., 1896, operator and agent, C.P.R.; Oct. 1896, to Mar., 1897, train dispatcher, C.P.R.; Smelter Jct., B.C.; Mar., 1897, to July, 1909, conductor, C.P.R.; July to Oct., 1900, acting Trainmaster, C.P.R.; Nelson, B.C.; Oct. 1909, to May 1, 1911, Chief Dispatcher, B.C. Electric Ry.; May 1, 1911, to May 1, 1912, Division Trainmaster, B.C. Electric Ry., New Westminster.

A short time since a committee of employees of the Ottawa Electric Ry., appointed by Division 279 of the Amalgamated Association of Street and Electric Railway Employees, waited on Superintendent Hutcheson to present some 29 requests on the question of wages, hours of work and working conditions. Mr. Hutcheson declined to deal with representatives appointed by a union, but expressed his willingness to meet a committee of the conductors and motormen. The men applied to the Minister

of Labor for a board of conciliation, which has been granted. Travers Lewis, K.C., has been appointed to represent the company, P. M. Draper to represent the men, and Judge MacDougall, of Hull, Que., is chairman.

Following are the chief details of the 22 interurban passenger cars, which the British Columbia Electric Ry. is having built at St. Louis, Mo., as mentioned in our last issue:—

Length over body	40 ft. 0 ins.
Length of each platform from end of body to outside vestibule sheathing	4 ft. 8 ins.
Length over vestibules	49 ft. 4 ins.
Length over bumpers	50 ft. 8 ins.
Width at sill including panels	8 ft. 5 ins.
Width over posts	8 ft. 4 $\frac{1}{2}$ ins.
Extreme width	8 ft. 7 ins.
Height from rail over trolley boards	13 ft. 4 $\frac{1}{2}$ ins.
Height from rail to under side of sill	3 ft. 3 ins.
Height from rail to top of floor	4 ft. 2 ins.
Height from rail to centre of drawbar	2 ft. 10 $\frac{1}{2}$ ins.
Wheel base of truck	6 ft. 6 ins.
Wheels, diam.	34 ins.
Truck centres	27 ft. 10 ins.
Seats	Walkover reversible
Trucks, type	M.C.B.

E. L. Milliken, whose appointment as Manager, Cape Breton Electric Co., Sydney, N.S., was announced in our last issue, graduated from the Technical High School, Springfield, Mass., in 1905, and obtained the B.Sc. degree from the University of Maine in 1908. He has been engaged at different times with the Westbrook Electric Light and Power Co., Westbrook, Me.; Bodwell Water Power Co., Oldtown, Me., and in the Track Maintenance Department of the Bangor and Aroostook Ry. In 1908 he entered the Stone and Webster Management Association's Statistical Department, and in the same year was transferred to the Cape Breton Electric Co., Sydney, N.S., and has since held the position of solicitor, Superintendent of Distribution, and Superintendent of Lighting.

W. M. B. McDonald, heretofore Assistant Superintendent of Lighting, Cape Breton Electric Co., Sydney, N.S., has been appointed Superintendent of Lighting, vice E. L. Milliken, who was appointed Manager on the resignation of H. C. Foss, as announced in our last issue. Mr. McDonald graduated from McGill University with the degree of B.Sc. in 1907, when he entered the service of Allis-Chalmers-Bullock, Ltd., Montreal. He was later a demonstrator in the electrical laboratory at McGill University, and in 1909 was appointed foreman of the meter department of the Pensacola Electric Co., Pensacola, Fla., and transferred to the Cape Breton Electric Co., Sydney, N.S., Jan., 1912, as Assistant Superintendent of Lighting. Both of the companies named are under the Stone and Webster Management Association.

Allan Purvis, who has been appointed Manager of Interurban Lines, British Columbia Electric Ry., New Westminster, was born at Batavia, Java, June 29, 1878, and educated at the Merchant Taylor's school, Liverpool, Eng. He entered railway service at 12 years of age, with the C.P.R., being successively, Aug., 1890, to Feb., 1891, messenger, Stores Department; Feb. to Nov., 1891, storesman; Nov., 1891, to Sept., 1892, junior clerk at Vancouver, B.C.; Sept., 1892, to Aug., 1893, timekeeper, Donald, B.C.; Aug., 1893, to Oct., 1894, clerk, Vancouver, B.C.; Oct., 1894, to Mar., 1895, assistant storekeeper, North Bend and Kamloops, B.C.; Mar., 1895, to Sept., 1896, clerk and operator, Car Service and Fuel Department, Vancouver, B.C.; Sept., 1896, to Jan., 1899, chief clerk, Fuel Department, Vancouver, B.C.; Jan., 1899, to Feb., 1908, chief clerk to General Superintendent, Vancouver, B.C.; Feb. to Nov., 1908, Superintendent, District 4, Central Division, Souris, Man.; Nov., 1908, to Oct., 1909, Superintendent, District 3, Pacific Division, Nelson, B.C.; Oct., 1909, to Oct., 1911, Local Manager, Fraser Valley Branch, British Columbia Electric Ry., Vancouver, at which latter date he resigned.

Remodeling British Columbia Electric Railway Cars.

The company* has about completed the remodelling of 27 interurban cars which were formerly equipped with four 50 h.p. motors and k-14 controllers. Seventeen of the cars are being altered to the General Electric Co.'s type m multiple unit equipment, consisting of four 75 h.p. motors and c-60 trucks. Ten cars, which are of lighter type, with less seating capacity, are being equipped with the Westinghouse type h.l. pneumatic control, with four 50 h.p. motors.

All of these cars are arranged for train operation, and those fitted with 75 h.p. motors will be available for service on the Fraser Valley line, the regular equipment of the cars on this division being similar as to control and motors.

The 17 large cars have each a seating capacity of 56 persons, 20 in the smoker, and 36 in the general compartment. The smaller cars seat 44 people, 10 in the smoker and 34 in the general compartment.

Fake Accident Cases in Toronto.

Following on the fake accident claims recently made against the Toronto Ry., as mentioned in our last issue, the charges of conspiring to fabricate evidence, and contempt of court were taken up at the Assizes held at Toronto, May 16, against J. W. Curry, K.C., J. H. Forrest, Claims Agent, Toronto Ry., A. Burnett and W. E. Smalling, detectives, the grand jury having thrown out the bill against R. J. Fleming, General Manager, Toronto Ry. The defendants, who pleaded not guilty, admitted indiscretion, and tendered a full apology. J. W. Curry, K.C., having been given leave, made a personal statement, to the effect that he had been called in consultation, and certain information placed before him which had been obtained from the Toronto Ry.'s special officer, A. Burnett, and subsequently, papers connected with the case and later reports were sent to him. The points on which he was consulted were the criminal prosecution of the medical man concerned, or the bringing of the case before the discipline committee of the Ontario Medical Council. He, having heard that the solicitor acting for Burnett was seeking instructions to issue a writ against the company, instructed that such instructions should not under any circumstances be given, and he had no idea that any civil action would be taken. What was in mind was the obtaining of sufficient evidence to bring the doctor before the Medical Council, and not to bring the court into contempt in any way. Since the case had been brought he had given the matter a great deal of consideration, and realized that the proper course for him to have taken was to have refused to go to court with the case and to have notified counsel for the then plaintiffs that there was no cause for action, and that coming into court with an action of that kind was an impropriety for which he could offer no defence.

Justice Latchford, who stated that there was nothing meretricious in the matter from beginning to end, decided that in view of the apologies tendered, the case need proceed no farther. He also stated in respect to the counsel who acted for the plaintiffs in the damage cases, that he was deceived, as anyone in the same position must have been, and that there was no imputation that he had acted in an unprofessional manner.

The grand jury returned a no bill against Dr. A. H. Garratt on a charge of wilfully obstructing a court of justice.

Electric Railway Projects, Construction, Betterments, Etc.

Alberta Interurban Ry.—See Railway Development, elsewhere in this issue. The line was originally projected as an electric railway, but has been renamed and proposes to run by steam or individual motor cars.

Bassano Electric Power and Development Co.—We are advised that no active steps have yet been taken towards the building of this company's projected railway from Bassano, Alta. Permission is being sought from the Board of Railway Commissioners to cross the C.P.R. tracks at Bassano, and from the Dominion Government to carry the line across an Indian reserve. A franchise has been secured from the town of Bassano, and preparations have, it is said, been made to start construction as soon as the permissions mentioned above have been obtained. (Mar., pg. 147.)

Berlin and Northern Ry.—The Ontario Legislature has changed the name of the Berlin and Bridgeport Electric St. Ry. to that of the B. and N. Ry. (See Berlin and Bridgeport Electric Ry., April, pg. 196.)

Berlin and Waterloo Electric Ry.—The Berlin, Ont., city council is being asked to submit a bylaw to the ratepayers to provide \$17,000 for the purchase of two new cars, and to build new car barns. (Oct., 1911, pg. 973.)

Brandon, Man.—A bylaw confirming an agreement between the city council and J. D. McGregor for the building of an electric railway in the city was voted on by the ratepayers May 21. The agreement provides that after its final execution the contractor will proceed with the construction of the railway, and have five miles completed by Dec. 1, and an additional two miles by June 1, 1913. The line to be standard gauge, laid with 70 lb. T rails. The contractor is to take over the track already laid or in progress of laying by the corporation at the original cost. The franchise is to extend for 30 years, and provision is made for the building of additional lines as required. The contractor undertakes to obtain the necessary act authorizing the building of the line, and to pay the corporation 3% of the gross earnings after it has been in operation five years, for a period of ten years; 4% for the next ten years, and 5% for the remainder of the term. Upon giving a year's notice the city can take over the line on termination of the franchise at replacement value, or renew the franchise for further periods of five years each. (See Brandon Electric Ry., May, pg. 251.)

British Columbia Electric Ry.—It is proposed to reconstruct the track on Hastings St., Vancouver, between Cambie and Main Streets, as soon as the Grenville St. reconstruction has been completed.

Construction has been resumed, west from Main St., Vancouver, of the line on Sixteenth Ave., towards Oak. This line will be double track except on the portion of the avenue which is within the Point Grey municipality, where a single track will be laid on the side of the avenue within the city.

At a meeting of the Burnaby board of works, May 1, an arrangement was entered into for the building of a line on Royal Oak Road, from the main line to the Government prison farm. The line is being built for the Provincial Government by the company and will be operated by the company under a special agreement, the Government protecting the municipality.

A conference has been arranged between the company and the municipalities affected by the proposed cut off from Highland Park to New Westminster, for the settlement of certain difficulties which have arisen in respect of street

crossings, and as soon as these matters have been adjusted construction will be resumed. This cut off passes through Burnaby municipality.

The Sixth St. extension in New Westminster has been completed and was put in operation May 6.

A contract is reported to have been let to Franklin and Sheppard for grading on Nanaimo St., from Hastings St. to Broadway, Vancouver. Provision will be made for a double track line, although it is only proposed to lay a single track at present. A contract is also reported to have been let to the same firm for grading for the second track on Fraser Ave., south from Twenty-fifth Ave., South Vancouver.

The laying of second track on Superior and Niagara Streets, Victoria, has been completed. (May, pg. 248, and April, pg. 196.)

Coquitlam, B.C.—Application is being made to the municipality in which the Coquitlam, B.C., townsite is situated, by the Minnehada Ranch Co., for the right to lay a tram line through the town. The company wants a tram line from the C.P.R. at the junction out to the ranch, five miles, and do not want a general franchise. The line would be built within three years, and the contract would run for 25 years, and if the municipality did not then buy out the company's rights, the franchise would be automatically renewed for a further 25 years. The proposed agreement was referred to the municipality's solicitors for consideration. H. L. Jenkins is president of the company.

Dunnville, Wellandport and Beamsville Electric Ry.—The Ontario Legislature has extended the time within which the company may build its line from Dunnville to Beamsville, Ont., and has authorized it to use any form of motive power. (Feb., pg. 91.)

Edmonton Radial Ry.—We are officially advised that the following improvements, extensions, and additions to plant will be made during this year:—Paving on 9,050 ft. of streets on which double track is laid, and 7,600 ft. of ballasting on improved streets. Track extensions—Spruce Ave., connecting Kirkness St. with loop at Park St., double track, 55,300 ft. paved and 500 ft. ballasted; First St. to Twenty-fourth St., via Wilson and Short Avenues, double track, 3,700 ft. paved, 2,000 ft. ballasted; Saskatchewan Ave. and Murtle St. to south side of bridge, double track, 3,700 ft. open; Strathcona east extension, 4,000 ft. single track ballasted; Fifth St. west, Strathcona from bridge to Whyte Ave., double track, 2,330 paved, 1,320 ft. ballasted. Additional plant for the substation, and a testing equipment is now on order from the Canadian Westinghouse Co. (May, pg. 251.)

Edmonton Radial Ry.—A contract has been let by the Edmonton, Alta., city council, to Manders and Gregory for excavating, grading and paving on the extensions of the municipal street railway. The steel and other material to be provided by the city is in course of delivery. (May, pg. 251.)

Flathead Interurban Ry.—An enquiry has been made by D. R. McGinnis, President, F.I. Ry., of the Calgary, Alta., city council was willing to encourage the building of an electric railway between that city and Kalispel, Mont.

Greenwood-Phoenix Tramway Co.—We are officially informed that the tunnel under the mountain at Phoenix, B.C., has been driven for 3,000 ft., and that work has been closed down for over three months. No definite information is available when work will be resumed. The tramway is to connect Greenwood and Phoenix, B.C., and it is intended en-

tirely as a mining transport tunnel. The full length of the line will be underground for between 17,000 and 18,000 ft. The tunnel will be 9 by 9 ft. in the clear. The material up to the present has been hauled out by horses, but later it is intended to install electric power, which will be obtained from the South Kootenay Power and Light Co. at Bonnington Falls on the Kootenay River, south of Nelson. The tunnel is being built with the intention of using a 10 ton car, but whether this size will be used or not will depend entirely upon the amount of ore to be handled. D. McIntosh, Greenwood, B.C., is manager. (May, pg. 251.)

Halifax Electric Tramways Co.—Two measures affecting the company's railway were under consideration at the recent session of the Nova Scotia Legislature. The first sought to restrict the dividends to 8%, to prevent further capitalization, and to divide profits with the city after certain provisions had been made for extensions, while the second sought to compel the city to make extensions in a certain district. The measures were opposed, the first by the company and the other by the city, with the result that a compromise was arranged, under which some amendments were made, and the other matters were left over for a year. (Apr., pg. 196.)

Hamilton Radial Ry.—Engineers are reported to be in the field surveying a line from Oakville, Ont., the present terminus, via Lorne Park, to Port Credit. The route will, it is said, be along a private right of way, and an endeavor will be made to so locate it that it will have a station adjoining the Mississauga Golf Club, on the Credit River, between Port Credit and Lorne Park. (Apr., pg. 196.)

Hamilton St. Ry.—Discussing about railway matters, May 8, Manager Coleman is quoted as having stated that the great problem was to relieve the congestion on James St., between Barton and King Streets, and one of the suggestions made to effect this was to loop up Barton and King St. by a cross line on Ottawa St. (May, pg. 251.)

Humber Valley Electric Ry.—The Ontario Legislature has incorporated a company with this title to build a railway from Dundas St., Lambton, to the Humber River, southerly along the west bank to Bloor St., thence along the east bank of the river to the Lake Shore road, and thence easterly to Sunnyside Ave. R. H. Smith, C. M. Garvey, F. Regan, W. J. Jackson are the provisional directors. (Apr., pg. 196.)

Hamilton, Waterloo and Guelph Ry.—J. Patterson, Hamilton, is quoted as stating that the projected line from Hamilton to Guelph, Ont., will be gone on with this year, and that the extension to Toronto will come later. Press reports state that the intention is to connect up the Hamilton end of the line with the Hamilton Radial Ry., run over that line to Oakville, and build a new line into Toronto. (May, pg. 251.)

Kawartha Transportation Co.—The Ontario Legislature has incorporated a company with this title to build railways from Peterborough to Lakefield, Clear Lake, Stoney Lake and Apsley; from Peterborough to Chemong Lake, and from Peterborough to Rice Lake. The provisional directors are L. H. Grahame, E. R. Tate, C. W. S. Dunn, H. G. Fitzgerald, Lakefield, Ont. R. B. Rogers, L. M. Hayes, Peterborough, Ont. (May, pg. 196.)

Lacombe, Alta.—E. K. Strathy, President, is quoted as having stated that financial arrangements for the building of his company's line have been practically completed. The line is projected to run along Bennett Ave., Lacombe, westerly to Gull Lake. It is said that the right of way has been secured, and that

a large area of land has been laid out at Gull Lake as a summer residential park and pleasure resort. There are two charters in existence for electric railways radiating from Lacombe, but the press dispatches do not indicate which is interested in the present project. (See Lacombe and Blindman Valley Electric Ry., and Lacombe, Bullocksville and Alix Electric Ry., Dec., 1910, pg. 1069.)

The London and Lake Erie Ry. and Transportation Co. is preparing to erect a shop in St. Thomas, Ont., this summer, to be 210 by 91 ft., one story high, and built of brick. It will be divided by a brick wall, each half containing two tracks capable of accommodating four cars each. Under three of the tracks pits will extend from the front half way back, and under the fourth track the pit will extend the full length of the building. Accommodation will be provided for the master mechanic and other officials and operating staff, with stock room, etc. A request has been made to the St. Thomas city council to put in additional switches for the new shops on Talbot St. A contract for erection has been let to G. A. Ponsford.

Two propositions have been put forward with the object of securing an electric railway to Port Burwell. One is for a line starting from London and passing through Milestown, Orwell and Aylmer, and the other is a direct line from St. Thomas to Aylmer, from which point the two propositions run parallel to Port Burwell. The latter proposition seems to meet with most favor. Representatives from the three townships through which the proposed line would pass waited on the directors of the company and discussed the matter in April, and a further meeting was held May 3, when the representatives of the townships expressed themselves favorable to guaranteeing the company's bonds for \$20,000 a mile, and agreed that a committee be formed to apportion the amount on the four municipalities interested. The directors went over the proposed route in company with the township representatives and J. A. Bell, county engineer. The line will be an easy one to build, the only difficult piece of work on the route being the crossing of a ravine at New Sarnia.

The projected extension of the line from Lambeth to Delaware, six miles, was discussed with the directors by representatives of Delaware tp., May 2. The township offers a free right of way and a guarantee of bonds. The directors promised consideration of the proposal.

Representatives of municipalities interested recommended, May 8, that the townships be asked to guarantee the company's bonds for \$10,000 a mile towards the cost of extending the line from St. Thomas to Aylmer. The company asked a guarantee of \$20,000 a mile.

A proposition is under consideration for the building of a line from Ingersoll to London, and some approaches have been made to the company. General Manager Mower is quoted as stating that if a definite proposition is made the directors will consider it. (May, pg. 252.)

London, Aylmer and North Shore Electric Ry.—In connection with the projected electric railway to Aylmer mentioned under the title of the London and Lake Erie Ry. and Transportation Co., the first route spoken of is that originally proposed to be followed by the L.A. and N.S.E. Ry., which was incorporated by the Ontario Legislature in 1901. The London and Aylmer boards of trade are endeavoring to have the charter revived and a meeting was held in London, May 3. It was reported that the L.A. and N.S.E. Ry. Co. had not sold any common stock, but had issued 5% bonds, selling some and giving others in payment for services rendered. There

were also outstanding 160 shares, and W. Warnock, of Aylmer, held a judgment of \$10,000 against the company. It was decided to ask the municipalities to agree to the guaranteeing of bonds for \$300,000 as a preliminary to applying for a renewal of the charter. Dr. Sinclair, Aylmer, Ont., is interested in the project. (Oct., 1910, pg. 875.)

London St. Ry.—We are officially advised that the company has practically agreed with a committee of the London, Ont., city council upon certain changes and extensions of the tracks. The Wellington St. line is to be removed to Richmond St., thus straightening out one line, and a branch or belt line from this through Cheapside St. and William St., connecting with the present line on Oxford St., is to be built. A line is to be built from the end of the Oxford St. line at Adelaide St., on Adelaide St. to Central St., crossing the C.P.R. near the latter point. Three places on the system where the traffic is too heavy for single track are to be double tracked. These are on the Hamilton road from Rectory to Mamelton St., on Horton St. from Richmond to Wellington St., and on York St. from Ridout St. to the bridge. The tenders for the several works are not yet all in, consequently no definite decision has been reached as to who will do the work or when it will be gone on with. The company has been informed that another proposition is to be made by the Hydro-Electric Commission with regard to the supply of power.

Plans have been prepared by Moore and Munro, architects for a new powerhouse for the company, the estimated cost of which is \$15,000. (April, pg. 197.)

Moncton Tramways, Electricity and Gas Co.—We are officially advised that a change has recently been made in the control of the company, T. N. Barnsdall of Pittsburgh, Pa., and associates having acquired a majority of the stock. The following are reported to have been elected directors and officers:—President, R. Law, jr.; Vice President and General Manager, E. B. Reeser; directors, D. Henderson, F. W. Summer, O. P. Boggs, H. C. Stuart, O. E. Bartlett, H. N. Price is Superintendent of Tramways and Electricity, and A. B. Farmer, Superintendent of the Natural Gas Department.

The new management, we are advised, is devoting its energies chiefly to the introduction of natural gas at first, and the question of the street railway and its extensions is in abeyance. In all probability there will be some alterations in the routes proposed to be followed in the extensions as arranged by the former management. The company was restricted by its act of incorporation from using T rails, but as the use of grooved rails has proved unsatisfactory to both the company and the city, arrangements have been made with the city council to use T rails on all but paved streets. The work of completing the first section of the line is being gone on with. Natural gas has been installed under the boilers in the power house, thus doing away with coal. It is proposed to take up the question of extensions at an early date. (Mar., pg. 148.)

Morrisburg and Ottawa Electric Ry.—The Ontario Legislature has extended the time within which the line authorized by chap. 130, statutes 1909; as amended by chap. 145 statutes 1910, may be built. (Apr., pg. 197.)

Montreal and Southern Counties Ry.—Press reports state that contracts will be let at an early date for about 25 miles of extensions, and that a contract has been let to the Byers and Anglin Co. for the building of car barns, repair shops and offices in St. Lambert, Que. (May, pg. 253.)

Montreal Tramways Co.—Negotiations are in progress between the company

and Canadian Northern Ry. interests for the establishment of a street car service in the new suburb being laid out by the railway company at the back of Mount Royal. (May, pg. 252.)

Moose Jaw Electric Ry.—A site of 25 acres for park purposes has been secured by the company on the river, about two miles from the post office at Moose Jaw, Sask. Track is to be laid to the park at the earliest possible date. (Mar., pg. 148.)

Mount McKay and Kakabeka Falls Ry.—A proposition has been submitted to the Fort William, Ont., city council for running rights for the company over the street railway in Fort William, Ont. The company proposes to use large electrically driven cars.

The Ontario Legislature has extended the time within which the company may complete its projected lines and has authorized an increase of capital stock from \$250,000 to \$500,000. (May, pg. 252.)

Niagara Falls, Welland and Dunnville Electric Ry.—An act has been passed by the Ontario Legislature authorizing the increase of capital stock from \$200,000 to \$500,000, and the bond issue from \$20,000 to \$30,000 a mile of line; authorizing the company to generate and dispose of electrical power, and extending the time within which its railway may be built. (May, pg. 252.)

Niagara, Welland and Lake Erie Ry.—A route plan for lines in the vicinity of Welland, Ont., has been approved by the Minister of Railways.

The Board of Railway Commissioners has approved location plans for the line between the G.T.R. on Main St. and the Michigan Central Rd. on South Main St., Welland, Ont., 1.5 miles. (May, pg. 252.)

Niagara, St. Catharines and Toronto Ry.—The St. Catharines, Ont., city council has under consideration a bylaw granting a franchise to the company to build a line on Niagara St., as a part of a proposed line to Niagara-on-the-Lake. The route proposed to be followed is along Niagara St. to the Lake Shore road, and along that road to Niagara-on-the-Lake, with spur lines. It is said that a route map of the line to Niagara-on-the-Lake has been filed at Ottawa and that the extension will be built this year. (May, pg. 252.)

Nipissing Central Ry.—The work of extending the line from Haileybury to New Liskeard, Ont., was started May 6, and over 100 men with a steam shovel are engaged on the works. (Apr., pg. 197.)

North Midland Ry.—The Ontario Legislature has extended the time within which the company may build the lines authorized by its several acts, from London through the counties of Middlesex, Perth and Huron, and from London to Toronto. (Mar., pg. 149.)

Ottawa Electric Ry.—The Ottawa city council was informed, May 9, that the company would lay tracks along Pretoria Ave. on the construction of a bridge over the Rideau canal; tracks on Queen St. to relieve the Sparks St. congestion; a double track on Broad St. from the C.P.R. station to Queen St. and along that street to a connection with the Bridge St. line. This latter line will, it is said, be started almost immediately. (May, pg. 252.)

Ottawa Electric Ry.—The Ottawa, Ont., city council has under consideration plans for laying tracks on Queen St. and Laurier Ave., as a temporary measure of relieving the congestion at the corner of Bank and Sparks Streets. (May, pg. 252.)

Ottawa, Rideau Lakes and Kingston Ry.—An act has been passed by the Ontario Legislature changing the title of

the Ottawa, Smiths Falls and Kingston Ry. to that of the O.R.F. and K. Ry., extending the time within which the line authorized by chap. 127 statutes 1910 may be built, and authorizing the building of an additional line from Ottawa to Manotick and through the townships of Gloucester and Osgoode, in Carleton county. (See Ottawa, Smiths Falls and Kingston Ry., Mar., pg. 149.)

Lethbridge Municipal Ry.—A contract was let by the Lethbridge, Alta., City Council, May 8, to the Wisconsin Steel and Ironworks, for the erection of car barns for the street railway now under construction as a municipal enterprise. Superintendent Reid reported that the branch on Sixth avenue was ballasted, while progress had been made with the paving on Fifth street south. The contractors were slow in delivering ties, and he was authorized to purchase two car loads from the C.P.R., so that the work would not be delayed.

We are officially advised that it is proposed to lay 10½ miles of track, some of which will be on double track lines. Construction was started April 8, and to May 7, two miles of line had been completed, and work was in progress on an additional three miles. It is expected to have the entire 10½ miles of line completed in time for the exhibition, which opens Aug. 19. The steel rails and intersections were ordered in the U.S., and delivery has been made. The orders for overhead material were divided up between the Canadian General Electric Co., the Northern Electric Co., the Eugene F. Phillips Electrical Works, the Imperial Wire and Cable Co., and the Ohio Brass Co.

Power is to be generated as alternating current in the power house, about a mile from the city, and changed to 600 volts d.c., at a substation located in the car barns, and from there will be distributed over the line. The plant for the power station consists of one 400 k.w. synchronous motor generator set, and one 200 k.w. synchronous motor generator set. (May, pg. 252.)

Porcupine Rand Belt Electric Ry.—The Ontario Legislature has incorporated a company with this title to build the railway already described in these columns. (Apr., pg. 197.)

Port Arthur and Fort William Electric Ry.—The ratepayers of Port Arthur, Ont., voted May 23 on two by-laws affecting the electric railway lines in the city. The first was to provide \$1,400 for replacing 40 wooden poles with iron ones, and the second to provide \$11,500 for laying 80 lb. steel rails on the Fort William road. (May, pg. 252.)

Quebec Ry., Light and Power Co.—We are officially advised that while it is altogether likely that the Crown St. line will be extended across the Drouin bridge into Limoulin, and the St. Malo line extended about 0.25 of a mile in the neighborhood of the C.P.R. tracks, nothing definite has been decided upon. The total distance to be built is about 2.5 miles. (May, pg. 252.)

St. John Ry.—The New Brunswick Legislature has authorized the company to extend its railway to points outside the city of St. John, within Kings County. (May, pg. 252.)

Col. H. H. McLean, Vice President, is quoted as stating, May 10, that the company will proceed at once with the laying of tracks on the east side of Courtenay Bay. The new tracks will run down as far as the breakwater, or further if necessary. Including its share of the cost of the new bridge at the reversing falls, the company has made arrangements for spending \$250,000 upon improvements this year. (May, pg. 252.)

St. Thomas Street Ry.—Two bylaws were voted on in St. Thomas, Ont., May 13, one for the extension of the street railway lines, and the second for betterments of the existing lines. The first provided for building a cross-over at

William St., and to extend the Ross St. line to Wenlock St., and the second provided for spending \$23,500 in overhauling the present lines, to purchase three additional cars and to repair the present cars at a cost of \$16,500. (May, pg. 252.)

The bylaw authorizing the expenditure of \$23,500 on the improvement of existing lines, and to purchase three new cars was approved by 638 to 166 votes, and that to expend \$6,500 on two extensions was approved by 565 to 244 votes.

Saskatoon Electric Ry. and Power Co.—A report on the proposed power development on the Saskatchewan River was made to the Saskatoon, Sask., city council, May 8, by H. M. E. Evans. Referring to the street railway part of the undertaking Mr. Evans said he had nothing definite to say, except that the work was being kept well in view. The company had made arrangements for the materials, and there would be no delay in construction as soon as things were ready for going ahead. When it became apparent that the Nutana hill would be the first road ready for the steel, he bought the necessary rails to lay it out of his own private funds.

A proposition is being considered by a committee of the city council for the taking over of the street railway part of the company's undertaking as a municipal work. (May, pg. 252.)

At a special meeting of the city council, May 13, preliminary steps were taken to finance the building of an electric railway in the city as a municipal undertaking, and to release the Evans syndicate from its agreement. Mr. Evans promised to allow the city the use of the company's engineers' reports, and to give whatever aid he could in promoting the building of the line. As to the power plant, the report of the engineers is to the effect that the project at present could not be made to pay. Further consideration of the matter was adjourned, pending consideration of certain proposals being made by Stone and Webster, Boston, Mass.

Simcoe Ry. and Power Co.—The Ontario Legislature has extended the time within which the authorized line from Penetanguishene easterly through Victoria Harbor, Sturgeon Bay, Tannerville, Waubausene and Fesserton to Coldwater, Ont., may be built. (Mar., pg. 149.)

Stratford St. Ry.—The Stratford, Ont., city council passed a resolution, May 2, extending the time for starting construction on the line in the city to June 1, 1912. J. E. Rothery, representing Mackenzie, Mann and Co.'s interests, stated that Stratford would be one of the centres for radiating lines when the company's plans for a comprehensive plan for electric railways had been worked out. It was planned to build an extensive system through all that part of Ontario lying west of a line from Toronto to the Georgian Bay. These would be feeders not only to the Canadian Northern Ry., but to the other railway lines. The main electric line would pass through Stratford, but he could not definitely state the route by which it would reach the city. The terminus on Lake Huron would probably be at Grand Bend. Mr. Rothery subsequently spent a day going over the country between Stratford and Lake Huron. (Mar., pg. 149. See also Toronto Suburban Ry.)

Sudbury-Copper Cliff Suburban Electric Ry.—The Ontario Legislature has incorporated a company with this title to build lines from Sudbury to Copper Cliff, and to Comston with branches. The provisional directors are W. J. Bell, W. Cochrane, J. Markey, D. M. Morin, and L. Laforest, Sudbury, Ont. (Apr., pg. 197.)

Toronto and Eastern Ry.—Ewen Mackenzie, of Toronto, has been given a contract for the construction of this line

from Bowmanville east via Oshawa and Whitby, and has started work. The original intention was to make connection with the Canadian Northern Ontario Ry.'s Toronto-Ottawa line at Cherrywood, mileage 17 east of Toronto, and to run over the C.N.O.R. tracks into Toronto, so as to save the heavy expense of a separate entrance. It is now said that it may be decided to build independently right into Toronto. If this is done electricity will probably be the motive power, but should the C.N.O.R. tracks be used between Cherrywood and Toronto gas electric cars will probably be adopted so as not to have to electrify the line between Cherrywood and Toronto. Another proposition is to build a separate line on the C.N.O.R. right of way between Cherrywood and Toronto.

Toronto Suburban Ry.—An act has been passed by the Ontario Legislature authorizing an increase of capital stock to \$3,000,000; authorizing the issue of bonds to the amount equal to 75% of the actual cost of power stations, transmission lines, bridges, right of way, etc.; extending the time for the building of its previously authorized lines; authorizing the building of a line from the Hamilton line near Cooksville, and giving power to build the following additional lines:—From Guelph passing through Hespeler and Waterloo to Berlin; from the line to Hamilton in Wentworth tp. to serve Hespeler, Preston and Galt, and from near Cooksville to Brampton and easterly to a junction with the company's line to Weston at Davenport.

Work has been started at Weston on the extension to Woodbridge.

A letter was received, May 5, by the chairman of the Railways Committee in Berlin, from the Secretary of the Canadian Northern Ry., stating that as soon as the direction of the route was settled the company would start with the building of the projected electric line from Toronto to Guelph.

The company has obtained approval of the route for an extension of the present line terminating at Lambton, via Sunnyside, and Dixie to Churchville and Meadowvale, and engineers were out on the route, May 15, making additional surveys. The company's right of way agent is buying property along this route. The charter provides for a line off this through Cooksville to Hamilton. The powers granted last session of the Ontario Legislature provide for a line from what is described as the Hamilton line, near Cooksville, to Brampton, thence easterly to the present line near the G.T.R. station at Davenport. Such a line would connect with the company's present lines at the point whence the line to Bathurst St., along Davenport road, branches off from the line to Weston. It is not improbable that this line, which is to be built on a private right of way, will become the main line from Toronto to Guelph, etc. A contract is reported to have been let to Ewen Mackenzie for the building of the line to Guelph, but details as to route, etc., are not available.

Press reports state that negotiations are in progress for the taking over of the London St. Ry., the London Electric Co., and various other electrical railway and power projects, between Toronto and Windsor, and working them in as part of the system. (Apr., pg. 198. See also Stratford St. Ry.)

Winnipeg Electric Ry.—Work is in progress on the new line on Donald St. between Portage Ave. and Broadway. It is also intended to extend the Broadway line to Sherbrooke St., joining the Portage Ave. line, and to lay tracks on Mountain Ave., from St. John's to McGregor St. Work on these two lines is to be started immediately. It is proposed to lay track on other lines during the summer, but just which ones has not yet been definitely announced. (May, pg. 253.)

Marine Department

Steel Floating Dry Dock for Toronto Harbor.

Constructional work on the steel floating dry dock for the Polson Dry Dock and Shipbuilding Co., Ltd., the original design of which was described in *The Railway and Marine World* for Sept. and Oct., 1911, is in progress and will be pushed to early completion. The cost of construction, including a complete marine repair plant, is estimated at \$900,000, on which the Dominion Government will pay a subsidy of 3% annually for 20 years.

The dock is to be of the sectional U type, and was designed by Wm. Newman, Works Manager, who is a member of the Institution of Naval Architects of England, and also of the Society of Naval Architects and Marine Engineers in the United States. He was sent by

must be held down on the bilge block tracks, underhung wheels attached to the bilge blocks accomplishing this and at the same time making it possible for them to be operated by one man with ease. They will slide down the slight incline of the tracks with but little effort.

The dock consists of two integral parts, identically the same in construction, each composed of three transverse bulkhead sections. These two integral parts are secured together by a 6 x 6 1/2 in. angle rivetted to the ends all around at the mating ends, with 1 1/4 in. machine bolts through the projecting flanges at a 6 in. spacing, with a rubber gasket between to make watertight. A 30 x 3/4 in. butt strap is bolted to the side of the attached ends of the dock above the

gate valve operated from the upper deck of the dock by a long threaded shaft. The volume of the discharge may be regulated by the valve as well as from the central electrical control, by varying the amount of the opening. Outside the valve there is a hinged screen which is swung out of the way by the rush of the discharging water, but which closes when the dock is being filled, the screen preventing the entry of foreign or solid matter. The same opening being used for both discharge and intake accounts for the absence of piping.

The pumping equipment is entirely frost proof, as such a construction was made necessary by the severity of the winter. The manner in which this is accomplished is simple in the extreme, as will be seen from fig. 3. The pumps, it will be noticed, are raised about 2 ft. from the bottom of the dock. Under ordinary conditions, the suction of the pumps is through the four openings opposite the point of the propeller, for, unless a vessel near the full capacity of the dock requires to be raised, the full lifting capacity obtained from completely ejecting all the water is not required. When, however, the full lifting power of the dock is required, or when the dock has to be completely emptied in winter weather, the level of the water is reduced as low as possible through the side openings. These openings are then plugged and the water drawn up through a sump running lengthwise of the dock, the body of the dock being thereby completely drained. To free the pump itself of all water, a drain plug is provided on the lower side of the largest part of the casing. This leaves the pump absolutely dry and frost proof in consequence. The construction of the sump of a channel as indicated in figs. 3 and 4 is a new construction. It was felt that to cut the transverse truss frame on each side to accommodate a sump on the level of the dock bottom would weaken that member at a point where it could least stand it—near the tension edge.

Fig. 1—Plan and Side Elevation of Floating Dry Dock.

the company to visit shipbuilding plants and Admiralty dock yards in Great Britain and on the European continent, and on returning visited various plants on the Great Lakes and Atlantic seaboard, with the object of studying floating dry docks. The result of this trip was that the designs previously made and described in these columns were abandoned and the present ones adopted in their stead.

The general dimensions of the dock are:—Length, 330 ft.; width, 100 ft.; depth, 35 ft. 4 ins.; inside width on deck, 72 ft.; inside width on top, 88 ft.; and depth of hold, 8 1/2 ft. It will weigh approximately 2,400 tons, and will have a lifting capacity of 5,400 tons. When light it will draw 30 ins. The cost of the dock will be about \$392,000.

The construction consists of one longitudinal watertight bulkhead amidships, and a transverse watertight bulkhead every 50 ft., dividing the dock into 12 equal compartments 50 ft. square, with a pump in each. All framing is transverse, 30 in. centres, and the plating is 50% in excess of Lloyd's requirements. Besides the longitudinal watertight bulkhead, there are six longitudinal lattice bulkheads, equally distributed, which, with the sides, insure absolute longitudinal rigidity. There is a transverse truss frame fitted every 10 ft. of ample proportions, which support the bilge block cross tracks. The bilge blocks will have a relieving screw under the top block, and will be of British Columbia fir instead of the usual oak. The fir, being light, gives them a certain amount of floating power, so that they

low water mark. At the inside corners of each section of the dock there are rolling fenders to protect the dock from entering boats striking the corners.

The only opening into each of the watertight compartments of the dock is through a small hatch on the upper deck, which can be sealed in the event of accident and compressed air pumped in to expel the water.

It will be possible with the pump equipment to be installed to completely empty the dock and thereby raise to the full height with the largest size of vessel for which it is designed in 24 mins. The pumping equipment consists of twelve 12 in. centrifugal pumps of the form shown in fig. 3, having a united capacity of 42,000 imp. gals. per minute. These pumps work in batteries of three in each quarter of the dock from a 75 h.p. d.c. motor mounted on the upper deck, driving a horizontal shaft from which the pumps are driven by vertical shafts through bevel gears as indicated in the plan and elevation of fig. 1. The four batteries are centrally controlled from a station ashore, which commands a view of the whole dock. The controller equipment is similar to that on an electric car, and is conveniently arranged for one-man operation.

The entire absence of levers and piping is one of the noticeable features of the dock. This may be noticed by referring to fig. 4, which shows the pump location and the discharge and intake control of the pump. The discharge connection of the pump is a very short flanged pipe coupling attached to the dock wall, and discharging through a

Fig. 2—End Elevation of Floating Dry Dock. at Edson, Alta.

There will be compressed air, steam, and electric power conduit systems run on both sides of the dock, with manifolds every 20 ft. for operating the tools. Sixteen arc lamps will be hung from the upper deck with plugs for drop light every 10 ft., thereby permitting of continuous work when necessity requires.

Four ship's capstans are situated on the upper deck to handle the ship lines when docking. Another feature is the mooring device. An I beam is rivetted perpendicularly to the outside of the dock opposite each of the bulkheads. These I beams are held in loose clips on the edge of the wharf, allowing the dock to raise or lower, and, if necessary, to list, without any adjusting.

The dock, as at present being constructed, will be large enough for the largest vessel now navigating Lake Ontario, which is the G.T.R. car ferry Ontario No. 1. This vessel is 317 ft. long between perpendiculars, and weighs

5,146 gross tons. It is the intention, however, to increase the length of the dock at some future date by the addition of a central portion 300 ft. long, similar in construction to the end portions without the platform ends. This will make the capacity of the dock 630 ft., which it is expected will meet all

Canadian Interlake Line Limited.

Reference was made in our last number to an issue of \$520,000 6% 1st mortgage 15 year sinking fund bonds by this company. Following are extracts from the prospectus:—

Fig. 3—Horizontal Centrifugal Pump in Floating Dry Dock.

requirements during its life, long as that may be.

The dock is very adaptable to all sizes of boats, and for boats in various conditions. For long freighters that when light have a considerable draught at the rear end, with the bow taking but a couple of feet, the dock can be immersed to suit by a proper manipulation of the valves. This is done by throttling the forward discharge valve of the dock on both sides of the dock, with the rear valves wide open, grading the intermediate valves to suit. This will give the dock bottom the correct slope to evenly catch the bottom of the boat and raise it uniformly. For smaller vessels, the dock can be divided into its two integral parts, and each used independently of the other. For very small vessels two may be docked at a time, side by side. If the two vessels be of unequal weight, the pumps on the light side may be operated at a slower speed to raise the dock evenly with the load. That is one of the advantages in having the dock divided with a longitudinal bulkhead amidships, as each side can be emptied independently.

The plans and specifications of the dock have been examined by the Chief Engineer of the Department of Public Works, and by the Resident Engineer at Toronto, and have been approved without a change.

In order to obtain a site of sufficient size on which to construct the dock, the company had to acquire two water lots to the east of the present plant. The completed dock will be located in a basin to the west of the plant on slips acquired specially for this purpose. A special plant has been obtained from Great Britain for the construction of the dock, so that the capacity of the present plant will in no wise be hampered.

A bylaw which is in course of preparation at New Westminster for submission to the ratepayers covers the building of a wharf from Tenth St. to Merrivale St. The work must be carried out by the city, after which it is expected that a harbor board will be formed to take charge of the harbor front.

The bonds are secured on seven vessels which an appraisal company has valued as follows:—Canadian, Acadian, McKinstry, and Renvoyle, now in service, \$584,683. Indian, Hamiltonian and Calgarian, to be completed by May 1, June 1 and Oct. 1 this year respectively, \$458,275. Total, \$1,042,958. The fleet's

A. E. McKinstry, built in 1910 at Glasgow; single deck with raised quarter deck, modern construction, steel, length 250 ft., beam 42 ft. 9 ins.; engines, triple expansion, 17-28-48 x 36; tons burden, 3,250; carrying capacity, 115,000 bush.

Renvoyle, built in 1910, at Glasgow; single deck with fore-castle and raised quarter deck, modern construction, steel, length 250 ft., beam 42 ft. 7 ins.; engines, triple expansion, 17-28-46 x 33 ins.; tons burden, 3,100; carrying capacity, 100,000 bushels.

Indian, which was to be completed May 1, 1912, being built at Glasgow, double deck, modern construction, steel, side ports, length 250 ft., beam 42 ft. 6 ins.; engine, two-cycle Diesel, 4 cylinders 18½ x 32¼ ins.; tons burden, 3,650; carrying capacity, 130,000 bush.

Hamiltonian and Calgarian, sister vessels, the Hamiltonian to be completed June 1 and Calgarian Oct. 1, 1912, being built at Port Arthur, Ont.; double deck, modern construction, steel, length 250 ft., beam 42 ft. 6 ins.; engines, triple expansion, 18-29-48 x 40 ins.; tons burden, 3,550; carrying capacity, 120,000 bush.

The average net earnings since the Canadian, Acadian, McKinstry and Renvoyle have been in commission were \$57,485; for 1911 they were \$62,797.40. The annual net earnings for the Indian, Hamiltonian and Calgarian are estimated at \$60,000, and the net earnings of the whole fleet in an ordinary year are estimated at \$120,000.

The regular route of the vessels will be between Montreal and intermediate ports to Port Arthur, Fort William and Westfort, Ont., and as business offers they will operate to the Gulf of St. Lawrence, Georgian Bay and Lake Michigan.

The company's authorized capital is \$2,000,000 half preferred 7% cumulative and half common. Of the preference stock about \$420,000 has been paid up in vessel property and cash, and common stock to the same amount has been allotted as paid up for contracts and

Fig. 4—Valve and Valve Control on Floating Dry Dock.

total carrying capacity will be 825,000 bush.

Following is a condensed description of the vessels:—

Canadian and Acadian, sister vessels, built in 1907 and 1908 at Newcastle-on-Tyne and Glasgow, respectively. double deck, modern construction, steel, side ports, length 248 ft., beam 43 ft. Engines, Canadian, triple expansion, 19-32-52 x 36 ins.; Acadian, 18-30-50 x 36 ins.; tons burden, 3,550; carrying capacity, 120,000 bush.

other trade connections, etc.

The board is composed as follows:—President, M. J. Haney, Toronto; Vice President, R. M. Wolvin, Winnipeg; Managing Director, J. W. Norcross, Toronto; other directors, H. Munderloh, Montreal; E. H. Ambrose, Hamilton; J. F. M. Stewart and T. Bradshaw, Toronto.

The Dominion Public Works Department is making arrangements for building a dock at Kenora at an estimated cost of \$11,800.

St. Lawrence River Steamboat Co. and Thousand Islands Steamboat Co.

There are persistent rumors that these two companies which little over a year ago were acquired by a syndicate headed by Sir Edmund B. Osler, President, Niagara Navigation Co., and W. D. Matthews, President, St. Lawrence and Chicago Steam Navigation Co., and including B. W. Folger, General Manager, Niagara Navigation Co., are to be absorbed by the Richelieu and Ontario Navigation Co.

Both lines operate in connection with the New York Central and H.R. Rd. The St. Lawrence River Steamboat Co. has three boats, America, Pierrepont, and Jessie Bain, which run between Kingston, Ont., and Cape Vincent, N.Y., an important ferry service of some 20 miles, serving territory east and west of Kingston, and, on the U.S. side, Watertown, Syracuse, Utica, Rome and other important points. The Thousand Islands Steamboat Co. has three boats, St. Lawrence, Ramona and New Island Wanderer. These boats run between Clayton and Alexandria Bay, N.Y., with eight stops between, and also carry local excursions among the Thousand Islands, calling occasionally at Kingston and Gananoque, Ont. A fourth boat, the Thousand Islander, is now rapidly approaching completion.

Now that the R. and O.N. Co. has secured the Niagara Navigation Co. and as the St. Lawrence River Steamboat Co. and the Thousand Islands Steamboat Co. are operating in what may be looked on as R. and O. territory, the acquiring of the two lines which have their headquarters at Kingston, Ont., and Clayton, N.Y., respectively, might follow as a natural sequence. No official information, however, is obtainable.

Merchant Service Guild of British Columbia.

This guild, which was organized recently by captains and other officers, and which has its headquarters at Victoria, B.C., has elected the following:—

TRUSTEES: Captains B. L. Johnson, J. Parkes, D. Owen.

EXECUTIVE COMMITTEE: Capts. Johnson, Shadforth, Whitley, Wearmouth, Davies, Gilchrist.

SECRETARY TREASURER: Capt. D. J. Jarvis, R.N.R.

Continuous Operation of Ontario and Quebec Canals.

In response to the Dominion Marine Association's representations, the Minister of Railways and Canals has given authority for keeping open certain canals on Sundays during the current navigation season, as follows:—The Sault Ste. Marie, Welland and Murray canals, the lift lock on the Galops canal leading into the St. Lawrence river near the head of the canal, the Williamsburg, Cornwall, Soulages and Lachine canals will be kept open continuously during the season. The St. Ours lock, the Ottawa River canals, and the Rideau canal, will be kept open on Sundays, except between 6 a.m. and 9 p.m.

Atlantic and Pacific Ocean Marine.

The Dominion Government has granted a subsidy to Pickford and Black, Ltd., for its West Indies service, every 12 days from St. John, N.B., and Halifax, N.S.

The Eastern Asiatic Steamship Co., trading from Copenhagen and Antwerp to U.S. Pacific ports, is stated to have arranged to make calls at Victoria, B.C.

The Manchester Liners s.s. Manchester Importer touched bottom at White Island when outward bound, May 17, and returned to Quebec, and was docked at the Louise basin for examination.

J. F. Pratt, heretofore chief clerk, Canadian Northern Ry. ticket office, Winnipeg, has been appointed Travelling Passenger Agent, Allan Line Steamship Co., with territory from Port Arthur, Ont., to Moose Jaw, Sask., and with quarters at Winnipeg.

The Donaldson Line s.s. Letitia, which arrived at Montreal, May 14, on her maiden trip, from Glasgow, Scotland, has accommodation for 300 cabin and 600 third class passengers. Her dimensions are—length 470 ft., breadth 56 ft., depth 39½ ft. She made 14 knots an hour on her trial trip.

A dispatch from Japan states that the C.P.R. s.s. Empress of China, which was wrecked off the Japanese coast some time ago, is being offered for sale by the underwriters at \$100,000, and that \$60,000 has been offered for her by Japanese shipowners. It is stated that estimates

for repairing her run from \$150,000 to \$200,000.

The Allan Line s.s. Scandinavian, formerly Romanic, which was bought recently from the White Star Line, arrived at Montreal, May 14, on her maiden trip to a Canadian port. Her dimensions are—length 550 ft., breadth 93 ft., depth 59 ft., registered tonnage 12,000. Her engines are of the reciprocating type, 985 n.h.p., driving twin screws.

As a result of the recent Titanic disaster, and in view of the extraordinary trend of icebergs to the south this year, the various trans-Atlantic steamship lines have decided to adopt a more southerly course for the present than has hitherto been used. On the westward route, vessels will follow latitude 38 north, and on the eastward route latitude 37.40 north, between the 45th and 50th degrees of longitude.

In response to questions in the British House of Commons recently, the President of the Board of Trade stated that the total passengers of all classes and nationalities carried outward and inward on British and foreign vessels between the United Kingdom and Canada, Newfoundland and the United States during 10 years ended Dec. 12, 1911, was 6,053,382, of which the great proportion were carried in British vessels. The number of passengers reported to the Board of Trade to have lost their lives by casualties to vessels belonging to the United Kingdom on these voyages was nine.

Maritime Provinces and Newfoundland.

The general contractors for the St. John, N.B., harbor improvements, Norton Griffiths and Co., have sublet contracts to Macdonald and Doheny, Alexandria, Ont., and C. L. Hervey, Montreal, for the construction of the breakwater, one mile long, and the removal of a large hill at the rear, involving an expenditure of \$4,000,000.

The Boston and Yarmouth Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with \$350,000 capital, and office at Montreal, to carry on a general steamship owning and navigation business in the Dominion and elsewhere. The incorporators are:—J. W. Brophy, F. A. Jones, Vice President, Eastern Steamship Corporation, Boston, Mass.; A. R. Holden,

C. G. Heward and A. E. Woodworth, Montreal.

The ratepayers of Sydney, N.S., will vote on June 3 on the proposal to grant a bonus of \$1,000,000 to the British Canadian Shipbuilding Co., for the construction of a dry dock and shipbuilding plant there. It is proposed to pay the bonus in four equal instalments, the first payable on the completion of the work, and the last about 1930. The plant is to be assessed for taxes at \$500,000 for 10 years, and the company will have to finance the necessary sewer and street extension up to \$500,000, accepting the city's 50 year bonds in payment. Sir Henry M. Pellatt, Toronto, is interested in the company.

The Reid Newfoundland Co.'s s.s. Bruce, recently built in Great Britain, to replace the vessel of the same name, wrecked last year, is considerably larger than the older vessel, and has more power, as an ice breaker. She is 1,600 tons gross and 663 tons register, and has accommodation for 70 first class and 200 second class passengers. Her dimensions are—length 250 ft., breadth 36 ft. The company will establish, June 3, a daily service between Port aux Basques and North Sydney, N.S., the steamships Bruce and Invermore leaving Port aux Basques daily except Saturdays, and North Sydney daily except Sundays. Two other steamships are under construction, one of which will replace the s.s. Invermore on the Cabot Strait, and the other will be operated in the St. John's to Labrador service.

Province of Quebec Marine.

An order in council has been passed confirming the Montreal Harbor Commissioners' amendments to bylaws regarding tariffs of grain and storage, and for handling cars.

The Sincennes McNaughton Co.'s tug Nathalie R. was launched at Sorel recently. A similar tug is under construction at Sorel for the same company, and a third is being built in Scotland. The last mentioned is to be named Aurelie G., and will cross the ocean under her own steam some time in June.

The Dominion Government ice-breaking steamboat, Bellechasse, for service in the lower St. Lawrence, was launched at Kingston, Ont., May 15. Her dimensions are, length 142 ft., breadth 27 ft., depth 13½ ft. She was christened by Mrs. E. Grimason, aged 90, who was presented with a loving cup by the builders. C. S. Duguid represented the Department of Marine, Ottawa.

The floating dry dock which is being built in England for Canadian Vickers, Ltd., and which is to be located at Maisonneuve, Montreal, is rapidly approaching completion. It will be capable of docking vessels up to 700 ft. long and 100 ft. wide, with a gross tonnage of 25,000 tons. The site for the dock is being prepared by the Montreal Harbor Commission.

The Montreal Harbor Commission announces plans for improvements to the western end of the harbor as follows:—Concrete pier 1,200 ft. long opposite the offices; removal of the entrances to the Lachine canal to west of Windmill point; construction of a concrete wharf in basin no. 1, deepening of the basin, and lengthening King Edward, Alexandra and Jacques Cartier piers by 300 ft.

The Quebec Harbor Commission, at a meeting, May 6, decided to proceed with the preparation for the construction of an elevator of 1,000,000 bush. capacity, with links so that it can be increased to 2,000,000 bush. capacity. The structure will be of concrete and steel, and arrangements were made to commence the foundation work on or about May

20. Plans for the two piers to be built in addition to the Louise embankment in line with the breakwater extension from the main pier to the centre of St. Charles River, were also discussed, and the necessary dredging was ordered to be commenced.

The shipbuilding and repairing plant which has been operated at Levis by G. T. Davie and Sons for some years has been sold to the Quebec Wrecking and Salvage Co., Ltd., in which it is said A. A. Allan, of the Allan Line, and F. L. Wanklyn, General Executive Assistant, C.P.R., are chiefly interested. The plant, which has not been successful for the past three years, received a subsidy of \$10,000 a year from the Dominion Government, and on representations being made to the Government recently, it is stated that a promise was made that the amount would be increased to \$25,000 annually.

Ontario and the Great Lakes.

The steamboat Turret Crown will shortly be docked at Port Arthur, where she will have two new boilers 14 ft. diam. by 11 ft. long installed.

A press report from London, Ont., states that the steamboat Forest City, which was operated last year between Port Stanley and Cleveland, Ohio, has been sold to Fort William parties.

The Western Steamship Co. has appointed R. G. Bassett, captain, and A. M. MacInnes, chief engineer, of its steamboat J. A. McKee; and G. H. Playter, captain, and J. G. McHattie, chief engineer, of its steamboat Wexford, for the current season.

The Merchants Mutual Line Steamboat A. E. Ames, in leaving Hamilton harbor, May 16, struck the G.T.R. swing bridge, causing considerable damage to the bridge and necessitating it being kept closed a short time until repairs could be executed. The vessel was not damaged and proceeded on her route.

Canadian Interlake Line, Ltd., the incorporation of which, under the Dominion Companies Act, we noticed in our last issue, has been licensed to carry on business in Ontario, provided that no larger amount of capital stock than \$2,000,000 be used in the province. J. W. Norcross, Toronto, is the company's attorney.

Montreal press reports stated recently

that negotiations were in progress for the Richelieu and Ontario Navigation Co. to obtain a controlling interest in the St. Lawrence and Chicago Steam Navigation Co. W. Wainwright, Vice President, R. and O.N. Co., stated, May 7, that there was nothing to be made public.

E. C. Miller, heretofore City Passenger and Ticket Agent, Northern Navigation Co., Sault Ste. Marie, Ont., has been appointed District Freight and Passenger Agent, same company, with office at Sault Ste. Marie, Ont. His territory covers North Bay to Sault Ste. Marie, Ont., including Sault Ste. Marie, Mich., Georgian Bay, Manitoulin Island and Mackinac Island.

The Belle Isle Park Co., Ltd., Ottawa, has purchased the steamboat Quinte Queen, for operation between Ottawa and Kettle Island, where the company's amusement park is situated. The Quinte Queen was built at Valleyfield, Que., in 1902, and is screw driven by engine of 13 n.h.p. Her dimensions are—length, 99.5 ft.; breadth, 20.9 ft.; depth, 4.7 ft.; tonnage, 203 gross, 143 register.

It is stated that the charges recently brought against employees of the Great Lake Towing Co., in connection with the alleged theft of cargo from the steamboat Wissahickon, which was wrecked on Duck Island in Lake Huron in Dec., 1909, for the salvage of which the company had the contract, have been dropped, and that settlement of all claims on either side has been made.

The Otonabee Navigation Co.'s steamboat Otonabee is reported to have been sold to H. D. Jamieson, Barrie, on behalf of a syndicate controlling summer hotels there. The price paid is stated as \$12,000. The Otonabee was built at Peterboro in 1907, and is screw driven by engine of 21 n.h.p. Her dimensions are—length 111.2 ft., breadth 24 ft., depth 5½ ft., tonnage 136 gross, 87 register.

The arrangement for the absorption of the Niagara Navigation Co. by the Richelieu and Ontario Navigation Co., of which full particulars were given in our last issue, will be carried out, as over 93% of the N.N. Co.'s stock is reported to have already been transferred by shareholders, a number of shareholders taking cash instead of R. and O.N. Co. stock for their holdings. It is said that the long drawn out negotiations for the acquirement of the Inland Lines, Ltd., by the R. and O.N. Co. are about completed and that that deal will also go through.

Sault Ste. Marie Canals Traffic.

Both canals opened April 24.

The North Bay Land Co., Ltd., has been incorporated under the Ontario Companies Act, with \$50,000 capital, and office at Toronto, to carry on a general land improvement business, and in connection therewith to build and operate wharves, docks, dockyards, elevators and vessels. The incorporators are:—F. H. Hippen, K.C., A. D. Davidson, A. G. McRae, W. McBain and H. Fitzsimons, Toronto, all of whom are associated with Mackenzie, Mann and Co.'s interests.

The U.S. Lake Survey reports the stages of the Great Lakes in feet above tidewater, for April, as follows:—Superior, 601.46; Michigan and Huron, 579.44; Erie, 572.25; Ontario, 246.32. Compared with the average April levels for the past ten years, Superior was 0.31 ft. below, Michigan and Huron 1 ft. below; Erie 0.09 ft. below, and Ontario 0.05 ft. below. It was anticipated that there would be a rise of 0.4 ft. in Lake Erie during May, and of 0.3 ft. in the other lakes.

The Minister of the Interior returned to Ottawa recently after investigating the question as to whether it would be feasible to lengthen the season of navigation. He considers that the season might be continued through December, instead of closing on Dec. 1 as hitherto, and that Thunder Bay could be kept open for navigation by means of powerful ice breakers, thus allowing about 20,000,000 bush. of grain to be shipped that would otherwise have to be stored at Fort William and Port Arthur for the winter.

F. Mitchell, heretofore land steward, Northern Navigation Co., Collingwood, has been appointed Chief of Commissary, with full charge of the cabin departments on all the company's vessels and the land stewards' offices at Collingwood and Sarnia; also the operation of, and the linen at, the company's laundry at Sault Ste. Marie, Ont. His office is at Collingwood. The accounts and records of the laundry will be handled by E. C. Miller, City Passenger and Ticket Agent, Sault Ste. Marie, who will receive instructions from the audit office.

F. H. Clergue, who is interested in the proposal to build a dry dock and ship building plant at Sault Ste. Marie, Ont., is reported to have stated there, May 14, that his company would spend about \$1,500,000 on the work, developing a plant large enough to employ 1,000 men. During the first years of the operation of the plant, the construction of two vessels would be undertaken, and later the capacity would be increased to six vessels each year would be undertaken, and later the capacity would be increased to six vessels a year. The plans had been deposited with the Public Works Department, and as soon as they were passed, the project would be proceeded with.

The Toiler, which was brought from England last year, and which is equipped with internal combustion engines, of which we have already given full descriptions, has been sold to a syndicate, in which Jas. Playfair of Midland, H. W. Richardson of Kingston, and H. H. Gildersleeve of Sarnia are principally interested. She will be operated under the management of J. Richardson and Sons, Kingston, trading almost exclusively between Montreal and Port Colborne, and possibly to Lake Erie ports for coal. It is not likely that she will be operated to Fort William this season. She was reported aground in a dangerous position near Cardinal, May 24.

The works which, it is stated, will be undertaken for the improvement of Hamilton harbor during the current season include the continuation of the revetment wall for 466 ft., in line with the east side of Wellington St. produced; the construction of close sheet piling with concrete superstructure to connect

the revetment wall with the shore of Wellington St., and filling in at back of same; extensions of existing channels, and the construction of a wharf, 450 by 50 ft. The Dominion Parliament has voted \$200,000 on account of the work, and plans have been prepared and filed with the Department of Public Works, together with a report by J. G. Sing, Government Engineer.

The St. Lawrence and Chicago Steam Navigation Co. is having a vessel built at Collingwood for delivery in 1913 season. The dimensions are—length, 550 ft.; breadth, 58 ft.; depth, moulded, 31 ft. She is to be built on the arch web system of framing, and fitted with side tanks and water bottom for the whole length, and there will be 32 hatches with sliding doors. The machinery will consist of vertical triple expansion engines with cylinders 24, 40 and 66 ins. diam., by 42 ins. stroke, supplied with steam at 185 lbs. by three Scotch boilers equipped with forced draught. She will be built to the highest classification of the Great Lakes Register, and is estimated to cost \$375,000.

The Northern Navigation Co. has contracted with the Marconi Wireless Telegraph Co. of Canada for the equipping of its steamboats Hamonic, Huronic and Saronic, with wireless telegraph installation, and it is expected that the installations will be completed before the heavy passenger season commences. The Dominion Government has erected wireless telegraph stations at Tobermory, Midland and Sault Ste. Marie, all of which, it was stated, would be equipped by June 1. A station is also to be erected at Sarnia, and it is expected to be ready for operation by the end of August. We are informed that the Marconi Company will operate all the stations under contract with the Dominion Government.

C. P. Edwards, of the Dominion Government Radio Telegraph Service, is reported to have stated recently that in the near future the Government would establish a series of wireless telegraph stations, extending from the head of the lakes to Belle Isle, Que., or Cape Race. The stations would probably be built at distances of about 180 miles, between Port Arthur and Kingston, Ont., where a powerful station would be erected to communicate with Montreal. Stations are already practically complete at Port Arthur, Sault Ste. Marie, Tobermory and Midland, Ont., and other stations will be completed very shortly, covering the north shore and Georgian Bay. It is also stated that stations will be erected at Point Edward, Port Stanley and Port Colborne, Ont.

The Peoples Steamboat Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of \$150,000, and office at Toronto, to take over the business of the Argyle Steamship Co., Ltd., and the steamboat Argyle, which was formerly operated between Toronto and Olcott Beach, N.Y. The Argyle was built at Picton, Ont., in 1899, and is a paddle wheel steamer, with engine of 274 n.h.p. Her dimensions are—length, 185.1 ft.; breadth, 26 ft.; depth, 9.7 ft.; tonnage, 700 gross, 374 register. It is the intention to run her this season between Toronto and Lewiston, N.Y., twice daily, commencing towards the end of June, and to purchase another vessel to take up the passenger business, leaving the Argyle for freight business. The officers of the company are:—President, F. Denton, Toronto; Vice President, C. W. Perkins; Managing Director, H. W. Crawford, Toronto; other director, J. J. Doyle, Niagara-on-the-Lake, Ont.

Manitoba, Saskatchewan and Alberta.

Navigation opened on the Athabasca River, May 6, when the Hudson Bay Co. sent its first vessels down the river from Athabasca Landing. Vessels are also

running up the river as far as Little Slave Lake.

The Saskatchewan Navigation and Recreation Co. is in process of organization, for providing summer resorts, and owning and operating motor driven and other vessels in connection therewith. The capital stock is \$10,000, and the head office is at Saskatoon, Sask.

The Public Works Department has recommenced survey work on the North Saskatchewan River in connection with the proposal to make the river navigable. The work is in charge of L. R. Voligny, and two parties are working from Edmonton, Alta., under G. P. Morse and H. H. Smith.

The Public Works Department has awarded the contract for the erection of a bascule lift span bridge for the St. Andrews lock, on the Red River below Winnipeg, to the Brown Construction Co., Ltd., Winnipeg. The whole work must be completed within 15 months, the contract price being about \$150,000.

The U.S. Government will spend \$17,000 on a survey of the Red River, from Breckenridge, Minn., and Wahpeton, N.D., to the International boundary, to determine the practicability of establishing a series of locks and dams. The scheme is being supported by the Red River and Hudson Bay Navigation Association, recently formed in Grand Forks, N.D., and in which a number of Manitoba men are interested.

British Columbia and Pacific Coast Marine.

The C.P.R. commenced its new service between Victoria, B.C., and Tacoma, Wash., May 15, with the s.s. Iroquois. The service is a daily one, and the vessel will call at Seattle each way.

A bill was recently introduced in the U.S. Congress providing that no passengers shall be carried by water between any other port in the U.S., and any port in Alaska, either directly or by a foreign port, except in U.S. vessels.

The Union Steamship Co. is suing J. H. Welsford, Liverpool, Eng., for the final payment of the purchase price of the company's undertaking, and an application has been made for an accounting. It is stated that the completion of the purchase is not in any way affected by the case.

A dispatch from London, Eng., states that C. F. Pretty, of Vancouver, has arranged with English capitalists to confer with the Dominion Government with a view to taking up the proposed bond issue of the Vancouver Dock and Harbor Development Co., which has planned a large harbor and dock scheme on Lulu Island.

Work on the vessel which the C.P.R. is having built at Esquimalt was commenced during May. A large quantity of the material to be used in construction has been brought from Great Britain, and it is said that the engines will be built there. This vessel will be the largest steel steamer and the third of the C.P.R. coast service to be built in British Columbia.

The Union Steamship Co.'s s.s. Chelohsin, which recently struck a rock in the Skeena river, was docked at Vancouver, May 3, for examination and repairs. It was discovered that about 100 frames would have to be straightened and a number of plates renewed, at an approximate cost of \$25,000. The Chelohsin only arrived on the coast in February, from Ireland, where she was built.

The G.T. Pacific Coast Steamship Co. has decided to equip its steamships Prince Albert and Prince John with oil burning apparatus, similar to that installed on its steamships Prince Rupert and Prince George, and which was fully described in our March issue. It is possible this change may not be made until the fall, as it may not be convenient to take the vessels out of service until then.

The C.P.R. s.s. *Princess Sophia*, which recently arrived at Vancouver from Scotland, has been placed on her route between Vancouver, Prince Rupert and Queen Charlotte Island ports. She is a single screw vessel, with triple expansion engines, having a speed of 13 knots an hour, and has been so equipped that he may use either coal or crude oil as fuel. Her dimensions are—length 247 ft., breadth 44 ft., depth 18 ft.

The G.T. Pacific Coast Steamship Co. has made a number of changes in the officers of its vessels. D. MacKenzie, captain of the *Prince Albert*, has been transferred to *Prince George*, vice F. T. Saunders, appointed agent of the Department of Marine at Prince Rupert; D. Donald, captain of the *Henriette*, has been transferred to the *Prince Albert*; D. O'Brien, heretofore on the *Prince George*, has been appointed captain of the *Henriette*.

The Department of Marine has erected two echo boards on the bank that dries on the north shore of the first narrows of Burrard Inlet, to assist in guiding vessels through the narrows in foggy weather, by reflecting echoes of their whistles. One of the boards is located at the west entrance, 3-10 mile north from the lookout on Prospect Bluff, and the other is at the east entrance of the narrows, entrance to Vancouver harbor, ½ mile 351 deg. from Brockton Point lighthouse. Each is painted white.

It is reported in Victoria that a company is being formed by a number of U.S. capitalists for the purpose of operating a line of steamships along the Pacific coast, between U.S. and Canadian ports. It is stated that the intention is to commence the service with three vessels, and that orders for construction will shortly be placed. Docking facilities are being arranged for at Victoria, Vancouver and other points in British Columbia. C. W. Clark, who has been connected with the Guggenheim interests for several years, is reported to be chiefly interested in the project.

It was reported in Vancouver, May 2, that E. L. Kinman, who, with his associates, is interested in the proposal to build dockage facilities at Deadman's and Co., Ltd., Vancouver, to prepare plans and estimates for the construction island, had requested Norton Griffiths of a concrete dock with six piers each 1,400 ft. long, with structural steel warehouses and car tracks, and a bridge to connect with the mainland, the dock to provide accommodation for about 28 vessels. F. W. Nicholson, local manager, Norton Griffiths and Co., is reported to have stated that the company had been asked to prepare designs and estimates, but had since been asked to suspend operations on account of possible alterations.

The Dominion Government steamboat *Estevan*, which is intended for the light-house and buoy service on the Pacific coast, was launched at Collingwood, Ont., recently. She is built of steel throughout with double bottom running the entire length. Her dimensions are—length 212 ft. over all, breadth 38 ft., depth, moulded, to main deck 17½ ft. She has a deadweight capacity of 375 tons on a mean load draught of 11½ ft., with bunker capacity for 260 tons, and has a speed of 12 knots an hour. She is built with a straight stem and elliptical stern, with seven watertight bulkheads, and is equipped with two sets of inverted vertical direct acting triple expansion surface condensing engines with cylinders 15, 25 and 42 ins. diam., by 26 ins. stroke, supplied with steam by two Scotch boilers, 10½ by 14 ft. diam., at 180 lbs. pressure, and with all the necessary pumps for condensing, fire purposes, etc.

The Minister of Trade and Commerce has addressed a communication to the Vancouver board of trade in connection

with the numerous petitions the department has received from municipalities, etc., for the construction of elevators and other grain shipping facilities at British Columbia ports. The points on which he desires information are, the extent of wheat exportation through Vancouver during the past two or three years, the countries to which it has been shipped, and whether in bag or bulk; the grounds on which a suggested increase is based, and upon what calculation of rates and transport facilities is the opinion based that when the Panama canal is opened, grain from the prairie provinces will seek the western route to Europe in competition with existing routes, and what points in the province would be considered available and necessary for establishing elevator facilities. The board of trade has formed a special committee to gather information.

St. John Harbor Improvements.

The general contractors, Norton Griffiths and Co., Ltd., have awarded the contract for the quarrying of the rock from the large hill recently acquired for quarry purposes, and on which the site of the dry dock will probably be situated, to Doheny and Macdonald, Alexandria, Ont., and C. L. Hervey, Montreal. In addition to the quarrying of the stone, the subcontractors will have to haul it to the site of the breakwater, and form the breakwater itself, the subcontract calling for the construction of a large portion of the breakwater.

The breakwater at the sea end is to be built in cribwork, but the method of dealing with this portion of the work has not been decided on.

The general contractors are carefully considering the material to be dealt with in the bay, in connection with the dredging to be undertaken, with a view to designing the most up to date dredging plant it is possible to build. The exact type of dredges to be used will probably be decided shortly. The dredging contract calls for an average output of 15,000 cu. yds. in each 24 hours.

Vessels Removed from the Register.

The following vessels were removed from the Canadian register during April, for the reasons assigned:—Steam—*Annie Blanche*, Parrsboro, N.S., 68 tons, sunk; *Bridgetown*, Chatham, N.B., 10 tons, broken up; *Enterprise*, Halifax, N.S., 14 tons, broken up; *Georgia*, Windsor, Ont., 19 tons, out of existence; *Olive*, Victoria B.C., 4 tons, broken up. Sailing—*Alexander*, St. Catharines, Ont., 351 tons, lost; *Archie*, St. Catharines, Ont., 172 tons, lost; *Emerald*, St. Catharines, Ont., 322 tons, lost; *Florence M. Smith*, Sydney, N.S., 99 tons, lost; *Hibernia*, Maitland, N.S., 298 tons, abandoned at sea; *Malta*, St. Catharines, Ont., 198 tons, lost; *Mary Ellen*, Port Hope, Ont., 51 tons out of

existence; *Pride of America*, St. Catharines, Ont., 285 tons, lost; *Sylvester Neelon*, St. Catharines, Ont., 291 tons, lost.

The *Marine Directory of the Great Lakes* for the current year, published at \$3 by Mitchell & Co., Cleveland, Ohio, has been issued. It contains information regarding the construction of United States and Canadian vessels, names and addresses of owners, lists of steamship owners, information concerning grain elevators, coal docks, and a great deal of miscellaneous matter.

A conciliation board has been appointed to enquire into the request of the employees of the Canadian Northern Coal and Ore Dock Co., a subsidiary of the Canadian Northern Ry., Port Arthur, Ont., that the same wages be paid them as to C.P.R. employees for similar work.

At the International Congress of Navigation at Philadelphia, Pa., which opened May 23, Canada was represented by Col. W. P. Anderson, Chief Engineer, Department of Marine; John Kennedy, Consulting Engineer, and F. W. Cowie, Chief Engineer, Montreal Harbor Commission, and J. F. Armstrong, of Fredericton, N.B. On the rising of the congress, a party of about 150 will travel the Canadian waterways from Sault Ste. Marie to Quebec, as guests of the Dominion Government.

New Steamship for Hydrographic Service for the Atlantic Coast.

TENDERS are invited and will be received by the undersigned at the office of the Department of the Naval Service, Ottawa, and the office of the High Commissioner, London, Eng., for the design and construction of the above vessel up to noon, June 30th, 1912. Designs and specifications for the above ship, for the information of prospective tenderers, may be obtained on application to the undersigned, or to the office of the High Commissioner for Canada, London. The vessel is to be delivered free of all charges to H.M.C. Dockyard, Halifax, N.S. The time of delivery to be in accordance with that established in the specifications, viz., within twelve months of the date on which the contract is awarded. The Department does not bind itself to accept the lowest or any tender, the awarding of the contract will depend upon the ability of the tenderer to execute the contract, as well as a consideration of the tendered price. A certified cheque payable to the Deputy Minister of the Naval Service, amounting to Ten Thousand Dollars (\$10,000), must accompany tender, as a guarantee that the contract will be undertaken if awarded.

G. J. DESBARATS

Deputy Minister of the Naval Service,
Department of the Naval Service,
Ottawa, Ont., May 11th, 1912.

Lake Grain Shipments.

The following statement prepared by F. Symes, Acting Grain Inspector, Fort William, Ont., shows the bushels of grain shipped by vessels from Fort William and Port Arthur, Ont., from the opening of navigation, April 24 to May 7. The figures in each column, after the period, represent lbs.

	1912	Wheat	Oats	Barley	Flax
Canadian Ports					
Goderich.....		201,780.40	157,804.14		
Midland.....		456,354.30	219,000.00		
Montreal.....		1,853,457.00	239,686.28	22,203.16	55,758.86
Port Colborne.....		588,443.10			
Port McNicol.....		62,891.30			
Tiffin.....		702,917.50			
		3,865,844.50	616,491.03	22,203.16	55,758.86
Foreign Ports					
Buffalo.....		5,855,493.20			293,768.10
Erie.....		554,778.40			
Port Huron.....		326,744.10			
		10,602,861.00	616,491.08	22,203.16	349,526.46

Tides on the British Columbia Coast.

In the investigations of the tides by the Naval Service Department's tide and current survey branch the future development of British Columbia is kept in view, and data are already given for the tides at Alberni, Port Hardy, Kiti-mat, Bella Coola and other places which may quite possibly become railway terminals in the near future. Not only is the direct interest of navigation benefited by the information published, but several important industries that are dependent on water transport, notably the lumber industry and the coal trade, which carry on their business by towing to so large an extent. Vancouver Island may be considered as an immense natural breakwater against the heavy seas of the Pacific, enclosing between itself and the mainland a series of sheltered passages and channels, which form a network of natural canals probably unrivalled anywhere in the world. This system of water communication is one of the assets of British Columbia which may not be appreciated at its full value, but this is emphasized by the constant use of these Canadian channels by United States vessels on the route from Puget Sound to Alaska.

The only difficulty in their navigation arises from the strong tidal currents met with in the various narrows, so strong that in some of them navigation is only possible at slack water. This problem the tidal survey undertook to solve and the practical outcome now obtained places navigation of all grades under a debt of obligation for its persevering efforts. The most important of these passes is the notorious Seymour Narrows, and it will interest mariners to learn in what way it is now possible to calculate correct tables for slack water there.

Observations at Seymour Narrows were obtained as long ago as 1897 by the U.S. Coast and Geodetic Survey. As a rule, the turn of a tidal current has some definite relation to the time of high and low water in the locality, but these observations showed at once that in this case no such relation could be found. The Coast Survey also failed to establish a relation with their tidal stations in Puget Sound and Alaska, because the tides there are of a different type. The Dominion Tidal Survey undertook this problem with better hope of success, as it has well-established tidal stations in British Columbia, with which to compare the complicated behavior of the currents in Seymour Narrows.

After a lengthy research the discovery was made that the turn of the current was governed by the rise and fall in the open Pacific, and now that this is known it seems quite natural because the Pacific tide comes round both ends of Vancouver Island from the north and south. The best tidal station on the open Pacific with which to make comparison was Port Simpson.

Having thus got within sight of a solution further observations were obtained in 1910. Although there is so heavy a traffic through Seymour Narrows, the shores are uninhabited, and observers for these narrows and the Yuculta were supplied with an outfit for camping at commanding points and chronometers for accurate time. In reducing both the old and new observations, tide tables were first calculated for the back year of 1897 at Port Simpson, and the observations of 1910 were compared with the simultaneous tides there. In making the comparisons between the time of slack water and the tide, it was found necessary to distinguish the half tides from the others, but even then the results were not altogether satisfactory till a fresh discovery was made. The difference in time with the tide at Port Simpson was reasonably constant

for high water slack, but for low water the difference had to be taken with the next following tide there. This curious result is in accord with the difference in the time of the tide to the north and south of the narrows, as the difference is practically the tidal period of six hours. The data thus obtained, with a special allowance for the half tides, at last afford a satisfactory basis for the calculation of slack water, as now published in the tide tables.

This achievement has made it possible to give data for all the passes and rapids which lie along an irregular line from Seymour Narrows eastward to the mainland at the mouth of Bute Inlet. The extreme pass on that side is the Yuculta, and it was therefore chosen as the companion to Seymour Narrows in the simultaneous observations of 1910. With the two extremes, next Vancouver Island and next the mainland, it became possible to deduce data for all the intermediate passes. For the time of slack water in these, in relation to the principal narrows, is known to many of the captains of the tugs and coasting steamers who use them, and this information has now been brought into practical shape, and is published this year for the first time in the tide tables.

A knowledge of the time of slack water in such narrows as Okisollo, Well-bore, Green Point rapids and others, is of substantial value to the lumber industry especially, as the most powerful tugs with a tow of logs can only attempt such places at slack water. These passes are in frequent use also by coasting steamers for a rapidly increasing traffic.

These additions in the new tide tables make them very complete, as slack water tables are already published for Active Pass, Porlier Pass and First Narrows, on the routes from Victoria and Nanaimo to the mainland, and the tides at the most important harbors in the province are fully given. It is to be hoped that all mariners will take advantage of these, as they are quite superior in accuracy to anything heretofore available.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

23. Apr. 24. 62. Quebec, Gulf of St. Lawrence, Gaspé Bay, Gaspé basin, buoys discontinued. 63. Quebec, River St. Lawrence, Cap Brule, main light to be moved to the front range lighthouse.
24. Apr. 25. 64. Ontario, Lake Erie, Port Colborne, light on eastern breakwater temporarily discontinued.
25. Apr. 25. 65. New Brunswick, Bay of Fundy, Machias, Seal island, westerly light permanently discontinued.
66. New Brunswick, St. Croix river, buoy established east of Docket island.
67. New Brunswick, south coast, Bay of Fundy, off Negro head, submarine bells not in operation.
68. Nova Scotia, south coast, Green bay, Green ledge, bell buoy established.
69. Nova Scotia, Cape Breton island, Lennox passage, buoy established east of Dog island.
70. Nova Scotia, Cape Breton island, east coast, Glace Bay, Glace cove, change in position of storm signal mast.
26. Apr. 27. 72. Prince Edward Island, Northumberland strait. West point wharf, range lights established.
73. Quebec, Gulf of St. Lawrence, Little Natashkwan harbor, uncharted reef, buoy established, wharf built.
27. Apr. 30. 74. British Columbia, Strait of Georgia, Burrard inlet, Atkinson point, new lighthouse and fog alarm under construction.
75. British Columbia, Burrard inlet, First narrows, echo boards established.
76. British Columbia, Dixon entrance, non-existence of reported shoal.
28. May 7. 77. British Columbia, Strait of Georgia, sandheads of Fraser river, advertised change in positions of

gas and whistling buoy and lightship, not made.

29. May 8. 78. Ontario, River St. Lawrence, Lake St. Francis, Lancaster light station, hand fog horn discontinued.- 79. Ontario, St. Clair river, Sarnia, barge established to mark wreck.
- 80. Ontario, Lake Huron, north channel, Manitoulin island, Little Current, description of dredged channel.
- 81. United States of America, Detroit river, changes in Grosse Isle south channel range lights.
- 82. United States of America, Detroit river, change in Ecorse back range light.

30. May 10. 83. Nova Scotia, Cape Breton island, east coast, Scatarie island, Mainadieu, intended change in character of light.- 84. Quebec, entrance to the St. Lawrence, survey steamer, engaged in the investigation of currents, to be avoided.
- 85. Quebec, Saguenay river, change in position of buoy above Rivière Lachance.

31. May 11. 86. British Columbia, William Head, Alberni, and Prince Rupert, quarantine regulations.

32. May 14. 87. Gulf of St. Lawrence and Atlantic coast, corrections to telegraph chart in reference to ocean cables.- 88. Nova Scotia, south coast, Cross island, intended change in character of light.
- 89. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Lake St. Peter, gas buoy at no. 3 curve, change in color of light.

33. May 15. 90. Ontario, Lake Ontario, South Bay point, light again in operation.- 91. Ontario, Lake Huron, Port Elgin, change in position of front light of south range, daymarks established.

34. May 18. 92. Ontario, St. Clair River, Sarnia, wreck of steamer Joliet being removed, caution.

35. May 18. 93. Nova Scotia, south coast, entrance to Halifax harbor, Sambro outer bank, lightship removed, gas and whistling buoy replaced in position.

The Heathcote-Malmstad Collision.

Following is a summary of the judgment delivered Apr. 26 by L. A. Demers, Wreck Commissioner, and concurred in by Capt. R. MacDonald, North Sydney, N.S., and Capt. N. H. Townsend, Port Warden, of Sydney N.S., re the collision between the s.s. Heathcote, owned by the Dominion Coal Co., and the s.s. Malmstad, under charter to the same company, in Louisburg harbor, N.S., Mar. 20.

The court finds that the Malmstad occupied what is considered the proper anchorage, and that its position did not obstruct the range lights which serve as a guide for the passage between White rock and Battery shoal. A proper watch was kept and the regulation lights were burning, and when the collision seemed imminent, chain was promptly paid out, this being the only practical alternative for the anchored vessel. Regarding the Heathcote, it is evident that with an extremely limited draught forward, she was carried rapidly to leeward by the prevailing winds, and insufficient allowance was made therefor, and the court holds that the master of the Heathcote acted imprudently and showed lack of judgment in navigating his vessel as he did under the conditions existing. All examinations of the Heathcote's logs disclose their incompleteness in recording the details of the circumstances preceding and attending the collision. In view of the facts, the court exonerates the master and officers of the Malmstad from responsibility for the collision and finds that Capt. Alex. Muir of the s.s. Heathcote committed a grave error of judgment in attempting to cross the bow of the Malmstad in the manner he did, for which he is severely censured and cautioned to exercise more prudence and discretion in future.

New Steamboat for C.P.R. Kootenay Lakes Service.

The C.P.R. recently awarded a contract for the construction of a vessel for its Kootenay Lakes service, to the Western Dry Dock and Shipbuilding Co., Port Arthur, Ont. The chief dimensions will be as follows: Length between perpendiculars, 200 ft.; beam moulded, 40 ft.; beam over guards, 43 ft.; depth, 8 ft. The hull will be of steel, with wrought iron stem, square stern with two longitudinal water tight bulkheads, one longitudinal truss and seven transverse bulkheads. Three steel interchangeable rudders will be fitted in place, and one spare one will be supplied. The deck will be of $\frac{1}{4}$ -in. plate throughout, all flush rivetted, $\frac{1}{4}$ -in. straps, all longitudinal seams single rivetted and transverse seams double rivetted. There will be openings from the deck to each compartment, with light plate door flush with deck. The stem will be of wrought iron $1\frac{1}{4}$ by 7 ins., to extend 18 ins. above the main deck. The transverse bulkheads will be $\frac{1}{4}$ -in. thick with single 3 by 3 by $\frac{3}{4}$ ins. angle frames, stiffeners flanged $2\frac{1}{2}$ ins., spaced 3 ft. vertically, and one $3\frac{1}{2}$ by $2\frac{1}{4}$ by $\frac{1}{4}$ ins. horizontal plating. The longitudinal bulkheads will be of $\frac{1}{4}$ -in. plates attached to shell plate and deck by $2\frac{1}{2}$ by $2\frac{1}{2}$ by $\frac{1}{4}$ ins. angles, angle stiffeners 3 by 3 by $\frac{3}{4}$ ins., spaced $3\frac{1}{2}$ ft. apart under hog posts. The engines will be of the tandem compound type with cylinders $16\frac{1}{4}$ and $35\frac{3}{4}$ ins. diam., by 96 ins. stroke. Centre to centre of engines to be 25 ft. $8\frac{1}{4}$ ins., and they will be of ample strength for a working steam pressure of 200 lbs.

Stranding of the s. s. Earl Grey.

Following is a summary of the judgment delivered by L. A. Demers, Wreck Commissioner, concurred in by W. R. Luger, Examiner of Masters and Mates, Halifax, N.S., and Capt. W. McKenzie, Pictou, N.S., Apr. 23, re the stranding of the Dominion Government s.s. Earl Grey at the River John in the Northumberland Straits, Apr. 17.

The court finds that Capt. Angus Brown was unable accurately to determine the speed of his ship, as the day of the stranding was the first occasion that she had been navigated in clear water, following the loss of her propeller blades, and that realizing the unreliability of his calculation with regard to the speed he should have adopted all available methods of establishing his position. His action in proceeding at full speed in a dense fog, without sounding, despite the fact that the vessel was equipped with a machine capable of determining the depth of water while proceeding at full speed, as well as his failure in insisting that a lookout be kept on the fore-castle head, constitute, in the opinion of the court, grave errors of judgment. Further, it is held, that instead of relying almost entirely on assistance from other sources, he should have utilized the wire remaining unused in his hold, to lay a bower anchor, and in the event of the wire not being of sufficient strength to dislodge the vessel, it would have acted as a deterrent against the vessel being driven ashore by strong gales. The reason given by the captain for the non-usage of the wire, to the effect that the chain attached to it, combined with its own weight, could not be sustained by the boats, cannot be accepted, for the mate in his evidence stated that he had procured spars from which to suspend the anchor between the boats to be utilized in hauling the vessel off. The captain's statement that he issued verbal orders for the speed to be reduced prior to the stranding remains uncorroborated, and the mode of procedure which he claims

to have followed cannot be countenanced. The court therefore suspends the captain's certificate for three months from Apr. 22. The court also holds that the pilot, McGregor Fraser, whose license extends from Pictou to Prim Point, was guilty of negligence through his failure to exercise necessary precautions with regard to the navigation of the vessel, and a copy of the finding will be forwarded to the Pictou Pilot Commissioners in order that they may deal with him. The second officer, F. P. Gallant, is considered to be insufficiently experienced in steamship navigation to occupy such a responsible position.

Lake Vessel Insurance Rates.

Largely owing to the Canadian Lake Protective Association's very successful work last season insurance rates on the Great Lakes and contiguous waters have been materially reduced this year directly in the premium charged and indirectly by the lowering of the valuation at which ships will be insured.

As a result of conferences between the Association's representatives and the underwriters the values have been reduced from \$111 or \$53.50 a ton to \$10 1s 2d or \$51 a ton. Last year the Great Lakes Protective Association, a United States organization, had a rate of $5\frac{1}{2}\%$ with U.S. insurance companies, while the Canadian owners were charged $5\frac{1}{4}\%$ in the U.S. against $5\frac{1}{2}\%$ by British companies. This year a list of preferred fleets will get a $5\frac{1}{4}\%$ rate pro rata. On all vessels attaching on and after Aug. 1 $\frac{1}{4}\%$ will be added, and to those attaching on and after Oct. 1 $\frac{1}{2}\%$ will be added.

An agreed policy will be used as in previous years. The Association and the London underwriters will consult and agree as to form of protection and indemnity clause, in view of recent workmen's compensation acts.

Declaration as to Vessel Ownership.

The British Colonial Secretary has forwarded to the Governor General a copy of a letter issued by the Board of Trade on the subject of the alteration of the form of declaration of ownership required by sec. 9 of the Merchant Shipping Act, 1894, to be made on application for registry of a vessel owned by a body corporate, and requesting to know whether it would not be desirable to bring the new forms into use in Canada. The letter referred to reads:—

"It will be seen that the principal alteration consists in the insertion of a paragraph to the effect that the company on whose behalf the declaration is made 'has its principal place of business at'—where all the important business of the company is, in fact, controlled and managed at meetings of directors or the managers of the company.' Recent experience has shown that foreign shipowners who are desirous of obtaining the advantage of the British flag for their vessels without relinquishing their control of them, sometimes attempt to effect their object by registering a company under the British Companies Act and having merely a registered office in the United Kingdom without in fact transacting their business there; and the object of the alteration in the form is to check as far as possible the registration of vessels owned by such companies."

The Inland Lines steamboat Empress of Midland, while running light from Midland to Cleveland, May 5, ran aground at Cabots Head during a fog and was released, May 7, and taken to Collingwood, where she was docked for repairs to about 20 plates.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time, we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Preston Car and Coach Co., Ltd., Preston, Ont., has been granted supplementary letters patent, increasing its capital stock from \$200,000 to \$500,000.

McKeen Motor Car Co., Omaha, Nebraska, has opened a central sales district office at 1451 Marquette Building, Chicago, Ill., with E. E. Wright as manager.

The Brown Hoisting Machinery Co.'s catalogue J 1912, covers illustrated descriptions of various kinds of hoisting and conveying machinery, including the Brown-hoist pillar crane, hand wrecking crane, mast jib crane, bracket jib crane, pillar jib crane, stationary bridge crane and transfer table. The illustrations include a two ton Brownhoist hand pillar crane, with 15 ft. radius, erected on a car for street railway work, for the Ottawa Electric Ry., a description of which is given in the Electric Railway Department of this issue.

The Robb-Brady Scotch boiler, which is manufactured at Amherst, N.S., and South Farmingham, Mass., was tested recently at the sewerage pumping station, Farmingham, Mass. This boiler is a modified form of the standard Scotch marine boiler, it being claimed that the changes from the standard form greatly increase the circulation. The heating surfaces are arranged as in the standard form and there are the same internal furnace flues, but there are two smaller shells, one above the other, in place of the large one, and an annular circulating passage is formed at the front end by the use of a plate beneath the front neck. This plate guides the cooler feed water around the shell, discharging it beneath the furnaces at the front. The water is heated while passing around the furnaces and among the tubes, and enters the steam drum by the rear neck. In the test referred to the boiler was equipped with thermometer oil wells so that the temperature could be noted at four points, viz., at the top of the shell near the front end, at the top of the shell at the rear just over the combustion chamber, at the front and rear close to the bottom. We are advised that with water in the boiler at about 80° the fires were started and readings of every thermometer taken every five minutes. The temperature of the water at the top of the shell increased steadily until the boiling point was reached. At the bottom the temperatures increased very slowly up to the time the upper thermometer indicated the boiling point. Then the lower thermometer showed sudden rise, jumping to within a few degrees of those at the top. From this time on all four kept within a few degrees until 100 lbs. was reached, at which time practically no difference could be noted at the four points, showing that the circulation was positive and rapid.

Railway Lands Patented. — Letters patent were issued during March, covering railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Canadian Northern Ry.	6.39
Canadian Pacific Ry.	1,352,938
Grand Trunk Pacific Ry.	20.43
Total	1,379,758

ONTARIO—ST. LAWRENCE CANALS. MURRAY CANAL.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Dredging Murray Canal," will be received at this office until 16 o'clock on Wednesday, June 5th.

The specification and form of contract to be entered into can be seen on and after Monday, May 20th, at the office of the Chief Engineer of the Department of Railways and Canals, Ottawa, and at the office of the Resident Engineer of the Ontario-St. Lawrence Canals, Cornwall, at which places form of tender may be obtained.

Parties tendering will be required to accept the fair wages schedule prepared or to be prepared by the Department of Labor, which schedule will form part of the contract.

Contractors are requested to bear in mind that tenders will not be considered unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signature, the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque for the sum of \$900.00 made payable to the order of the Minister of Railways and Canals must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work at the rates stated in the offer submitted.

The cheque thus sent in will be returned to the respective contractors whose tenders are not accepted.

The cheque of the successful tenderer will be held as security, or part security, for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order,

L. K. JONES,

Secretary.

Department of Railways and Canals,
Ottawa, May 18th, 1912.

Newspapers inserting this advertisement without authority from the Department will not be paid for it.—23205.

Department of Railways and Canals.

New Fishery Protection Vessel for Service on Pacific Coast.

TENDERS are invited and will be received by the undersigned for the design and construction of the above vessel up to noon 17th June, 1912.

General particulars and a guidance print shewing the typical nature of the vessel required, for information in preparing a design, may also be obtained on application to the undersigned.

The vessel is to be delivered free of all charges at H.M.C. Dockyard, Esquimalt, the time of delivery to be stated in the tenders. Special consideration will be given to early delivery.

An alternative tender may be submitted if so desired, using Diesel Heavy Oil Engines as the motive power for propulsion, but such engines would be required of the 2 cycle reversible type, designed to use Texas and other heavy oils.

The Department does not bind itself to accept the lowest or any tender, the awarding of the contract will depend on the suitability of the design for the service required as well as a consideration of the tender price.

The tenderer should also state for what price two vessels of the type proposed will be supplied.

A certified cheque payable to the Deputy Minister of the Naval Service, amounting to \$10,000, must accompany design and tender, as a guarantee that the contract will be undertaken if awarded. If two vessels are decided on a further deposit of \$10,000 will be required.

G. J. DESBARATS,

Deputy Minister of the Naval Service.

Department of the Naval Service,
Ottawa, 9th April, 1912.

Public Markets, Limited.—Under the terms of an act to incorporate a public live stock markets board, passed by the Manitoba Legislature in 1911, a company with the title of Public Markets, Limited, was formed, with the C.P.R., the Canadian Northern Ry., and the Grand Trunk Pacific Ry. as the interested parties. An agreement was entered into between the province and the company, Oct. 13, 1911, for the formation of the company, each of the railways holding one-third of the capital stock, and having the right to appoint one director. The C.P.R. transfers to the company certain properties in St. Boniface for stockyard purposes, which are to be laid out and equipped by Oct. 1, and each of the railway companies contracts to provide the necessary spur tracks to connect their lines with the yards. The city of St. Boniface agrees to construct sewers for the proper drainage of the yards. This agreement has been confirmed by an act passed at the recent session of the Legislature. Another act passed confirms an agreement between the company and the city of St. Boniface, by which \$250,000 is to be expended on the laying out of the yards, and the city is to construct the necessary sewer on payment by the company of \$20,000, and make roads. It is also agreed that the yards shall be assessed for \$250,000 for 20 years.

FOR SALE Barge "Santiago"

Three masted wooden barge in first class condition. Length, 325 ft.; beam, 45½ ft.; depth, 21½ ft.; gross tonnage, 2,600; net tonnage, 2,525; carrying capacity 5,000 net tons on 18 foot draft. YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference

work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost \$1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. Chicago, U.S.A.

EDISON BSCCO PRIMARY BATTERY

The ideal tower battery for a mechanical interlocking plant should be capable of maintaining a uniform voltage under constant discharge and of delivering comparatively high discharges without injury; their condition should be plainly indicated by the appearance of the cell; they should not be affected by slight variations in temperature and they should operate from one renewal period to the next with no expense for maintenance.

The Edison BSCCO cells, we believe, possess these qualities more completely than any other type of Primary Battery. The uniformly good service that they can be depended on to furnish from the day set up until the full capacity is consumed, with no attention whatever, makes them the logical cells for this service.

One series of Edison BSCCO cells will usually replace a two or three series gravity battery in towers where the amperage discharge is not high. For plants where the demand on the battery is heavy, the multiple series system of hooking up should be used, the number of series being governed by the current demand of each particular plant. In this way extremely long life can be obtained, and you enjoy a feeling of security, knowing that the all important requisite, viz., sufficient voltage to operate all functions without failure, is guarded by a battery of proven reliability—one that will not be affected by momentary heavy discharge, evaporation, buckled plates, etc. And as time passes this feeling of security strengthens and you realize that whatever else goes wrong you have a battery that can be depended on to do its work day in and day out without failure.

Thomas A. Edison, Inc.
262 Lakeside Ave., Orange, N.J., U.S.A.

OTTAWA - - CANADA

Eliminate Losses From Fire Blockades

The O-B Emergency Fire Hose Bridge will make it possible for you to run your heaviest cars over several lines of fire hose and save the fares lost by blockades during fires along your line.

It can be carried on your repair wagon and set in position on track very quickly.

Fares lost by a single blockade during rush hours would equip your entire system. Better be prepared.

THE OHIO BRASS CO., Mansfield, Ohio, U.S.A.

Synopsis of Dominion Land Regulations.

Any person who is the sole head of a family, or any male over 18 years old, may homestead a quarter section of available Dominion land in Manitoba, Saskatchewan or Alberta. The applicant must appear in person at the Dominion Lands Agency or Sub-agency for the district. Entry by proxy may be made at any agency, on certain conditions by father, mother, son, daughter, brother or sister of intending homesteader.

Duties.—Six months' residence upon and cultivation of the land in each of three years. A homesteader may live within nine miles of his homestead on a farm of at least 80 acres solely owned and occupied by him or by his father, mother, son, daughter, brother or sister.

In certain districts a homesteader in good standing may pre-empt a quarter-section alongside his homestead. Price, \$3.00 per acre.

Duties.—Must reside upon the homestead or pre-emption six months in each of six years from date of homestead entry (including the time required to earn homestead patent) and cultivate fifty acres extra.

A homesteader who has exhausted his homestead right and cannot obtain a preemption may enter for a purchased homestead in certain districts. Price, \$3.00 per acre. **Duties.**—Must reside six months in each of three years, cultivate fifty acres and erect a house worth \$300.00.

W. W. CORY,

Deputy of the Minister of the Interior.

N.B.—Unauthorized publication of this advertisement will not be paid for.

"Standard" Service

The Bare and Weatherproof Wire and Cable Departments of our Factory are now in full operation, ready to meet your every requirement, promptly.

"STANDARD" PRODUCTS have, for over 30 years, been made and sold upon a **QUALITY BASIS**, which means greater durability, greater safety, greater economy.

"STANDARD" Bare and Weatherproof Wires and Cables are drawn from the best commercially pure copper wire bars. The weatherproof insulation is mechanically perfect and will stand great extremes of heat and cold without losing its insulating properties.

"STANDARD" SERVICE also consists in quoting prices, shipping promptly and in supplying information generally about our products. We will promptly give assistance in solving your installation problems.

Send us your inquiries. A post card will do!

Department C.

HAMILTON, ONT.

Manufacturers of Electric Wire and Cable of all kinds, all sizes, for all purposes, Junction Boxes, Terminals, Insulating Compound, etc.

Steel Castings

One of the two largest steel castings ever made in Canada was cast by us. They were Y-pipe connections for a 10,500 H.P. water wheel. We made it for the John McDougall Caledonian Iron Works, and they were thoroughly satisfied.

Absolute Satisfaction is Guaranteed

PROFESSIONAL CARDS.

THE RAILWAY AND MARINE WORLD is especially adapted for the publication of professional cards of engineers, inspectors, analysts, electrical experts, naval, grain elevator and other architects, solicitors, etc., who desire to bring themselves under the notice of the management and officials of the various steam and electric railway, steamship, grain elevator, telegraph, telephone and power companies throughout Canada, as well as the locomotive, car and shipbuilders, contractors and promoters of railway enterprises. THE RAILWAY AND MARINE WORLD is the only medium through which all these important classes can be reached.

Rates will be quoted on application.

THE VICTORIA ROLLING STOCK AND
REALTY CO. OF ONTARIO, LIMITED.

NOTICE is hereby given that a dividend of three per cent. on the paid-up capital stock of the Company for the half-year ended May 31st, 1912, has been declared payable June 1st, 1912, to the shareholders of record as of the 31st of May, 1912.

By order of the Board,

G. E. CHISHOLM, Secretary.
Toronto, May 20th, 1912.

THE CANADIAN PACIFIC RAILWAY COMPANY.**Dividend Notice.**

At a meeting of the Board of Directors, held to-day, a dividend of two and one-half per cent. on the Common Stock for the quarter ended 31st March last, being at the rate of seven per cent. per annum from revenue and three per cent. per annum from interest on the proceeds of land sales and from other extraneous assets, was declared payable on 29th June next to shareholders of record at 1.00 p.m. on 1st June next.

By order of the Board,

W. R. BAKER, Secretary.
Montreal, May 6th, 1912.

**Make a "Thermit Outfit" Part of YOUR Shop
Equipment**

With the "Thermit Process of Welding" it is possible to weld into one solid piece, locomotive frames and other parts that have broken, without having to dismantle the engine or interfere with other work about it.

The repair can be made quickly and yet permanently making the broken part as good as new. We have cited cases where locomotives have been returned to service in twelve working hours and even less after entering the shop.

The leading railroads of the United States, Canada and Mexico, have adopted the "Thermit Process of Welding" and could not afford to be without it.

It is used extensively by the U. S. Navy and the Panama Canal.
It's worth investigating, isn't it.

Write for Pamphlet No 21 N.

NEW 8-FEED DETROIT LUBRICATORS

CANADIAN DETROIT LUBRICATOR COMPANY, LTD.
WINDSOR, ONT.

The new 8-feed Detroit Locomotive Lubricator is used on superheater Mallet compound locomotives. The six outside feeds lead to the high pressure steam chests, the high pressure cylinders and the low pressure steam chests.

The two middle feeds can be used for two air pumps, or for one pump and an intercepting valve or for one pump and a mechanical stoker.

A half turn of the oil control valve permits of all the feeds being started or stopped instantly without disturbing the adjustment of the feed regulating valves. A quarter turn cuts off all but the two middle feeds.

The new Detroit Locomotive Lubricators give greater oil mileage, easier control and better lubrication than any other lubricators on the market. Our circular tells why.

Sales Agents, Taylor & Arnold, Limited, Montreal.

The Ball Watch

A safety appliance for modern railroading—furnishes correct, reliable time for the operating of trains at high speed.

Built strong and simple in 16 and 18 size models and guaranteed to give satisfaction.

"BROWNHOIST" LOCOMOTIVE CRANES

"Brownhoist" Crane Coaling Engine on N. Y., N. H. & H. R. R. from cars on side track.

A RAPID AND ECONOMICAL METHOD of handling coal from car to engine or from car to coal tipple. The crane coals the engine while it is being cleaned on the ashpit. It cleans the pit, placing the ashes into the car. Many roads use the crane to fill the pockets on their coal chutes. Time and money are saved on both of these methods of coaling an engine.

ON CONSTRUCTION WORK the crane is a labor saver. The crane excavates, drives piling with a pile-driver, handles construction material of all kinds, switches the cars, places heavy steel structures, and does all the lifting and moving of material.

AROUND THE SHOP AND YARD the crane handles ALL material. It can be equipped with either grab bucket, bottom block, or lifting magnet. Either one is easily and quickly applied.

"Brownhoist" Cranes are built for hard and continuous service.

SAWS C M C SAWS

CMC No. 621 CAR RIPPING SAW

WE illustrate our latest improved Car Rip Saw, designed for the heaviest class of work and especially suitable for the heavy work of CAR SHOPS and SHIP YARDS.

It is of massive construction throughout. This feature, combined with its improved design, recommends itself to those requiring a heavy saw for hard work.

Two of these machines have just been sold to one of our largest railways for their new car shops.

The Arbor is of large diameter and runs in self-oiling bearings. The table is adjusted vertically by the hand wheel shown. A 32-in. Saw is regularly supplied with the machine.

Bulletins and Prices with full information on request.

Modern Milling Machines

42 in. by 12 in. by 21 inches

Convenience of Operation.
Patent Knee Clamp.
Patent Dial Motion.

When buying Milling Machines it is better to make horse-power the determining factor rather than mere weight, which may be of the "dead" variety. Weight in the right place, when accompanied by sufficient power, is undoubtedly desirable in all machine tools for heavy work, but weight without power is useless, and suggests possibilities of output that cannot be attained in practice.

FAIRBANKS - MORSE

Combined Gasoline Engine and Pump

Our Water Station Equipment will reduce your expenses, such as attendance, maintenance and fuel cost to a minimum. A great advantage in this system, whether for railroads water station or for town waterworks, is the little attendance necessary. A section foreman or a station agent can look over the engine and start it before taking up his other duties.

We contract for complete erection of these tanks and the furnishing of pumping machinery.

Titanium Alloy

Leading chemists and metallurgists recommend that Titanium Alloy be used to purify and strengthen all steel and iron. Their opinions are unbiased and well worth reading. Ask for them.

When properly used, Titanium Alloy has, without a single exception, produced a product of greater durability than could be made from the untreated metal. It is as easy to use as silicon or manganese, and increases the cost of iron only 25 cents and upwards per gross ton of finished product. For Titanium steel, the extra cost ranges from 50 cents to about \$3 per ton.

Titanium alloy is the only alloy that has been successfully used in steel rails. It has made possible high-carbon rails free from brittleness and of unusual durability. The output of Titanium steel to-day is greater than the combined output of all other alloy steels.

CHANGE

*Output of Titanium Steel in 1910 was 326,300 gross tons.
Output of Titanium Steel in 1911 was 410,600 gross tons.*

You will find much interest in our Booklet No. 30. It proves, by facts and figures, that it certainly pays to use and specify our Titanium Alloy.

Titanium Alloy is made for Canadian consumption by Electro Metals, Ltd., Welland, Ont.

The Statement of a Railroad Storekeeper

Here is a report made by Mr. J. P. Murphy, General Storekeeper for the L.S. & M.S.R.R.:—

"In the handling of oils the Bowser System is being used extensively, and with it, at every engine house where it has been installed, we have been able to DECREASE our forces TWO MEN, one night and one day, as it has been entirely possible to have the supply man deliver the oils in addition to his other duties. The pumps are located so the oils and supplies are delivered over the same counter."

The above is copied verbatim from his report to the convention. This shows the economy of the Bowser System under actual working conditions.

Why can't you save the labor of *two men* and maintain absolute accuracy in your oil department?

Marine Oil Storage

There is no place where more scrupulous care should be used than on steam ships, etc., not alone for the sake of cleanliness and economy, but a dirty engine-room is always a constant fire hazard.

Battery of Cut 64'S

The Bowser System has been especially designed for marine use. When desired the pumps are trimmed in polished brass to harmonize with the fittings in the engine-room.

Why not get our literature on this matter and see just how much improvement can be made in handling your oil? Ask for catalogue No. 18.

S. F. Bowser & Co., Inc., Toronto, Ont. 66-68 Frazer Avenue

For twenty-seven years manufacturers of self-measuring oil pumps and tanks, gasoline and oil storage systems, oil filtration and circulating systems, etc.

The Most Remarkable Cab Signal System Ever Devised for Train Operation

THE SIMMEN SYSTEM

THE DISPATCHER OBSERVING MOVEMENT OF HIS TRAIN.

Think of a system of train operation and control by which the dispatcher sits calmly at his desk and

—Can see every move of every train on his road.

—How fast each train is travelling.

—Where it is at any given moment.

—With a single movement of one of his control switches can flash a visible and sound an audible signal right in the cab of the car within a few inches of the driver's face.

—There's more!

—The dispatcher cannot make a mistake and lap two trains on a "meet." His own levers won't let him—they interlock.

—And that's not all!

—Consider what it means for the dispatcher to be able to give a complete "meet" or advance order by a single, simple movement of a control switch. No red tape. No semaphore arms for the driver to see, or perhaps fail to see. No precious minutes wasted. It's all done by the dispatcher in the twinkling of an eye, and the dispatcher cannot make a mistake, as he has before him a constantly moving perforated needle-point record showing the position of the car or train throughout its entire run, and the control switches interlock to prevent "proceed" signals being given to two opposing trains without an intermediate danger or stop signal having first become effective. Every regular train is

reminded of every meet by stop signals displayed in the cab when at a safe distance from the meeting point.

—The dispatcher alone decides whether an extra shall pass a siding or enter it.

—All these advantages are exclusive features of the Simmen System of Railway Signalling.

Has any system of train operation and control ever reached your attention which will half so well safeguard and promote your traffic?

Isn't the Simmen System the real solution of your problem of how to shorten the interval between trains with complete safety?

With all its remarkable features, the Simmen System is one of the simplest railway signalling systems ever devised.

You will agree with this statement when you learn the technical details of its operation and realize its low cost of installation and great economy of maintenance.

It has proved thoroughly successful on the Toronto & York Radial Railway (electric).

Write for complete description of the Simmen System and its operation.

HOW RAILROADS SAVE MONEY BY USING THE TATE FLEXIBLE STAYBOLT

OUR CUSTOMERS REPORT THE FOLLOWING FACTS:

"Locomotives equipped largely with the Tate Flexible Staybolt where bolts are installed properly, have been running over three years with no staybolt breakage, no side sheet cracking, and no engine time lost due to staybolt repairs.

The saving of time incidental to taking like engines out of service for the purpose of renewing broken rigid staybolts, more than pays for the flexible staybolt investment regardless of the cost necessitated by reason of dismantling and reassembling a large portion of the back end covering and boiler attachments, in order to remove and renew broken rigid staybolts, an item which in the aggregate is too large to be overlooked and should be eliminated."

We have always said and now claim with assurance, that if provision is made for flexible connections to firebox by the use of the Tate Flexible Staybolt in locations where expansion is greatest, and the Tate Bolts are adjusted to allow for the difference of expansion between the outer shell and firebox, from the cold to the hot state, staybolt breakage, fire sheet cracking, flue and seam leakage, will be largely, if not entirely overcome, thereby raising the earning value and lowering the cost of maintenance of the locomotive as an earning factor.

This is all being accomplished by customers who first took up the Tate Flexible Staybolt and gave it careful consideration.

MADE FILES

Never Vary in Quality and Temper

This unvarying quality and temper is due to the specially made steel, special machinery, special methods and the work of wide experienced workmen.

On account of the keen cutting teeth of the Nicholson-Made File, a mechanic can turn out work of better quality and in greater quantity, in less time, than with any other file on the market.

No matter what grade of work you handle, there is a Nicholson-Made File that will meet your requirements and give you the best of satisfaction.

If you want to get full value for money invested, buy a Nicholson-Made File. It is guaranteed good service.

Nicholson-Made Brands manufactured in Canada are:—

JONES' NEW AD.

Telling How the New Shoe is Built Up and the Satisfactory Results

The Body of the Shoe is a medium hard gray iron, poured hot, low in silica and of fine granular structure. The combined and graphitic carbons in this iron are evenly balanced. No chilled metal or freak chemical mixtures.

With these Results : Cast iron has a greater co-efficient of friction than chilled end or insert shoes. (Under 10,000 lbs. shoe pressure 9.7 rise — 7.8 in. last 15 feet.) When desired, however, chilled blocks can be used. The life of your tires is increased; the new shoe does not score the tire, but gives longer service without undue tire wear. Hardness approximately 275 of the Brinnell scale. Shoe loss, 1.5 lbs. per 100,000,000 foot pounds of work on chilled iron wheel.

The two Steel Reinforcements which run the length of the shoe are convex and curved in. The back is greatly strengthened at the centre—the point of greatest stress—by the extension of the steel to form the lug.

Eight per cent. additional breaking strength results from this strong reinforcement, which

becomes one piece with the body of the shoe, bonding it together at every point in such a way as to permit the iron body to wear to extreme thinness without danger or breakage.

The Steel Lug which is a projection of the back is unbreakable—fits accurately and uniformly and is applied easily. No rough or cracked castings to give trouble.

A Marked Advance in Foundry Practice

The Canadian Brake Shoe is the last word in shoe construction: 20 per cent. cheaper to punch and mould than any other.

And a Money Saver

The original saving in weight gives you as many shoes in 19 tons of Canadian Brake Shoes as in 20 tons of other steel back shoes and 24 tons of cast iron shoes, and you get more wear per shoe. Your scrap-heap will not be filled with half-worn, broken or discarded shoes. This means money saved.

The Unbreakable Shoe with the Two Steel Backs.

July, 1912.

The June Railway Mechanical Conventions at Atlantic City.

The two great railway conventions of the year, the Master Car Builders' Association and the American Railway Master Mechanics' Association, were held at Atlantic City, N.J., the former on June 12 to 14, and the latter on June 17 to 19. The most important features of these annual conventions are the reports of the standing and special committees, the principal ones of which are given on this and following pages, either in full or in abstract:—

The Maintenance of Superheater Locomotives.

The Master Mechanics' Committee, R. D. Smith, Superintendent of Motive Power and Rolling Stock, Boston and Albany Rd., chairman, and of which H. H. Vaughan, Assistant to the Vice President, C.P.R., is a member, reported as follows:—

Your committee was instructed to consider and report on: The best metal for cylinder and steam chest bushings; the best metal for valve and piston rings; the best means of lubricating superheater locomotives.

In order to obtain as much data as possible upon which to base its report, the committee issued a circular of inquiry to the members; the different questions and an outline of replies received being as follows:

The total number of superheater locomotives in service on the railways answering our circular is 2,222, of which 1,748 are of the fire-tube type and 474 of the smoke-box type. So far as the committee is able to ascertain, there are about 2,500 superheater locomotives of the fire-tube type now operating in the United States and Canada, so that the replies represent 70% of the total number of locomotives now in service, using highly superheated steam. This is an exceptionally large percentage and indicates the great interest taken in the use of superheated steam on American railways. In addition to the 36 railways mentioned, replies were received from a number of roads stating their experience had been so limited they did not feel justified in answering the circular.

The following types of superheaters are in use on the railways replying to the circular: Schmidt, Cole, Emerson, Vaughan-Horsey, Baldwin, Jacobs and Vaclain. Of these types, the first four are fire-tube superheaters and the other three smoke-box superheaters.

The results are not based on any particular type of locomotive, as many different classes or types were reported as having superheaters, among which are Pacifics, Consolidations, Mallets, Prairie, Mikado, Mountain and 10-wheelers.

Superheater locomotives have been operating on American railways for 11 years, but most of the 36 roads referred to have been operating them for at least one year.

As might be expected, the steam pressures and degrees of superheat vary considerably on the various types of locomotives on different roads, the maximum steam pressure being 220 lbs. per sq. in., and the minimum 150 lbs. per sq. in. The degrees of superheat, that is, the excess in temperature of

superheated steam over the temperature of saturated steam at same pressure, varies from 100° to 250° F. for fire-tube superheaters and from 10° to 65° F. for smoke-box superheaters. The temperature of superheated steam as used in locomotives rarely exceeds 600° F.

Twelve roads reported that cylinder and steam-chest bushings on superheater locomotives wear out more rapidly than on locomotives of the same classes using saturated steam, and 20 roads replied that there is no perceptible difference in the wear of cylinder and steam-chest bushings between locomotives using superheated steam, as now operated, and those using saturated steam. All roads reporting more rapid wear on superheated steam than on saturated steam locomotives have superheaters of the fire-tube type, giving a high degree of superheat, but all roads having superheaters of this type do not report more rapid wear of bushings.

Fourteen railways report that valve-packing rings of superheater locomotives wear out more rapidly than those of saturated steam locomotives of the same classes, and 17 roads state there is no appreciable difference between the wear of the rings on superheater locomotives as now operated and those of saturated steam locomotives.

Sixteen roads report they have found Hunt-Spiller gun iron the best metal for cylinder and steam-chest bushings, and one other road intends to use this iron for cylinder and steam-chest bushings of new locomotives. Nine roads state they are using grey iron for bushings, three roads use the same metal for the bushings of superheater locomotives as is used for saturated-steam locomotives, and one road is undecided as to the best metal.

All the roads favoring the use of Hunt-Spiller gun iron for bushings also favor its use for piston and valve packing rings, and two other roads report using this material for rings but do not use it for bushings.

The ordinary "L" type of spring packing ring is used for valve packing on practically all the railways, and most of them use the ordinary rectangular section rings for piston packing.

Have you used and do you favor the use of packing rings having equalizing holes drilled radially through packing rings to eliminate pressure caused by steam leaking under them? The object of this question was to learn whether any American railroads had adopted packing rings having equalizing holes drilled radially through the ring. Of 36 roads replying, there are but four which have used this type of packing ring and the replies indicate there is no particular benefit to be derived from such a design.

The use of piston rod or valve stem extensions is so closely allied to the consideration of the wear of cylinder and steam-chest bushings, we thought it advisable to include this question in our circular. Replies also placed us in position to better understand conditions under which superheater locomotives are operating. Eighteen roads use piston-rod extensions and 12 use valve-stem

using piston-rod extensions are eliminating them.

Eight roads favor the use of piston-rod extensions, nine favor the use of valve-stem extensions, and six advocate the use of piston-rod extensions on superheater locomotives having large and heavy pistons. Eleven roads are opposed to the use of either piston-rod or valve-stem extensions and two are undecided as to their desirability.

Twenty-three roads report there is no unusual difficulty in properly lubricating the cylinders and steam chests of superheater locomotives as they are now operating. Five roads report it is difficult to properly lubricate superheater locomotives, and three state that trouble was experienced at first, but the use of a different grade of oil has overcome the trouble. One road using balance slide valve states it is difficult to properly lubricate the valve, but no difficulty is encountered in lubricating the cylinders. Reports indicate it is no more difficult to lubricate locomotives with smoke-box superheaters than to lubricate the ordinary saturated steam locomotive.

Twenty-nine roads report using hydrostatic feed lubricators with entirely satisfactory results. There is but one road using mechanical feed lubricator exclusively. Of the roads now using hydrostatic lubricators, four had formerly tried mechanical feed lubricators. The advantages of the hydrostatic lubricator are its reliability, simplicity of construction and ease of regulation as compared with the considerable number of moving parts of mechanical feed lubricators and the tendency of the latter to wear and get out of order.

Atomizers are used on three roads to deliver oil to steam chest of superheater locomotives and results are reported as satisfactory, but we are of the opinion that without atomizers, when the oil is discharged into the steam passageway above the entrance to the steam chest it is partially atomized, which would seem to be desirable. Replies indicate no advantage is derived from the use of an atomizer.

There are a number of different arrangements of oil pipes on superheater locomotives which may be divided as follows: The most common arrangement is that in which the oil is delivered at the centre of steam chest and at the centre of cylinder. Another arrangement is that in which the oil is discharged into the steam passageway above the entrance to the steam chest, with an independent connection to the centre of the cylinder. Some roads use oil connections to both ends of the steam chest, with an independent connection to the centre of the cylinder. A common arrangement, and one that is growing in favor, has a connection which discharges oil into the steam passageway only. It is claimed that the oil is thoroughly mingled with and distributed by the steam. A few roads report having oil connections to the centre of the steam chests only.

Twenty roads consider it necessary to lubricate the cylinders of superheater locomotives independent of the steam chest, eight roads that it is unnecessary and two are undecided.

From replies received and from the experience of members of your committee, there seems to be no doubt that an oil connection into steam passageway only, near entrance to steam chest, is the best arrangement for obtaining satisfactory lubrication. It reduces the number of feeds to a minimum and furnishes sufficient oil to valves and cylinders.

The allowance of valve oil per 100 miles for superheater locomotives varies according to type and service. The maximum allowance reported for Pacific type locomotives with fire-tube superheaters is 3.25 pints per 100 miles and the minimum 1.25 pints, the average allowance being 2.25 pints. For consolidation locomotives with fire-tube superheaters, the allowance of oil varies from 2.50 pints to 1.25 pints, the average being 1.75 pints per 100 miles. The average allowance of oil for Mikado locomotives with fire-tube superheaters is 4 pints and the allowance for Mallets is about 6 pints per 100 miles.

Answers indicate that the allowance of valve oil for superheated steam locomotives varies in about the same proportion as for saturated steam locomotives, according to type and service. It is customary to allow about 45% more oil for the fire-tube superheaters than for saturated steam locomotives, while locomotives with smoke-box superheaters usually have the same allowance of oil as saturated steam locomotives.

Twelve roads report using special superheater oil exclusively on superheater locomotives and 13 roads report using the ordinary grade of valve oil, but all the roads using superheater oil report it is more satisfactory, and tests which have been made of the two kinds of oil, on superheater locomotives, bear out this statement.

None of the roads report the admission of steam automatically to the cylinders when drifting, but 12 roads report good results from keeping the throttle slightly open when engine is drifting, and this practice seems to meet with most general approval.

Answers show that the use of vacuum valves on superheater locomotives is quite general on American railways, as 23 roads report their use gives satisfactory results and five report using bypass valves.

There are a number of different makes of metallic piston-rod packing in use on superheater locomotives, all reported as giving satisfactory service. In general, the same types are used as on saturated steam locomotives, the principal difference, if any, being in the composition of the rings. The chemical composition of the rings is in most cases unknown to the railways, the rings being purchased in finished state from the manufacturers. Where reports are given, a mixture of 80% lead on 20% antimony has been used with several makes of packing. Some roads have tried a mixture containing a small percentage of tin, but this has been found unsatisfactory. A widely different mixture containing approximately one-half copper and one-half lead has given exceedingly good results, but is expensive. In general, the preferable composition for packing rings is still largely a matter of experiment.

The committee received a great many suggestions and much information that is embodied in the report. The replies were so general as to indicate that this is a very live subject, and the committee feels that a report based on replies from such a large number of railways may be considered as representing conditions prevailing on practically all the railways in the country.

SUMMARY.—An analysis of the replies indicates that the results obtained from superheater locomotives have been very satisfactory. It is interesting to note that five years ago there were less than

a dozen superheater locomotives operating in the United States, whereas at the present time there are about 2,500 in the U.S. and Canada having fire-tube superheaters.

Minor difficulties have been experienced on a number of railways, but the great advantages to be derived from the use of superheated steam, such as increased economy of coal and water, increased power, due to the absence of cylinder condensation, the permissible reduction of steam pressure combined with the use of larger cylinders—all obtained without material increase in the size or weight of boiler—leads us to believe that the use of superheated steam in locomotives will increase rapidly. This being so, it is of great importance to determine the metal best suited for use for bushings and packing rings on modern superheater locomotives, because the use of highly superheated steam increases the difficulty of obtaining proper lubrication, and thus the metal is subjected to more severe working conditions than are usually found with saturated steam locomotives. It is also important that we know the best means of securing proper lubrication because the efficiency of lubrication has a direct bearing on the life of bushings and packing rings. A metal suitable for use as cylinder and steam-chest bushings of superheater locomotives should be homogeneous, close grained, tough and of good wearing quality, combined with sufficient strength. It should be tough in order to resist wear, but at the same time it must be of such composition that it can be readily machined.

Replies to the circular indicate that Hunt-Spiller gun iron has been used on many railways with excellent results. This is stated to be an air-furnace charcoal iron, and the process of manufacture, combined with proper chemical composition, seems to result in a metal which is well adapted for use with highly superheated steam. The analysis of this iron, obtained by your committee, is as follows:

Silicon	1.40	per cent.
Phosphorus	0.35	"
Sulphur	0.07	"
Manganese	0.49	"
Combined carbon	0.80	"
Graphite carbon	2.20	"

Replies indicate that this same iron has been used extensively for piston and valve packing rings on superheater locomotives with very satisfactory results and that an iron of this character is the best metal so far produced for piston and valve packing rings of superheater locomotives.

The importance of properly lubricating cylinders and steam chests of superheater locomotives, especially those using a high degree of superheat, can hardly be overestimated, because if proper lubrication is not obtained, many of the advantages derived from the use of superheated steam are offset by continual troubles from excessive cutting of bushings and packing rings, which keep the engine in the engine house when its proper place is on the road.

There seems to be a tendency to use too much oil in superheater locomotives, with the result that there is trouble from the oil carbonizing on the cylinder heads, pistons and steam passages. The deposit of carbon also tends to diminish the life of the metallic piston-rod packing, as it builds up in the stuffing boxes and under the vibrating cups to such an extent that the packing in a short time is forced to carry a part of the weight of the piston rod and piston head.

On certain classes of locomotives, possibly those having pistons exceeding 24-in. diameter, it is considered by some advisable to lubricate the cylinder independent of the steam chest, but in most cases we believe better results will be obtained by eliminating the connec-

tion to the cylinders and delivering the oil to the steam passageway.

We do not approve of the arrangement of oil pipes in which the oil is delivered near the end of the steam chest, as in this case it is probable that part of the oil is lost in the exhaust, due to the difference in pressure between the live and exhaust steam. A number of roads report that when superheater locomotives were received from the builders oil was delivered to both ends of the steam chest and to the centre of the top of the cylinder; but this arrangement has since been changed so that the oil is now delivered into the steam passageway above the entrance to the steam chest, and the feed to the cylinder has been discontinued. The allowance of oil has also been reduced and it has been found that the locomotives are much better lubricated than formerly and there is a marked diminution in the quantity of oil adhering to the cylinder heads, piston heads and steam passages.

There can be no doubt of the advisability of using a good grade of mineral oil having a high flash point, for locomotives using highly superheated steam, because the temperature of the superheated steam is sometimes as high as 600° F. A number of the roads state they have used valve oil having a flash point of about 520° and also special superheater oil having a flash point of at least 585°, and in every case better results have been obtained from the oil having the higher flash point.

Tests have shown that a moderately high temperature has very little effect on the lubricating properties of a good grade of valve oil when the oil is protected by steam, but when the engine is drifting there is, in most cases, no steam in the cylinders, and the bushings are apt to become hot. There does, however, appear to be a difference in the results obtained on superheater and saturated-steam locomotives. When drifting the conditions are the same on both, but on saturated-steam locomotives the oil deposit on the cylinders is fluid and the condition of the oil does not appear to have changed; while on superheater locomotives the deposit is gummy and sticky to the touch. This difference may possibly account to a large degree for the rapid wear of piston rings and bushings occasionally experienced on superheater locomotives.

When an engine is drifting a good deal with a closed throttle, there is a considerable vacuum in the cylinders and steam chests, and cinders may be drawn through the exhaust and dirt through the relief valves. This dirt may adhere to the gummy oil on the cylinder walls and convert them into a lap which will wear away the packing rings and piston heads very rapidly. This theory explains the good results obtained on locomotives where the drifting throttle has been carefully used and is supported by analyses of the deposit found on the cylinders, which show the presence of cinders and dirt in considerable quantities. The remedy is obviously to obtain a quality of oil that does not make a deposit of this nature at the temperature to which it is exposed, and to provide means either by ample vacuum or by-pass valves, or by the admission of steam to prevent over-heating when drifting.

Many roads use a tandem type of metallic packing on account of the importance of preventing the blowing out of the lubricating oil, which might result in the cutting of the cylinder bushings. During the past year or two, several alloys have been tried that have given satisfactory results, and while the preferable mixture will vary with the type of packing employed, this question is not now a serious one. It is important to use a type of piston-rod packing which will stand up under the high temperature met with in the use of super-

heated steam, and considerable trouble has been experienced with packing that had proven satisfactory with saturated steam when this point had not been attended to. The melting point of the packing rings should be higher than the melting point of rings usually found on saturated-steam locomotives.

In conclusion, your committee feels that, in order to insure satisfactory results in the operation of superheater locomotives, it is of the utmost importance not only to use the best metals for parts subjected to the action of superheated steam, but it is also important to take all reasonable precautions to obtain proper lubrication.

When superheater locomotives were first placed in operation it was to be expected that certain difficulties would be experienced, but these difficulties have been overcome one by one and we believe that at the present time, with reasonable care in operation and with proper attention on the part of engine-house forces, superheater locomotives will be no more difficult to maintain than saturated-steam locomotives of the same classes.

Report of Committee on Rules for Loading Materials.

The Master Car Builders' Committee, A. Kearney, Assistant Superintendent of Motive Power, Norfolk and Western Ry., Roanoke, Va., chairman, reported as follows:—

Your committee wishes to report the following recommendations for changes in the present code of rules for loading materials. The modifications, in the main, have reference to reductions in amount of material required to build up loads, having due regard for the safety of cars as well as lading in transit. We have during the past year collected a good deal of information from railways and shippers in connection with the several suggestions we are recommending, some of this information coming to us quite recently.

First, we would direct attention to rule 6, and with particular reference to its apparent conflict with American Railway Association rule 15, some allusion to which was made in our report of 1910. Your committee has had a great deal of correspondence during the past year concerning this particular subject, no doubt mainly brought about by the insertion of the second paragraph of rule 6, which was effected in 1911 on the strength of an interpretation given us by the American Railway Association.

In our 1910 report we stated that the question concerning the apparent conflict between M.C.B. rule for loading materials and American Railway Association rule 15 was first brought up by Mr. Delano, then president of the American Railway Association, who suggested some modification in the rule to make it harmonize with rule 15 of the American Railway Association. Mr. Delano suggested that rule 6 of the rules for loading materials be modified to conform to the principle of run, repair or transfer, in order to increase the movement of cars in interchange. The specific point in rule 6 was its apparent conflict with American Railway Association rule 15, paragraph D, showing the conditions for which the receiving road should pay cost of transfer, the paragraph reading as follows—"The receiving road shall pay cost of transfer or rearrangement: (d) When cars exceed load limit or cannot pass clearances or be moved through on account of any other disability of receiving line."

After the presentation of the 1911 report your committee recommended to the arbitration committee the acceptance of the last suggestion offered by the American Railway Association, which was to add the following paragraph to rule 6:—"Should it become necessary to

transfer or rearrange the lading in transit on account of excess width or height of lading, see American Railway Association Car Service rule 15, paragraph D."

This was done under the impression that the supplement would remove the apparent conflict, still leaving rule 6 in such shape as to allow the shippers to build up loads within reasonable limits, without infringing upon the principle involved in American Railway Association rule 15.

The application of the second paragraph or added portion of rule 6 soon demonstrated the wisdom of the rule as it originally stood prior to the change last year, which required that the load be built up with reference to the clearances of the roads over which the lading is routed. In the light of this development the General Managers' Association of New York, at their meeting held there, 1911, concluded to suggest to the American Railway Association certain modifications to American Railway Association rule 15, having further in mind that in the event of the American Railway Association adopting such changes the Master Car Builders should be requested to modify rule 6 for loading materials, erasing therefrom that portion of the rule which was added in 1911, which would leave the rule practically in its original shape. Your committee has no further reference to make relative to rule 6 until the matter is disposed of by the American Railway Association.

RULE 10.—Wooden cars of light capacity when used as idlers between cars of heavier capacity are liable to break down when placed in a train composed of heavier capacity cars, in case of sudden stops or emergency application of the brakes; a paragraph, therefore, should be added to rule 10 reading as follows:—"If the idler is a flat car of wooden construction, its capacity must be not less than that of the carrying cars."

RULE 11.—Change "for" to "from" following "inches" in the middle line of the last paragraph of this rule, which would make the last paragraph read as follows:—"For loads of greater height than 12 ft., subtract 2 ins. from given width (w) of load for every inch of height in excess of 12 ft."

RULE 23.—The first sentence of this rule should be changed to read as follows, so as to also cover the placing of sliding as well as bearing pieces:—"Bearing and sliding pieces must never be placed between bolster and end of car, unless special provision is made therefor in detail instructions."

RULE 43.—This should be changed to read as follows:—"The lading overhanging the idler, figs. 6 and 7, must be governed by restrictions contained in general rule 11, so that overhang will not exceed clearances in curving."

RULE 45.—The last portion of this rule should be changed to read as follows:—"Where the pile of lumber on the idler exceeds 20 ft. in length, four stakes on each side must be used, three on each side being sufficient for shorter piles to conform to rule 34." This would make the new rule read as follows:—"The five stakes on each side of the carrying car should be placed as near the bolsters as possible, and no stakes whatever should be used on the idler to confine the overhanging part. The only stakes permitted on the idler will be such as may be required for the short lumber loaded on the idler. Where the pile of lumber on the idler exceeds 20 ft. in length, four stakes on each side must be used, three on each side being sufficient for shorter piles to conform to rule 34. All stakes should be fastened as shown in figs. 6 and 7, and as provided for in rules 12, 13, 34, 35 and 36."

RULE 55.—We find that some of the Canadian roads have flat cars equipped with permanent chains and short stakes,

which are used for the handling of logs, and having ascertained that logs loaded on these cars with this method of binding the lading are safe, we would recommend the addition of the following note immediately after rule 55 so as to allow the use of this equipment for handling the material in question. It would be proper to mention that this subject came up last year, too late to be presented in our report. The subject was put before the executive committee, but was laid on the table. "Logs loaded in accordance with fig. 14, secured by means of permanent short stakes and chains in lieu of the specified staking and wiring will be acceptable."

RULES 56 AND 57.—These two rules should refer to flat as well as low-sided gondola cars, and, therefore, should be changed to read as follows:—

"**RULE 56.**—When material of this kind is loaded on flat or gondola cars with sides less than 30 ins. high, and lading does not exceed 4 ft. in height measured from floor, and the lading is not loaded in pyramidal form, the stakes must be as high as the lading and must be tied together at the top with not less than eight strands equal to four wrappings of good $\frac{1}{8}$ in. diameter wire, and must be tight. Stakes must be sound hardwood, free from knots and of the dimensions specified in general rule 12."

"**RULE 57.**—If the material is loaded on flat cars or gondola cars with sides less than 30 ins. high, to a height more than 4 ft. measured from floor, opposite stakes must be bound together with wire at about one-third of the height above car floor after one-third of the load has been placed on the car, and in such a manner that when the remaining load is placed on the car the wire will have a tendency to draw the tops of the stakes toward each other. The middle as well as the top wrappings of wire must consist of not less than 10 strands equal to five wrappings of good $\frac{1}{8}$ -in. diameter wire and must be tight. Bearing pieces may be placed between the lower and upper sections of load to facilitate application of wire after all the lading has been placed on the car. See

Fig. 15.—Loading of Logs, Piling Props and Telegraph Poles on Flat Cars.

fig. 15. Stakes must be sound hardwood free from knots and of the dimensions specified in general rule 12. Stakes must incline toward centre of car a total of about 12 ins. before load is placed on car, and in no case will they be allowed to incline away from centre of car after the car is loaded. The inspector must assure himself that all wiring is tight before load is moved."

RULE 58.—Insert the figures "4½" just preceding the word "live" toward end of fourth line, which will then show size of saplings, making the first sentence read as follows:—"When lading is placed inside of a single gondola car with sides 30 ins. high or over and load projects above car sides, not less than three pairs 4 by 4 hardwood stakes or three pairs of 4½-in. live saplings should be well secured to either side of lading on inside of car for piling or props 20 ft. or less in length."

Also add the following paragraph to this rule:—"When lading is in two piles not over 20 ft. in length and ends of piles are interlaced at centre of car as per figs. 15-A and 15-C, there must be not less than five pairs of stakes for total length of load. If the length exceeds 20 ft. as per figs. 15-B and 15-D, there must

be not less than six pairs of stakes for total length of load. The ends of poles

Figs. 15A-D—Loading of Logs, Piling, Props and Telegraph Poles in Two Piles on Flat and Low Gondola Cars.

must extend not less than 18 ins. beyond the centre stake."

RULE 81.—Some suggestions have been made with reference to handling twin loads of flexible material where the shipment is light and can be handled safely without the use of blocking prescribed for full loads, and in order to make this entirely clear, the following paragraphs should be added to this rule:—

"81-A. If the total weight per bolster, figs. 32 and 33, does not exceed 10,000 lbs., the centre post and bolster cross braces may be omitted, provided the bearing piece is not less than 8 x 10 ins.

"81-B. For twin loads of plates with two bearing pieces and two or four sliding pieces, if the total weight does not exceed 20,000 lbs., or 10,000 lbs. per bearing piece, the centre post and bolster cross braces may be omitted, providing the bearing pieces are not less than 8 by 10 ins.

"81-C. For loads less in weight than those specified in paragraphs A and B, the dimensions of bearing pieces may be proportionately reduced as per rule 29."

RULE 98 A.—Add the word "cars" after the word "hoppers" in the first line last paragraph, which would make this paragraph read as follows:—"When hopper cars or self-cleaning hopper cars are selected the doors must be securely boarded over as per fig. 45-D."

RULE 103.—In order to bring the weight of the lading nearer to the allowable limit for double and triple loads, the following paragraph should be added to provide that girders, either of the solid or latticed type, ranging from 10,-

000 to 30,000 lbs. each in weight, shall be so arranged that two or more can be loaded side by side on pivoted bolsters:—"Two or more girders may be loaded vertically, side by side, provided they are bolted together near pivoted bolsters, with proper spacing pieces between them, in such a manner that they act as one girder."

FIG. 56.—It is claimed that the method of loading pipe 24 ins. or more in diameter on a flat car in accordance with

Fig. 56—Loading of Pipe on Flat Cars.

the present figure is wrong on account of there being no provision for holding the second and top tiers of pipe from sliding off endwise. Pipe of this description should be loaded with the bell ends toward the centre of car the bell ends of the second tier overlapping the first toward centre of car. There should be at least 18 ins. clearance between the bell ends of the top tier and when loaded in this manner the end blocking is not required, therefore fig. 56 should be changed accordingly.

RULE 121.—Due to objection on the part of shippers to the size of blocking now specified, and due also to the fact that blocking of smaller dimensions can be used without interfering with the safe movement of boiler shells and tanks this rule should be changed to read as follows:—"Lading of this description, 8 ft. or less in diameter, when loaded on single flat or gondola cars, should be substantially chocked with side blocking in height equal to one-seventh the diameter of the shell, providing that blocking of more than 10 inches in height will not be required. End blocking to be not less than 4 ins. in height. See fig. 64-A."

Fig. 64A—Loading Boiler Shells and Tanks 8 ft. or less in Diameter.

"Lading over 8 ft. in diameter, when loaded on single flat or gondola cars with sides less than 30 ins. in height, must be substantially chocked with side blocking not less than 10 ins. in height

Fig. 64B—Loading Boiler Shells and Tanks over 8 ft. in Diameter.

and backed up by the use of stakes in the stake pockets, and in addition to this must be secured with two bands of not less than 3/4 in. round iron or flat bands of equal section. End blocking to be not less than 4 ins. in height. See fig. 64-B."

"When loaded in gondola cars with sides 30 ins. or over in height, the bands will be unnecessary, but precaution with reference to blocking must be taken as specified for lading 8 ft. in diameter."

"When such lading is placed upon two or more cars as a tandem shipment, it should be secured with two bands of not less than 7/8 in. round iron or flat bands of equal section, in addition to the prescribed blocking."

"Steel tanks, lined or unlined, in sections weighing not over 2,500 lbs. per section, 8 ft. or less in diameter, when loaded on single flat or gondola cars, must be substantially chocked on each side with blocks not less than 6 inches in height and of sufficient length and width so that they may be securely spiked to the floor of the car. End blocking to be not less than 4 ins. in height and of sufficient length to provide for proper bearing area against head of tank or shell, and to be securely spiked to the floor of the car. If more than 8 ft. in diameter the same side and end chocking is to be used, and, in addition, each tank or part of tank must be secured with two bands not less than 1/2 by 2 ins. in section passing over the top and properly secured to the floor or stake pockets of the car. In lieu of the bands over the top of the shell the same may be secured to the floor of the car or stake pockets by straps of 3/4 in. round iron or equal section, bolted to the flange of the tank or shell with not less than two bolts, the lower end of the strap passing through the floor or stake pocket. See fig. 64-C."

Fig. 64C—Loading Sections of Boilers, Tanks or Shells over 8 ft. in Diameter, Weighing less than 2,500 lbs. per Section.

The heading "Rules Governing the Loading of Mounted Wheels on Open Cars," should be inserted immediately following rule 122, and new rule 122-A should be added to the code to cover the shipment of mounted wheels on flat cars, as follows:—"122-A—Mounted wheels may be loaded on flat cars as shown by figs. 66-B and 66-C. If fig. 66-B is followed, the end blocking must be

Fig. 66B—Loading Mounted Wheels on Open Cars.

not less than 8 by 8 ins. in section in one piece, or made up of two pieces of hardwood of equivalent section and secured by end stakes in addition to bolts through floor, or by separate blocking pieces secured to floor and end sill with

Fig. 66C—Loading Mounted Wheels on Open Cars.

3/4 in. bolts. In addition to this, for a full load, five pair of wheels must be secured by 2 by 4 in. hardwood braces as shown, spiked to floor of car."

"If fig. 66-C is followed, three pairs of wheels at either end of load are to be

ried together, using $\frac{3}{4}$ in. rods with clamp plates or $\frac{3}{4}$ in. U rod and plate as shown, and blocking at ends and along sides of hardwood not less than 4 by 8 ins., joined and bolted to car floor by either of the methods shown in fig. 66-C."

The two new figures referred to in new rule 122-A should be inserted in the code, immediately following fig. 66 and ahead of fig. 66-A.

RULE 124.—We have had some correspondence in reference to some modifications in the latter part of this rule, referring to the necessity for protection strips being placed in the door openings on cars not equipped with doors, where such cars are loaded with a commodity requiring that the door openings be protected. As the rule now reads, the lading must be protected by placing strips or slab wood, whether the lading does or does not require it; hence, we felt that some latitude might be given the shipper, and therefore wish to add after the words in the second sentence, "cars without doors," the words, "and containing freight of a character requiring it." This would make the second sentence of rule 124 read as follows:—"Cars without doors, and containing freight of a character requiring it, must

Report of Committee on Main and Side Rods

The Master Mechanics Committee, W. F. Kiesel, Jr., Assistant Mechanical Engineer, Pennsylvania Rd., Altoona, Pa., Chairman, reported as follows:—

A year ago a progress report was submitted, and criticisms and suggestions requested. Your committee has received none, and therefore assumes that the members are satisfied with the formulæ as they stand.

Checking Formulæ

All measurements in inches and pounds.

A=Area of section considered

a=Width of section considered

b=Depth of section considered.

C₁=Maximum compression unit stress for traverse bending.

C₂=Maximum compression unit stress for vertical bending.

C=C₁-C₂=Coefficients.

d=Cylinder diameter.

L=Length of rod from centre to centre of pins.

M=Bending moment.

P=Maximum compression strain acting at the end of rod

p=Maximum boiler pressure

Q=Cylinder pressure=0.7854 d²p.

R=Radius of driving wheels

r=Radius of crank.

Standard Main and Side Rod Ends.

have the lading protected from falling or rolling out of the car by strips or slab wood, not less than 1½ in. thick at centre, nailed to inside of door posts, and sufficiently close to floor of car and to each other to prevent lading from passing between them."

We have also had a great deal of correspondence recently in reference to the subject of proper method of loading triple loads of long flexible material (angle irons and plates) as specifically referred to in paragraph 15-E on pg. 10. It is a fact, if such lading is built up in accordance with the present prescribed practice, and the load bears on the sliding pieces on the centre car, there is some danger of upsetting the car on account of the lading shifting or sliding toward the outer edge in going round a curve, and by its bearing rather heavily at this particular point would contribute to the greatest liability of derailment. Still, we do not feel that we have as yet obtained sufficient data or information along this line to warrant changing the present practice or adding any additional rules to the code, it being our idea that such shipments for the present should be handled under special instructions until we have an opportunity to further study the subject with a view of ascertaining the best and safest practice for shipment of such material.

RG=Radius of gyration of section—axis horizontal.

rg=Radius of gyration of section—axis vertical.

S=Stress. Where used in formulæ must not exceed one-sixth of ultimate strength of the steel.

s=Horizontal offset in rod.

SM=Section modulus of section considered—axis horizontal.

sm=Section modulus of section considered—axis vertical.

W=Weight on pairs of drivers actuated through rod considered.

Main rod area must not be less than P÷10000 lbs.

For main rods, P=Q.

For side rods, P=0.3WR

To determine C₁ and C₂, calculation should be based on a section half way between rod pins.

For transverse bending in rods having knuckle pins flexible transversely,

$$C_1 = \frac{P}{A} \frac{1}{1 - \frac{30000000 A r g^2}{P L^2}}$$

For all other rods,

$$C_1 = \frac{P}{A} \frac{1}{1 - \frac{120000000 A r g^2}{P L^2}}$$

For vertical bending in all rods,

$$C_2 = \frac{P}{A} \frac{1}{1 - \frac{300000000 A R g^2}{P L^2}}$$

Values for C₁ and C₂ can also be taken from tables in "Kent's Pocket Book" under heading "Merriman's Rational Formula for Columns".

First—

For rods without offset, the larger value of C₁ and C₂ should be taken equal to S.

For rods with offset, the larger value of C₁ + $\frac{P s}{SM}$ and C₂ should be taken equal to S.

Second—

$$S = C \frac{A L^2 r}{SM} + C_1 P \left(\frac{1}{A} + \frac{5}{SM} \right)$$

The calculations should be based on a section located at a distance 0.6L from crosshead pin for main rods, and half way between pins for side rods.

Values of C₁ and C₂

Revs per min = 265 325 375 420

Main Rod C₁=0.036 0.055 0.073 0.091

C₂=0.500 0.500 0.400 0.300

Side Rod C₁=0.071 0.106 0.142 0.177

C₂=0.500 0.500 0.500 0.500

The coefficients selected should correspond with the highest number of revolutions per minute which the locomotive can make.

If this cannot be determined, use 420 R.P.M. for high speed passenger, 375 R.P.M. for pass. and high speed freight, 325 R.P.M. for all other locomotives.

Very simplerules for rods without offset and having bodies with rectangular section, based on the above theory follow.

First—

Stress is less than one-sixth of ultimate strength of the steel if L is less than 46a or 23b, and if A is more than P divided by one-eighth of ultimate strength

Second—

$$S = C_2 \frac{L^2 r}{b} + C_1 \frac{P}{A}$$

Values of C₁ and C₂

Revs per min 265 325 375 420

Main Rod C₁=0.22 0.33 0.44 0.55

C₂=0.50 0.50 0.40 0.30

Side Rod C₁=0.43 0.64 0.85 1.06

C₂=0.50 0.50 0.50 0.50

The allowable stresses for the various sections of rod ends are given in connection with the accompanying diagrams, except where thickness of section is indicated by the letter "b". The figures denote maximum stress allowed under end load P. If the minimum areas of the two members differ, take double the lesser area for A.

The minimum area at points indicated by the letter "b" should be—

For main rods—

$$A = \frac{P X}{30000 b}$$

For side rods—

$$A = \frac{P X}{60000 b}$$

In which X is the average diameter of eye, or average spread of jaw members.

Report of Committee on Mechanical Stokers.

The Master Mechanics' Committee, T. Rumney, Assistant to Vice President, Chicago, Rock Island and Pacific Ry., Chicago, chairman, reported as follows:—

Last year your committee expressed the expectation that this year, judging from the progress which was being made in the development of the mechanical stoker, it would be able to report finally on a few stokers which had then been developed sufficiently to render practically uninterrupted service. Your committee also pointed out that the principal benefit to be derived from the utilization of a perfected stoker fulfil-

ling the requirements specified was the realization of the maximum boiler capacity of locomotives with the ultimate result of increasing their hauling capacity and reducing their cost of operation per ton mile of service rendered.

The actual service performance of two stokers complying with the specifications laid down in last year's report, as developed by extensive enquiry among railways who have heeded your committee's request by lending their aid and installing a limited number upon large locomotives, justifies your committee in now reporting that these two stokers have, in a measure, fulfilled its expectations, inasmuch as the indications are that their service has been sufficiently reliable in practical operation on a large number of heavy locomotives. The stokers are the Crawford underfeed stoker and the Street overfeed stoker.

Both types of stokers in successful service to-day maintain the same general principles in design originally employed. The improvements made on them, which resulted in making their operation practicable, are improvements of detail only, such as would result from the knowledge gained of the weaknesses of individual details brought out by actual service.

The principal benefit to be secured by the application of the mechanical stoker to large locomotives is the realization of the maximum boiler capacity. When three or four years ago the necessity for passenger locomotives and freight locomotives of still greater capacity than those already in service became apparent, they were not generally considered possible without some device to assist in handling the increased quantity of fuel which it was thought these engines would require. The solution of the apparent difficulty, however, was accomplished to a large extent by providing means which reduced the actual fuel requirements of large locomotives. These means are the superheater, the brick arch, improved boiler, better engine proportions, more scientific methods of firing, and better locomotive maintenance. The fact is being more strikingly realized every day that a five per cent. saving in fuel amply warrants the installation of apparatus and the adoption of means which may result in a five per cent. increase in the cost of maintaining motive power.

The net effect of these means as far as the stoker is concerned, in spite of the fact that they tend to increase maintenance expenses, has been to defer, to some extent, the absolute necessity of the stoker as a means on present-day engines to get out of them their maximum capacity. It should not be inferred, however, from this statement that the mechanical stoker does not find application to certain engines in operation to-day especially of the larger Mallet types which are in continuous service on long mountain grades. On the other hand, too, as the greater sustained tractive efforts of the large engine, equipped with superheaters and brick arches, is gradually taken advantage of, its fuel consumption per hour will increase, though decreasing on the ton-mile basis, with the eventual result of possibly making necessary to some extent means, in addition to those already provided, to supply fuel to the engine up to its maximum requirements.

When this condition develops, as it is bound to, by traffic increases, careful investigation of tonnage ratings, and the raising to a higher standard the efficiency of operation, the demand for a perfected type of mechanical stoker will become more acute than ever. It is, perhaps, somewhat of a good fortune that the superheater has stepped in and tided over the difficulty that would have resulted while the stoker was in process of development and the demand for large engines becoming more insistent.

The report then gives a review of the

present status of stokers already called attention to, and a brief description of new stokers under process of development.

Generally speaking, your committee feels justified in concluding that decided progress has been made during the last year in the development of the mechanical stoker. While the perfection of the superheater and the brick arch have assisted in making possible a larger engine, it is considered, judging from these indications, that the advent of the perfected mechanical stoker will make possible a still larger engine.

Report of Committee on Safety Valves.

The Master Mechanics' Committee, W. J. Tollerton, Assistant General Superintendent of Motive Power, Chicago, Rock Island and Pacific Ry., Chicago, chairman, and of which W. D. Robb, Superintendent of Motive Power, Grand Trunk Ry., is a member, reported as follows:—

1. The suggestions given below apply to oil and coal burning locomotives, whether using superheated or saturated steam. Safety valves suitable for the requirements of coal burning locomotives should be ample for those burning oil, inasmuch as the engineers have control of the fire of an oil-burning locomotive to a greater extent than on coal burners.

2. In view of the variation in the various makes of safety valves as regards lift, we feel any formula used for determining the size of safety valves required should take this item into consideration. We do not believe that any change should be made in the formula proposed by the A.R.M.M. committee in 1910, except that the lift and diameter of the valve will be substituted for the area. We, therefore, suggest the following formula, assuming valves have 45 degree seat:—

D.—The total of the actual diameters of the inner edge of the seats of valves required.

H.—Total heating surface of boiler in sq. ft. (Superheating surface not to be included.)

L.—Vertical lift of valve in inches.

P.—Absolute boiler pressure in lbs. per sq. in.

$$D = 0.036 \times \frac{H}{L \times P}$$

EXAMPLE.

$$\frac{0.036 \times 2878}{0.1 \times 200} = 5.2" \text{ diameter}$$

which would require two 3 inch valves.

3. The only accurate method of determining the capacity of safety valves is by actual test in a testing plant, with safety valves fully equipped with springs, as in actual road service. In order that it should be positively known that safety valves will prevent undue raise in pressure under extreme conditions, they should be subjected to a road test.

4. Every locomotive should be equipped with not less than two, and not more than three, safety valves, the size to be determined as per formula in paragraph 2. Safety valves to be set as follows:—

First—Boiler pressure.

Second—Two lbs. in excess.

Third—Three lbs. above second, or five lbs. in excess of first.

5. No metal for valves and valve seats has yet been developed as entirely proof against erosion. Nickel seats and valves are desirable, and an improvement over other metal, but are expensive as to first cost and renewals; therefore, your committee's recommendation is to continue the use of bronze alloys.

6. Manufacturers should be required to stamp on the valve the lift in inches, as determined by actual test, with valve in working condition, and set for a blow-

back of not to exceed 3 lbs. Your committee recognizes the fundamental importance of valve lift. It, therefore, recommends that in design and manufacture valve lift receive proper consideration.

7. Steam discharge from safety valves of given size can be estimated closely by the use of Napier's rule for flow of steam, as follows:—

Flow of steam per second.

Absolute pressure in lbs. per sq. in., multiplied by area in sq. in. of discharge opening, divided by 70.

Multiplied by 3,600 gives flow in lbs. per hour.

8. The location of safety valves has much to do with the normal crest of the water in the boiler; therefore, safety valves should be located at the highest point on the boiler, where clearance limits will permit. In vertical position, avoiding the use of piping, long nipples, and elbows between safety valves and boiler.

9. Where safety valves are located on an independent dome, they should be spaced as per fig. 1. The opening from boiler into dome and the area between

Fig. 1—Location of Safety Valves.

supporting ribs in dome should not be less than inlet area of valves. If this is not done, the opening will momentarily reduce pressure, causing valve to flutter and hammer.

10. The practice of screwing down the safety valve spring during a hydrostatic test of boiler should be discontinued. Valves with springs designed for certain pressures should not be subjected to extreme pressures. One safety valve should be removed and replaced with a special high-pressure valve, and the other valves should be removed and replaced with caps or plugs during test.

11. In order to make valves of different manufacture interchangeable, recommend standard thread and diameter of valves at connections as follows:—

2½ in. safety valve, 2½ in. U.S.S. pipe thread, 8 threads to in.

3 in. safety valve, 3 in. U.S.S. pipe thread, 8 threads to in.

3½ in. safety valve, 3½ in. U.S.S. pipe thread, 8 threads to in.

4 in. safety valve, 4 in. U.S.S. pipe thread, 8 threads to in.

4½ in. safety valve, 4½ in. U.S.S. pipe thread, 8 threads to in.

Value of above dies to be made for U.S.S. wrench, fit 12. As it has been found that the condition of the safety valve springs greatly affects the discharge capacity of the valve, oil springs should be tested as to their deflection under load before being used in repaired valves.

13. Safety valves should be thoroughly overhauled and put in good condition whenever the locomotive is in shop for general repairs. Standard gauges should be used, in order that important dimensions may be maintained as originally designed. If this is not done, it generally impairs the efficiency of the valves.

Report of Committee on Train Lighting and Equipment.

The Master Car Builders' Committee, T. R. Cook, Master Mechanic, Pennsylvania Lines, Wellsville, Ohio, chairman, reported as follows:—

Your committee has gone over carefully the suggestions as to recommended practices given in our report to the 1911 convention, and have also given careful consideration to the various points as brought out by the Association of Railway Electrical Engineers' committee on standards at their 1911 convention, and desire to change our suggestions as to recommended practices given in our report of 1911 to read as follows:—

1. That in electrically lighted cars the following voltages should be used:—

60 volts (nominal) for straight storage, head-end and axle-dynamo systems.

30 volts (nominal) for straight storage and axle-dynamo systems.

2. That each electrically lighted car be provided with a notice giving the following information, and that this notice shall be posted in the switchboard locker.

System.—State whether axle dynamo, straight storage, and if used on head-end system.

Type of generator.

Type of regulator.

Voltage of system.

Ampere hours capacity of battery at 8 hour rate.

Number of sets of battery in parallel.

Nominal charging rate....amps. max. amps.

Size of train line wires—B. & S.

Number of train line wires—(2 or 3).

Capacity of generator amps.

Axle pulley in. diam.

Generator pulley in. diam.

Length of belt ft. in.

Wiring diagram (show location and capacity of fuses).

3. That the rules of fire underwriters shall cover all car wiring.

4. That all wiring under car to the switchboard shall be run in conduits.

5. Standard lamps for car lighting service should be in accordance with dimensions as shown on exhibit L.

6. That where train line connectors are used a connector having dimensions as shown on exhibit A shall be used and located as shown on fig. 1, with connec-

Fig. 1—Location of Connector and Arrangement of Terminals when Facing Car.

(Note: In head-end system, jumper to be placed across negative battery and negative dynamo).

tions to dynamo, battery and jumper as shown on fig. 2.

If only two wires are used they shall be connected to the outside terminals and the female connector on each end

of the car shall be stencilled: "Not for use on head end system."

7. That each electrically lighted car equipped with batteries shall be provided with two charging receptacles with swivel supports, as shown in detail on exhibits B, C and D, installed one on each side of the car as shown on exhibit E, the outside annular ring to be the positive.

8. That each electrically lighted car shall be provided with a switchboard upon which shall be mounted switches, fused switches or terminals. The switches, fuses or terminals to protect and completely disconnect the following parts:—(a) Train line. (b) Battery. (c) Axle dynamo. (d) Circuits for lamps, fans, etc.

The axle dynamo terminals to control the positive and negative armatures and the positive field of the dynamo. Each of the above switches, fuses or terminals to be plainly marked, designating the part controlled, the positive terminal to be on the right side facing the board.

9. Where a main lamp switch is used, or where fuses controlling all lamps are used, they shall be so stencilled in plain letters.

10. The switchboard or regulator panels of electrically lighted cars shall be provided with fuses for the protection of the parts given below and with the type of terminal as specified:—

(A) Train Line.—Terminals for reception of flat fuses shall be provided $2\frac{1}{2}$ ins. between centres; stud or screw to be in. diameter, with threads per inch.

(B) Battery.—Optional. Fuse terminals, if fused, shall be same as for train line.

(C) Main Line Switch.—Optional.

Fig. 2—Connection of Battery to Train Line.

Fuse terminals, if used, shall be same as for train line.

(D) Circuits.—For lamps, fans, etc., fuse shall be of the Edison screw-shell type for both positive and negative.

(E) Axle Generator.—Positive armature fuse terminal; terminals to have N.E.C. code standard 150 amperes knife blade contact clips mounted with 4 in. clearance between clips.

(a) Axle Generator.—Negative armature fuse terminal optional. If used, terminal shall be same as positive.

(b) Axle Generator.—Positive field optional. If used, to have ferrule type clip mounted with 1 in. clear space between clips and to take N.E.C. code standard, 0 to 30 amperes.

Note.—Capacity of fuses, as designated above, to be such as to properly protect the parts in question.

11. That each electrically lighted car equipped with battery box or boxes shall have provided a fuse block, mounted in a suitable metal box at the positive and negative terminals of each set of batteries, and that the fuse block shall be in accordance with the detail as shown on exhibit F, and installed on the car substantially as shown on exhibit E. knife-blade fuses shall be provided with a capacity of between 101 and 200 amperes.

12. That where axle dynamos are used, negative, positive and dynamo field shall be fused as close as possible to the dynamo and prior to the said leads either entering the conduits or being secured to the bottom of the car. The above fuses to be used for emergency service only, and to be at least one hun-

dred per cent. above the capacity of the fuses on the switchboards protecting the same leads.

13. All wires or terminals must be marked for identification.

14. That batteries as a set shall be connected up with a positive pole to the right, facing the car as shown in fig. 2.

15. Where lead storage batteries are used they shall be preferably installed in double compartment tanks substantially as shown on exhibits G, H and I.

16. That where double compartment tanks are used, the connections and arrangements of battery terminals are to be as shown on fig. 3.

Fig. 3—Connection and Arrangement of Terminals in Double-compartment Tray.

(Note: When Westinghouse hand connectors are used, male head to be used for positive, female head for negative terminal).

17. Battery boxes shall have provided in each door a vent, substantially as shown on exhibit K.

18. That a straight pulley seat be provided for the axle pulley. That if a bushing or sleeve be used, it should preferably be secured to the axle, independent of the pulley. Bushing to have an external diameter of $7\frac{1}{2}$ ins., and to be $8\frac{1}{2}$ ins. long, turned straight. That the pulley hub have a uniform internal diameter of $7\frac{1}{2}$ ins., the length of the hub to be $6\frac{1}{2}$ ins., the face of the pulley to be 9 ins., or wider if flangeless, and 8 ins. if flanged. That the generator pulley be flanged, crowned and perforated, and have a 7 in. face.

19. That when facing the end of the truck on which axle generator is mounted, the pulley or sprocket shall be on the right hand side.

In addition to the above report on recommended practices your committee desire to make the following suggestions to the Association for consideration:—

The adoption of standard size straight axles for different journal sizes for use with axle dynamos. This in view of the adoption of the axle device throughout the country, and the fact that with the present standard tapered axle it is very difficult to properly secure the axle pulley or bushing. The straight axle would result in less maintenance cost in axle pulleys and belts and improvement in service. A number of roads have adopted the straight axle, and if this practice spreads, the diameter of the axle should be standardized in order to minimize the different sizes of bushings or pulleys for car lighting equipment.

The design and adoption of standard arrangement of axle dynamo suspension; the axle dynamo people arranging to provide necessary lugs so that their dynamos will be applicable to the M.C.B. standard suspension. This suggestion is made in order that a safe suspension may be provided for all equipment and that the generators as manufactured by the various manufacturers will be interchangeable.

If the train lighting committee is con-

tinued, the committee would like to be advised as to whether or not it is desired that they include in their investigation recommended practices as to maintenance and repairs of batteries and other electric car lighting apparatus, and maintenance and repairs of axle generators.

Report of Committee on Steel Tires.

The Master Mechanics' Committee, of which L. R. Johnson, Assistant Superintendent of Motive Power, C.P.R., Montreal, is chairman, reported as follows:—

Since the last convention, your committee, which was continued with a view to presenting a specification from which railway companies could purchase tires, with confidence that they would give the service expected, have worked to that end, and although it would be impossible to construct a specification every clause of which would meet with every member's ideas, and also fill in detail all the ideas of every member, we feel we have a good working specification, which, if followed by the manufacturers, will produce tires which will give satisfactory service on any road on this continent. It is a little longer, perhaps, than we would have liked; at the same time, we hardly see where we can shorten it, and get the results required.

Recognizing the importance of a drop test, we have gone to considerable trouble in getting the very best practice of the old and new worlds, but clause 8 leaves it optional with the railway companies to demand or not as they wish. The rules for the drop test have been drawn up with the idea of utilizing as far as possible the drop test machines already in use for other purposes, and so sparing the manufacturers the expense of making special one for tires.

SPECIFICATION FOR STEEL TIRES.

1. MATERIAL.—Stock for tires shall be made by the open hearth or crucible process.

2. CLASSES.—There will be three classes of tires for the different classes of service, as follows:—

Class 1. Driving tires for passenger engines.

Class 2. Driving tires for freight engines.

Class 3. Driving tires for switching engines, and tires for engine truck, tender truck, trailers and car wheels.

3. CHEMICAL COMPOSITION.—

Class 1. Carbon not less than 50% or over 70%.

Phosphorus, not over .05%.

Manganese, between 50% and 80%.

Sulphur, not over .05%.

Class 2. Carbon, not less than 60% or over 80%.

Phosphorus, not over .05%.

Manganese, between 50% and 80%.

Sulphur, not over .05%.

Class 3. Carbon, not less than 70% or over 85%.

Phosphorus, not over .05%.

Manganese, between 50% and 80%.

Sulphur, not over .05%.

4. FINISH.—The tires must be free from defects of any kind, and finished tires must be accurately machined to the prescribed dimensions of the Master Mechanics' standard, and rough tires must not be outside the limits of the attached prints.

5. BRANDING.—The tires shall be distinctly stamped when hot with such brands as the purchaser may require, and in such a manner that the marks shall be legible when the tires are worn out.

6. SAMPLES FOR CHEMICAL ANALYSIS.—

Drillings from a small test ingot cast with the heat, or turnings, from a tensile specimen, or turnings from a tire (where tires are machined at the works of the manufacturer), shall be used to determine whether the chemical compo-

sition of the heat is within the limits specified in paragraph 3. When required, the purchaser or his representative shall be furnished an analysis of each heat from which tires are made.

7. PHYSICAL PROPERTIES.—The steel for the different classes of service shall meet the following minimum physical requirements:—

Class (a)—Tensile strength, lbs. per sq. in., 105,000; elongation per cent. in 4 ins., quotient of 1,556,000 divided by the tensile strength.

Class (b) Tensile strength, lbs. per sq. in., 115,000; elongation per cent. in 4 ins., quotient of 1,300,000 divided by the tensile strength.

Class (c)—Tensile strength, lbs. per sq. in. 125,000; elongation per cent. in 4 ins., quotient of 1,150,000 divided by the tensile strength.

8. FALLING WEIGHT TEST.—Should the contract call for a falling weight test, a test tire from each heat represented shall be selected by the purchaser or his representative and furnished at his expense, provided it meets the requirements.

8a. The test tire shall be placed vertically under the drop in a running position on a spring foundation with an anvil of at least ten tons weight, and shall be subjected to successive blows from a tup weighing 2,000 lbs., falling from heights of 5 ft., 10 ft., 15 ft., and 30 ft., and upwards, until the required deflection is obtained as specified in paragraph 8b.

8b. The test tire shall stand the drop test described in paragraph 8a without breaking or cracking, and shall show a minimum deflection equal to X in the following table:—

Internal diam. of tire (—d) Thick- ness of tire (=t).	Class 1. Tensile breaking strength per sq. in. 105,000 lbs.	Class 2. Tensile breaking strength per sq. in., 115,000 lbs.	Class 3. Tensile breaking strength per sq. in., 125,000 lbs.
3 ft. dia. and over	3 d 6 t	3 d 10 t	3 d 12 t
Under 3 ft. diam.	3 d 10 t	3 d 12 t	3 d 14 t

8c. A specimen for the tensile test is to be taken from a tire that has been subjected to a falling weight test, and it shall be cut cold from the tested tire at the point least affected by the falling weight test. The tensile test specimen when cut from a tire that has been subjected to a falling weight test shall be cut normal to the radius and parallel to the face.

8d. Should the test tire fail to meet these requirements in any particular, two more test tires shall be selected from the same heat if the manufacturer so desires, and at his expense. Should these two tires fulfil the requirements, the heat shall be accepted.

9. INSPECTION.—The inspector representing the purchaser shall have free entry to the works of the manufacturer at all times while his contract is being executed. All reasonable facilities shall be afforded to the inspector by the manufacturer to satisfy him that the tires are being furnished in accordance with the specifications. All tests and inspections shall be made at the place of manufacture prior to shipment, and shall be conducted so as not to interfere unnecessarily with the operations of the mill.

Tires must be rolled in accordance with the best practice, sufficient metal being discarded to insure sound tires. The tire taken from the bottom of the ingot must be stamped with the letter A before the tire number, the next above B, and so on up the ingot.

Tensile test specimens, one from each heat, must be forwarded to the engineer of tests of the railway company, together with a copy of the chemical analysis of

each heat, showing the tire numbers rolled from each heat; also destination of each tire, together with the railway company's purchasing agent's order number. If, however, the manufacturer is rolling tires right along for the railway company, and its inspector is at the plant, the test specimens from heats ready at that time may be pulled at the manufacturer's plant by the inspector and the broken test pieces sent in for analysis, in which case the above information must be furnished the inspector.

An analysis of the test pieces made by the railway company's test bureau must agree with that furnished by the manufacturer, and with an analysis made from turnings from the tires after received; a failure to agree within reasonable limits will be cause for rejection.

In addition to the above tests, the railway company reserves the right to make a repetition of any tests to make sure that only material meeting all the requirements set forth in this specification be accepted, and all material found not up to any one or all of these requirements will be rejected.

Samples representing rejected material will be retained in the test bureau not longer than thirty days from date of test. If at the end of that period the sellers have not signified their desire for a rehearing, it will be understood that they agree with the results as reported. If by this time the sellers have not given shipping directions for material rejected at destination, the material represented by the samples will be returned to them at their risk, they paying freight both ways.

Increased Power Obtained with Superheat.

C. H. Benjamin, Dean of the Schools of Engineering, and L. E. Endsley, Professor of Railway Mechanical Engineering, Purdue University, Lafayette, Ind., presented the following report of progress:—

It is with regret that we have to say that we are unable at this time to make a full report upon the results obtained on the Purdue locomotive in regard to the increased power obtained with superheated as compared with the maximum power obtained with saturated steam. This is due to the fact that laboratory conditions were such that all the tests of the series could not be completed until so late a date that sufficient time was not available to make a full report.

It was thought worth while, however, to make some statement in regard to the progress of the work, and, in a general way, to indicate to what extent the power of the locomotive was increased by the installation of a Schmidt superheater, which gives a rather high degree of superheat.

It will be remembered that the work reported upon for the last three years was a comparison between the efficiency of the locomotive when using, first, saturated steam, and then superheated steam, while developing approximately the same amount of power under both conditions. When the maximum power was obtained upon the locomotive, while using saturated steam, it required the burning of from 120 to 130 lbs. of coal per sq. ft. of grate area per hour, whereas when superheated steam was used, and when approximately the same power was developed, only from 85 to 90 lbs. of coal per sq. ft. of grate area were burned. This difference in the amount of coal burned while operating with saturated and superheated steam, respectively, is due to the fact that about 25% saving was made in the amount of coal burned.

The work this year has consisted in increasing the power by increasing the cut-off by small increments in an en-

deavor to burn the same amount of coal per sq. ft. of grate area per hour, as was done while using saturated steam. While we have not increased the cut-off to such an extent as to make this possible, it is apparent that there will be no great difficulty in burning the same amount of coal. When these tests are completed, it can then be determined to what extent the power has been increased and by what amount the efficiency has been affected. It is evident that if this increase in the amount of coal burned can be effected without decreasing the efficiency of the locomotive, the per cent. of gain in power will be even greater than the per cent. of gain in the efficiency of the locomotive when using superheated steam than when using saturated steam. The tests made so far, however, indicate that there is a slight decrease in efficiency with increased burning of coal, so that a gain of not more than 20 or 25% in power may be anticipated.

Flange Lubrication.

The Master Mechanics' committee, of which M. H. Haig, Mechanical Engineer, Atchison, Topeka and Santa Fe Ry., is chairman, reported as follows:—

In preparing last year's report an effort was made to determine to what extent the railways were troubled with flange wear; to describe the methods and

has been received of flange lubricators having been applied by over 30 railways on which lubricators had not been used previously. In most cases reported, the number of locomotives equipped on each road has been small. In one instance, however, a road operating over 1,100 locomotives has applied flange lubricators to the entire number. On a number of other railways on which flange lubricators were used at the time of preparing the last report, the application has since been extended. The reports of 35 of these roads show an average increase of 30 lubricators each, the number per road varying from one to over 200.

An affirmative answer to the question "Does your experience confirm the report on flange lubrication presented at the last convention?" was received from 23 of the 29 roads replying in detail to the committee's circular. Five of these roads explained that failure to answer was due to lack of sufficient experience.

Among these railways on which lubricators have been used, no cases have been reported where flange lubrication has been abandoned. A number of roads has removed certain types of lubricators applied experimentally and replaced them by others. The types of lubricators applied during the past year indicate the most general adoption of crude oil as a lubricant. Some reports state that hard grease has been rejected

pipe is connected to the oil delivery pipe leading to the flanges. The oil is thus forced through the pipes and sprayed upon the flanges. Used with electrical equipment, the air is controlled by an electric push button. Valves admitting air above the surface of the oil, as well as to the delivery pipes, are operated by electro magnets. The push button is located in easy access of the engineer and oil is sprayed upon the wheel flanges almost immediately upon the admission of air pressure. With this arrangement flange lubricant is applied only when needed, and when running on straight track the lubricator is not continued in operation.

This apparatus has been in successful operation since July 10, 1910, and has operated under extremely severe conditions. Six electric locomotives have been equipped and handle 1,000 ton trains up and down 2% grades. Owing to the many curves encountered, and also because of the rather low centre of gravity of the locomotive, flange wear has been quite heavy. Since applying this lubricator the conditions have been improved to such an extent that 50,000 miles and over are made between turnings, and it is seldom necessary to remove wheels for tire turning before the armature is removed for commutator dressing, and these two operations may, therefore, be performed at the same time. Before the application of the lu-

Fig. 1—Pneumatic Flange Lubricator for Grand Trunk Ry. Electric Locomotives.

Fig. 2—Four inch Pneumatic Flange Lubricator for Electric Locomotives.

devices for applying lubricant to flanges; and to record the effectiveness of lubrication in overcoming flange wear. Having presented its conclusions as based on information available at the time the former report was closed, the committee feels that its further duty lies in recording the development in flange lubrication during the past year; the increase or decrease in the application of flange lubrication; as well as in reporting the further actual experience of the various railways, thereby confirming or refuting its previous report.

Some of the railways which have already made service trials have satisfied themselves as to the effectiveness of flange lubrication. They do not feel justified in going to the expense of still further tests to provide data for additional information. Having determined that lubrication is reducing flange wear and proving economical, they are proceeding with the application of flange lubricators and consider the experimental stage to have been passed.

As but little further information seemed available from formal tests, a consensus of opinion was sought through replies to a set of questions distributed to all members, through the Association's Secretary. The report is, therefore, a compilation based on the experience of various railways and does not represent merely the opinion of a single committee or single individual.

Since closing the 1911 report advice

as unsatisfactory due to the fact that the grease catches and holds sand. The abrasive action resulting has increased instead of decreased the flange wear. Graphite as a flange lubricant has been reported as successful by some roads, but others have abandoned it for crude oil. Crude oil with a heavy asphaltum base is spoken of with the greatest favor by roads using flange lubricators. It has been successfully applied by both hydrostatic and gravity feed devices.

Exhaust steam from air pumps as well as water jets are still being used to a limited extent by some railways, and beneficial results are reported. An undesirable feature of the water jet is the fact that it must be abandoned during the winter weather.

A type of lubricator especially adapted to electric locomotive service has been developed on the Grand Trunk Ry. by W. D. Hall, Superintendent of Power Plant and Electrical Equipment, St. Clair Tunnel, to meet the requirements of service through the tunnel. Fig. 1 shows the principle by which this lubricator is connected and operated. Oil is contained in an airtight receptacle of one quart capacity. The oil is led to the wheel flanges by pipes and is sprayed upon the flanges by jets of air. The air is supplied from the main reservoir by a 1/4 in. pipe connected to the oil receptacle above the surface of the oil. This provides a pressure to force the oil from the receptacle. A branch of this

lubricator, mileage made between tire turnings was from 12,000 to 25,000. The lubricant used is engine oil, most of which is taken from bearing cellars of the railway armatures when the oil in them is being changed. The oil is filtered before being applied to the flange lubricators. No difficulty has been experienced with the delivery of this oil in cold weather. It is sometimes thinned to suit the weather conditions by the addition of a little coal oil. Care has been exercised in keeping the oil free from anything that might obstruct the nozzle, and very satisfactory results have been obtained under varying and severe weather conditions.

Fig. 2 shows the application and principle of operation of an air operated flange lubricator for electrical equipment, manufactured by the makers of a hydrostatic flange lubricator for steam locomotives. The lubricator is located in the cab, as with the hydrostatic device, and sight feeds indicate the rate of formation of the drops of oil. An electrical heater is included in the equipment, and the temperature of air and oil is raised by passing through this heater. The air supply is from the main reservoir. Oil is led to wheel flanges by pipes as with the hydrostatic lubricator and is sprayed upon the flanges by air instead of steam. This lubricator has been placed on electric locomotives of the Baltimore and Ohio and the Pennsylvania Railroads,

The Collins flange lubricator illustrated and described in the former report has since been improved. The improved device is similar in construction to that already described. The feeding device of the original type was placed under the body of the lubricator. The lubricating block of graphite composition was pressed against the flange by a pawl engaging in notches in the under side of the block. With the improved type a coil spring and plunger acting directly behind the block of lubricant presses it against the flange, the feed being continuous without adjustment until refilling is necessary. The 1911 report has given the impression that this lubricator was designed to use hard grease. The lubricant is graphite.

Among the simple devices operated by some of the railway companies is one which can be built up of pipe fittings and has been used to apply either hard grease or graphite. The device consists of a short section of 1½ inch pipe capped at one end and containing a piston actuated by a spiral spring. A small rod threaded into the piston extends through the cap, not only assisting to guide the piston, but also indicating the amount of grease in the lubricator. This device is clamped to the frame of the locomotive in front of the drivers and feeds the lubricant directly against the flange. When using ordinary rod grease the lubricant is contained in a section of scrap rubber hose and is deposited as the hose is worn away. The Pittsburgh and Lake Erie Rd. has applied this lubricator extensively, using a mixture of paraffin and graphite as the lubricant. This is contained in a wooden block turned up in a lathe, the cavity for the grease being bored out 1 inch in diameter. The Pittsburgh and Lake Erie applies a lubricator to each wheel which has shown wear or cutting. After the flange has been worn smooth it has not been considered necessary to operate the lubricator until further signs of cutting develop. Some difficulty has been reported as to keeping this device in proper adjustment at all times.

The result of a test of flange lubrication on a number of 12 wheel locomotives of the Norfolk and Western Ry. was given in the 1911 report. This test led to the conclusion that with track conditions as existing on this line, flange wear was too slight on freight engines to warrant the practice of lubrication. Five Pacific type passenger engines have since been equipped with lubricators for test purposes. The equipment includes three types of lubricators—hydrostatic, gravity and graphite. The comparative mileage between front tire removals before and after the application of the lubricators is shown in table I. It will be seen that the average service per front tire removed from these engines before the lubricators were applied was 16,518 miles, while the average for the same engines since the lubricators were installed has been 39,909. The former figures are taken from the record of 25 tires removed, the latter from the record of 10 tires removed. The local authorities providing the data suggest that this result may have been affected in some measure by a lateral spring arrangement applied to the trailer trucks to prevent nosing. They state, however, that they consider the improved condition to be due to lubrication and not to the spring.

Fig. 3 shows the contour and mileage records of a decapod locomotive on the Buffalo, Rochester and Pittsburgh Ry. Previous to the application of the lubri-

Fig. 3—Contours taken from a Decapod Locomotive, B. R. and P. Ry.

cator this engine had made 31,529 miles with the flanges worn as shown by the dot and dash contour lines. After making 21,102 miles with a hydrostatic oiler in service, the condition of tires was as shown by the dotted contour lines.

The Hocking Valley Ry. reports that the service of switch engines operating upon industrial tracks with much sharp curvature has been increased from 4 to 12 months. On consolidation engines subject to excessive wear of front and back flanges, the service of tires has been increased from 1 to 2 years. At the end of this period the flanges are still in good condition.

Table 2 shows the estimated saving in cost of tires effected by the use of flange lubrication on the St. Louis and San Francisco Rd. This is based upon experience with consolidation engines equipped with hydrostatic oilers using asphaltum oil.

Several roads report a noticeable reduction in tender truck wheel flange wear on engines equipped with lubricators. However, no data have been received to show the extent of reduction or influence upon wheel mileage. The information received by the committee is shown in table 4.

TABLE IV.

Railway.	Tender Wheels.	Rails.
Queen & Crescent

The number of lubricated engines in service is relatively too small to have any noticeable effect upon track.

The question of saving in rail renewals and decreased train resistance to be realized from lubrication of rails on curves has been carefully investigated by the Pennsylvania lines west of Pittsburgh. Tests to determine the reduction in rail wear to be obtained by lubrication were made on curves 3° 20' and 10° respectively. The rails on the first half of the curve to be traversed were not lubricated, and those on the last half were lubricated by hand. The following is quoted from the conclusions of the Pennsylvania committee: "The data collected shows that with lubrication there would be considerable saving in rail and flange wear on roads with sharp curvature. . . . Our tests confirm a saving, but show that for light curvature the saving is very little. The tests show very little more wear on curves up to 4° than on straight line."

Records of rail renewal on the South-

ern Pacific in the Sierra Nevada Mountains, where all of the locomotives are equipped with flange oilers, show that since the oilers have been in service the average life of the outside rail on all curves above 5° has been increased from 12 to 32 months, or 2 2-3 times the life prior to the use of flange oilers. The average life of the inside rail on curves above 5° has been increased from 13 to 33 months, or 2½ times the life prior to the use of the oilers.

In this connection it should be stated that rails are now removed having a much smaller percentage of wear than those removed a number of years ago. In other words, rails which are now considered unsafe for traffic, a number of years ago would have been allowed to remain in the track several months longer. Keeping this in mind, the above figures, which have been abstracted from curve-worn rail reports, will be seen to be conservative.

Attention should also be called to the increase in average daily tonnage. The flange oilers have been in general use on the territory under consideration since May, 1908. For three years prior to that date the average daily tonnage passing over these curves was approximately 15,000 tons. For the three years since that date the average daily tonnage has been 22,000, an increase of 47%. The increase in tonnage should increase the rail wear, and in order to get at the actual increase in the life of the rail since flange oilers were put into use, this factor should be taken into consideration. Had the average daily tonnage remained 15,000 tons instead of increasing to 22,000, the rail would have lasted 47% longer than it did, or practically 48 months. This is nearly four times as long as the life of the rail prior to the use of flange oilers, considering conditions to have been the same in both cases.

The experience of other railways in reducing rail wear is given in table 4. No data are available to show the extent of reduction, but in several cases it has been noticeable.

Any agency whereby the wear of rail and flanges is reduced may be expected to affect train resistance on curves. This has been observed in the ease with which lubricated engines round curves, but it has not been of sufficient effect to lead to any increase of tonnage rating. It must be considered that the effect of lubricant applied to the flanges of the locomotive drivers decreases very rapidly with increased distance from the locomotive.

The committee of the Pennsylvania lines, already referred to, continued its tests to determine the effect of flange lubrication on train resistance. A series of runs was made on a division with a grade northbound of 90 ft. per mile and 60 ft. per mile southbound. About two-thirds of the track over the summit is made up of curves from 2° to 6° 45'. The trains were hauled by a consolidation locomotive. The drawbar pull of runs made with oil lubrication applied to two pairs of drivers, and the truck wheels, and the runs with graphite applied to the gauge side of the rail by brushes, was compared with the drawbar pull without lubrication. Northbound the trains consisted of the dynamometer car and 29 empty cars weighing about 605 tons. Southbound the trains consisted of the dynamometer car and 13 loaded cars weighing from 915 to 951 tons. The tests showed a reduction in drawbar pull with a loaded train of 951 tons, of 285 lbs., or about one-sixth of the drawbar pull for one loaded car. The reduction for empty cars was equal to about one and one-half cars. The tests were not considered conclusive, however, on account of variable weather.

A similar set of test runs was made over another piece of track as nearly

level as could be found, with curves from 2° 49' to 9° 59'. This was selected in order to eliminate, as far as possible, any resistance due to grade. The tests showed fairly uniform results and that there was slight decrease in curve resistance due to lubrication, but not sufficient to allow of another car being added to the train.

It is the practice of many roads, where curves occur on grades, to compensate for the curvature by reducing the grade. Where this practice is followed no decrease in curve resistance can affect tonnage rating.

The flange lubricator, like other devices, requires attention. Any defects or any imperfections in the device or its connections should be included by the engineer in his work report at the end of his trip. This work should be done by the roundhouse force and the roundhouse should be held responsible for repairs.

Engine crews should be held responsible for the performance of the lubricators, and where repairs are maintained by the roundhouse, the lubricators require comparatively little attention. In view of the economy in life of tires when flanges are properly lubricated, road foremen of engines should see that lubricators are kept in operation on the engines under their jurisdiction.

With oil as a lubricant the delivery nozzle should be properly adjusted and maintained to direct the oil against the flange of the wheel. If the oil is not deposited on the flange it results in no benefit as a lubricant. If directed toward the tread it will run down to the rail when the engine is standing, and where the nozzle is forward of the wheel, this is apt to cause slipping when starting.

To avoid this, as well as to get away from the sand pipe, the delivery nozzle is often placed at the rear of the wheel. With the hydrostatic lubricator there is a certain objection to this location. On an engine equipped with the Stephenson link motion, the space just back of the first pair of wheels is often the opening through which the engineer reaches in oiling around. With the delivery nozzle located back of the first wheel there is sometimes sufficient steam in cold or wet weather to cause annoyance.

When placed forward of the wheel a good location is just opposite to the top frame rail. This should be far enough from the delivery end of the sand pipe to prevent water of condensation from collecting at the end of the pipe and freezing.

In severely cold weather care should be exercised to prevent water of condensation from freezing in the delivery pipes of the hydrostatic lubricator. By keeping a sufficient flow of steam through the pipes this should be avoided. This steam can be throttled sufficiently to keep the pipes clear without emitting so much steam as to be annoying.

Considering the previous report and the information upon which the present report has been based, your committee feels justified in the following conclusions:—

The value of flange lubrication depends upon local conditions.

Flange lubrication has proven effective as a means of reducing flange wear, particularly on driving wheels.

The effect of lubricant applied to driving wheel flanges decreases rapidly as distance from locomotive increases.

Flange lubrication results in considerable saving in rail wear when sharp curves are frequent.

The effect of flange lubrication upon train resistance is not sufficient to make it a factor in tonnage rating.

The Canadian Northern Ry. hotel at Brandon, Man., which has been named the Prince Albert, was opened June 1.

Report of Committee on Overhead Inspection of Box Cars.

The Master Car Builders' Committee, A. Kearney, Assistant Superintendent Motive Power, Norfolk and Western Ry., Roanoke, Va., presented a report, of which the following is an abstract:

In an endeavor to formulate methods and practices for the prevention of losses it is not always certain what proportion of the resulting damage belongs to the condition of the car, the manner in which the packages are made up for shipment, method of packing and stowing away in the cars, rough handling and the shrinkage incidental to the method of transportation. All these conditions carry responsibilities.

A very important consideration is the ability to readily secure the necessary supply of equipment in the event of more stringent and specific rules being established for the selection of cars, separating them for certain commodities. Any further restrictions might result in diminishing the opportunity of readily supplying sufficient equipment, and might prove disastrous to the degree of almost causing a cessation of traffic locally. The need of some form of easement of the difficulty is shown by the extent of the freight losses and damage per annum, which from 1900 to 1910 increased in the United States from \$7,055,622 to \$21,756,671, exclusive of the enormous clerical work involved and the loss of time to the public. The Committee of Relations of the American Railway Association, from inquiries made among numerous roads, computes that the loss from defective cars alone amounts to \$139,194, of which \$51,919 can be traced to leaky cars. This is for a series of roads having a total gross earnings for the year of \$259,061,997.

Closer inspection, involving increased cost for repairs, leaves an open question as to how much extra expense would be justified to overcome the claim losses due to defective equipment. There are two open avenues through which improvement can be directly approached: 1. Concentrate responsibility for losses due to defective car bodies in such a manner as to provide an automatic incentive for the use of better cars. 2. Establish standard requirements for inspection of car bodies.

The General Managers' Association of the southeast has been giving considerable attention to the subject of freight losses and damage, and the feature of defective car bodies has been under consideration, the results of the investigations of the committees formed by this association being embodied briefly in what follows.

DEFECTIVE CARS.—Scarcity of cars has almost compelled the use of defective cars, but which are kept running so long as the running gear is in good condition. These cars ought to be inspected more closely, and if the roof and sides be found defective, have them placarded "Not to be loaded with freight that could be damaged by rain," and have them loaded with non-destructive freight and directed homeward for such repairs as are necessary to again permit them to go into service. This suggestion was unanimously adopted.

This was followed up by correspondence in various directions, which led to the conclusion that the rules of the Freight Claim Association in loading the losses on the several lines that participated in the haul were not conducive to the best results in the maintenance of the rolling stock in good condition, as the loading line is relieved of a large part of the burden, although initially responsible for the loading of the defective car. The General Managers' Association resolved that all the responsibility for loss and damage from defective car roofs and bodies be centred

on the loading line, causing the latter to produce clear and positive evidence of the car having been properly inspected and found all right in order to clear itself from the responsibility. The Freight Claim Association failed to act on this, but at a joint meeting of the freight claim agents of three of the Atlantic seaboard organizations, substantially the same resolution was passed.

END WINDOW.—The General Managers' Association also adopted a resolution that in view of the small use of end windows in cars, and the fact that they afford easy access for thieves, admit rain, cinders and dirt, with consequent damage to the car contents and to a certain extent destroy the effectiveness of seal records, that the use of them be discontinued except where the traffic demands otherwise.

PROTRUDING NAILS AND BOLTS.—A committee of the same association as the result of an investigation, found on 730 cars examined, that there was an average per car of 40 nails projecting, $1\frac{1}{2}$ bolts projecting and 25 nails bent down. The bigger proportion of the nails were below the belt rail. As a result of this investigation, most of the member lines issued circulars covering the preparation of the cars prior to loading, which called for the removal of all nails, the covering of the heads of protruding bolts with bagging and the thorough cleaning of the cars for the reception of the loading, by covering the floor with sawdust or clean dirt if the flooring has been penetrated with oil or similar damaging fluids.

LEAKY ROOFS.—Of 52 box cars examined at one point, 45 were found to be leaking, 38 through the roof and seven through the sides only. There were 152 leaks in the roof, or an average of 4 per car. At another place, a divisional point, the cars that passed through in a 10-day period were examined, and out of 702, 467 or 66% were found defective, 106 of these having a leaky roof. The defective cars had from 1 to 33 cracks or openings in the sides, ends and doors.

INSPECTION CARDS.—Another committee of the same association recommended the use of cards stating the exact condition of the car at the time of loading. The Frisco Lines have used such a card with a great degree of success. The card has printed on it in large letters "Flour," with some additional matter respecting the fact that the car had been inspected, in smaller type at the bottom. This card is used for tacking on the sides for various commodities such as cotton piece goods, grain, plaster, sugar, rice, etc., that would be injured by water, the word "flour" being used to cover all these materials. The use of the card on the Frisco lines carries with it an understanding between the railways and the mills and other shippers, that they must not load a car with flour or other mill products unless that car is labelled with one of these cards. When loaded, the card is removed and turned into the agent to be returned with the duplicate bill of lading, and agents are instructed not to sign the bill of lading until the card has been signed by the inspector or the agent's representatives. The card is then filed in the station record, to be produced in the event of a claim being filed for damages. In 1911 the Frisco system paid \$43,150 for claims directly traceable to defective equipment, which was $8\frac{1}{2}\%$ of the total loss and damage to freight handled.

The association sent out cards something along the same line to its members for criticism, which has not as yet been reported upon. The Chicago, Milwaukee and St. Paul Ry. uses a card something similar, with considerable success. The inspection on this line is reported as resulting in the rejection of a large number of cars in the flour and similar carrying lines the percentage of foreign cars running as high as 65, but a rigid

inspection like this seems essential to this class of shipments.

The Chicago Great Western Rd. at Minneapolis, where the flour shipments are very large, has introduced a special overhead as well as interior inspection of cars, with satisfactory results. The interior of the car is made perfectly clean, and where the flooring has become oil-soaked or otherwise fouled for flour shipments, the floors are gone over with a coating of quick-drying paint to prevent damage to the loading.

GRAIN LEAKAGE.—It is reported that the Galveston Wharf Co., Galveston, Texas, where considerable grain is exported, made a test inspection of 7,429 cars, which showed that 4,859, or 67%, were leaking grain. Proceeding on this information, the Frisco lines have been experimenting on some means of overcoming this trouble. Grain doors are not entirely satisfactory, from the fact that the sides do not fit up as flush to the door posts as they should from the presence of bent over nails at that place. Experiments conducted with various means of protection led to the adoption of burlap at all leaky places. Eight ounce burlap at 4 cents a yard in 2,000 yard bales is used, it requiring about 15 yds. per car, or about 60 cents, to fully protect the car against grain leakage. Investigation charges on a claim for losses would amount to more than this figure, even if the charge were not sustained. The inside of the grain doors are lined with 8 ft. lengths of the burlap, overlapping the floor at the bottom and hanging over the top, the strips running lengthwise of the car. It is held in place with short wooden strips. The car inspector attends to both the placing of the grain doors and the fastening on of the burlap around the grain doors.

It is no argument to state that in some instances cars are offered in condition unfit for certain classes of commodities, for at the same time it must be remembered that there are numerous shipments made in cars that are in a much higher state of repair than the class of freight being handled would warrant. Therefore, it is possible that if all the cars were raised to the proper degree of excellence for all commodities, there would be an unnecessary expenditure. Guided by the apparent trend, necessities and many conditions surrounding the question of inspection, the committee concludes its report by making the suggestion to the Master Car Builders' Association that box car equipment be divided into three primary grades, designating them according to the classes of freight they are intended to handle. These classifications are as follows:

Classification A.—Freight readily damaged by moisture, such as lime, cement, plaster, flour, sugar, boxed, sack and crated packages of seeds, coffee and merchandise, grain, hay, dry goods and notions, high grades of finished lumber, leaf tobacco, furniture and household goods, and certain grades of tin and galvanized iron.

Classification B.—Freight not readily damaged by moisture, such as raw wool, baled cotton, crated china, agricultural implements, barreled liquids, hides, shooks (knocked down boxes), wagons, carriages, tools, stoves and stove castings, certain grades of lumber, etc.

Classification C.—Rough freight, such as coal, coke, brick, pig iron, slate, tiling, earthenware, pipe, ties, barrel staves and other rough lumber.

METHOD OF INSPECTION BEFORE LOADING.—(a) Inspection to be made at the point of loading whenever practicable, or (b) at point of distribution from which car is forwarded to loading station and again by the agent. (c) Cars received and unloaded at stations where no inspectors are located should be inspected by the agent.

Aside from the M.C.B. inspection of the car, including the roof, running boards, air brakes, safety appliances

and running gear, as well as the external inspection of the sides, ends, doors, ventilators and windows, an internal inspection must be made of the roof and siding, with doors, ventilators and windows in closed position:

1. Search for light indicating openings and cracks which might produce leaks.

2. For loose, damaged and broken boards, loose knots, knot holes, bad joints, etc.

3. For all nails and bolts extending above the surface of the floor and lining, and nails protruding through the roofing.

4. Search for water stains indicating cracks and air spaces.

5. Search for cracks sufficient to admit storm-water beating through the opening; also for openings and bad joints around windows and doors.

6. Examine for metal sheets out of position along edge of sub-carlins or down from the edge of the ridge pole.

7. Search for small holes in metal roofs, or small openings in roof from other causes.

8. Doors must operate and close properly.

The floors must be clean, dry and free from defects sufficient to admit moisture and any fouling from previous shipments such as fertilizer, oils, and other freight which would damage more perishable commodities. If the centre pin is uncovered, it might be necessary to cover it with a piece of board, depending entirely upon the character of the freight to be loaded.

Inspect closely for defect in framing which might, by reason of their weakness, allow the sheathing being readily broken or damaged.

The rules above suggested for inspection are for certain shipments not otherwise covered by rules for the transportation of explosives.

Report of Committee on Contour of Tires.

The Master Mechanics' Committee on the contour of tires, W. C. A. Henry, Superintendent of Motive Power, Pennsylvania Lines, Columbus, Ohio, chairman, reported as follows:—

Your committee has been instructed to look into the various points brought out

Fig. 1—Contour of Tire.

in the discussion at the last convention and, if possible, recommend a contour of tire that would be most economical in all services; also, recommend a minimum thickness of flange for re-turned tires. The discussion at the 1911 convention was confined to the proposed reduction in height of flange from $1\frac{1}{4}$ ins. to 1 in., the taper of tread, and the question of limit of flange thickness of less than 15-16 in.

After considering the replies received to our circular of inquiry and such other data as were available, your committee is very strongly of the opinion that the M.C.B. recommended contour of tread and flange for steel wheels should be used for engine and tender truck wheels. To a very large extent in ordering wheels it is not specified whether for tender trucks or cars, no distinction being made as between the two. It is of distinct advantage to the railways to keep down the number of standards

manufactured as insuring more prompt filling of orders and a smaller stock on hand at their own shops. Car, tender and engine truck wheels are, as a rule, turned up on the same machine, and most shops are provided with special tools for dressing the flanges and treads. To require different tool equipment for different wheels would be objectionable and confusing. In fact, when wheels are being machined, it is not generally known whether application will be made to cars or tenders. Your committee, therefore, recommends for engine and tender truck wheels in all classes of service the contour of tread and flange as shown in fig. 1. This contour is the same as will be recommended to the M.C.B. Association in June, 1912, and differs from the present M.C.B. recommended contour in that additional metal has been added to the back of the flange, making the contour of the flange identical with the flange for cast iron wheels. This thickening of the flange was recommended with the view of increasing the life of the wheel, as many steel wheels are now withdrawn from service due to thin flange.

Replies received from manufacturers of steel wheels indicate that about 80% of the engine truck and 95% of the tender truck wheels manufactured during the past year are of the 1909 M.C.B. recommended contour.

In driving wheel service the conditions are somewhat different, as the brake shoes generally used are recessed for the flange, and also opposite that part of the tread coming in contact with the rail. This tends to keep down the height of the flanges and retards channelling of tread. On account of the general opposition to any reduction in flange height of driving wheels in road service and the fact that the present A. R.M.M.A. standard contour of tread is so nearly like the M.C.B. 1909 contour, your committee does not feel justified in recommending, at present, any change from the present contour for driving and trailing wheels of locomotive in road service. As a matter of information, we wish to add that while practically all railways are using a contour of driving wheel tire approximating the A.R.M.M.A. standard, almost all are deviating in some particular.

In the case of switching locomotives it is felt that a flange 1 in. high is perfectly safe and will be more satisfactory than the present standard, as a greater mileage can be made with the shorter flange before reaching an objectionable height. As has been previously mentioned, the A.R.M.M.A. and M.C.B. contours of tread being so nearly alike, it was felt unwise to establish a new contour having the M.C.B. flange and A.R.M.M.A. tread, and we, therefore, recommend the contour shown in fig. 1 for driving wheel tires in shifting service.

The six widths of flanged tires shown on sheet 1 of the standards are, in your committee's opinion, entirely unnecessary, and we would recommend that one width be shown, namely, 5½ ins. In the case of plain tires, three sizes as recommended last year are sufficient; the two sizes 6¼ and 6¾ ins. to be eliminated.

As concerns condemning thickness of flange below 15-16 in., after carefully considering the replies received and all information available, we cannot see our way clear to recommend flanges of wheels under locomotives and tenders being allowed to remain in service when worn below this limit.

Our recommendations, therefore, are as follows:—

Engine truck and tender truck wheels, contour as shown in fig. 1.

Flanged driving wheels and trailing wheels of locomotives in road service, present A.R.M.M.A. standard of 5½ ins. wide.

Flanged driving wheels in shifting service to be as shown in fig. 1.

Plain tires, present A.R.M.M.A. standard, three widths, 6, 6½ and 7 ins.

Condemning limit of thickness of flange, 15-16 in.

Master Car Builders Association's Meetings.

This association met at Atlantic City, June 12 to 14, the President, A. Stewart, G. S. M. P. & E., Southern Ry., Washington, D.C., presiding. In opening the convention he said:—"We are meeting again this year, with the approval of our respective companies, to further perfect our rules, and, if possible, to revise them in a manner that will still further reduce our cost of maintenance and clarify matters that have not been understood alike by all of our members; also to devise the best possible manner of complying with new legislation affecting the construction, maintenance and handling of equipment in interchange."

He paid tribute to the earnest work done by the committees on various subjects assigned to them, the principal reports on which are given in earlier pages of this issue. He also referred to the interchange of equipment in the U.S., as regulated by the recent safety appliance acts, and said:—"We are required to change the safety appliances to standard on both system and foreign cars going through the shops for general repairs, and we should have a rule for charging the car owner with a portion of this expense. It is my understanding that we are now subject to a penalty for handling cars marked "U. S. Safety Appliances," if the cars so marked are not in accordance with the law. To inspect all cars received with safety appliance defects, including location, is obviously out of the question, and we should have a rule that will relieve the receiving line for penalty defects and material, location or manner of application, when cars have been stencilled as complying with the law.

"Cars that have been fitted with the special 12 in. coupler to give the required end clearance should be so stencilled for protection to the owners and for the information of the inspectors.

"We should consider a rule for a fair basis of interchange where it affects the removal or turning of steel wheels under freight equipment, and a proper charge for wooden cars which have been reinforced by continuous metal draft sills.

"The question of changing the present M.C.B. specifications for air brake hose has been brought to my attention, and a committee should be appointed to take up this matter and report what changes are necessary."

REVISION OF CONSTITUTION.

The committee on revision of constitution pointed out that prior to the adoption of the new constitution in 1909, a nominating committee presented a verbal report to the convention at the first day's session, and the election called at the third day's session was by viva voce vote. It was felt by some of the members that this method did not offer the best opportunity for the membership to express their preference as to officers, and, therefore, when the constitution was changed provision was made for the so-called secret ballot. It has developed in the election since the adoption of the constitution that this method is not entirely satisfactory, requiring considerable time. The committee proposed certain changes in the constitution, and submitted sample forms of ballots to be used. In the method proposed by the committee each member has an opportunity to vote for the membership of the nominating committee, and at the same time has opportunity to vote for any other member than those named by the nominating committee if he may desire to do so.

H. H. VAUGHAN, Assistant to the Vice President, C.P.R., in discussing the re-

ports, said that the matter was not of great importance so long as the association was willing to trust the election of officers to its nominating committee, but he thought that if printed ballots were to be used, some plan should be evolved by which the names of any members proposed as officers might be put on the ballots in addition to those proposed by the nominating committee. He suggested that the American Society of Mechanical Engineers' plan be adopted, by which the nominees of the committee on nominations are printed as such, but if any section of the membership desires to put up any other candidates for office, they have the privilege of doing so, and the names of such candidates are entered on the regular ballot which contains the names of the candidates proposed by the committee on nominations. This nomination of a candidate other than those nominated by the committee on nominations has to be signed by a certain number of members. He moved in amendment that where 20 members desire to propose a name of any member for any office in place of one or more of the names suggested by the nominating committee, that the secretary shall place that member's name on the printed ballot, making a statement in connection with such name that it has been proposed by a certain number of members. This amendment was adopted.

REVISION OF STANDARDS AND RECOMMENDED PRACTICE.

The committee on this subject said in its report, among other things:—"In accordance with action of this association, 1911 convention, with respect to the establishment of a maximum standard or limiting height for the running board of a standard dimension box car, your committee, after careful consideration, believes that this is governed by the height of the brake staff as referred to in the 1911 proceedings, pg. 564, which fixes this at 14 ft., and with this in mind, and the clearances for the brake wheel as established by the U.S. safety appliance standards, determines the maximum height of running board for the various construction of roof, and, therefore, does not concur in the suggestion."

H. H. VAUGHAN, Assistant to the Vice President, C.P.R., said that was an important question for the C.P.R., and also for other lines, and continued:—"We have in Canada legislation in connection with the height of clearances which is demanded, and I understand some of the bills have been introduced in the U.S., and we feel that it is impracticable to discuss the construction of cars of more than standard height. That is a matter that rests as a rule outside of the car department. But one thing we can do, and that is to fix the maximum height or standard dimension box cars. I think there is no objection to taking a limited height of 13½ ft. on the running board or standard box cars. As nearly as we can ascertain, there are only about 30,000 cars in the U.S. and Canada which exceed this limit. It seems to me just as reasonable for this association to fix a limited height for the running board of a car, as it has been in the past to fix the height of eaves, etc. But if we can establish a limited height that constructors would work to in their cars, there would be some hope of keeping this running board height down to a certain limit. The difference may not appear very great, but if it amounts in practice to nearly 6 ins. in construction of bridges and in structures of that sort, it is important, and the amount of that kind of work that has been going on in Canada and the U.S. in recent years has been considerable. We are very much interested in seeing some action taken by this association that will put this matter in such shape that we can show the standard of the running board shall not exceed a figure to be determined by the committee on standards, which we hope

they can make 13½ ft. for a standard dimension box car."

T. H. GOODNOW, M.C.B., Armour Car Lines, Chicago, who was chairman of the committee making the recommendation, said that one of the things that occurred to the committee's mind was the question of the longitudinal running board, coming up in connection with the outside metal roof, which naturally increased the height of the car at the eaves, and affected the height of the box car at that point. The committee felt that as railways are limited now by the height of the brake wheel and the clearance of the brake wheel under the U.S. appliances standards, to go any further would be tying it down pretty tight. He thought they could not take the benefit of half an inch, or an inch, especially with outside metal roofs and the additional running board that is required with that roof.

H. H. VAUGHAN could see no reason why the outside metal roof designer should not be kept down to designing to the limit. It was the height of the running board that was involved in the question. He moved that the report on the running board be referred back to the committee.

TESTS OF BRAKE SHOES.

This committee reported on brake beam standard as well as testing brake shoes.

L. C. ORD, Car Inspector, C.P.R., said he understood the Air Brake Association had a committee which has recommended 5 ft. for the length of the beam, and the Angus Shops thought it would be well for the committees of the two associations to co-operate in investigating the matter and to determine the standard length.

ELECTION OF OFFICERS.

The following officers were elected:—President, C. F. Fuller, Union Pacific; Vice Presidents, M. K. Barnum, Illinois Central; D. F. Crawford, Pennsylvania, and D. R. MacBain, Lake Shore and Michigan Southern; Treasurer, J. S. Lentz, Lehigh Valley. Executive Committee: R. E. Smith, Atlantic Coast Line; C. E. Chambers, Central of New Jersey, and H. LaRue, Chicago, Rock Island and Pacific.

At a subsequent meeting of the executive committee, J. W. Taylor was re-elected Secretary and F. W. Brasier was elected a member of the arbitration committee to succeed E. D. Bronner, who resigned on his appointment as General Manager, Michigan Central Rd.

American Railway Master Mechanics Association Meetings.

This association met at Atlantic City, June 17 to 19, the 1st Vice President, D. F. Crawford, G.S.M.P., Pennsylvania Lines, Pittsburgh, Pa., taking the chair in the absence through illness of H. T. Bentley, A.S.M.P. and M., Chicago Dock Island and Pacific Ry., Chicago, whose address was read by the secretary. Following are extracts:—

The question of consolidating the Association with the Master Car Builders Association has been discussed since the last convention, but the feeling of the members generally appears to be against anything of the sort being done; the thoughts expressed are to the effect that after 44 years of good service, it hardly seems wise that the A.R.M.M.A. should lose its identity. The two conventions could, however, be held in one week, Monday and Tuesday being set aside for the Master Mechanics' meeting; Wednesday for a joint meeting of the two associations to discuss matters of common interest, and Thursday and Friday for the Master Car Builders' Association. The principal reason for consolidating is to reduce the time away

from business, the present arrangement breaking into two weeks for those attending both conventions, but by handling it as suggested the duplication of work would be avoided by the joint session, and only five days would be taken up with both meetings.

A suggestion was made by the General Foremen's Association last year that the members be allowed to investigate and report to the Master Mechanics' Association upon matters pertaining to shop methods and practices, the statement being made that there might be numerous details in shop organization which we were desirous of obtaining information about, but for lack of time had to pass up, and which they were willing and anxious to investigate and report on if asked to do so. This offer was laid before the executive committee who will probably take advantage of it.

Apart from the experience gained at our meetings through the discussion of the various subjects presented, the opportunity for exchanging ideas among members, when outside of the Convention Hall, is great. I am a warm advocate of meetings of this kind, and know personally that valuable information can be obtained from people who have, perhaps, gone through some experiences that we are lacking. I believe we should insist on our men attending conventions; it broadens their ideas, gives them new thoughts and puts fresh life into them, so that on their return to business they are better able to grapple with the problems that confront them.

The question of promoting safety in the operating of railways has received a tremendous impetus lately. About eighteen months ago an organization was started on the Chicago and North Western Ry., in a very humble way, for the purpose of trying to reduce the number of accidents that were occurring daily on our tracks, in the movement of trains and in our shops and roundhouses. The plan worked out so well under the forceful leadership of the general claim agent, and with the assistance of the members of the central safety committee and the local committees on the various divisions, and the results were so gratifying that the scheme was quickly taken up by all of the large roads in the country, and now, fortunately, nearly everybody has acquired the "safety" habit, or as one road tersely sets forth, "It is better to be careful than crippled."

At one time it was thought that most accidents were inevitable, but when live safety committees got into action it is remarkable how quickly this idea changed, and a reduction in 16 months (the latest data for which figures are available) of 107 persons killed and 3,996 persons injured on the C. and N.W. shows what can be done when men make up their minds that it is better to cause a delay than to cause an accident. The fact that it is possible to make such a remarkable showing has induced the Railway Commission of Indiana to ask all the roads in that State to go and do likewise. Before long the Federal Government will probably step in and call for some action that will help this good cause along; if it would only pass a trespass law and enforce it, a large number of the 5,000 men, women and children who are now being killed each year, because of the dangerous track walking habit would be saved.

The past winter has been the most severe in years, as most of us know to our sorrow, and now that summer is here, we must remember our weaknesses and fix our fences before another winter comes along. In the summer we are liable to forget the cold weather, but that is the time to remember it, and taking advantage of the experience gained, to profit by it. It is only by having the engines and roundhouses in first-class condition that the best results can

be obtained, and I am sorry to say when the weather is warm we are likely to forget some of the things we promised to do when we were in trouble.

The progress in locomotive construction appears to have kept pace with the requirements, but nothing of a freakish design has been seen. The most radical departures noticed are the turbine locomotive, built and put in service at Milan, Italy, and the turbine electric locomotive constructed by the North British Locomotive Co. Dr. Diesel is also reported as having designed an electric locomotive, the generator being operated by a Diesel engine. So far, however, nothing definite has been heard of their performance.

The question of fuel economy is of greater importance than ever. The railways and locomotive builders, however, have had this before them, and a large number of Mikado engines have been built, which while pulling very little more tonnage than a consolidation engine, have done it with a decrease in coal consumed for the work performed.

In some places Mallet engines have displaced consolidations with remarkable success in the way of increasing the train load, reducing the number of trains, and doing the work with a reported saving of more than 40% in the amount of fuel burned over other engines engaged in similar service.

The superheater engine has given a good account of itself during the past few months, and the results obtained last winter were, generally speaking, very satisfactory. While we have had troubles on account of lubrication, headers leaking, etc., we are overcoming them successfully for the reason that our education has been improved by our difficulties and where regular men are employed, they soon become familiar with the different conditions brought about by the higher temperatures, so that no more trouble is experienced with superheater than with saturated engines, the improved results justifying the regular crewing of power, where possible.

Several switch engines have recently been equipped with superheaters and excellent results in the way of fuel and water economy are reported. It would seem that the best results in superheating could be obtained by an engine that is working practically up to its capacity most of the time, and not one in switching service, working intermittently, as most of them do, but the satisfactory service reported as being obtained by superheater switch engines would indicate a field for the device in that kind of work.

While nothing very new has been developed in the stoker line, steady progress has been made with the few that we consider have passed the experimental stage, and a number of Mallet engines have, during the past year, been equipped with them, in one case over 9,000 lbs. of coal per hour having been fed into a locomotive firebox by a mechanical stoker.

The question of efficiency in our shops has not been lost sight of. Careful investigations are constantly being made tending to increase our output and decrease cost, and in this we are being ably assisted by the tool and machine manufacturers, who are very much alive to our requirements.

The headlight question is still a very serious one for us; lack of uniformity in state and railway requirements making it difficult to know what to do for the best. The difference of opinion among railways as to what should be used is perhaps justifiable, for the reason that what would be entirely satisfactory on a busy double or four track road with block signals, might not be suitable for a single track road with very little traffic and no automatic signals, and it would be far better for the various states to call for a minimum re-

quirement, that would be low, so as to be suitable for a double track road, and then those roads that felt a brighter light was necessary in certain sections, could provide it.

There appears to be considerable progress in the welding up of locomotive broken parts, firebox sheets, etc., by the use of electricity and oxy-acetylene, and a large number of engines that would ordinarily have required new firebox sheets have been kept in service by repairing defects in the old ones. The welding of flues in place is probably going to be a solution of the failures due to flues leaking.

Considerable interest is being taken in the tests of boiler fireboxes of different designs at Coatesville under the direction of Dr. Gross; but so far, results of these tests are not forthcoming and we cannot yet say whether the standard design of box will have to give way to one of entirely new shape and form.

Elaborate locomotive tests have been made on the Altoona testing plant in connection with the Chicago committee on smoke abatement to see what effect the different locations of air tubes with steam and air jets in the side of the firebox will have on the amount of smoke emitted; also what benefit is derived from brick arches, air openings in firebox door, etc. When the results of these tests are tabulated, a very useful work will have been accomplished.

CONTOUR OF TIRES.

R. PATTERSON, Master Mechanic, G.T.R., Stratford, Ont., in the course of the discussion of the committee's report on the contour of tires, said: "I am not any more convinced this year than I was last year that we should turn our driving tires taper. I think the explanation which the committee has given in regard to tender and engine tires and tires for cars is all right. Where wheels are turned up in the same shop both for the car department and engine repairs, I think that is desirable. We, of course, run our departments entirely separately, and it is not necessary to follow the same plan in turning tires for locomotive work as for car work. Consequently we don't see any reason why we should turn our tires taper for locomotive work. I have heard no explanation yet of why we should turn our driving tires taper except at the extreme edge. How long does that taper last on the tires after the engines are put out? You can turn them more rapidly. You can make a better job of it. Why turn them taper. As I mentioned before, on the road I am representing, we invented that practice 35 years ago. What advantage is there in it? I have yet to hear of an advantage in driving tires being turned taper. It is quicker done. You can make a better job of it. You don't require an expert machinist on the lathe to turn them, and it is only a month or so when the tire becomes worn."

ELECTION OF OFFICERS.

The following were elected:—President, D. F. Crawford, Pennsylvania Rd.; 1st Vice President, T. Rumney, Chicago Rock Island and Pacific Ry.; 2nd Vice President, D. R. McBain, Lake Shore and Michigan Southern Ry.; 3rd Vice President, F. F. Gaines, Central of Georgia Ry.; executive members till 1914, G. W. Widden, New York, New Haven and Hartford Rd.; C. F. Giles, Louisville and Nashville Rd.; W. Schlafye, Erie Rd.

The branch office of the Department of Natural Resources, C. N. R., was opened June 1, in the new section of the Windsor St. station building, Montreal.

The G.T.R. has opened an office in the Montreal Harbor Commissioner's buildings at the foot of St. Sulpree St., Montreal, for the convenience of freight importers and exporters.

Atlantic City Convention Notes.

The entertainment features were somewhat cut down from previous years, informal dances being substituted for the usual balls. There were orchestra concerts in the entrance hall of the pier each afternoon and evening, and local gatherings and informal dances at the Marlborough-Blenheim, and on the pier, also evening musicales on the pier. On the Saturday there was the usual baseball game, between the east and the west, each team being composed of eight railway supply men and four railway men, and on the Sunday there were morning and afternoon instrumental concerts at the Marlborough-Blenheim.

Among the Canadian officials in attendance were the following:—

CANADIAN PACIFIC RY.—H. H. Vaughan, Assistant to the Vice President; R. W. Burnett, General Master Car Builder; P. A. Cryslar, Assistant Master Car Builder; C. Kyle, General Master Mechanic; J. H. Mills, J. Burns, A. Dixon, Master Mechanics; H. Osborne, Superintendent Angus Locomotive Shops; A. Plow, Mechanical Inspector; G. E. Smart, District Car Foreman; L. C. Ord, Car Inspector.

GRAND TRUNK RY.—W. D. Robb, Superintendent Motive Power; J. Coleman, Superintendent Car Department; J. Hendry, J. L. Hodgson, Master Car Builders; A. A. Mavor, J. Markey and R. Patterson, Master Mechanics; J. Powell, Chief Draughtsman Locomotive Department.

A. L. Graburn, Mechanical Engineer, Canadian Northern Ry.; G. W. Robb, Master Mechanic, Grand Trunk Pacific Ry.; G. R. Joughins, Superintendent Motive Power and Rolling Stock, Intercolonial Ry.; W. Kuhn, Master Mechanic, Toronto, Hamilton and Buffalo Ry.; T. Fraser, Master Mechanic, Algoma Central and Hudson Bay Ry.; T. C. Hudson, Master Mechanic, Canadian Northern Quebec Ry.; J. Ogilvie, Inspector Board of Railway Commissioners; W. Cross, ex-Assistant to Vice President, C.P.R.; A. Allen, ex-Superintendent of Motive Power, T. and N.O. Ry.

The Railway Supply Exhibits at Atlantic City Convention.

The larger portion of the space on Young's million dollar pier was devoted viva voce vote. It was felt by some of the members that this method did not to exhibits of railway supplies, machinery, etc., there being over 260 exhibitors, using over 83,000 sq. ft. of space. Among the principal exhibitors were the following:—

AMERICAN BRAKE SHOE AND FOUNDRY Co., Mahwah, New Jersey—Brake shoes for locomotives; passenger and freight equipment and electric railway equipment. Brake heads and keys.

AMERICAN LOCOMOTIVE COMPANY, New York, N.Y.—Reception booth.

AMERICAN VANADIUM Co., Pittsburgh, Pa.—Vanadium steel, iron, brass and bronze locomotive parts; vanadium steel forgings and castings, vanadium tool steels, vanadium ore and vanadium alloys.

ANCHOR PACKING Co., Philadelphia, Pa.—Packing and mechanical rubber goods.

BALDWIN LOCOMOTIVE WORKS, Philadelphia, Pa.—Pneumatic power reverse gear for locomotives.

BOWSER & Co., Inc., S. F., Ft. Wayne, Ind., and Toronto, Ont.—Standard self measuring oil pumps; one tank and oil pump combined; one paint oil outfit; one power pump; one automatic registering measure; one automobile filling station; one oil filtration and circulating.

BUFFALO BRAKE BEAM Co., New York, N.Y.—High speed passenger brake beams. Automatically adjustable brake heads, truss and solid brake beams for all classes of cars, locomotives and electric equipment.

COMMERCIAL ACETYLENE Co., The, New York, N.Y.—Railroad car lighting by acetylene. Locomotive headlighting by acetylene, signal lighting by acetylene, marker, gauge and cab lights by acetylene; buoy lantern with sun valve and flasher, commercial acetylene tanks for oxy-acetylene welding, commercial acetylene tank cut open showing asbestos packing.

CONSOLIDATED CAR HEATING Co., New York, N.Y.—Pressure traps, vapor traps, steam couplers, end valves, admission valves, thermostat, electric heaters, switches, resistances.

DEARBORN DRUG AND CHEMICAL WORKS, Chicago, Ill.—Reception booth.

DETROIT LUBRICATOR Co., Detroit, Mich.—No. 0 one feed Bullseye Locomotive Lubricators, No. 5 one feed, No. 11 two feed, No. 22 three feed, No. 22 sectional, No. 32 four feed, No. 42 five feed, No. 52 six feed, No. 62 seven feed, No. 72 eight feed. Half pint air brake lubricator; flange lubricator; one, two, three and four feed air cylinder lubricator, complete with emergency and throttle valve and check valve connection. "T" steam chest plugs, angle and straight; locomotive road cup; locomotive guide cup; Pendry throttle valve; boiler valve; mechanical force feed oiler for motors on section cars. Complete line of all models, sizes and finishes of stationary accessories.

EDISON STORAGE BATTERY Co., Orange, N. J.—Five exhibition boards showing the assembly and parts of the various sized cells made by this company; car lighting battery equipment; short circuit test on a fully charged Edison battery.

FAIRBANKS Co., The, New York, N.Y.—Railroad track scales; platform scales; valves; dart unions and flangers.

FAIRBANKS-MORSE & Co., Chicago, Ill.—Sectionalized No. 32 gasoline section motor car.

FLANNERY BOLT Co., Pittsburgh, Pa.—Tate flexible staybolts; Tate adjustable crown stays; tools for applying Tate staybolts; "F. B. C." arch bar nut locks.

FRANKLIN RAILWAY SUPPLY COMPANY, New York, N.Y.—Franklin automatic fire door; grate shaker; flexible joint between cars; water joint; flexible metallic roof.

GALENA-SIGNAL OIL COMPANY, Franklin, Pa.—Reception booth.

GOLD CAR HEATING & LIGHTING Co., New York, N.Y., and Montreal, Que.—Gold's combination pressure and vapor system; straight vapor system; thermostatic temperature regulator; new ideal pressure regulator; cyclone ventilators; heat storage system for refrigerator cars; wedge lock steam hose couplers; electric heaters.

GOLDSCHMIDT THERMIT Co., New York, N.Y., and Toronto, Ont.—Thermit of various kinds and appliances; metals and alloys produced by the aluminothermic process; specimen pipe welds and apparatus for making same; motion pictures and transparencies to show the operations done by the Thermit process.

GREENE, TWEED & Co., New York, N.Y. Palmetto packing, round and square, for high steam pressures; Palmetto packing, twist, for small globe valves, etc.; Palmetto packing in sets for railroad service; Manhattan packing for low steam and hydraulic pressures. Favorite reversible ratchet wrench.

JOHNS-MANVILLE COMPANY, H. W., New York, N.Y.—Refrigerator and steel passenger car insulation; waterproofing and mastic samples; electrical materials; air pump packings; Vitribestus pipe coverings; high and low pressure pipe coverings; train pipe coverings; wool felt roofing; car roofing; asbestos roofing; throttle and steam hammer packings; Transite asbestos shingles; smoke jack; ebony asbestos wood; ventilators; fire resisting cements; asbestos car sill covering; friction tapes and splicing compounds; packings; gaskets; diaphragm canopy covers; locomotive laggings; in-

durated fibre conduit for electric wiring; Sanitor toilet seats.

LOCOMOTIVE SUPERHEATER Co., New York, N.Y.—Model of Schmidt top header type superheater. Model showing method of setting superheater flues in boiler. Model of superheater unit.

McCord & Co., Chicago, Ill.—McCord malleable iron and vanadium cast iron journal boxes for freight, passenger and engine tender equipment; draft gear; spring dampener; force feed locomotive lubricator in operation.

NORTON, Inc., A. O., Boston, Mass., and Coaticook, Que.—Various types of jacks.

PYLE-NATIONAL ELECTRIC HEADLIGHT Co., Chicago, Ill.—Pyle-National latest type "E" electric turbo generator set for locomotive electric headlights.

SAFETY CAR HEATING AND LIGHTING Co., New York, N.Y.—Pintsch car lighting system; safety electric axle dynamo lighting system; thermo jet car heating system; Pintsch and electric car lighting fixtures; steam traps, valves, etc.; indirect lighting fixtures; hot water car heating system.

STANDARD COUPLER COMPANY, New York, N.Y.—Standard steel platforms; couplers; Sessions-Standard friction draft gears.

UNITED STATES LIGHT AND HEATING Co., New York, N.Y.—Axle light equipment, stationary and vehicle batteries, electric starters for gasoline trucks and vehicles; complete assortment of parts and partly assembled apparatus.

WESTINGHOUSE AIR BRAKE Co., Pittsburgh, Pa.—Reception booth.

WESTINGHOUSE, CHURCH, KERR & Co., New York, N.Y.—Plans and photographs showing design and construction of machine shops, erecting shops, boiler shops, locomotive and freight car blacksmith shops, stripping shops, planing mills, foundries, power plants, storehouses, roundhouses, etc., with which the company has been connected as engineers or constructors.

WESTINGHOUSE ELECTRIC & MANUFACTURING Co., East Pittsburgh, Pa.—Reception booth.

WESTINGHOUSE MACHINE Co., East Pittsburgh, Pa.—Reception booth.

WOOD, GULFORD S., Chicago, Ill.—Wood's flexible nipple end air hose protector; the Monogram train pipe bracket; standard improved all steel warehouse truck.

1,000 Ton Coaling Station on the Grand Trunk Pacific Railway.

By J. G. Le Grand, Bridge Engineer, G.T.P.R.

It may be of interest to have a description of one of our 1,000 ton coaling stations, which has been adopted as standard for all our principal division points, the one particularly referred to having been built at Edson, Alta., the first division point west of Edmonton.

When I was first called upon to design a coal chute I was furnished with drawings of the one in use on the Grand Trunk Ry., which is called the

into tender. They are also provided, as before mentioned, with two undercut revolving gates, which discharge directly into tender.

The side bins over the coaling track are completely covered with a roof having an inclination slightly greater than the natural slope of the coal, thus allowing the complete filling of each section to the roof line. The centre portion is covered with hinged gates which are opened when coal is to be unloaded from box cars. The centre portion between rails is covered by movable traps, which are removed when hopper cars are used. When there are no cars standing on top of bins, the traps and hinged doors are

1,000 Ton Coaling Station for the G.T.P.R. at Edson, Alta.

ramp type. This type, in common with those in use on railways in the United States, is composed of pockets separated by bents 12 ft. centres, with sliding gates and aprons on each side, the whole covered by a frame roof resting on two sides composed of scantling covered with plank. Upon going over these plans the first thing that struck me was the enormous quantity of timber used to accommodate a comparatively small quantity of coal. By adding to a similar cross-

closed, thus forming a kind of arched roof, upon which the snow will hardly remain.

The trestle approach, as constructed, gives a rise of 8 ins. in 12 ft., which corresponds to about 5.55% grade. The total length from the point where the vertical curve commences to the last bent is 954 ft., of which the vertical curve takes up a distance of 200 ft., the trestle 575 ft., and the horizontal part, including the four groups of bins, 179

End and Side Elevations of 1,000 Ton

Railway Supply Manufacturers' Association.

The annual meeting was held at Atlantic City, June 13, the President, B. C. D. Stafford, General Manager, Flannery Bolt Co., Pittsburgh, Pa., in the chair.

S. G. Allen, Vice President, Franklin Supply Co., New York, was elected President for the current year, and B. H. Hagerman, Jr., President, N.S. Metal and Manufacturing Co., New York, was elected Vice President.

The following were elected members of the executive committee to serve three years:—First district, F. M. Nellis, Westinghouse Air Brake Co., Boston, Mass.; Second district, O. F. Ostby, Commercial Acetylene Co., New York; Fourth district, J. C. Whitridge, Buckeye Steel Castings Co., Columbus, Ohio; Seventh district, S. M. Dolan, American Car and Foundry Co., St. Louis.

section a bent on the outside of the coaling track, this bent supporting upper bins with a revolving gate discharging on the centre of the coaling track. I practically doubled the capacity of the section.

Now, what governed me in the design of the length was the number of cars required to be unloaded at one time, this number being stated to be four cars. These four cars and their length gave me the length required for the horizontal part of the trestle placed over the bins. I then designed the bins in four groups, each one composed of three sections made by four bents 7 ft. centres, well braced together, the space between each group being 19 ft. centre to centre of bents, spanned by means of steel beams carrying the rail on their top flange, each bin being provided on each side with a revolving gate and an apron which can be lowered for discharging

ft. The distance between base of rail of the coaling tracks and the base of rail of the coal track is 37 ft., and the distance between the two coaling tracks is 38 ft., these two coaling tracks being called inbound tracks in the mechanical department yard.

Comparing this with the G.T.R. design, the portion required for the bins is 179 ft., with a capacity of 1,000 tons, against 228 ft. for a capacity of 500 tons. The estimated cost of the G.T.R. design is about \$18,000 for 500 tons, or about \$36 a ton; the G.T. Pacific design costs \$25,000 for a capacity of 1,000 tons, which means \$25 a ton.

Outside of this, a great feature is the arrangement of groups well separated in case of fire. With the revolving gates in case of fire in any one group of bins, it can be emptied practically instantaneously and the fire extinguished very readily, thus saving practically the

whole structure. In the other design several fires have occurred in which not only the bins but the entire trestle has been destroyed.

The question of capacity is also a very important one, especially in this western country, where coal movement is very often seriously delayed owing to our rigorous winter season, strikes, etc.

The foregoing was read before the Western Canada Railway Club recently. As this design is to represent standard practice, it has been most carefully worked out in every detail, and it contains a number of interesting points that the foregoing description does not mention. The timber sizes are as follows:

Ties 8 x 8 ins. by 10 ft. long
Guard rails 6 x 8 ins. by 12 ft. 8 ins. long
Stringers 8 x 16 ins. by 24 ft. long
Splices 4 x 16 ins. by 4 ft. long
Caps 10 x 14 ins. by 12 ft. long
Sills 10 x 10 ins. and variable length
Spacing blocks
... 4 x 10 ins. by 3 ft. 1 in. and 2 ft. 5 ins. long
Posts 10 x 10 ins. and variable length
Sway bracing 3 x 10 ins. and variable length
Longitudinal bracing 4 x 8 ins. and variable length

Two different designs of foundations are called for under different conditions of the ground on which the coaling station is to be constructed. Where piles can be driven, they are in all cases to be used, driven 2½ ft. apart under each post in the line of the station length, two per post under the bin section, and one per post under the ramp, with the heads of the piles in all cases projecting above the ground 1 ft. on which the framed bents rest. Where it is impossible or impracticable to drive piles, the framed bent is to rest on concrete foundations under the bins, and on mud sills under the ramp portion. The concrete for the bin piles is to be a 1-3-5 mixture, the centre one containing 15 cu. yds., and the outer ones 1.4 cu. yds. each.

The vertical curve portion of the approach is filled with a stone fill for drainage purposes to a level of 5 ft. 7 ins., where it strikes the framed structure ramp.

All contact surfaces in the framed structure are to be given a coating of creosote residuum to preserve the timber from decay.

The central openings for hopper bottom cars mentioned in the article are each covered by three doors, 7 ft. by

Agreements Between Canadian Northern, Great Northern and Northern Pacific Railways.

The agreements between the Canadian Northern Ry. and the Midland Ry. of Manitoba, through which the Great Northern Ry. and the Northern Pacific Ry. obtain entrance into Winnipeg, are three in number, the first covers the section of the C.N.R. between Emerson and Portage Jct., the second covers the section between Portage Jct. and Woodward Ave., Winnipeg, and the third covers the entrance into the union terminals at Fort Garry.

The first agreement describes the joint section as being the C.N.R. lines connecting with the G.N. Ry. and the N.P. Ry. at the International boundary near Emerson, Man., and near West Lynn tp. to Portage Jct., and the portion of the line westerly from Portage Jct. to any point of connection with the Midland, or other line, the use of which may be acquired, but not west of the G.N. Ry. crossing of the C.P.R. near Wilkes Ave., Winnipeg. The C.N.R. grants the full, joint and equal use of the line to the M. Ry. (and such other companies as it may admit to this joint section) by its own crews and equipment, except that it shall not do any local business, and shall not use any of the industrial spurs on the section westerly from Portage Ave., Winnipeg. If, however, local business is done under the Board of Railway Commissioners' order, or the consent of the C.N.R., the M. Ry. shall pay 80% of the gross receipts to the C.N. Ry.

The C.N. Ry. is to keep the joint section in repair, and if it is not kept in suitable condition for the traffic offering, and the C.N. Ry. is unwilling to put it in such repair, the question shall be submitted to arbitration. The M. Ry. intends to operate freight engines of 362,000 lbs., and passenger engines of 384,000 lbs. weight, and the C.N. Ry. agrees within nine months to reconstruct the bridges as may be rendered necessary, charging the same to capital. The M. Ry. is given the right to string telegraph and telephone wires for its own purposes, and to have its own operating crews, which are to co-operate with the C.N. Ry. crews. In order to make the

Morris, and providing for referring to arbitration any questions as to which there is a difference. The agreement is to run for 20 years, and the M. Ry. has the right on giving one year's notice to abandon the use of the line westerly from Portage Jct. The C.N. Ry. agrees to ask for parliamentary authority to sanction the agreement being extended for 999 years.

The second agreement provides for the operation of the trains of the two companies over the C.N. Ry. from Portage Jct., and Woodward Ave., in order to enable the trains to enter the Fort Garry union terminal, Winnipeg. It gives the right to six revenue trains per day, with such light engines and empty trains as may be necessary. The trains to be moved shall be through trains, and only the main and passing tracks are to be used. In the event of any local business being done the C.N. Ry. is to be paid 80% of the gross receipts. The trains are to be treated as C.N. Ry. trains, and the engines and cars are to be stored at the C.N. Ry. yards at Fort Rouge. The rental to be paid will be at the rate of \$2.50 for each revenue train movement, with 50 cents extra for every car over eight; actual cost plus 10% of cost of cleaning, etc.; actual cost plus 10% of repairs; \$2.50 a day for housing each engine; \$2.50 for each boiler washing; actual cost plus 10% for supplies; actual cost plus freight, plus 15 cents a ton bunkering for coal, and 50 cents a tank for water. The agreement also contains similar provisions to the first, as to arbitration, etc. It is to continue in force for five years, subject to the right of the M. Ry. to withdraw on giving a year's notice, and after the five year period is subject to termination by either party on giving two years notice.

These two agreements are assigned by the Midland Ry. to the Great Northern Ry. and the Northern Pacific Ry., which own its capital stock. The Board of Railway Commissioners has recommended the Governor-General-in-council to sanction the agreements, and has permitted the lines to be operated under them for 30 days, pending the obtaining of such sanction.

The Manual of Statistics.—The numerous changes which take place annually

Coaling Station for the G.T.P.R.

4½ ft. The outer doors in the top are six in number on each side and measure 5 ft. 9 ins. by 3½ ft. The tender filling doors in the sides and bottom of the bins have swinging doors that cut the coal in the direction of flow down the chutes.

J. B. Fuller, operator, Canadian Northern Ry., Woodworth, Man., was, on June 9, sentenced to two years' imprisonment for being intoxicated while on duty.

The Fort William Coal Dock Co. has decided to make extensions to its plant in order to handle the increased business. A contract has been placed with the Brown Hoisting Machinery Co., Cleveland, Ohio, for a six ton bridge and equipment, and another with the Canadian Westinghouse Co., Hamilton, for three generators.

joint section suitable for the increased traffic, the C.N. Ry. will relay the line with 80 lb. steel, upon the completion of which work the M. Ry. shall pay \$30,000 in half yearly payments of \$5,000 each.

For the use of the joint section the M. Ry. shall pay \$35,000 a year for the Emerson-Portage Jct. section, and \$1,225 a year for the line westerly from Portage Jct., and such proportion of 5% on the capital expenditure, other than relaying rails, as the car miles of the M. Ry. bear to the total car miles of all companies using the section, and a pro rata proportion of expenses chargeable to maintenance.

The agreement contains all the necessary provisions defining the powers of each company, safeguarding the interest of each in cases of accident, etc.; reserving to the M. Ry. the right to build its own connection with the C.P.R. at

in connection with large joint stock corporations — amalgamations, rearrangements, and new incorporations—necessitate a great deal of work in the compilation of such a book of reference as this. The edition for 1912 is brought well up to date, and adequately represents the organization, finances and position of the leading railway and transportation companies of Canada and the U.S., as well as of allied companies, and the industrial concerns of the two countries from which the transportation companies draw such a large portion of their revenues. The present volume has been increased to 1,100 pages; the matter is well arranged, and the index is copious and clear. It is published by the Manual of Statistics Co., 20 Vesey St., New York. Price \$5.

The Canadian Northern Ex. Co. has opened a waybill office at Gypsumville, Man.

Canadian Northern Railway Construction, Betterments, etc.

Quebec and Lake St. John Ry.—A deputation waited on the Quebec Government, recently, to urge the building of a five mile extension of the company's Gosford branch. W. A. Kingsland, representing the company, stated that in view of the subsidies voted by the Legislature, he did not think there would be any hesitation on the part of the company in building the line. There were certain preliminary steps needful, and as soon as the necessary data were obtained, arrangements would be made for starting construction.

Canadian Northern Quebec Ry.—Work has been resumed on the erection of the shop buildings at Limoilou, Que., and it is expected that they will be ready for occupancy in November. As soon as the change has been made, the present shops, adjacent to the Q. and L. St. J. Ry. station, will be demolished, and the land so cleared will be utilized for other purposes.

The company has under consideration the extensions of terminal yards, etc., in view of the completion of its transcontinental line in 1914, and negotiations are in progress with the city on various matters in connection therewith. D. B. Hanna, Third Vice President, C.N. Ry., is expected in the city, to take up matters in connection with the project with the city council.

Montreal Tunnel and Terminal Construction.—We are advised that plans and details for the construction of the proposed tunnel under Mount Royal, and the terminals in Montreal, have not yet been approved by the Board of Railway Commissioners. The general plans for the terminals are the subject of negotiations with the Montreal city council, and there are several questions in connection with them which will be argued before the Commission. The company proposes to start operations on the west end of the tunnel before anything is done in the city. The only contract let to the date we were advised, is one for core boring to the Eddy-Burland Development Co., Ottawa. While it is expected that the company will do a good deal of the tunnel work itself, it is very probable that a contract may be let for work at the west end to a company which has a novel device for tunnel excavation.

The Minister of Railways has approved of the tunnel and terminal plans between the back of the mountain and Lagauchetiere St., leaving the Board of Railway Commissioners to settle the location of the remaining distance to the water front. This latter section involves the elevated tracks to which the Montreal city council objects.

Plans are being studied with a view of operating all traffic through the tunnel by electricity. W. C. Lancaster, the engineer, who has the work in hand, is quoted as stating that 120 ton electric locomotives will probably be used, capable of making 70 miles an hour. Electricity will also be used on the suburban lines to be operated in connection with the main line. A press report states that it is likely that the line between Montreal and Ottawa will be electrically operated, but we are advised that this is not correct, as it will be a steam road.

Construction work was started May 24, and preparation is being made for the starting up of the boring plant. Six air compressors with a 400 h.p. motor plant are being installed. Electricity will be supplied by the Montreal Light, Heat and Power Co., according to a statement made at that company's annual meeting, June 5, by the President, H. T. Holt, who said that the company had not only secured the contract for power for tunnel driving, but also for the power to operate trains through the tunnel.

Montreal-Ottawa-Port Arthur Line.—The Board of Railway Commission-

ers has approved revised location plans for the line in Ross tp., mileage 62.09 to 66.19; mileage 69.15 to 71.08; mileage 254.53 to 256.2, and mileage 267.2 to 271.4 from Ottawa. An effort is being made to have the line carried through Pembroke, and as a compromise it was decided to have a route surveyed through Churchville. The Board of Railway Commissioners has also approved revised location plans for the line through Davis tp., at Callandar, through Pedley tp.; location plans through unsurveyed territory in Thunder Bay district, between mileage 363 and 398, and mileage 399.21 to 404.46, Sudbury Junction, and revised location plans between mileage 149.85 and 161.03, from Port Arthur. It has also authorized a temporary connection with the C.P.R. at Dalzell station, Thunder Bay district, Ont., for construction purposes only.

The question of the location of the line through North Bay, Ont., has been practically settled, a new agreement having been reached, under which certain subways will be built, and watchmen provided at certain level crossings by the company.

The Board of Railway Commissioners has authorized the company of connect its line under construction with the C.P.R. at Meadowsdale, 15 miles west of North Bay, Ont., for construction purposes only, for six months from May 28.

Track laying was started at the Port Arthur end of the line in May, and District Engineer Hazen is reported as stating that the laying of steel would be going on in earnest by the end of June.

W. M. Everill, of the Railways Department, Ottawa, is acting as Inspecting Engineer for the department between Ruel and Port Arthur, Ont.

Canadian Northern Ontario Ry.—Construction is reported to be proceeding at a satisfactory rate on the line under construction into Ottawa from Toronto. An official inspection of the line was made recently by the company's officers and G. A. Mountain, Chief Engineer of the Board of Railway Commissioners, the special train carrying the party running as far east as Enterprise. A train service was put in operation as far as Napanee, June 14.

Press reports state that plans are being prepared for improving the Brockville, Westport and North Western Ry., which is owned by C.N.O. Ry. interests, and is being operated as a branch line. It is proposed to relay 40 miles with new ties and steel and to bring it up to the C.N.O.R. standard. The point of junction is about 35 miles north of Brockville, to which point the grading on the Toronto-Ottawa line has been completed, and it is expected that tracklaying will be started in June. The grading beyond this point to Ottawa is well advanced.

The company has made very extensive purchases of land in the vicinity of Leaside Jct., near Toronto, for yard and terminal purposes, and a site for a model city.

We are advised that it is extremely probable a start will be made this season, from the Toronto end, on the company's projected line from Toronto to Niagara Falls, and that the route to be followed will be mainly along the Electrical Development Co.'s right of way, on which is the power transmission line between Niagara Falls and Toronto. In connection with this projected construction the Board of Railway Commissioners has authorized the crossing of the C.P.R. spur line from Islington to Mimico, an interlocking plant to be installed at the cost of the C.N.O. Ry.

The plans for the entrance into Hamilton were filed at the end of May, and the city council has had them, as well as the alternative route suggested by F.

L. Somerville, consulting engineer, under consideration. There has been considerable discussion, and it is said that the several railway companies whose lines enter the city are arranging to discuss the question of the erection of a union station and some rearrangement of routes.

The question of the route of the line from Hamilton to Niagara Falls, and from Hamilton to Windsor, is under consideration, and considerable speculation is being raised in various towns owing to the visits of people representing Mackenzie, Mann and Co. The firm is interested both in the steam line and electric feeders for the same, but where the one begins and the other ends cannot be definitely gauged from the negotiations with the various public authorities. That there will be a steam line from Toronto to Hamilton and Niagara Falls, and a line from Toronto to Windsor, whether as an independent line, or as a branch of the Toronto-Niagara Falls line, is pretty certain. All the other lines to be built will probably be electric. This seems to be indicated by a recent statement of Sir Wm. Mackenzie, who is quoted as stating that the steam line will be carried into London from the east, connecting with the London and Port Stanley Ry., for a lease of which the company would make an offer. The line would run through Delaware and on to Detroit.

Canadian Northern Ry.—Sir. Wm. Mackenzie, President, returned to Toronto, June 22, after a trip to the Pacific coast. He reached Victoria, B.C., June 4, and after an interview with the Premier, left for the east a couple of days later. In the course of his trip he is reported to have stated that it was expected to have the line completed through from coast to coast by 1914. The question of a ferry service to connect the lines on the mainland with those on Vancouver Island had not been considered. The building of a second track between Port Arthur and Winnipeg was a necessary work, and would be undertaken, but he could not state just exactly it would be started.

Efforts are being made along the route of the branch line now terminating near Gunflint, near the International boundary line between Ontario and Minnesota, to induce the company to extend it, if not to complete it into Duluth, as originally proposed.

It is expected that the work of completing the Duluth, Winnipeg and Pacific Ry., a subsidiary of the C.N.R., in the U.S., will be so far advanced as to enable it to be opened for traffic July 1. The line extends from Virginia to Duluth, Minn., and completes the through connection between the Canadian Northern Ry. main line at Fort Frances, Ont., and Duluth. A contract is reported to have been let to J. Roy, Duluth, for the erection of a freight and passenger office there.

A contract for the construction of a section of the Winnipeg and Northern branch of the C.N.R. has been let, we are advised, to the Western Construction Co., Winnipeg.

M. H. MacLeod, General Manager and Chief Engineer, is quoted as stating that the company proposes to build the new yard at St. Boniface, Man., with its own forces.

The train shed at the Fort Garry, Winnipeg, union station, is practically completed and is being used.

The Board of Railway Commissioners has approved of an agreement between the C.P.R. and the C.N.R. for the provision of joint facilities in Regina, Sask.

We are advised that no information is available with respect to the branch line which press reports state is to be built from Regina to a junction with the Goose Lake line at Rosetown, Sask. A second report states that the junction point with the Goose Lake line will be Kindersley.

Plans for an addition to the station building at Saskatoon, Sask., have been prepared, and Superintendent Entwistle is quoted as stating that the work will be started at an early date.

A contract has been let to W. J. Cowan, Winnipeg, for building 25 miles from Vonda, on the Winnipeg-Edmonton line, to Fenton, on the line to Prince Albert, Sask.

The Board of Railway Commissioners has approved of the location of the line from near Radville into Moose Jaw, Sask., through tps. 16 and 17, range 26, west 2nd meridian, and part of Moose Jaw, mileage 84.25 to 87.13. The terminals in Moose Jaw have been arranged for, the location of the station being between Athabasca and Fairford streets. Surveys are reported to have been made for a line from Moose Jaw to Swift Current, passing through Gravelburg, at which point it is stated that the line from Maryfield, now terminating west of Bengough, will effect a junction.

We are officially advised that a contract has been let to W. J. Cowan, Winnipeg, for an extension of the Thunder Hill branch for 21 miles northerly from Canora, Sask.

Surveys were recently started on the projected branch line from Prince Albert, Sask., to a junction with the Dominion Government line to Hudson Bay at either Split Lake or The Pas, Man., P. H. Canby being in charge of the work. The survey starts just north of the C.N.R. bridge over the Saskatchewan river, and the line will be about 150 miles long. Press reports state that 50 miles of this line is to be built this year, and that grading has been started at Prince Albert.

We are officially advised that the company has no information in relation to surveys being made for a line southeasterly from Camrose, Alta., which press reports credit to the C.N. Ry.

M. H. MacLeod is quoted as stating recently that he was not prepared to say definitely when the company would be running its trains into Calgary. The work on the line from Vegreville was being proceeded with as rapidly as circumstances permit, and the line would certainly be completed by the fall. It is reported that arrangements are being made with the G.T. Pacific Ry. for facilities in that company's proposed station.

Press reports state that 1,500 men and 300 teams are at work on the Brazeau branch, which runs westerly from the Vegreville-Calgary branch near Stettler. It is expected to have the line completed for 170 miles this year. Track is reported to have been laid for 100 miles. A regular train service was started on this branch between Warner and Rocky Mountain House, June 1, a distance of 120 miles.

The Northern Construction Co., we are officially advised, has been given the contract for the line from Munson, Alta., easterly for 110 miles. Munson is a station north of Drumheller on the Vegreville-Calgary line, and the point to which the 110 miles will carry the line will be to Benton, near the Saskatchewan boundary, to which point a line from Saskatoon, passing north of Goose Lake, has been completed.

A branch line described as the Pakar branch is under construction, work being started May 1. Pakar is four miles north of Oliver, northeasterly from Edmonton, and it is proposed to build the line as far as Birch Lake, about 20 miles. M. McCrimmon is reported to be in charge of construction for the Northern Construction Co. We are advised that the contract has been let to the Northern Construction Co. for the building of 10 miles, and that about 20 miles of the branch has been definitely located. On the company's map this line is shown as effecting a junction with the line now under construction from

North Battleford, Sask., to Athabasca Landing, for which the Saskatchewan and Alberta Legislatures have voted guarantees of bonds.

Work is reported to have been started on the line from Calgary southerly, the McDonald grading outfit having been delivered at Macleod from Athabasca Landing, in May. The camp has been located nine miles north of Macleod. The James O'Connor Construction Co., which has the contract for grading from Macleod to Pincher Creek, is reported to have four miles completed, and expects to have it finished by Aug. 1. We are officially advised that a contract for a section on this line south of Macleod has been let to W. J. Cowan, Winnipeg. E. O. Archibald is engineer in charge of construction at Macleod.

The Board of Railway Commissioners has approved of revised location plans for the projected Strathcona-Calgary branch, mileage 72.58 to 81.75. This line passes through Lacombe, Alta., at which point a station to cost about \$25,000 is to be built on Stanley St. The work of clearing the right of way for the line is being proceeded with. The plans provide for a line running west of Pigeon Lake, and about 20 miles westerly of the Calgary and Edmonton Ry., for a considerable mileage. It is expected that construction will be started in the near future.

The line to Athabasca Landing has been completed, and the work of finishing ballasting, putting up buildings, etc., is in progress.

C. W. Cummings, of the Northern Construction Co., is quoted as saying that a large force of men is at work on the Peace River line between the Pembina and the Athabasca rivers, and it is expected to have track laid to the latter point, 98 miles northwest of Onoway, Alta., this year. The sub-contractors at work on this mileage are—Rumble, Mann and Co., J. Bradley, Allen Bros., T. Hopgood, W. F. McKenzie, W. Hopgood, P. Peterson.

Work on the line to the Yellowhead Pass is being pushed. The steel for the bridge across the Pembina River has been delivered, and it is expected that this will be erected within three months. It is expected to have track laid through the Pass by the fall.

Canadian Northern Pacific Ry.—E. V. Johnson, Inspecting Engineer of the Department of Railways, made an inspection of the line as far as the present track end recently, and also went over the route, as far as the North Thompson River, to inspect the work under construction. The line is completed to Mount Lehman, and it is expected that a regular passenger service will be put in operation as far as Chilli-wack shortly. All the bridges have been built on the line as far as Hope, except the one at Silver Creek.

We are officially advised that the company has abandoned its original plan to construct a line on the north bank of the South Thompson River, having obtained permission from the C.P.R. to build a parallel line on that company's right of way on the south bank of the river, between Black Canyon and the Oregon Jack Creek, about four miles. This change will effect a saving of about \$100,000 in construction, as the route on the north bank was through moving clay banks.

Press reports state that negotiations are in progress by which the company will obtain access to the Great Northern Ry. terminals now being developed on False Creek, Vancouver.

Vancouver Island.—F. G. Holt, Executive Agent, Vancouver, recently completed an inspection of the work on the island, and is quoted as stating that satisfactory progress is being made. The route of the line across the island to the east coast, he stated, had not been definitely located.

Grading is in progress as far as Cowichan Lake, and the line is under contract to about two miles west of the Alberni slope.

We are advised that nothing has been definitely decided as to the letting of further contracts for grading on the line so as to carry it to Comox, on Vancouver Island.

Press reports state that interests associated with the C.N.R. have what is referred to as the Bute Inlet Ry. charter, and have in contemplation the building of a line to connect the lines on Vancouver Island with those on the mainland by means of a bridge across the Seymour Narrows. It is reported that about 20 miles of line will be built from Campbell River, a point on the present authorized lines of the C.N.P. Ry., to Seymour Narrows, and from the mainland to a junction with the line now being built from through the Yellowhead Pass to Port Moody and Vancouver. The bridge part of the undertaking, it is said, will cost about \$20,000,000, and reports state that a preliminary arrangement has been made with the Provincial and Dominion Governments as to its erection. (May, pg 231.)

Bridge Construction on the Canadian Northern Pacific Railway.

Tenders will be received to July 8 for the steel superstructure for 10 bridges over the Fraser and Thompson Rivers on the Canadian Northern Pacific Ry. The plans were prepared by Waddell, and Harrington, Kansas City, Mo., who planned and supervised the erection of the New Westminster bridge for the British Columbia Government. The Victoria Colonist gives the following details of the bridges:—

No. 1 will cross the Fraser River a short distance above the C.P.R. bridge, or about five and a half miles below Lytton, starting from an abutment on the hillside at the west end, the structure will have three 40 ft. deck plate spans, supported by a steel bent and a steel tower, a 60 ft. plate girder span over the C.P.R. right of way, a 40 ft. tower span and tower, a 90 ft. plate girder span, a 424 ft. three hinged riveted spandrel arch span and a 30 ft. plate girder span.

No. 2 will cross the Fraser River just below Lytton, about half a mile from the C.P.R. station. The portion of this bridge over the water will consist of a 292 ft. riveted span, with flanking spans of 150 ft. at each end, from which the centre span is to be erected by cantilevering. The approaches will be of deck plate girders supported by concrete piers.

No. 3 will cross the Thompson River a very short distance above the mouth and within the town limits of Lytton. At the west end of the bridge there is to be a concrete abutment supporting a 90 ft. plate girder span, following which there will be three 150 ft. deck, open webbed, riveted girder spans, the westerly one resting on either a small concrete abutment or a bearing cut into the solid rock. The concrete piers are all to be parallel to the current.

No. 4 will cross the Thompson River midway between Spatum Station and Black Canyon siding, on the C.P.R. The superstructure will consist of six 125 ft. deck, open webbed, riveted spans, supported by five concrete piers and two concrete abutments. Four of the piers have to rest on pneumatic caissons, and the other pier and abutments are to have ordinary earth foundations.

No. 5, which will cross the Thompson River about six miles below Ashcroft, will consist of a single through truss span of about 16 ft., resting on little concrete abutments that are resting on solid rock. As the final survey of this crossing has not yet been made, the span length may have to be changed later. As

the bridge is located over a narrow deep gorge, it will be necessary to erect by cantilevering and anchoring back into the solid rock.

No. 6 will cross the Thompson River about two miles above Ashcroft. It will consist of six 93 ft. deck plate girder skew spans on concrete piers having shafts parallel to the current. These shafts will rest on cribs containing concrete and piles, if the latter can be driven, as in all probability they can by using water jets, for the material to be penetrated is mainly sand and gravel, covered in many places with boulders.

No. 7, which will cross the Thompson River another mile above Ashcroft, will be on a skew. It will consist of twelve 85-ft. deck plate girder spans, resting on 11 concrete piers and two concrete abutments.

No. 8 will bisect the Thompson River about a mile below Wallachin. It will consist of 11 93 ft. deck plate girder, skew spans. These will rest on 10 concrete piers and two concrete abutments to be founded on piles, if they can be driven.

Bridge No. 9 will cross the Thompson River almost midway between Wallachin and Savonas, which stations are some seven miles apart. At the west end of the bridge location there is a rocky hill from the foot of which the bridge will start with a through skew span of about 200 ft., then will come six half through, plate girder skew spans of 91 ft. each. These spans will rest on concrete piers and abutments.

No. 10 will cross the North Thompson River some four miles by water from Kamloops. It will consist of thirteen 93-ft. deck plate girder spans resting on fourteen concrete piers.

The contractors are given until June 1, 1913, to complete the work.

Toronto, Hamilton and Buffalo Railway Co.'s Annual Report.

The report for the year 1911, presented at the annual meeting at Hamilton, Ont., June 4, shows there was no change in the capital stock during the year, it remaining at \$2,500,000. The funded indebtedness authorized and outstanding remains at \$4,280,000. There was expended for additions and betterments, and charged to cost of road and equipment, \$163,410.92, of which \$51,084.25 was expended on yards and sidings; \$40,062.24 on stations and other structures; \$53,571.20 on roadway, and \$18,693.23 on new equipment.

The operating revenue was \$1,256,012.43, an increase over the previous year of \$110,243.33. The increase in freight and switching revenue was \$90,470.31, and in passenger revenue \$14,216.19. Operating expenses increased \$95,490.36, being \$726,775.54; maintenance of way and structures showed an increase of \$47,033.68, due to extensive repairs to track, bridges and buildings; maintenance of equipment increased \$14,890.45; traffic expenses \$2,206.02; transportation expenses \$28,911.92, due to greatly increased volume of traffic and general expenses \$2,448.39. Other income was \$46,333.53, an increase of \$3,464.30, and total deductions from income were \$269,449.72, a decrease of \$22,847.70, the principal decrease being for hire of equipment. The surplus for the year was \$300,108.18, an increase of \$39,752.45.

The company's equipment includes, 18 passenger, and nine switching locomotives, 11 passenger cars, four combination cars, two mail, express and baggage cars, 181 box cars, 73 flat cars, 10 stock cars and nine cabooses, and 25 other road cars.

In addition to 80.57 miles of main line and 11.06 miles of branches, the company has 3.89 miles of second track, 37.04 miles of side tracks, and three miles of track owned and leased to the C.P.R.

TRAFFIC STATISTICS.—Operating revenue per mile of road, \$14,909.92; operating expenses per mile of road, \$8,627.43; net operating revenue per mile of road, \$6,282.49; operating revenues per train mile, \$2.70; operating expenses per train mile, \$1.56; net operating revenue per train mile, \$1.14.

EQUIPMENT STATISTICS.—Average mileage per engine, 29,703; cost of repairs per engine mile, 7.63 cents; total capacity of freight train cars, tons, 7,950; average capacity of freight train cars, tons, 30; seating capacity of passenger cars, 842; average seating capacity of passenger cars, 56; average mileage per passenger train car, 24,548; average cost of repairs per passenger train car mile, 1.170 cents.

CONSUMPTION OF FUEL BY LOCOMOTIVES.—Total tons of coal, bituminous, 42,018; average pounds consumed per mile run by locomotives in freight service, 178; average pounds consumed per mile run by locomotives in passenger service, 62; average cost of fuel per ton, \$3.11; average cost of fuel per locomotive mile, 16.28 cents.

The directors for the current year are:—J. N. Beckley, Rochester, N.Y., President; Sir Thos. G. Shaughnessy, Montreal, Vice President; D. McNicoll, Montreal; W. L. Scott, Ottawa; Sir Edmund Osler, N. Kingsmill, and W. P. Torrance, Toronto; W. C. Brown, W. H. Newman, and C. F. Cox, New York; H. B. Ledyard, Detroit, Mich.

Rotary Snow Plough for Reid Newfoundland Co.'s Railway.

The Reid Newfoundland Co. is building a rotary snow plough at its shops at St. John's, Nfld., of which the following are particulars:

The engine consists of two horizontal cylinders 17 ins. bore by 22 ins. stroke each, cast with half saddle, rigidly bolted together, and to the frame. Steam is distributed to the cylinders by slide valves worked by Walschaert valve gear, and arranged so that the one engine works in the opposite direction to the other. Each engine is connected by a balanced crank disc to a cross shaft, on the end of which is a bevelled gear cast steel pinion, which meshes with the bevelled gear on the end of the rotary wheel shaft.

The boiler is of the straight locomotive type, length of barrel 9 ft. 6½ ins., smoke box extension 2½ ft., diameter of barrel inside 4 ft. 10½ ins., thickness of barrel plates ⅝ in., thickness of smokebox tube plate ⅝ in., length of firebox casing outside 8½ ft., number of tubes, steel, 202, diameter of tubes outside 2 ins., firebox (steel) length inside 7 ft. 7 ins., width inside 4 ft. 3 ins., thickness of tube plate ⅝ in., top, back and sides 7-16 in., heating surface firebox 131 sq. ft., tubes 1,000 sq. ft., total heating surface 1,131 sq. ft., grate area 28 sq. ft., working pressure 180 lbs. per sq. in. Steam is supplied from the dome of the boiler to the steam chests of the engines by two 4¼ ins. inside diam. copper pipes, one on each side of the boiler. The throttle valve is inside the dome, and is operated by the engineer from the cab by a spring lever and quadrant in the usual way.

The tender is supported on two bogies, the axle boxes of which are connected with the equalizing beams. It is designed to carry 5½ tons coal, and the tank about 3,000 gals. of water. Both engine and tender are fitted with Janney couplers, and spring buffers are provided between the engine and tender.

The wheel of the rotary consists of a cast iron conical hub, keyed to the rotary wheel shaft. Bolted to the forward side of this drum is the arm piece which takes the knives, and to which the six scoops are fastened by angles.

These scoops are also fastened to the steel plate disc which forms the back of the wheel, and in turn is bolted to the aft side of the conical hub. Each scoop is open on the front side, and through these openings the snow is taken in. The knives are hinged and so arranged that they automatically adjust themselves into cutting position. The scoops are tied together at their outer ends by 4 x 1 in. flats on the circumference, and have also a ¾ in. diam. diagonal tie rod between each. This makes the front of the wheel where the cutting takes place extra strong, and stiffens up the scoops at the front, as the disc plate does at the back. The diameter of the scoop wheel is 12 ft. The wheel is encased in a drum, with a rectangular front or hood. The knives, being slightly in front, are the first to encounter the snow. The wheel, of course, can be made to rotate in either direction, to throw the snow on one side of the track or the other, and the top of the hood is provided with a spout fitted with a movable cover, which can be turned to suit the direction in which the wheel is rotating, by means of a mechanical arrangement inside the cab.

The plough is carried on two four wheel plate frame trucks. Ice cutters and flangers are applied as a safeguard against derailment. The ice cutters are composed of two parts, the wing and the cutter. They are secured to a wrought iron frame supported by bearings on the front of the forward truck. There is a pneumatic operating gear under control of the pilot, by which the ice cutters and flangers may be raised or lowered. The frame of the plough is constructed of two 55 lb. I beams and two 45 lb. channel beams. The cab is made extra strong, and is partitioned off in front of the boiler, the forward part being the pilot house and the rear the engineer's cab.

The plough is equipped with the following mountings:—One 9½ pump, standard Westinghouse automatic brake, one engineers automatic brake valve, one governor, one blower valve, two check valves, two locomotive pop safety valves, one chime whistle, two self-acting injectors, one triple sight feed bull's eye lubricator, two steam gauges and two duplex air gauges, one set automatic water gauges.

Abuse of Rolling Stock.—On all sides one hears reference to the increasing cost of maintaining rolling stock in condition. An instance of what is happening daily to freight cars in general came before the attention of the writer recently when passing through one of the larger freight yards of this country on a train, the car that caught his attention standing at the edge of the through running tracks. A box car door was being closed by two men, and difficulty having been experienced by them in sliding it along its tracks, force was applied. At the rear edge of the door a flat edged axe was being driven into the car body sheathing, and the door pried along about an inch each time. When observed, the door was nearly closed, and the car body where the axe pry had been used looked as though the car had been badly side swiped, leaving the car in a condition that would doubtless require its shopping at an early date for new sheathing. Such treatment—presumably by railway employees, too—should not be tolerated. This and many other examples of the way in which rolling stock is subjected to rough usage, affords a partial explanation of the reasons for the increasing costs of maintaining stock in repair.

F. W. Atherton, former purser of the C.P.R. s.s. *Empress of Britain*, was sentenced to two years in the Dorchester penitentiary, at St. John, N.B., June 25, for theft of travellers' cheques, etc., from the Dominion Ex. Co.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta Interurban Ry.—The Vice President has been investigating the question of the motive power to be adopted on this projected railway. It has been decided, we are advised, to adopt the heavy oil engine, conveying its power by friction. This motive power, it is claimed, is several times more powerful than the gas-electric, and is produced at a cost of from one-third to one-fourth, and probably about one-half of that of electric installation, and has the additional advantage that the vibratory and other objectionable features are nil. The class of rolling stock has practically been decided, and will consist to a large extent in following the plans of the big railways. The power unit will have a seating capacity of from 26 to 40 passengers, and baggage and other facilities, and will be able to haul up to eight freight cars. These will be platform cars with fairly high sides. The motors will be able to haul over any pulls of the line, four of the largest freight cars of the regular steam lines. The lines will be built on the highways, the use of 26 ft. on one side having been freely granted. The plans for the first section of the line have been approved by the Department of Railways, and are now before the Board of Railway Commissioners. (June, pg. 299.)

In the item in our last issue the name of A. F. MacLaren, Toronto, was inadvertently omitted from the list of directors.

Alberta, Peace River and Eastern Ry.—The work plans for this projected railway came before the Minister of Railways for approval June 26. The plans show a line starting at the international boundary west of the Milk River, via Cardston, Pincher, the Happy Valley to Cochrane, keeping about 25 miles west of the Calgary and Edmonton Ry., and passing through the Big Prairie country, on to the Peace River country. A branch line to Edmonton, and another to Fort Churchill, are shown. The line will connect with the Great Northern Ry. and the Northern Pacific Ry., to the south of the international boundary. (May, pg. 238.)

Atlantic, Quebec and Western Ry.—Quebec Oriental Ry.—The Board of Railway Commissioners has approved an agreement between these companies for the erection of joint shops at New Carlisle, Que. C. R. Scholes, New Carlisle, is General Manager. (April, pg. 101.)

Burrard Inlet Tunnel and Bridge Co.—The question of the site of the bridge is under discussion, and the local municipalities have made certain representations to the Minister of Railways. The site agreed to is that which was acquired by the Victoria, Westminster and Yukon Ry., but since the amalgamation of interest in the bridge project, the V., W. and Y. Ry. has not given its assent to the sale of the site by the bridge company. (June, pg. 299.)

Cariboo, Barkerville and Willow River Ry.—Surveys were made for this projected railway by —McGregor, of Gore and McGregor, Vancouver, B.C. The company was dissatisfied with the work done and claimed \$1,645.70 damages, and \$4,999 paid for work done, etc. Mr. McGregor disputed the claim and put in a counterclaim for additional remuneration. At the hearing, June 7, the company's claim was dismissed, and Mr. McGregor allowed \$225 on his counterclaim, but without costs. (May, pg. 239.)

Central Ry. of Canada.—The Board of Railway Commissioners has approved location plans for this line from near the McAlpine station of the C.P.R., to near

the G.T.R. station at South Indian, Ont., mileage 7.2 to 38.165. This portion of the route passes through Routinier, Fournier and Lemieux. The company's plans also show an extension of the line from McAlpine to Hawkesbury, on the Ottawa River. (June, pg. 299.)

Chicago, Milwaukee and St. Paul Ry.—Surveys are reported completed for a line from Fargo to Grand Forks, N.D., thence crossing the Red River into Minnesota, in a nearly direct northerly line to Winnipeg. R. Hamilton, Milwaukee, Wis., was the engineer in charge. Right of way is reported to have been secured from Fargo to Grand Forks. (April, pg. 187.)

Delaware and Hudson Co.—Press reports state plans have been discussed for extending the Napierville Jct. line from its present junction with the C.P.R. at Delson Jct., across the St. Lawrence River and through Verdun into Montreal. (May, pg. 238.)

Edmonton, Dunvegan and British Columbia Ry.—Surveys were started June 8, for a spur line from the G.T. Pacific Ry. in Edmonton, to the southwest quarter of sec. 24, tp. 43, range 25, which has been acquired as a terminal site. —Jackson, who is in charge of the surveys, is quoted as stating that the plans are to provide for extensive trackage, roundhouse, machine shop and other necessary buildings. (June, pg. 299.)

Edmonton, Dunvegan and British Columbia Ry.—Considerable work is being done on the grading of the first 30 miles out of Edmonton, Alta. The steel is being delivered and it is expected that tracklaying will be started early in July. (June, pg. 299.)

Esquimalt and Nanaimo Ry.—We are officially advised that a contract has been let to Culleton Bros., Spokane, Wash., for grading and bridging on the Comox extension, from McBride Jct., to mileage 10 in the direction of Courtenay, B.C. The contract calls for the completion of the work by Mar. 31, 1913. (June, pg. 300.)

Fredericton and Grand Lake Coal and Ry. Co.—We are officially advised that A. E. Trites and Son, the general contractors for the building of this line from Fredericton to Minto, N.B., have let subcontracts as follows:—For clearing—Station 355 to 450, L. Taylor; station 454 to 560, H. Burns; station 633 to 792, J. W. Steevens; station 1,156 to 1,636, Barnes and Nichols. Except for the distances included in the above, the subcontracts mentioned below cover the grading and any clearing:—Station 1 to 100, A. E. Trites and Son; station 100 to 160, J. Mavor; station 160 to 200, Patterson Bros.; station 200 to 355, Mavor Bros.; station 355 to 528, J. E. Armstrong; station 528 to 633, McPhail and Baird; station 792 to 1,056, Cook, Kitchen & Co.; station 1,056 to 1,151, McLeod and McNeill; station 1,156 to 1,214, Wm. Rocheford; station 1,322.50 to 1,636, Sutton and Martin. Subcontracts have not been let for the sections:—station 633 to 792, station 1,214 to 1,322.50. The section, station 1,151 to 1,156 covers the bridge across the Little River, the contract for the masonry work has been let to D. C. Burpee and Son, who will also do the masonry work on the Nashwaak bridge, and build the concrete culverts at stations 97.50, 110.50 and 143.50. McLaggan and Bain have the contract for the masonry and concrete work at Burpee Mill stream, and stations 881.50 and 986, while the Bailey Brook arch, station 1,279, and a number of arch culverts will be built by —Maxwell. H. W. D. Armstrong, Fredericton, N.B., is Chief Engineer. (June, pg. 300.)

Grand Lake and Bell River Ry.—Press reports state that arrangements are being made to start construction on this line, so as to have it finished by the opening of the National Transcontinental Railway. J. B. Fraser, 74 Nepean St., Ottawa, is Chief Engineer. (June, pg. 300.)

Kettle Valley Lines.—The Board of Railway Commissioners has approved location plans for the extension of the Kettle Valley Ry. from mileage 4.80 to 38.99 west of Pemberton, B.C.

A contract is reported to have been let to G. A. Carlson and Co., Spokane, Wash., for about 35 miles in the vicinity of Pemberton, the work to be completed in 1913. A. McCulloch, Penticton, B.C., is Chief Engineer. (June, pg. 300.)

The Klondike Mines Ry. was re-opened for traffic May 1, and reports from Dawson, Yukon, state that 5,000 ties have been distributed along the line, and that other material has been taken in for the repair and improvement of the roadbed, etc. (July, 1911, pg. 647.)

Medicine Hat, Alta.—We are officially advised that the line which will be built partly by the Ansley Coal Co. and partly by the city of Medicine Hat, will be constructed under and operated by the coal company, which will have its own rolling stock. It is said that ties and steel rails have been ordered. W. Ansley, Medicine Hat, Alta., is President. (June, pg. 301.)

Montreal to James Bay.—Several survey parties have left Montreal for James Bay, with a view of locating a line from some point on Rupert's Bay, at the mouth of the Nottaway River, to Montreal or other points in Quebec. There are several companies authorized to build such a line, and subsidies have been voted by the Dominion Parliament and the Quebec Legislature to aid in its building. The Quebec Government, however, has under consideration a proposition for building the line as a Government work. (June, pg. 301.)

North Ry.—A contract has been entered into between the Department of Railways and the North Ry. Co., under the provisions of the act passed last session of the Dominion Parliament granting aid, among other lines, for one from Montreal to mileage 837 west of Moncton on the National Transcontinental Ry., and from that point to Hudson Bay at the mouth of Nottaway River, Que., a total distance of about 500 miles.

We are advised by F. H. Clergue, President, that the North Ry. was incorporated at the last session of the Quebec Legislature for the purpose of building this railway. The surveys preliminary to construction are now being made, and are expected to be completed in time to permit of contracts being let by the end of the year. (See Montreal to James Bay on this page. Also North Eastern Ry., June, pg. 301.)

Owen Sound and Meaford Ry.—The Owen Sound, Ont., town council has under consideration a bylaw for submission to the taxpayers providing for guaranteeing the bonds of this projected railway. (Mar., 1911, pg. 207.)

Pacific Great Eastern Ry.—Three parties are reported to be in the field locating the route. One party, under J. Nelson, has been operating between Port Atkinson lighthouse and Newport, B.C.; a second, under W. Oakley, has been working between Newport and Green Lake Summit, and a party in charge of J. Callaghan, Chief Engineer, is going over the route to Lillooet, 120 miles from Vancouver. Press reports state that preparations are being made for an early start at construction. (June, pg. 301.)

Prince Edward Island Ry.—We are officially advised that the Minister of Railways has selected the route from Cape Tormentine, N.B., to Carleton Point, P.E.I., for the Prince Edward Island car ferry service. The adoption of this route

will mean the sending of considerable traffic over the New Brunswick and Prince Edward Island Ry., extending from Sackville, on the Intercolonial Ry., to Cape Tormentine, 36 miles. It is said that an agreement has been reached between the Government and the company, which is controlled by the Lieut.-Governor of New Brunswick, for acquiring its line under the provisions of the act relating to the taking over of branch lines for the Intercolonial Ry. The only work which will be necessary in addition to standardizing the gauge of the P.E.I. Ry., will be the construction of ferry terminals at Cape Tormentine and Carleton Point. (April, pg. 182.)

Quebec and Saguenay Ry.—In a recent interview, A. H. N. Bruce, Chief Engineer, is quoted as saying:—"The building of the line to Pointe-a-Pic, commonly called Murray Bay, was commenced at Cape Tormentine in May, 1911, by the contractors, O'Brien and Doheny, and work is so far advanced that we calculate to have trains running over the road by the first snow fall next autumn. We have finished 90% of the construction and will begin to lay the rails from Cap Tormente to Nairn's Falls in the middle of July, and have the whole line tracked by November. Last summer we landed on the beach at Pointe-a-Pic a 65-ton engine and 12 freight cars, and have lost no time in the construction work. This locomotive and freight cars were used to transport the machinery for the new Eastern Canada Pulp Co.'s mill at Nairn's Falls, and the branch of railway leading from Pointe-a-Pic to the pulp mill was first attended to, in order to haul this machinery, etc. The construction was one of the heaviest propositions on this continent. As a rule, in railway building, the easiest work is at the beginning. It was the very reverse with us. We started right in on heavy work, and for the first 16 miles had to cut through solid rock. The line will run through two tunnels, one four miles east, to Cap Tormente, 500 ft. in length, and the other at Cap Martin, four miles below Les Eboulements, 300 ft. in length."

The length of the line is 56 miles to Murray Bay, and the extension to Nairn's Falls is 7.5 miles. The grading etc., for the latter section was carried out by the Bishop Construction Co. (May, pg. 238.)

St. John and Quebec Ry.—We are officially advised that a contract has been let to J. H. Corbett and Sons, Kittanning, Pa., for grading, tracklaying, ballasting and bridge building (except the steel work) on the line from Fredericton to Rothesay, 65 miles. The bridges over the St. John River and the Kennebecasis River, on this point, are to be built by a bridge company, the Dominion Government having granted special subsidies for them.

Press reports state that the Quebec Contracting Co. has sublet work on the 62 miles from Fredericton to Woodstock to the following:—J. C. Scott and Co., Fredericton, from Woodstock to Medunatic; Smith and Merrithew, mileage 7 to 16.5; Collins, Labelle and Prey, mileage 16.5 to 20; G. H. Tuitere, Brownville, Me., one mile at Springhill; W. and C. R. MacDonald, mileage 27 to 32; J. A. Wheaton and Son, St. John, mileage 32 to 35. F. A. Hibbard is Chief Engineer for the general contractor on this section. It is further reported that the Corbett firm has sublet a portion of its contract to Morrison and Clark, ummerside, P.E.I.

The contract for enforcing the right of way, and the stringing of the telegraph line, has been let to T. R. Campbell, Salisbury, N.B. (June, pg. 302.)

Seymour's Narrows, B.C.—A deputation from Vancouver Island waited on the Dominion Government, June 11, to urge the construction by the Dominion of a bridge across the Seymour's Narrows, so as to give direct railway con-

nection between Vancouver Island and the British Columbia mainland. The cost of the bridge is estimated at \$20,000,000. The Premier promised that an engineering party would be sent out to investigate and report upon the feasibility of the project.

Temiskaming and Northern Ontario Ry.—The Minister of Railways has approved of plans for the proposed crossing of the Montreal River on lots 10 and 11, con. 1, Tudhope tp., Nipissing district. This crossing is on the Enk Lake branch. Work is reported to be progressing favorably on the building of the branch. The right of way has been cleared to Montreal River, 25 miles, and about five miles of grading completed. (June, pg. 302.)

Birthdays of Transportation Men in July.

Many happy returns of the day to:

W. H. Allison, District Freight Agent, C.P.R., Saskatoon, Sask., born at London, Ont., July 22, 1885.

J. H. Black, ex-Superintendent, Temiskaming and Northern Ontario Ry., now at Cobalt, Ont., born near Smiths Falls, Ont., July 8, 1874.

M. S. Blaiklock, Engineer Maintenance of Way, G.T.R., Montreal, born at Quebec, July 19, 1859.

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., July 25, 1877.

D. C. Coleman, General Superintendent, Manitoba Division, C.P.R., Winnipeg, born at Carleton Place, Ont., July 9, 1879.

Geo. Collins, General Manager, Central Ontario Ry., Trenton, Ont., born at Kingston, Ont., July 20, 1860.

G. C. Conn, Vice President, Pere Marquette Rd., Detroit, Mich., born at Woburn, Mass., July 1, 1867.

D. D'E. Cooper, Canadian Freight Agent, Lehigh Valley Rd., Toronto, born at Buffalo, N.Y., July 8, 1862.

John Corbett, ex-General Foreign Freight Agent, C.P.R., Montreal, born in Lanarkshire, Scotland, July 19, 1863.

E. J. Coyle, ex-Assistant General Passenger Agent, C.P.R., Vancouver, B.C., born at Stayner, Ont., July 23, 1870.

S. E. Dewey, Commercial Agent, G.T.R., Pittsburgh, Pa., born at Beckenham, Kent, Eng., July 4, 1879.

J. F. Dolan, City Passenger and Ticket Agent, Richelieu and Ontario Navigation Co., Montreal, born at Kingston, Ont., July 1, 1868.

F. C. Foy, Canadian Passenger Agent, New York Central Lines, Toronto, born there, July 5, 1881.

W. R. Haldane, ex-Division Freight Agent, Kootenay and Boundary District, C.P.R., Nelson, B.C., now at Detroit, Mich., born at Galashiels, Scotland, July 6, 1867.

J. H. Hanna, ex-Division Freight Agent, G.T.R., at Hamilton, Ont., now at Calgary, Alta., born at London, Ont., July 27, 1867.

A. D. Huff, Division Freight Agent, G.T.R., Ottawa, born at Chatham, Ont., July 17, 1866.

C. A. Jaques, General Manager, Montreal and Lake Erie Steamship Co., Montreal and Great Lakes Steamship Co., and Jaques Transportation Co., Montreal, born there July 15, 1849.

J. P. Kavanagh, Local Manager, Ogdensburg Coal and Towing Co., Montreal, born at Plattsburg, N.Y., July 17, 1862.

R. G. McNeillie, District Passenger Agent, C.P.R., Calgary, Alta., born at Lindsay, Ont., July 1, 1883.

J. M. Macrae, District Freight Agent, Canadian Northern Ry., Saskatoon, Sask., born at Stornoway, Scotland, July 31, 1884.

T. J. Maguire, Accountant, Quebec Central Ry., Sherbrooke, Que., born at Quebec, July 31, 1860.

R. E. Perry, Assistant General Freight Agent and Chief of Tariff Bureau, Intercolonial Ry., Montreal, born at Drayton, Ont., July 5, 1876.

R. Preston, Master Mechanic, Manitoba Division, C.P.R., Winnipeg, born at Toronto, July 28, 1863.

J. E. Quick, General Baggage Agent, G.T.R. and G.T.P.R., Toronto, born at Richmond, Ontario Co., N.Y., July 10, 1851.

G. G. Ruel, Chief Solicitor, Canadian Northern Ry., Toronto, born at St. John, N.B., July 5, 1866.

P. E. Ryan, Secretary, National Transcontinental Railway Commission, Ottawa, born there July 26, 1876.

Geo. Stephen, General Freight Agent, Canadian Northern Ry., Winnipeg, born at Montreal, July 5, 1870.

R. F. Struthers, Chief Inspector of Time Service, C.P.R., Winnipeg, born at Stratford, Ont., July 31, 1879.

Sir Thos. Tait, President, Fredericton and Grand Lake Ry and Coal Co., born at Melbourne, Que., July 24, 1864.

H. T. Wilgress, Agent, C.P.R. Pacific Steamship Service, Yokohama, Japan, born at Lachine, Quebec., July 29, 1857.

The Death of James Stephenson.

On June 5, W. Wainwright, Vice President, G.T.R., Montreal, received a cablegram stating that his brother in law, James Stephenson, had died at Clevedon, Somerset, Eng., as the result of an accident. Only a few days before Mr. Wainwright had received a letter from him, written in the best of spirits and saying that he was in excellent health. Subsequently Mr. Wainwright received a letter from Mrs. Stephenson giving particulars of the accident. Mr. and Mrs. Stephenson had been in London, where they had celebrated Mr. Stephenson's 75th birthday. They reached home about 5 p.m. and after reading some letters that had arrived during his absence Mr. Stephenson went upstairs. The supposition is that in coming down he missed his footing at a turn in the stairs and fell the whole flight to the bottom, striking his head, which brought on concussion of the brain. He did not regain consciousness and died at 3 a.m. the following day. He was buried at Weston Super Mare, where his mother-in-law, Mrs. Arnold, formerly of Toronto, is buried.

Mr. Stephenson was born at Lancaster, Eng., in June, 1837. On coming to Canada in 1855 he entered the British American Telegraph Co.'s service, and in 1856, on its amalgamation with the Montreal Telegraph Co., entered the Grand Trunk Ry. service as telegraph operator, afterwards occupying the following positions in the same company's service:—1861 to 1862, train dispatcher, Kingston, Ont.; 1862 to 1863, agent at Don, Toronto; 1863 to 1867, Assistant Superintendent, Toronto; 1870 to 1874, Assistant Superintendent, Kingston; June 29, 1874, to June 13, 1881, Assistant Superintendent, Montreal; June 13, 1881, to July 1, 1884, General Passenger Agent; July, 1884, to Feb. 16, 1896, Superintendent, Montreal. In the latter year he was superannuated and went to England to live, first going to Weston Super Mare, and in 1910 removing to Homeleigh, Walton Park, Clevedon, a short distance from Weston Super Mare.

During the Fenian raid in 1866 he enlisted in the volunteer militia and went to the front, subsequently becoming captain and then major, and retiring in 1871, retaining the latter rank. He married a daughter of the late Richard Arnold, of Toronto, and sister of the late Mrs. Wm. Wainwright. He visited Canada in 1911, receiving a warm welcome from old colleagues and other friends. He was one of the earliest subscribers to The Railway and Marine World.

National Transcontinental Railway Construction.

Owing to the revision of certain drawings, the commissioners extended the time for receiving plans for station and other buildings referred to in our last issue, from May 31 to June 14.

It is reported that on the 578 miles in District B, extending from the New Brunswick boundary to Megiskwan bridge, grading is completed on all but 80 miles; and that of the mileage on which track has been laid, only 30 miles have yet to be ballasted.

The Quebec city council has decided to call the Government's attention to the fact that when the Champlain market was sold for \$100,000, it was on the understanding that it was to be used as the terminal site for the National Transcontinental Ry. and to ask the Government to carry out the agreement made.

The Quebec board of trade has passed a resolution urging the commissioners to push forward the work on the line between Quebec and Cochrane, Ont., so that it may be completed at the same time as the line easterly to Cochrane. This section of the line, R. W. Leonard, commissioner, stated would be ready for operation by the end of the year. The contractors are operating a bi-weekly train service from Cochrane easterly to Peter Brown Creek, 150 miles, and bi-weekly from Cochrane westerly to Crow Creek, 103 miles. (June, pg. 291.)

Grand Trunk Pacific Railway Construction.

The Port Arthur, Ont., city council, discussed the company's plans for entering that city, June 15. The company informed the council that it will start construction almost immediately on the line along Empire avenue. At Fort William, the company is preparing to build its line into the union station, now that the Board of Railway Commissioners has approved of location plans for the line in accordance with the agreement between the city and the C.P.R., an order which rescinds that made Oct. 6, 1909. The company is also laying additional tracks in the Mission River yards.

The Board of Railway Commissioners has approved of revised location plans for the Regina-Moose Jaw branch from mileage 0 to 2.1, and a diversion of 0.4 of a mile at mileage 36.4.

Surveys are reported completed by the party under — Silcox, for a line from Watrous, through Swift Current, Sask., to the international boundary. The first 50 miles of the line is said to have been definitely located, and it is reported that construction will be started early next year.

D. McPherson, representing McPherson and Quigley, is quoted as stating that his firm has completed the last of the masonry and concrete work for the bridges, etc., on the Tofield-Calgary line, and that according to the present rate of progress, track will be laid and the line ready for operation into Calgary in the fall.

Reports from construction gangs, quoted in Edmonton, June 14, state that grading is practically completed to 140 miles west of the British Columbia boundary, and that considerable grading has been done west of that point on the 100 miles intervening to Fort George.

Grading gangs are at work west of Fort George. It was expected to have steel laid to Tete Jaune Cache, 53 miles from the B.C. boundary line, June 30, but this depended upon a 2,000 ft. tunnel being completed at mileage 47. Two steamboats and 12 gasoline launches are employed in transporting men and materials from Tete Jaune Cache, on the Upper Fraser River, to the camps in the direction of Fort George.

The line from Prince Rupert, B.C., has now been opened for traffic as far as the Skeena River, 164 miles, the Board of Railway Commissioners having given its approval for the opening of the last 64 miles, June 4. The construction of the bridge across the Skeena River is well advanced, and it is expected to have it completed early in July. Work is well advanced between this point and Hazelton, and track will be laid into it as soon as the bridges are completed. There is still a lot of heavy work to be done east of Hazelton to Mud Creek. (June, pg. 291.)

Little Current Channel Bridge, Algoma Eastern Railway.

The Algoma Eastern Ry., the construction of which was described in The Railway and Marine World for June by the Chief Engineer, will cross the channel between the mainland and Manitoulin Island. The small intervening islands are being utilized to make the spans required shorter. All but one of the bridges are solid spans, as the channel between Goat and Manitoulin Islands at Little Current is the only one required to be open for navigation. In consequence a swing or lift bridge was necessitated at this point.

The present plans call for a 372 ft span swing girder, with approaches from each side, giving two clear channels 150 ft. wide. The Little Current approach is across a single 60 ft. deck plate girder, and the approach at the other end is across two 70 ft. deck plate girders. The swing bridge pier is circular, 31 ft. in diameter below the water line, and 28 ft. above. The swing bridge abutments and the approach girder piers, as well as the land abutment piers are all of concrete, and with the central swing girder pier of the same construction, run down to bed rock, which is at the bed of the channel. The central pier extension, on to which the swing revolves, is 425 ft. 9 ins. long by 49 ft. wide. The embankment approaches from the Little Current end are short, while that on the other end is of some length. The bridge and approaches are on a tangent and level, at an elevation of 636.00, or 23 ft. above the mean water level. The whole structure has been approved by the Minister of Public Works, and was designed to conform to the Dominion Government specifications of 1908, class I. This is the plan that has been filed, but there is under discussion the substitution of the swing span by a bascule lift span, with consequent change in the present arrangement.

Railway Finance, Meetings, Etc.

Canadian Pacific Ry.—On his return to Montreal, June 10, Sir Thomas Shaughnessy was reported to have stated, in regard to the rumors that the C.P.R. shares would be split and arranged to cover separately, the land, steamships and railway departments, that the directors had given no thought whatever to such a proposal, and, in any case, it would not be legal.

Dominion Atlantic Ry.—Approximate passenger earnings for May, \$51,740.95; freight earnings, \$51,657.87; total earnings, \$103,398.82, against \$97,100, total earnings for May, 1911.

Grand Trunk Ry.—The G.T.R. is reported to have arranged with Blair and Co., and the Bankers Trust Co., New York, for the financing of \$4,483,675 of 5% equipment trust notes repayable in 10 years.

Kootenay Valley Ry.—Press reports recently stated that the C.P.R. had purchased the K.V. Ry., running from Bonners Ferry, Idaho, to Creston, B.C., and that the transfer would be made June 1.

We are officially advised that there is nothing in the report.

Montreal and Vermont Junction Ry.—Following are the officers and directors for the current year:—President, E. H. Fitzhugh; Vice President and Managing Director, G. C. Jones; Auditor, W. G. Crabbe; Secretary Treasurer, A. H. Gilmore; Assistant Secretary Treasurer, W. H. Chaffee.

New York Central and Hudson River Rd.—There has been deposited in the office of the Secretary of State at Ottawa a lease and agreement, dated Apr. 23, between the Guaranty Trust Co., New York, and the N.Y.C. and H.R. Rd., the Lake Shore and Michigan Southern Rd., the Michigan Central Rd., and the Cleveland, Cincinnati, Chicago and St. Louis Ry. The Canadian interests affected by the lease and agreements cover the Canada Southern Ry., an interest in the Toronto, Hamilton and Buffalo Ry., the Ottawa and New York Ry., the St. Lawrence and Adirondack Ry., and the Rutland and Noyan Ry.

Pere Marquette Rd.—The U.S. court at Detroit, Mich., has authorized the receivers to raise \$3,500,000 to take \$1,800,000 of equipment obligations now due, to provide for the purchase of further equipment, and to make improvements on the line. The order also permits the receivers to pay out of the earnings of the line interest on the underlying mortgages as it becomes due.

Quebec Central Ry.—Under the provisions of acts passed last session of the Quebec Legislature amending the company's charter and confirming an agreement between the Q.C. Ry. and the C.P.R., meetings of bondholders were held in London, Eng., June 12, when resolutions consenting to the terms and stipulations of the first act, and the schedules attached thereto were passed. The holders of the 4% debenture stock met first; then the holders of the 3% debenture stock, and then the holders of income bonds. A special meeting of shareholders was subsequently held and resolutions as to the lease of the line of the C.P.R. were adopted.

A London, Eng., cable, June 12, states that the lease to the C.P.R. was approved, and that it will become operative Dec. 31, after having been approved by the C.P.R. shareholders. Under the terms of the lease the interest on all the Q.C.R. securities is guaranteed by the C.P.R. for 999 years. The directors will be appointed jointly by the C.P.R. and the holders of securities. The company's head office has been transferred from England to Canada, where all future meetings will be held.

Quebec Central Ry.—Gross earnings for April, \$107,371.25; expenses, \$67,633.37; net earnings, \$39,707.88, against \$104,176.10 gross earnings; \$65,901.30 expenses; \$38,274.80 for April, 1911. Aggregate gross earnings for 10 months ended Apr. 30, \$1,067,441.22; expenses, \$737,097.96; net earnings, \$330,343.26, against \$964,536.49 aggregate gross earnings; \$661,461.44 expenses; \$303,075.05 net earnings for same period 1910-11.

Toronto, Hamilton and Buffalo Ry.—At the annual meeting at Hamilton, Ont., June 4, the following were elected directors for the current year:—J. N. Beckley, W. C. Brown, Nicol Kingsmill, H. B. Ledyard, D. McNicoll, W. H. Newman, Sir Edmund Osler, W. L. Scott, Sir Thomas Shaughnessy, W. P. Torrance and W. K. Vanderbilt, Jr.

White Pass and Yukon Route.—Gross earnings for four months ended Apr. 30, \$81,439, against \$131,570 for same period, 1911.

The Board of Railway Commissioners has notified railway companies to show cause why a general order should not issue requiring railway companies to furnish a heated car service.

railway, unless proof to the contrary is furnished.

For the violation of any of these regulations, the railway shall be liable to a penalty of \$100 for each offence in addition to any other liability incurred. Any employee or party included in the regulations, and who fails to obey them, is subject to a penalty of \$25 for each offence, in addition to his other liabilities.

Grand Trunk Railway Betterments, Construction, Etc.

Southern New England Ry.—The Governor of Massachusetts has signed the act of Legislature authorizing the building of an extension into Boston and other lines to connect with the projected extension to Providence, R.I.

The extensions proposed to be built in Vermont, New Hampshire, Massachusetts and Rhode Island total 208 miles, and will serve a rich agricultural and manufacturing district. The S.N.E. Ry. is a subsidiary of the Central Vermont R'y., and will have outlets to ocean ports at Boston, Mass., and Providence, R.I. The Central Vermont Ry. has an ocean port at New London, Conn., and the G.T.R., which owns the C.V. Ry., has an ocean port at Portland, Me.

The Boston line will branch off from the C.V. Ry. at Bellows Falls, on the Vermont-New Hampshire State line, and will be over 100 miles long. Preliminary surveys have been made, but the route is not yet finally determined. The contract for the line to the Rhode Island boundary at Woonsocket, R.I., has been let to J. Marsh, Chicago, Ill.; and that for the line to Providence has been let to the O'Brien Construction Co., New York.

We are officially advised that G. M. Thompson has been appointed engineer in charge of surveys for the section of the projected lines of this company in the state of New Hampshire.

Montreal Track Elevation.—The Chief Engineer estimates that the proposed track elevation will cost over \$1,000,000 in excess of the amount originally proposed, when the city of Montreal undertook to contribute \$200,000 towards it. The company is asking for an increased contribution, which the city council is opposing. A proposition has been submitted to the board of control with a view of having the tracks depressed instead of elevated, with subways at the street crossings, and it is contended that this plan will cost less than the original estimate for the elevation.

Ottawa Station and Hotel.—The new central station and hotel were opened to the public June 1.

Brockville Roundhouse.—A new roundhouse with 47 stalls is projected at Brockville, Ont. On its completion a new station will be built at the head of Buell St., according to press reports.

Toronto Union Station.—Workmen started work June 4, clearing the debris of the fire of 1904, on the site secured for the new union station. The real work of building the station will not be undertaken, however, according to a statement of Vice President Kelley, until the work of grade separation from Bathurst St. is well forward. The plans for this have been finally approved by the Board of Railway Commissioners, and arrangements are in progress for putting it in hand.

Woodstock-Sarnia Track Relaying.—We are officially advised that the track between Woodstock and Sarnia, Ont., is to be relaid with 100 lb. steel rails. (June, pg. 292.)

S. G. Ferguson, engineer, Intercolonial Ry., Chaudiere Jct., Que., in remitting his annual subscription, writes: "I consider The Railway and Marine World of great value and interest to us railway men."

C.P.R. Passenger Terminal and Office Facilities at Vancouver.

Plans have been prepared and work is now under way on extensive improvements in connection with the passenger terminal at Vancouver, B.C. The present passenger station, which is located at the foot of Granville St., near the shore line of Burrard Inlet, was built about 14 years ago, and except for minor alterations, is unchanged from its original plan. The general waiting room and ticket offices are at the street level, and the baggage room is on the track level, which is about 30 feet below the street.

Along the water front across the local freight yard tracks are located the steamship wharves. There are two large sheds on a jetty pier of recent construction used by the C.P.R. trans Pacific steamship lines; also five sheds adjoining the longitudinal wharves used by the C.P.R. Victoria, Seattle, Alaska and other steamship lines. Between the wharf sheds and the passenger tracks adjoining the passenger station certain of the freight tracks serve the several sheds, and other tracks are used for drilling and storage. The yard tracks extend along the harbor front about a mile and a half.

By reason of its favorable location and the transportation facilities afforded by C.P.R. enterprise, Vancouver has grown from a trading camp to a well established city with over 125,000 inhabitants in about 25 years time. All business lines are represented in the commercial field centreing at the city. Situated at the terminal of the first, and still the only, Canadian transcontinental railway on a fine natural harbor and with other favorable surroundings, its growth has been based on advantages which ensure continued growth and permanency, and there is every indication that its population will be not less than 300,000 at the end of the next decade. The past growth has rendered inadequate the present facilities for handling the C.P.R.'s terminal business and the general plan adopted has been designed to relieve the present congestion, as well as to provide for reasonable growth in the near future.

The general scheme embraces a passenger station and office building located on available land immediately east of the present passenger station. There will be four passenger tracks, with provision for more when required, separated by wide platforms, between the station and the present freight yard. The passenger tracks are to be raised about 5 ft. above the present track level to reduce the difference in level between the street and the tracks to about 25 ft.

In order to avoid an inconvenient grade crossing and delays to traffic between the city and steamship wharf a bridge on the line of Granville St. extended, is to pass over the passenger and freight tracks to the steamship pier and connect directly with passenger accommodations on the pier. An incline is also to be built leading from the west side of this bridge to the wharf, giving access to the lower deck of the pier and freight sheds and the water front. Another viaduct over the tracks is to be built on the line of Burrard St. extended northerly, with an incline giving access to the present trans Pacific pier and other portions of the water front.

The main entrance of the passenger station will be on Cordova St. with the main waiting room located centrally in the station on the street level. Ticket offices serving the several classes of railway and steamship passengers will be located at one end of the waiting room, and the baggage checking room, luncheon and dining room, parcel room, women's waiting room, men's smoking room, news booth, information booth and other facilities will be all placed

immediately adjoining the main waiting room.

On the lower floors of the station will be the baggage rooms, express company's space, immigrants' rooms, supply rooms, and other station facilities not directly used by passengers. Stairways and lifts will connect the two levels of the station and also afford communication with the office floors above. A separate foot bridge will be carried over the passenger tracks directly connected with the waiting room at one end and with stairways leading to the track level, giving access to platforms without crossing tracks at grade. The track platforms will be 1,000 ft. long and will be covered with shelter sheds of the umbrella type. The platform adjoining the station will be used only for baggage express and supplies.

Above the public rooms of the station building the space will be devoted to the company's offices. The interior arrangement of the office space will be adapted for a unit system of sub-division; that is, each panel will have heating and lighting facilities so that partitions may be placed or removed at will in order to provide for changes in arrangement of office accommodations which may be desired from time to time.

The proposed steamship station on the pier will be a two level building, the upper floor being devoted to the passenger business and offices and the lower floor to freight, baggage and express. There will be double level gangways on the west side of the pier, which will be used for the Victoria and Seattle service, the lower gangway being used for freight and the upper for passengers; these gangways to be supported on floating pontoons to maintain the landing at a constant level with respect to the boats. On the passenger or upper level of the pier will be waiting rooms, ticket offices, baggage checking room, customs office and other conveniences. Separate rooms will be provided for outgoing and incoming passengers. Two tracks will be placed on the surface of the pier within the shed, and one track on the outside of the building for the direct handling of freight between cars and steamers.

The essence of the general design has been to secure easy lines of communication between the railway trains, steamers and the city. The traffic conditions at Vancouver are unusual as compared with other large terminals on account of the absence of suburban business. The aggregate number of trains is not large, but they are long and frequently are run in several sections and contain a number of classes of traffic.

The designs for the terminal have been prepared by Westinghouse, Church, Kerr and Co., New York and Montreal, in co-operation with C.P.R. officials, and the construction of the station and facilities is being carried out by the same organization.

Dominion Railway Subsidy Agreements.

The Dominion Government has entered into agreements with the following companies, under the act granting aid for the construction of railways:—

SOUTHAMPTON RY., May 14.—From Millville, N.B., to the St. John river, near Pokiook bridge, 13 miles.

DOMINION ATLANTIC RY., June 1.—From the main line to the Government pier or wharf at Canning, N.S., one mile.

JOLIETTE AND LAKE MANUAN COLONIZATION RY., June 11.—From Joliette, Que., to near Lake Manuan, 60 miles.

NORTH RY., June 12.—From near Montreal, to mileage 837 west of Moncton, N.B., on the National Transcontinental Ry., and from that point, northerly and northwesterly 300 miles.

FREDERICTON AND GRAND LAKE COAL AND RY. CO., June 13.—From Gibson, N.B., to near Minto, with a branch to Marysville, 35 miles.

Canadian Pacific Railway Construction, Betterments, Etc.

Quebec Terminals Proposals.—A modified proposal was submitted by the President to the Quebec city council, June 13, by which the company will accept 107,000 ft. on the south end of Victoria Park, instead of 225,000 ft., and in return give over to the city a portion of its property at Hare Point. The proposition is under consideration.

St. Martin's Jct. to Ste. Therese.—The Board of Railway Commissioners has authorized the opening for traffic of the second track on the main line between St. Martin's Jct. and Ste. Therese, Que., 7.22 miles.

Hull Station.—The President invited the Hull, Que., city council, June 4, to submit suggestions with regard to the new station which it is proposed to build there. The site selected is on Brewery St., at the junction of Frost St. and Chelsea Rd. It is proposed to utilize the old station for freight purposes only. Plans for submission to the C.P.R. are being prepared by the city engineer.

Ottawa Tunnel, etc.—The Minister of Railways recently stated that the Department would not decide upon the question of the proposed C.P.R. tunnel through the city for some time. In connection with this proposal it is reported that the C.P.R. has secured an option on the Russell House property.

Campbellford, Lake Ontario and Western Ry.—The Board of Railway Commissioners has authorized the making of a connection of this line under construction, with the C.P.R. Montreal-Toronto line at Glen Tay, Ont., and has approved of revised location plans from the point of the junction to mileage 2.08. The board has also approved of location plans for the line from mileage 58.5 to 68; from mileage 72 to 75.45; from 79.5 to the western boundary of Trenton; from mileage 106.7 to 123, and from mileage 140.63 to 147.89, all mileages being calculated from Glen Tay. It has also authorized the taking possession of certain portions of the right of way of the Canadian Northern Ontario Ry. at mileage 79.5.

Toronto Terminal Improvements.—In connection with the laying out of the old Government House site, etc., at Toronto, the Board of Railway Commissioners has authorized the company to make connections with the G.T.R., to take additional lands, and to divert lanes, near Clarence Square.

Islington-Weston Branch.—The Board of Railway Commissioners has dismissed the company's application to build a branch from Islington, on the Toronto-Windsor line, to Weston, on the Toronto-Owen Sound line. It is said that the project to build this line has been abandoned in favor of a line, which is now being surveyed, to connect the Hamilton-Guelph Jct.-Guelph line with the Owen Sound line near Bolton.

Collingwood Southern Ry.—C.P.R. surveyors were reported to be working in the vicinity of Litsa, Ont., June 13, on a line from Collingwood to a junction with the Toronto-Sudbury line.

Toronto-Owen Sound Line.—Press reports state that a resurvey of the line from Bolton to Owen Sound, Ont., is being made with a view of reducing gradients, and eliminating curves, notably the horseshoe curve at Caledon. We are officially advised that this is incorrect. The gradients on the section of the line from Toronto to Bolton Jct. were reduced, and a number of curves eliminated, at the time of the building of the line from Bolton Jct. to Sudbury.

Georgian Bay and Seaboard Ry.—A contract has been let to the John S. Metcalf Co., Montreal, for the erection of an addition to the grain elevator at Port McNicoll, Ont., the terminus of the line

on Georgian Bay. The addition will have a storage capacity of 2,000,000 bush., and will be similar in construction to the main building.

Car Ferry at Fort William.—The C.P.R. has a car ferry barge in operation at Fort William, connecting with Island No. 1. A temporary track has been laid from the city yards to the banks of the Kaministiquia River, and the ferry is used for the transfer of cars of construction plant and material.

Freight Yards at North Transcona, Man.—We are officially advised that the contract for the erection of a 1,000,000 bush. grain elevator, with cleaning facilities, has been let to the Barnett, McQueen Co., Minneapolis, Minn. The elevator is to be built of reinforced concrete throughout. It will have a capacity for receiving, cleaning and loading out to cars at the rate of 12 cars an hour, and a drying capacity of 1,000 bush. an hour. It will contain 140 bins, so that the individuality of cars of grain could, to a large extent, be maintained in passing through it. The general arrangement of the plant will admit of an increase of storage up to 15,000,000 bush., if required. The elevator will be operated by electricity.

Winnipeg-North Transcona.—It is reported that in connection with the laying out of the new yards at North Transcona, Man., a new line will be built about a mile north of the Winnipeg limits. To carry the line, two subways across streets, and a new bridge across the Red River, would be required.

Gimli Branch Extension.—Tenders are being asked for the clearing of the right of way for the extension of the Gimli branch, from its present terminus at Gimli to the Icelandic River, Man.

Portage la Prairie-Brandon Second Track.—Vice President George Bury made an inspection of the second track work, now practically completed between those points, June 7. The Board of Railway Commissioners has authorized the opening for traffic of the second track from mileage 92.4 to 105.7 from Winnipeg.

Saskatoon Office Building.—Plans have been completed, and tenders are being asked for the erection of an office building on 2nd Avenue, Saskatoon, Sask., at an estimated cost of \$200,000. The building will be four stories high, of steel, with stone and brick facings. The basement will be of full size, 50 by 148 ft. On the ground floor there will be ticket, telegraph, express and freight offices, and the three upper floors will be laid out in suites of offices.

Kerrobert Northerly.—The Board of Railway Commissioners has approved of location plans for the branch line northerly from Kerrobert, Sask., from mileage 20 to 36.09. This branch will connect with the branch line southerly from Wilkie, which is projected on the east side of Tramping Lake to Anglia. The contract for grading has been let to Dutton and Trenton, Winnipeg.

Weyburn-Lethbridge Line.—The western end of this line is being built as a branch of the Alberta Ry. and Irrigation Co.'s line, owned by the C.P.R., and starts at Stirling, from which point a branch runs westerly to Cardston. The route map as approved shows that the line will run almost due east for 36 miles. J. Timothy has the contract for 25 miles, and Foley, Welch and Stewart are building the line from the east. It is expected that track will be laid on a considerable mileage at the east as well as the west end this year.

Suffield Southwesterly.—In connection with the reported building of a line from Suffield, on the main line, to Kipp, between Lethbridge and Macleod, a con-

tract was let early in the season (see R. and M.W., April, pg. 177) to the J. G. Hargrave Co., Winnipeg, for 25 miles, and construction was started at Suffield in a southwesterly direction.

Bassano Branch.—The Board of Railway Commissioners has approved of revised location plans for the proposed branch from Bassano, Alta., for 35.39 miles in tp. 3, range 22 to 25, west of the 44th meridian.

Track Revision, Gleichen to Shepherd.—The Board of Railway Commissioners has approved plans for the revision of the line from Gleichen to Shepherd, Alta., mileage 0 to 16.

Alberta Central Ry.—The Board of Railway Commissioners has authorized the building of a bridge over the trail at Rocky Mountain House, Alta., and the diversion of the trail.

Strathcona-Edmonton Line.—The Board of Railway Commissioners has authorized the crossing of the Saskatchewan Ave., Edmonton, Alta., by an overhead bridge, and the crossing of Hardisty Ave., on the level. This is the extension of the line from Strathcona into Edmonton, for which the high level bridge is being built across the Saskatchewan River.

Edmonton Office Building.—A contract is reported let to C. W. Sharpe and Son, Winnipeg, for the erection of an office building in Edmonton, Alta., the estimated cost of which is \$300,000.

Double Track Work in the Rocky Mountains.—Sir Thos. G. Shaughnessy, President, is quoted as stating, June 11, that surveys were to be started at once for a second track through the Rocky and Selkirk Mountains. It was estimated roughly that the work would cost \$60,000,000.

Kaslo and Slocan Ry.—We are officially advised that the C.P.R. has agreed with the B.C. Government to reconstruct prior to Dec. 31, 1913, the K. and S. Ry. from Kaslo to Bear Creek, B.C. The line is a narrow gauge one, and it is to be made standard. The contract with the B.C. Government calls for the effectual maintenance and continued operation of the line as part of the C.P.R. system.

The line was taken over by the C.P.R. at the end of May, the officers and directors being as follows:—President, Geo. Bury; Vice President, J. S. Dennis; Secretary Treasurer, G. A. Walker, C.P.R. Solicitor, Calgary; other directors, T. Heeney, Calgary, and C. L. Stephenson, Kaslo.

The spur line from Three Forks to Bear Lake, which the C.P.R. has under construction, will connect with the K. and S. Ry. The contractors, Anderson and Co., have the grading nearly completed, and are having a connection made with the Sandon spur in order to get in material for the Seaton Creek bridge.

Vancouver Station, etc.—The Board of Railway Commissioners has approved of change in location of the station at Vancouver. The new building, according to a statement attributed to F. W. Peters, General Superintendent, will cost about \$1,000,000; the overhead viaducts to the docks, and the additions to the docks, will cost an additional \$1,500,000. The site of the new station will be just east of, and including a portion of the present building. The contract has been let to the Westinghouse, Church, Kerr Co., New York, and preliminary operations were expected to be started by June 30. The building will be six stories in height, four of which will be above the Cordova St. level. In connection with the station building there will be an overhead bridge carrying Granville St. right across the tracks to the new and enlarged docks. The agreement in connection with these matters was approved by the city council, May 30. It also provides for the building of bridges across the tracks to the waterfront at George

Harris St., at Dunsmuir St., and a subway at Carral Ave., in conjunction with the city.

Branch in North Vancouver.—The Board of Railway Commissioners has approved location plan for a line from mileage 115, Cascades subdivision, along the north shore of Burrard Inlet, to North Vancouver, 21 miles. (June, pg. 290.)

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:—

Rates on Coke from Hamilton and Toronto.

16453. May 6. Re complaint of Consumers Gas Co. of Toronto complaining that rates on gas house coke from Buffalo to Hamilton, Brantford and Toronto create an unjust discrimination in favor of Buffalo and against Toronto. It is ordered that the railway companies charge the following rates on coke per net ton in carloads of the minimum Hamilton to Toronto, Brantford and Bridgeburg, 50c; from Toronto to Hamilton, 50c; from Toronto to Brantford, 60c; from Toronto to Bridgeburg, \$1; and that the tariffs containing the said rates be published and filed to become effective not later than June 1, 1912.

Order 16707, June 4, amended order 16453, by substituting 40,000 lbs. for 30,000 lbs.

Classification of Gramophones.

16479. May 10. Re application of Berliner Gramophone Co., Ltd., of Montreal, for an order directing railway companies to add gramophones, boxed, to the musical instruments list in Canadian freight classification. It is ordered that in the Canadian freight classification the following articles be transferred from their present positions to the "musical instruments list," and that they be also included in the second class rating applicable to "Musical instruments, all kinds, not otherwise specified, carloads, minimum 12,000 lbs., viz.—Gramophones, graphophones, phonographs, records.

Order 16705, June 5, prescribes that order 16479 take effect, July 15.

Victoria and Sidney Railway Freight Tariff.

16507. May 13. Re application of Great Northern Ry. Co., under sec. 327 of the Railway Act, for the approval of its standard freight tariff of maximum tolls to apply on the Victoria and Sidney Ry. It is ordered that, pending the Board's decision in the enquiry into the tolls of railway companies in British Columbia generally, the applicant company's said tariff be approved.

Grand Trunk Pacific Railway Freight Tariff.

16528. May 15. Re application of Grand Trunk Pacific Ry. under sec. 327 of the Railway Act, for the approval of its standard freight mileage tariff C.R.C. 9, to apply from Prince Rupert east 170 miles to Carnaby, cancelling tariff C.R.C. 8. It is ordered that the said tariff, specifying the maximum mileage tolls to be charged for each class of the Canadian freight classification for all distances covered by the company's railway up to 170 miles, between and including Prince Rupert and Carnaby, be temporarily approved pending the result of the Board's enquiry into the rates charged generally by the railway companies west of and including Crow's Nest, Canmore, and Thornton; the said tariff to include and supersede the company's standard freight mileage tariff C.R.C. 8, approved by order 14524, Aug. 8, 1911.

Quebec Oriental Ry.—A meeting of the holders of 5% first and second mortgage gold bonds on the Matapedia section of the line is to be held, July 18, to authorize the creation of £50,000 of prior lien mortgage gold bonds or other security to rank in priority to the existing bonds.

Block and Truck Car for Wrecking on the Grand Trunk Pacific Ry.

The block and truck car for wrecking purposes shown in the accompanying illustration was designed by John B. Shelton, Car Foreman, G.T.P.R. shops, Transcona, Man., and since being put in service has proved its merits.

In the first place, a common flat car was used, erecting thereon heavy posts, braces and rods. The upper deck of the superstructure is used for wrecking blocks, with one end of this floor partitioned off to form a 6 x 9 ft. bunk room, containing two bunks, providing ample room for four men. In this room, which is 5 ft. high, there is also a provision closet and stove.

Under this upper deck, on the surface of the flat car, there is a store of trucks and wheels, which can be unloaded from either end of the car by the use of the windlass and rope. Between the wheels, there is room for a supply of steel rails and wrecking chains. In addition to this storage space and the store on the upper deck, a boot has been added, suspended from the sills under the car, in which are kept oil boxes, journal bearings, dope buckets, packing hooks and various other articles required by a repair car.

Block and truck car for wrecking purposes on the G.T.P. Ry.

Securely fastened along each side of the car is a supply of heavy wire cables. In addition, the car is supplied with climbing ladders, sill steps, grab irons, uncoupling levers, etc., conforming with the Board of Railway Commissioners' requirements for safety appliances.

The windlass is geared, and has two 18 in. cranks, giving a sweep of 36 ins. Two men can thus unload a pair of trucks with ease, and, by the same arrangement, the car men can load defective trucks or wheels without the delay attendant on the use of a locomotive, which would block the track to passing trains and others that are required in the work of clearing the wreck.

Mr. Shelton resigned from the G.T.P.R. service since the above information was furnished us and has been appointed Car Foreman, C.P.R., at Moose Jaw, Sask.

B. J. Coghlin Co., Ltd., manufacturers of railway rolling stock springs, track tools, tie plates, etc., Montreal, whose factory has been on its present site since 1863, have bought a large block of land on Ontario St. East, between Davidson and Darling Streets, and have let contracts for the erection of a large factory and office building, which will double their present capacity. They will also put up a large warehouse for steel and have ordered considerable new machinery.

Automatic Block Signals on the Grand Trunk Railway.

The G.T.R. is installing an automatic block signal system on its western division in Indiana, as follows:—Maynard to Sedley, double track, 20 miles; Valparaiso to Grangers, double track, 55 miles; Valparaiso to Sedley, single track, 5 miles; Olivers to St. Joe River, single track, 2 miles.

On double track the signals will be automatic, bottom post, pull clear, three position type, operating in the upper quadrant and arranged to be worked "normal clear." On single track the system will be controlled manual with continuous track circuits. All the signals will be power operated. The materials and specifications will conform to the Railway Signal Association standards throughout. The type of signal to be used is the three position, normal clear, the semaphore indications being in the upper right quadrant. All the signals are to be power operated. Where the G.T.R. is crossed by other railways, interlocking plants are in service, but improvements are to be made to these which will become an integral part of the signal system. They will be equip-

ped with power operated signals route locking, calling on arms, and tower indicators, which will give an advance indication of the approach of trains. Switch boxes will be installed on all switches and derails leading off the main line; while switch indicators of normal danger type are to be installed on all main line switches. The two short stretches of single track between Olivers and Studebaker and between Valparaiso and Sedley respectively will be operated and controlled by manual system with track circuit. Metallic signal blades will be used entirely. It is proposed to combine into one signal the automatic and beamer functions where possible to do so. Double track junctions will be locked into the controlled manual circuit to facilitate the movement of trains entering the single track, and minimize the hazard. The spacing of the signals will approximate two miles. This spacing, of course, is modified for gradient, curvature, location of crossings and other physical features.

It is expected that the sections between Maynard and Sedley and Valparaiso and Sedley will be completed by Sept. 1, and the balance by Dec. 1. The Hall Signal Co. has the contract.

The installation of similar signalling between Toronto and Niagara Falls is contemplated, but up to June 17 it had not been authorized.

Railway Rolling Stock Notes.

The Canadian Northern Ry. has ordered two cafe-parlor cars, and six sleeping cars in the U.S.

The Intercolonial Ry. has ordered 50 box cars, 60,000 lbs. capacity, to be built at its Moncton shops.

F. H. Hopkins and Co., Montreal, have ordered two 30 ton Lidgerwood flat cars from the Canadian Car and Foundry Co.

The Dominion Iron and Steel Co. has ordered 10 limestone cars from the Canadian Car and Foundry Co., Montreal.

The Quebec Central Ry. has received two consolidation locomotives from the Canadian Locomotive Co., Kingston, Ont.

Press reports state that a private car for use by members of the Dominion Government has arrived in Ottawa from Dayton, Ohio.

The Temiskaming and Northern Ontario Ry. has received four consolidation locomotives from the Canadian Locomotive Co., Kingston, Ont.

The Reid Newfoundland Co. recently placed in service the fourth locomotive built in its shops at St. John's, Nfld. Four more of the same type are being built there.

The G.T.R. recently received two Pacific type passenger locomotives, Nos. 223 and 224, one first class car and three baggage cars, from its Montreal shops; 543 box cars, five first class cars and three baggage cars, from the U.S.

The G.T. Pacific Ry. has received five first class cars, nos. 2044, 2050 to 2053; three second class cars, nos. 1018 to 1020; five tourist cars, nos. 3405 to 3409, and 47 ballast cars, nos. 392700 to 392746, from the Canadian Car and Foundry Co.

The Esquimalt and Nanaimo Ry.'s 60 logging cars, which the C.P.R. recently ordered for operation on the E. and N.R. Cowichan Lake branch, will be of 80,000 lbs. capacity, 42 ft. long, M.C.B. standard flat cars, equipped with log bunks, etc.

Daily press reports early in June stated that the C.P.R. was in the market for 250 locomotives and for from 20,000 to 25,000 cars, and a few days later similar reports stated that additional orders had been given for 300 locomotives and 12,500 freight cars. We were officially advised June 13 that there was absolutely nothing in the reports.

The C.P.R., between May 13 and June 17, placed orders for additional rolling stock, as follows—nine stock cars, five refrigerator cars, two flat cars, one flanger and five vans, at its Angus shops, Montreal; four Jordan spreaders and 16 ballast ploughs, with F. H. Hopkins and Co., Montreal; one Lidgerwood unloader, with Allis-Chalmers-Bullock, Ltd., and two wrecking cranes in the U.S.

The G.T.R. has ordered 41 Pacific type passenger locomotives, 4-6-2-S., with superheaters, cylinders 23 by 28 ins., total weight in working order 223,000 lbs., driving wheels, for 31 locomotives, 69 ins., diar., and for remainder, 73 ins. diar., from the Montreal Locomotive Works. We are also advised that an order has been placed with the Baldwin Locomotive Co., Philadelphia, Pa., for 19 Pacific type passenger locomotives. These are in addition to 15 switching locomotives, ordered from the Canadian Locomotive Co., Kingston, Ont., details of which are given elsewhere under this heading.

Following is a list of the rolling stock which the Canadian Northern Ry. has ordered for delivery during this year, of which mention has already been made in our columns, the greater portion having been already delivered:—4,100 box cars, 2,500 delivered; 1,050 flat cars, 950 delivered; 400 Hart cars, all delivered;

70 cabooses, 20 delivered; six snow ploughs, all delivered; one rotary snow plough, delivered; 136 locomotives, 75 delivered; 82 passenger cars, 45 delivered; 35 mail and baggage cars, five delivered; four dining cars, all delivered; two cafe parlor cars, all delivered; 10 sleeping cars, nine delivered.

The Intercolonial Ry., between May 22 and June 18, received the following additions to rolling stock—five consolidation locomotives from the Canadian Locomotive Co., Kingston, Ont.; four first class cars from the Preston Car and Coach Co., Preston, Ont.; one postal car from the Nova Scotia Car Works, Halifax, N.S., and one dining and two sleeping cars from the Pullman Co.

The Canadian Northern Ry., between May 15 and June 15, received the following additions to rolling stock—one sleeping car, five first class cars, 200 box cars from the Canadian Car and Foundry Co.; one flat car, one baggage and mail car and nine baggage cars from the Crossen Car Co., Cobourg, Ont.; 275 box cars from the Nova Scotia Car Works, Halifax; two consolidation locomotives from the Canada Foundry Co., Toronto, and six flat cars.

The C.P.R., between May 13 and June 17, received the following additions to rolling stock—92 box cars, 97 refrigerator cars, 121 stock cars, 23 vans, four sleeping cars, six observation cars, 14 first class cars, seven first class and smoking cars, one steel first class car, two mail and express cars and two second class cars from its Angus shops,

A VICE PRESIDENT AND GENERAL MANAGER'S OPINION.

Morley Donaldson, M. Can. Soc. C.E., who has been appointed Vice President and General Manager of the Grand Trunk Pacific Ry., has been a subscriber to The Railway and Marine World for a number of years.

A short time ago he wrote in regard to it as follows:—

"I have always read The Railway and Marine World with pleasure and believe it to be a necessity in our Canadian railway life. I find the news accurate and complete in details we all want to know. If continued in its present form its future success is assured."

Montreal; 474 box cars, 263 flat cars and five coal cars from the Canadian Car and Foundry Co.; 10 Rodger ballast spreaders from F. H. Hopkins and Co., Montreal; 35 stone cars from the Nova Scotia Car Works, Halifax, N.S.; 351 box cars from the American Car and Foundry Co.; 10 sleeping cars, and one wreck-in car from the U.S.

O'Brien and Martin, railway contractors, Cochrane, Ont., have ordered 23 Hart convertible ballast and construction cars from the Hart-Otis Car Co., Montreal. Following are the chief dimensions:—

Length over end sills	36 ft. 8 ins.
Width over side sills	8 ft. 10 ins.
Length inside as hoppers	20 ft. 10 ins.
Length inside as gondolas	34 ft. 8 ins.
Width inside	8 ft. 8 ins.
Width over all	10 ft. 2½ ins.
Width at top	9 ft. 10 ins.
Height from rail to floor	4 ft. 4½ ins.
Height from rail to top of car	8 ft. 1¾ ins.
Height inside	3 ft. 9¼ ins.
Truck centres	26 ft. 8 ins.
Wheel base of truck	5 ft. 4 ins.
Length of hopper door opening	16 ft. 8½ ins.
Width of hopper door opening	2 ft.

Following are chief details of the 15 six wheel switching locomotives which the G.T.R. is having built by the Canadian Locomotive Co., Kingston, Ont.

Weight in working order	139,500 lbs.
Wheel base	12 ft. 8 ins.
Heating surface, fire box	148 sq. ft.
Heating surface, tubes	1,772 sq. ft.
Heating surface, total	1,920 sq. ft.
Driving wheels, diar.	56 ins.
Driving wheel centres	Cast steel
Driving journals, diar. and length	9½ by 12 ins.
Cylinders, diar. and stroke	20 by 26 ins.

Boiler, type	Radial stayed
Boiler, working pressure	190 lbs.
Tubes, No. and diar.	264—2 in.
Tubes, length	12 ft. 9½ ins.
Brakes	Westinghouse E. T. 6
Weight of tender, loaded	108,500 lbs.
Tank, capacity	5,500 U.S. gals.
Tank, type	Sloping back
Coal capacity	8 tons
Truck, type	Arch bar
Wheels, diar.	33 ins. M.C.B.
Journals	5 by 9 ins.
Brake beam	G.T.R. standard

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net profits, increases or decreases, compared with those for 1910-11, from July 1, 1911:—

Earnings.	Expenses.	Net Earnings.	Net Increase
July \$1,475,900	\$1,114,300	\$361,600	\$13,400
Aug. 1,420,600	1,105,900	314,700	51,700
Sept. 1,576,400	1,157,000	419,400	38,200
Oct. 2,028,900	1,348,800	680,100	99,900

Embankments and Foundations on the Toronto-Sudbury Branch C.P.R.

By A. C. Oxley, A.M. Can. Soc. C.E.

The C.P.R.'s Toronto-Sudbury branch was built in the years 1905-1909, and as the standards were of a very high type they may contain some points of interest. No curves over 4° were allowed, and the grades were limited to 3-10% compensated. These grades were successfully maintained, with the exception of a pusher grade of 8-10%, for some miles near Tottenham, mile 37. This difficulty will eventually be obviated when traffic demands it, by the substitution for freight purposes of 8 miles of 3-10% track for the present 3 miles of 8-10%. Velocity grades were allowed within the limits of 10 and 30 miles per hour for freight trains.

The intention was to insure a thoroughly solid road bed, rather than to keep initial expenses at a minimum, and as the greater part of the 225 miles runs through a rock and muskeg country, there was frequently some difficulty in attaining this result. This article, however, will deal only with the district between miles 22 and 182, north from West Toronto, from Bolton to Byng Inlet, as this was the part with which the writer became personally familiar during his four years' experience on the work.

The line may be divided into two sections, viz., the earth district and the rock district; the first running from mile 22 to 92, and the second north from mile 92 to 248.

On the south, or earth section, little difficulty was encountered either with foundations or embankments. Eventually all streams and gulleys will be bridged either by steel viaducts, or by concrete arches and embankments, but at the time a number of permanent timber trestles were built, several of them containing an average of 500,000 f.b.m. The bent of these trestles rested on piles driven to an average depth of 20 ft. or more, and the only settlement that has occurred has been on the ends of the trestles, where the bents rested on mud sills on the made embankment.

A curious instance of an over refinement of engineering occurred at the Nottawasaga River trestle. The trestle is about 700 feet long with a maximum height of 110 ft., and is located on the short tangent between two reverse curves. The trestle itself has an average elevation of 10 or 15 ft. below the general track elevation in the immediate vicinity. This is overcome by the use of 2,000 ft. of velocity grade of 6 or 7-10%, resulting in a high rate of speed for the consolidated locomotive that passes over it. This will easily be remedied, however, when the trestle is replaced by a steel viaduct, either by building the viaduct higher or by slightly reducing the little summits adjacent to it. The curves also may be somewhat lessened by turning the new viaduct in a direction more nearly parallel with the tangents.

In the earth section water openings were either concrete or glazed tile pipes for small drainage areas, with concrete arches for the larger ones. The pipes, on the whole, were very satisfactory, except that in a number of instances insufficient allowance had been made for their becoming reduced in area by being partially filled with water-washed sand; it was therefore necessary, under these circumstances, to replace 18 or 24-in. pipes with 4 ft. arches. The rule was to camber as high as the drop would allow, and the adjustment of the soil under the embankment was usually sufficient to take out quite a large curve, as shrinkage seemed to be due not only to settling of the deposited embankment, but chiefly to the sagging of even firm clay in such a way as to cause a low spot in a pipe laid flat, and the consequent tendency of the pipe to clog. The

culverts were the standard 1905 and 1906 types of concrete arches made in 20 ft. sections, to allow settlement. Piles were used in exceptional cases, a row under each side, but the general practice was to divert the stream far enough to secure firm soil.

In the rock soil, practically all openings of 8 ft. or less were built up of the excavated rock and laid without mortar, those over 4 ft. in width being made double, with the top constructed of flat lintel stones. These proved entirely satisfactory in the great majority of cases, as they were laid on solid rock a little to one side of the original stream.

We will now proceed to deal with the rock section, discussing particular points in the order of their mileage from the south end. At mile 102, near Buckskin, a rock embankment about 10 ft. high crossed a fairly dry muskeg, in which the rock was about 50 or 60 ft. down. No cross waying was ever permitted, as the intention was to have the rock embankment cut its way through the thin mattress of the dry surface of the muskeg; in this case the rock remained on the surface for about a year, and then gave way during train filling. Some time was spent in filling it, as its depth

This brings up an important question. If the intention is to have the weight of the rock cut its way through the mattress, and as it is only when it has done so and reached solid bottom that the earth filling becomes really effective, would it not be advisable, in some instances, before placing the rock fill, to cut right through the mattress parallel to the centre line, for instance, in the case of a thirty foot embankment, to cut two longitudinal ditches 40 ft. apart, and thus allow that whole section to sink vertically without deforming the surface at the side. Almost every case of deformation is caused by the sand or gravel floating sideways, and it does not become solid for some time.

Depressed temporary grades of 3% were allowed. In many cases small hillocks of rock were cut away to allow the temporary grades to descend to the centre of the larger gulleys.

At mile 124, during train filling, a low rock embankment, while carrying a locomotive, gave way suddenly, and the locomotive sank with such force as to shear the nuts in the track for 1,000 ft. or more. Between miles 112 and 142 a number of embankments were train filled from temporary trestles, and little trouble was experienced, although in many cases it was found necessary to lower the level of adjacent small lakes in order to give more solid bearing to the toes of the slopes.

At Richmond Lake, mile 101, south from Romford, the lake level was about 50 or 60 ft. below the level of the track.

allowed the train gravel to move sideways, but eventually bottom was reached after 3,000 Hart car loads of gravel had been placed in it. The only real objection to its sinking, when it did, was that the gravel used was high grade surface gravel which had to be hauled about 40 miles, as track laying had not then proceeded far enough to reach the more northerly, and thus more convenient, sand pits.

The only midway divisional point was at Muskoka, mile 126 from West Toronto. As this point was in the rock district the grading for it was rather heavy, the finished yard occupying an area, apart from the main pass siding, of about 3,000 x 300 ft., much of which was solid rock that had to be lowered about 10 ft. Water was obtained from the near by Stewart Lake, but, as it is not allowable to pollute the Muskoka waters, the sewers had to drain into the swamp on the other side of the track.

The general mode of procedure through the rock country was to make the rock cut only about a third of the embankment, as this quantity of rock would have sufficient weight to cut its way vertically through the mattress, and as soon as bottom was reached the remainder could be made by train filling. The efficiency of this method of forcing the sink holes through is shown by the fact that, train filling once completed, the percentage of derailments has been at least as low on this new road bed as on that of sections 20 years old or more.

A rock embankment rested firmly on the solid rock below, but was not carried up to grade, a trestle being used above water level. The water would probably seep through the rock fill, but, in the event of its not doing so, it would easily flow through the trestle at high water. At mile 76, south from Romford, occurred one of the heaviest train fills of the line, the depressed grade being 25 ft. at a maximum below the final grade, and as it was necessary in filling to cover the toes of a rock embankment up to 30 ft. in height, at least 250,000 yards of earth must have been used in this half mile of fill.

At mile 75.5, south from Romford, a temporary trestle beside a lake had been train filled, but the water had apparently dissolved the embankment and caused lateral slipping. The lake was small, and the lowering of its level about 4 ft. left the toe dry and firm.

In many instances where a comparatively dry muskeg was to be crossed, provision was made for thickening the dry supporting mattress by ditching and lowering the level of the water table. This was generally effective, provided there was solid soil in the mattress, but not invariably. At mile 70.5 from Romford, the track crossed a muskeg about 2,000 ft. long and from 20 to 40 ft. deep, with an embankment when completed about 4 ft. high. A drainage ditch was dug, leaving the water table only about 4 ft. below the level of the surface soil. The track crept very badly and made

sun kinks, elevations taken during the passage of a train showing track undulations of one or two tenths. The track was made safe for traffic and prevented from creeping by the substitution of 14-ft. bridge ties; later it was diverted to a side hill of solid rock and made thoroughly solid.

At mile 66.7, south, in order to make secure a muskeg, which for its length gave considerable trouble, a depressed grade was built, with a rock embankment about 10 ft. high, the lowest point of which was a maximum of about 20 ft. below the intended finished grade. In this case, although soundings showed a depth of 50 ft. or more to bed rock, the weight of the rock embankment was not in itself sufficient to slice through the surface mattress. This was somewhat unfortunate, as it was always

viaduct, at the same time leaving the bridge contractors a mile or more of blind main line for bridge yard purposes. The only difficulty occurred at one of the abutments at the South Nascautong River. In this case the abutment was carried to a depth of 10 or 15 ft. below the surface of the ground, and piles were then driven to bed rock, about 20 ft. further. Back of the abutment was a temporary trestle about 30 ft. high, resting on mud sills, the soil being an alluvial clay, which was kept moist by the presence of a stream less than 100 ft. away. No trouble was experienced with the abutment until train filling had proceeded for some time on the temporary trestle, when the earth filling caused a flow of the clay sub-soil, and, although the bases of the piles remained in their places on bed rock, the

found that although earth alone would eventually reach a firm foundation, yet, owing to its specific gravity being so low, it had a greater tendency when placed by train filling, to move horizontally rather than vertically, causing the mattress to bulge upwards for some distance out from the toes of the slope.

The writer was not present until the completion of the filling of this sink hole, but although it had a length of only 600 ft., and had to be lifted to a height of 20 ft. above the depressed grade, a fill of 30,000 yards had raised it only 3 ft. Fortunately, by the use of spreaders, the embankment while sinking retained a good surface and alignment, and no difficulty was experienced in running passenger trains over this temporary velocity grade.

The next large fill occurred at the crossing of the Magnetawan River, the valley of which is about 3,000 ft. wide. With the exception of three girder spans this valley was crossed by a timber trestle about 40 ft. high. In this case the length of the trestle helped to reduce the unit cost of filling, as it was possible to fill from temporary grades placed on each side of the trestle, and thus leave the main line open for traffic.

On this 160 mile section, with two exceptions, there were no steel bridges larger than plate girders the exceptions were at the Severn River, where there was a 200-ft. through Pratt truss, and at Parry Sound, where there was a viaduct 1,700 ft. in length. The largest span consisted of two Howe deck trusses of 165 ft. span. In the earth district all concrete was carried below frost line and rested on piles; while in the rock country the piers in almost every case rested directly on the rock itself.

During the construction of the Parry Sound viaduct a simple method was adopted to eliminate delay. The track was paralleled at the points by the Canadian Northern Ontario Ry., and running rights, or rather haulage rights, were given by that railway over a four mile section through Parry Sound. In this way it was possible to lay some twenty miles of steel north of Parry Sound during the construction of the

flowing of the clay caused the abutment to tilt forwards, necessitating its demolition. No further attempt was then made to fill the embankment, but piles were driven and a trestle constructed, both in place of the temporary trestle, and also between the abutment and the next pier, the new trestle replacing a short girder span. In this case, even if the pier had been constructed just as it was, had piles for the temporary trestle been driven at once, the clay might possibly have been so firmly anchored that

Division Organization on C. P. R. Western Lines.

The organization of the operating and maintenance of way departments on the C.P.R. Western Lines is divisional, a system which is in force on the best operated railways in the United States. The difference between divisional and departmental organization is so well understood that it need not be dwelt on here.

To improve the ordinary divisional organization, the consolidation of the office work of the divisions and districts was arranged on the Western Lines.

The accompanying plan shows the layout of the General Superintendent's offices at Winnipeg, which may be regarded as typical. All the other grand divisions are arranged on the same principle, with the exception of the British Columbia division, which will be similarly arranged when the new station is built and the necessary room becomes available at Vancouver.

Under the old system the general superintendent had a separate staff, with a chief clerk in charge, the master mechanic, the divisional engineer and the car service agent, each had the same. Under the divisional organization, there is one clerical office for the general superintendent, divisional engineer, master mechanic and car service agent. All communications addressed to these several officers are opened in this general office, and are distributed to the various officers. This office organization is not only more economical in labor and stationery, but it gives the general superintendent greater control of his territory, eliminates red tape, minimizes office work, and enables the officers to spend more of their time on the line, and everyone knows that good operation is the result of the officers being out on the road as much as possible.

Under the old organization, if the general manager wrote to the general superintendent about a mechanical matter, the latter would, in turn, be required to write to the master mechanic, the master mechanic would write back to him, and he would in turn write to the

Arrangement of Offices, Manitoba Division, C.P.R., Winnipeg.

there would have been little, if any, horizontal movement.

The foregoing paper was read before the Canadian Society of Civil Engineers.

The Canadian Ticket Agents Association's annual meeting will be held in Ottawa, Oct. 9 and 10, instead of Oct. 8 and 9 as first arranged, thus obviating the necessity of staying over in Montreal for 30 hours, which would have been caused by the first arrangement. Ottawa will be left on the morning of Oct. 11, luncheon will be had at a hotel in Montreal; there will be afternoon tea on the Donaldson line s.s. Saturnia; the White Star Dominion line s.s. Laurentic will be boarded in the evening, and at daylight the party will leave Montreal for Quebec, where the members will disband.

general manager. This took time and stationery. Under the present system, letters coming to the general superintendent about mechanical, engineering and transportation matters are placed on his desk. He asks the respective officers to step in and discuss the matters, and he then hands the letters over to these officers, who call in a stenographer and dictate a reply to be signed by the general superintendent. This means that usually a letter is answered the same day as received.

The superintendent's offices on the Western Lines were also reorganized a little over a year ago. The superintendent, district master mechanic bridge and building master and road master's offices are located side by side, and they have one general office under one chief clerk and with one clerical staff.

The Great Northern Railway's Policy in Canada.

C. R. Gray, the newly appointed Pres-
ident of the Great Northern Ry., is
credited by a United States paper, En-
gineering News, with making the fol-
lowing statement:

"Millions of dollars are to be expend-
ed this year and next year in extending
lines into the virgin territory of Wash-
ington and Oregon, and into the pro-
vince of British Columbia. The plan is
to drain the rich grain fields of western
Canada by means of north and south
feeders. Contracted work in eastern
Washington to the Pacific coast will be
rushed to completion, and additional
contracts will be awarded soon for ex-
tensive development in northern Wash-
ington. Development of subsidiary lines
in Oregon will be carried out by J. H.
Young, the new President of the Spo-
kane, Portland and Seattle Rd. and oth-
er Hill lines. The Northwest is our
territory, and we are planning to
strengthen our position in all parts of
the western country."

Mr. Gray's statement that the Great
Northern's intention "is to drain the
rich grain fields of Western Canada by
north and south feeders" is significant.
Of course it has been a well known fact
for some years, but this is the first
public announcement of it by one of the
company's officers.

The position, therefore, is that the
Great Northern's policy is avowedly not
to assist in building up Canada, but "to
drain" it, and to attempt to follow
President Taft's idea of making it "an
adjunct."

Mr. Gray's statement deserves the
most serious consideration by the Do-
minion Government, and in fact of
everyone interested in Canadian develop-
ment.

Four New Car Building Plants.

The ratepayers of Fort William, Ont.,
will on July 10 vote on a bylaw to give
the Canadian Car and Foundry Co. 80
acres of land, \$20,000 for building a dock
and 10 years exemption from general
taxation. We are officially advised that
the company is ready to start work on
its car building plant as soon as the
ratepayers ratify the agreement entered
into with the council.

W. W. Butler, Vice President, Cana-
dian Car and Foundry Co., returned to
Montreal from the Pacific coast about
the middle of June, and confirmed the
previous announcement that the com-
pany would establish a car building
plant in British Columbia, and that it
would turn out all wood, steel and steel
and wood construction cars, and that
there will probably be a small cast steel
plant in conjunction with it.

The Eastern Car Co., Ltd., was organ-
ized recently at New Glasgow, N.S., the
\$2,500,000 of capital being quickly under-
written by the principal promoters, who
are connected with the Nova Scotia Steel
and Coal Co. The company will manufac-
ture freight cars, including both steel
underframe cars and complete steel
cars. The plant will be built either at
Trenton, adjoining the Nova Scotia Steel
and Coal Co.'s plant, or in the adjoining
town of New Glasgow. It will require
a ground space of about eight acres, and
some 10 miles of railway tracks will be
built. It will have a capacity of from 25
to 50 cars a day, and will employ from
800 to 1,000 men. H. H. Lane, late of the
American Car and Foundry Co., Detroit,
Mich., has been appointed consulting en-
gineer, to design and construct the plant,
and we were advised on June 10 that the
plans were well under way and that the

early stages of construction would prob-
ably be commenced before the end of
June.

The directors are the following officers
of the Nova Scotia Steel and Coal Co.:
R. E. Harris, President; Hon. J. D. Mc-
Gregor, 1st Vice President; T. Cantley,
2nd Vice President and General Man-
ager; J. C. McGregor and G. F. McKay,
directors; R. E. Chambers, Mining Su-
perintendent.

In the middle of June the public were
offered \$1,000,000 of the Eastern Car
Co.'s 1st mortgage 6% bonds at par and
interest, payment of both principal and
interest being guaranteed by the Nova
Scotia Steel and Coal Co., and it was
announced that the issue had been over-
subscribed.

The Ontario and Western Car Co.,
which is promoted by F. B. McCurdy,
F. M. Brown and J. M. McLeod, of Hal-
ifax, N.S., is going to erect a car build-
ing plant at Port Arthur, Ont. Plans
are being prepared and the promoters
state that construction will be com-
menced at an early date. Both passen-
ger and freight cars will be built. Under
the agreement with the city the plant is
to have a capacity of 40 cars a day, the
buildings, machinery, etc., are to cost
not less than \$1,250,000.

Second Track on C.P.R. Lake Superior Division.

We are officially advised that the
C.P.R. has decided to start work on the
second tracking of the Lake Superior
Division of the main transcontinental
line and has let a contract to the Do-
minion Construction Co., Toronto, for
about 60 miles of the work. The con-
tract includes grading, tracklaying and
ballasting, which is to be completed and
ready for operation in November. About
20 miles of the work will consist of sid-
ing extensions, to form part of the sec-
ond track, and the balance will be dis-
tributed as follows:—Crete to Sudbury,
3.2 miles; Cartier to Gencon, 3.4 miles;
Roberts to Lembro, 21.2 miles; Devon to
Chapleau, 4.8 miles; White River to
Tarpon, 3.5 miles; Hedge to Port Ar-
thur, 4.1 miles.

The Dominion Construction Co. was
incorporated under the Ontario Com-
panies Act in April last, with an author-
ized capital of \$150,000, the provisional
directors being:—G. S. Deeks, T. R.
Hinds, H. E. Williams, and T. F. Hinds,
the two first named being President and
Secretary-Treasurer respectively of the
Toronto Construction Co., Ltd., railway
contractors, which has carried out sev-
eral other C.P.R. contracts. The same
parties have the contract for the
C.P.R.'s subsidiary line, the Campbell-
ford, Lake Ontario and Western Ry., be-
tween Glentay and Agincourt, Ont.

The Construction of the Algoma Eastern Railway.

In the article on this subject, by R.
S. McCormick, Chief Engineer, in The
Railway and Marine World's June is-
sue, the first paragraph was printed as
follows:—

"The original charter for this railway,
of 855 miles, now being completed from
Sudbury to Little Current, on Manitou-
lin Island, Ont., was obtained by F. H.
Clergue, at about the same time as the
Algoma Central and Hudson Bay Ry.
project was launched. A land grant and
subsidy accompanied the granting of the
charter."

The article as written stated that the
distance covered in the original char-
ter was 85 miles, but by mistake 855 was
put in type, and, unfortunately, was
overlooked in the proof reading.

Mainly About Transportation People.

HON J. D. HAZEN, Minister of Marine, sailed for England, June 26.

SIR THOS. G. SHAUGHNESSY returned to Montreal from England early in June.

JAS. ROSS, Montreal, has been elected a member of the Royal Yacht Squadron, Cowes, Isle of Wight, Eng.

R. H. DUFF, Resident Engineer, Mackenzie, Mann and Co., was married in Toronto, June 14, to Miss S. Neilson.

SIR MONTAGU and LADY ALLAN arrived in Montreal from England June 8, and will spend the summer at Cacouna, Que.

JAS. KENT, Manager, C.P.R. Telegraphs, left Montreal, June 12, for the west, on his annual inspection over the company's lines.

A. W. SMITHERS, Chairman, G.T.R. board, left Montreal, June 10, for Boston, Mass., whence he sailed for England.

JAS. DUNSMUIR, of Victoria, B.C., director, C.P.R., and Mrs. Dunsmuir, who are staying in England, have taken Bisham Abbey for a time.

G. BLACKBIRD, Locomotive Foreman, G.T.R., Richmond, Que., left early in June to spend two months' holiday in Europe, accompanied by Mrs. Blackbird.

H. TANDY, of Kingston, Ont., who has been a member of the American Railway Master Mechanics' Association since 1883, has been elected an honorary member.

T. KILPATRICK, Superintendent, C.P.R., Revelstoke, B.C., was the principal guest at a dinner given by the Vernon, B.C., Board of Trade, recently.

MRS. W. H. GRANT, wife of the manager of Construction, Mackenzie, Mann & Co., Ltd., Toronto, sailed for England on the s.s. Royal George, June 26.

LADY THOMAS TAIT and Miss Tait, who have been spending some time at Niagara-on-the-Lake, have gone to St. Andrew's, N.B., for the rest of the summer.

W. F. TYE, President, Canadian Society of Civil Engineers, and Mrs. Tye, who have been visiting Europe, are expected to return to Toronto early in July.

SIR WILLIAM MACKENZIE and Lady Mackenzie left Canada for England June 26. On their return they will probably be accompanied by Mrs. Scott Griffin and family.

J. DUNCAN and J. K. DUNCAN, C.P.R. ticket agents, Thamesville, Ont., and J. F. ROBERTS, C.P.R., ticket agent, Parkhill, Ont., have joined the Canadian Ticket Agents' Association.

The Countess Jacques de Lesseps, daughter of SIR WILLIAM MACKENZIE, with the Count and their son, arrived in Toronto, June 10, from France, and will spend the summer in Canada.

SIR DONALD MANN has given \$1,000 towards the relief of the sufferers by the recent fire at Chicoutimi, Que. Relief supplies are being carried free by the Canadian Northern Ry. lines.

D. W. HAYES was presented with a quantity of silver by merchants of Guelph, Ont., June 13, on his transfer from G.T.R. freight agent there to a similar position at London, Ont.

E. WALTER RATHBUN, President of the Thousand Islands Ry. and other transportation lines, with headquarters at Deseronto, Ont., left there early in June, with Mrs. Rathbun, for England.

The body of LAWRENCE CHIPMAN, the Edmonton, Dunvegan and British Columbia Ry. engineer, who was drowned April 7, was found near Mirror Landing, on the Athabasca River, May 20.

T. R. CAMPBELL, Salishury, N.B., a subcontractor on the National Transcontinental Ry., was badly injured in the

wreck of a construction train on the railway near McGivney's, N.B., June 4.

MAJOR GEO. C. ROYCE, Manager, Toronto Suburban Ry., was officer commanding the 2nd Queen's Own Rifles of Canada, at the 6th district camp at Niagara, Ont., recently.

SIR WILLIAM VAN HORNE, with Lady and Miss Van Horne, and Mrs. R. B. Van Horne and family, left Montreal, about the middle of June, for their summer home, Covenhoven, St. Andrews, N.B.

LORD STRATHCONA has given \$10,000 to complete a fund of \$100,000 for the establishment of a school for the English-speaking blind, proposed to be erected by the Montreal Association for the Blind.

J. J. HILL, Great Northern Ry., U.S.A., and a party of friends, are on a fishing trip on the St. Lawrence River and tributary waters. His yacht, Wascouta, arrived in Montreal, June 13, to take on the party.

P283 William Phillips, European Traffic Manager, Canadian Northern Ry. and Canadian Northern Steamships, Ltd.

F. E. TRAUTMAN was presented with a purse of over \$900, May 30, on his leaving Fort William, Ont., to take a position on the staff of Geo. Bury, Vice President and General Manager, C.P.R. Western Lines.

R. MARPOLE, General Executive Assistant, C.P.R., returned to Vancouver early in June, much benefitted by a holiday which he spent in California. There is no truth in the press report that he is about to retire.

F. L. WANKLYN, M. Can. Soc. C.E., General Executive Assistant, C.P.R., was married in England, June 18, to Miss L. H. McConnel, youngest daughter of the late Wm. McConnel, of Knockdolan, Ayrshire.

C. C. WORSFIELD, heretofore Assistant District Engineer of the Dominion Department of Public Works for Southern British Columbia, has been appointed District Engineer in succession to the late G. A. Keefer.

T. DUFF SMITH, Fuel Agent, Grand Trunk Pacific Ry., Winnipeg, was elected a member of the International Railway Fuel Association's executive committee

for three years, at the convention held in Chicago recently.

Miss M. M. Somerville, eldest daughter of F. L. SOMERVILLE, of Toronto, formerly Resident Engineer, Grand Trunk Ry., was married at Winnipeg, June 15, to the Rev. Somerville Caldwell, rector of Rapid City, Man.

E. W. BEATTY, K.C., General Solicitor, C.P.R., on account of whose illness the hearing of the western freight rate case before the Board of Railway Commissioners, June 18, was deferred to Oct. 1, returned to business June 25.

CAPT. KILLALY GAMBLE, who died at Bournemouth, Eng., June 19, was a well known land surveyor of Toronto, being for some time connected with Speight and Van Nostrand. He was President of the Engineers Club of Toronto in 1911.

M. J. BUTLER, C.M.G., formerly Deputy Minister of Railways, and now General Manager, Dominion Steel Corporation, addressed the Canadian Club of Montreal, N.B., recently, on "The Industrial Development of the Maritime Provinces."

D. M. WILLIAMS was presented with some silverware and cut glass by North Bay, Ont., friends, May 31, on leaving the C.P.R. service. In which he was chief clerk in the General Superintendent's office, to engage in business in Montreal.

K. GALLAGHER, Roadmaster, G.T. Pacific Ry., Prince Rupert, B.C., was thrown off a railway motor cycle into the Skeena River, by a collision with a train near Terrace, B.C., recently. The body had not been recovered when this was written.

J. J. HILL, of the Great Northern Ry., U.S.A., who was born at Rockwood, near Guelph, Ont., has contributed \$1,000 to the Guelph Y.M.C.A., and \$500 towards the cost of beautifying the Everton cemetery, where a number of his relatives are buried.

M. Dow, President, British North American Construction Co., who dropped dead in Prince Rupert, B.C., May 20, had only been there a few weeks in connection with the construction of the G.T. Pacific Ry. docks, for which his company has the contract.

W. D. BARCLAY, General Manager, Canadian Northern Quebec Ry., Quebec and Lake St. John Ry., and Halifax and Southwestern Ry., who has been given leave of absence on account of ill health, left Montreal early in June to spend some weeks at Banff, Alta.

E. H. WILSON, heretofore Assistant Land Commissioner, Alberta Ry. and Irrigation Co., Lethbridge, Alta., has entered private business in partnership, and his firm, Wilson and Skeith, Lethbridge, has been appointed agent for sale of C.P.R. lands and town lots.

SIR THOMAS SHAUGHNESSY, who returned to Montreal, June 9, from Great Britain, denied that he was to be president of a reported large banking merger. He stated that it would probably be many years before he would be able to lay down his work as President of the C.P.R.

JAS. DUGUID, who recently resigned the position of Master Mechanic, G.T.R., Eastern Division, was, on June 1, presented with an address and a purse of gold by his former associates. He has since then been appointed machine shop foreman, Canadian Locomotive Co., Kingston, Ont.

JOS. FARRAR, who was recently appointed Assistant Superintendent, Canadian Locomotive Co., Kingston, Ont., was, for a number of years, in G.T.R. service, subsequently being in the employ of the American Locomotive Co., at Pittsburgh, Pa., and later, with the Chicago and Alton Rd., at Bloomington, Ill.

R. W. BAXTER, heretofore General Superintendent, Illinois Central Rd., at

Chicago, Ill., has been elected President of the Copper River and Northwestern Ry. of Alaska, and of the Alaska Steamship Co., succeeding J. R. Young, who has been made President, Spokane, Portland and Seattle Ry.

J. H. FLOCK, K.C., London, Ont., Honorary Counsel, Canadian Ticket Agents' Association, was the only member of the London city council which welcomed the Duke of Connaught, when, as Prince Arthur, he visited that city in 1860, surviving to welcome him there as Governor-General, May 31.

LORD STRATHCONA has been awarded the Albert Medal of the Royal Society of Arts, with the approval of the President, the Governor General of Canada, for services in improving railway communication, developing resources and promoting commerce and industry in Canada and other parts of the British Empire.

G. J. DESBARATS, Deputy Minister of Naval Service, who is in England in connection with the international wireless conference, will, it is stated, remain there to assist in the conference between the Premier, the Minister of Marine and the Imperial Government, regarding suggestions as to the naval policy to be adopted by Canada.

G. BETHUNE GREY, of the C.P.R. Land Department, London, Eng., died at Woking, Surrey, recently, after a long illness, aged 53, from Bright's disease. He was born in Edinburgh, Scotland, and was, for some time, resident in Alberta, before becoming connected with the C.P.R. Land Department. He joined the London staff about four years ago.

GEORGE B. HULL, A.M. Can. Soc. C.E., Assistant Engineer, Dominion Department of Public Works, who had charge of the surveys for and construction of the Quinze dam of the Upper Ottawa River reservoir system, has been appointed District Engineer for the Department in British Columbia, with headquarters at Prince Rupert.

W. C. LANCASTER, M.Am.I.E.E., who has been appointed Electrical and Mechanical Engineer, Canadian Northern Montreal Tunnel and Terminal Co., is a graduate of Virginia University, and has had experience on tunnel construction on the Pennsylvania crosstown tunnels and various other works in the U.S., and abroad, besides being consulting engineer for several of the large tunnel contractors in New York.

W. M. PUNTER, Manager, Canadian Branch, Saxby and Farmer, Ltd., railway and signal engineers and contractors, with headquarters at Montreal, left there about the middle of May for a trip to the Pacific coast. En route he was attacked with pneumonia, and on arrival at Winnipeg had to be taken to the General Hospital. He had sufficiently recovered to return to Montreal about the middle of June, where he is convalescing.

J. S. PYEATT who has resigned as Vice President and General Superintendent, Fort Worth and Rio Grande Ry., Fort Worth, Texas, on his appointment as Vice President and General Manager, New Orleans, Texas and Mexico Rd., and Beaumont, Sour Lake and Western Ry., and Vice President, St. Louis, Brownville and Mexico Ry., Houston, was for some time Superintendent, Canadian Division, Pere Marquette Rd., St. Thomas, Ont.

HON. F. COCHRANE, Minister of Railways and Canals, left Ottawa June 26, intending to be absent till September. Press reports say he will go over as much of the National Transcontinental Ry. and the G.T. Pacific Ry. as possible between Quebec and Prince Rupert and will also go by steamship from Quebec to Hudson Bay, visiting Nottaway River, Port Nelson and Fort Churchill. Hon. J. D. Reid, Minister of Customs, will act as

Minister of Railways and Canals during Mr. Cochrane's absence.

L. G. COLEMAN, who has been appointed Superintendent, Ottawa Division, G.T.R., Ottawa, was born at Macon, Ga., in 1877, and entered railway service in 1900, in the G.T.R. transportation department. He was later transferred to Barrie, Ont., and subsequently returned to Montreal, and in 1906 was appointed Assistant Superintendent, Ottawa Division, and later Assistant Superintendent, Eastern Division, Belleville, Ont., which position he retained to June 24, the date of his present appointment.

F. G. WOOD, who has been appointed Travelling Agent, Canadian Northern Ry., and Duluth, Rainy Lake and Winnipeg Ry., Pittsburgh, Pa., was born at Toronto, Sept. 15, 1890, and entered railway service in 1905, in Division Freight Agent's office, G.T.R., Toronto, since when he has been connected with the National Despatch-Great Eastern Line, Canadian Northern Ry., and G.T. Pacific Ry., at Edmonton, Alta. He returned to C.N.R. service, Feb. 16, 1911, in the Traffic Manager's office, Toronto, and on Apr. 29, 1911, was appointed Contract-

P284 W. A. Fitch,
Assistant Superintendent, Sydney and Oxford District, Intercolonial Ry.

ing Agent, C.N.R., and D.R.L. and W.R., at Pittsburgh, Pa., which position he held to June 1, 1912.

E. L. DESJARDINS, whose appointment as Assistant Superintendent, Montreal and Ste. Flavie District, Intercolonial Ry., was announced in our last issue, was born at St. Jean Port Joli, Que., Aug. 1, 1859, and was educated at Ste. Anne de la Pocaterie College. He entered I.R.C. service, Nov. 1, 1876, since when he has been, to Apr. 11, 1878, agent at Sayabec, Que.; Apr. 11, 1878, to June 1, 1879, night operator at Ste. Flavie, Que.; June 1, 1879, to July 29, 1880, train baggage master between Levis, Que., and Halifax, N.S.; July 29, 1880, to Feb. 15, 1898, dispatcher at Riviere du Loup, Que.; Feb. 15, 1898, to May 1, 1912, Chief Dispatcher at Levis, Que.

W. A. FITCH, whose appointment as Assistant Superintendent, Sydney and Oxford District, Intercolonial Ry., Sydney, N.S., was announced in our last issue, and whose portrait appears in this issue, was born at Kentville, N.S., Nov. 25, 1867, and entered I.R.C. service, Oct. 1880, since when he has been, to Jan.,

1882, Telegraph operator at Folley, N. S.; Jan., 1882, to Apr., 1883, telegraph operator at Maccan, N.S., Sackville, N.B., and St. John, N.B.; Apr., 1883, to July, 1885, agent at Folley, N.S.; July, 1885, to Aug. 25, 1886, dispatcher's operator at Truro, N.S.; Aug. 25, 1886, to Mar. 30, 1903, dispatcher at Truro, N.S., Campbellton, N.B., Moncton, N.B., and Truro, N.S.; Mar. 30, 1903, to June 1, 1912, Chief Dispatcher at Sydney, N.S.

W. S. POOLE, Mechanical Superintendent, Prince Edward Island Ry., Charlottetown, P.E.I., who has retired on the Provident Fund, was born at Burslem, Eng., July 20, 1844. He entered railway service in 1857, as an apprentice in Earl Granville's works at Hanley, Eng., and served in other capacities until 1866, when he came to Canada. After spending a short time at other work he entered the service of Schreiber and Burpee, contractors for the construction of the P.E.I. Ry., and on the completion of the line from Charlottetown to Tignish, in 1875, he entered its service as a mechanic, becoming, successively, roundhouse foreman, foreman of erecting shop, locomotive foreman, and, since Aug. 31, 1901, Mechanical Superintendent.

T. COLLINS, who has been appointed Superintendent, District 2, Lake Superior Division, C.P.R., Chapeau, Ont., entered C.P.R. service, Sept. 2, 1885, since when he has been, to Mar. 7, 1887, brakeman, West Toronto, Ont.; Mar. 7, 1887, to Aug. 1, 1896, conductor, West Toronto, Ont.; Aug. 1, 1896, to Sept. 1, 1897, construction trainmaster, Guelph and Goderich branch; Sept. 1, to Oct. 15, 1897, trainmaster, London, Ont.; Oct. 15, 1897, to Jan. 1, 1908, construction trainmaster, double tracking, Montreal to Smiths Falls; Jan. 1, to Apr. 15, 1908, Trainmaster, Smiths Falls, Ont.; Apr. 15, 1908, to June 1, 1909, construction trainmaster, double tracking, Montreal to Smiths Falls; June 1, 1909, to June 1, 1912, Assistant Superintendent, Smith's Falls, Ont.

H. P. DWIGHT, President, Great Northwestern Telegraph Co., was taken ill early in June, first suffering from lumbago and then from weakness of the heart. As this is written on June 26, he is in a critical condition, though hope of his recovery is entertained. He was born at Belleville, N.Y., Dec. 23, 1828, and commenced telegraph operating at an early age. He came to Canada in 1847, from when to 1881 he was in the Montreal Telegraph Co. service, since when he has been in the G.N.W. Telegraph Co.'s service. From 1881 to 1892 he was General Manager; 1892 to 1903, President and General Manager; and from 1903, President. During the North West rebellion of 1885 he rendered signal service to the Government, which was acknowledged in Parliament by the then Minister of Militia. He is also connected with several industrial and financial companies.

MORLEY DONALDSON, M.Can.Soc.C.E., who has been appointed Vice President and General Manager, Grand Trunk Pacific Ry., Winnipeg, and whose portrait appears in this issue, is a son of the late Major R. D. Donaldson, of the 41st regiment, and subsequently staff officer of pensioners, Ottawa. He was born near Edinburgh, Scotland, May 1, 1851, and was educated in France and Canada. After spending some time in E. Gilbert and Co.'s engine works, Montreal, he entered the service of W. and F. Shanly, and was with them during the construction of the Hoosac tunnel in Massachusetts. He entered railway service in 1881, as chief draughtsman, Canada Atlantic Ry., since when he has been consecutively Superintendent of Traffic, Superintendent Mechanical Department, and to Apr. 11, 1898, Superintendent, same road, Ottawa; Apr. 11, 1898, to Sept. 30, 1905, General Superintendent, same road, Ottawa; and on the absorp-

tion of the C.A.R. by the G.T.R., and its operation as the Ottawa division, G.T.R., he was appointed Superintendent, which position he retained to June 17, the date of his present appointment.

E. H. KEATING, who died at Toronto, June, 17, was born at Halifax, N.S., Aug. 7, 1844, and was educated at the Free Church Academy and Dalhousie University. He studied engineering under G. Whiteman, Nova Scotia Government Engineer, and Sir Sandford Fleming, and commenced his career on the Pictou Extension Ry. In 1867 he was chief draughtsman, Windsor and Annapolis Ry.; 1867 to 1870, Contractors' Engineer, European and North American Ry., and Division Engineer, Intercolonial Ry. at various points in Nova Scotia and New Brunswick; 1870 to 1871, Division Engineer in charge of exploratory surveys, C.P.R.; 1872 to 1890, City Engineer, Halifax, N.S., during which time he was also engaged in private practice, designing and constructing water works, sewerage works, etc., and also acted as Resident Engineer, Halifax graving dock; 1891 to 1892, City Engineer, Duluth, Minn.; 1892 to 1898, City Engineer, Toronto; 1898 to 1904, General Manager, Toronto Ry.; 1904 to 1905, Manager and Engineer for Mackenzie, Mann and Co. in Mexico, and since then in private practice in Toronto, latterly as senior partner of Keating and Breithaupt. He was appointed a member of the commission to deal with the proposed dry dock at Montreal, in 1903, and was responsible for several large municipal engineering works. He was a member of the Canadian Society of Civil Engineers, since May 23, 1895, and served as President in 1901, as Vice President in 1899 and 1900, and as a member of the council from 1896 to 1898. He was also a member of the Institute of Civil Engineers (Eng.), of which he was elected a member of the council in April, and was a member of the American Society of Civil Engineers.

Algoma Steel Corporation.—Under the Ontario Companies Act, supplementary letters patent have been issued changing the name of the Lake Superior Iron and Steel Co. to that of the Algoma Steel Corporation; increasing the capital from \$1,000,000 to \$30,000,000, of which \$15,000,000 shall be preference stock, and authorizing it to take over the following companies:—Algoma Steel Co., Algoma Commercial Co., Algoma Iron Works, Lake Superior Power Co., Florn Limestone Co., Cannelton Coal and Coke Co. The two latter companies are located in the U.S., the first in Michigan, and the second in West Virginia. This is a consolidation of a number of the subsidiary companies owned by the Lake Superior Corporation, and is being carried out in furtherance of the policy of consolidating the subsidiary companies in natural groups and arranging for the independent management and financing of each consolidated unit.

The Canadian Locomotive Co., Kingston, Ont., has increased its output from five locomotives a month to eight, and by the end of this year will be able to turn out 15 to 18 a month.

The General Improvement and Contracting Co., Ltd., has been incorporated under the Dominion Companies Act, with \$100,000 capital and office at Montreal, to engage in river, lake, canal, and other dredging, and in connection therewith to own and operate vessels, wharves, piers, elevators, etc. The incorporators are E. Rainville, J. O. Gagnon, and others of Montreal.

The steamboat Frontier, operated by the People's Steamboat Co., Toronto, formerly known as the Argyle, and before that as the Empress of India, which is running between Toronto and the Niagara River, started Sunday trips on June 23, carrying about 400 people on the two round trips between Toronto and Lewiston.

Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Northern Ry.—JAS. MORRISON, heretofore chief rate clerk, C.P.R., Montreal, has been appointed Assistant General Passenger Agent, Eastern Division, C.N.R. lines east of Port Arthur in Ontario and Quebec. Office, Montreal. Agents east of Ottawa send correspondence and reports of passenger traffic to Mr. Morrison, instead of as formerly to Guy Tombs.

GUY TOMBS, heretofore General Freight and Passenger Agent, lines east of Ottawa in Ontario and Quebec, has been appointed General Freight Agent, lines east of and including Ottawa. Office, Montreal.

J. H. MCKINNON, heretofore Commercial Agent, St. Paul, Minn., has been appointed General Agent.

F. G. WOOD, heretofore Contracting Freight Agent, Pittsburgh, Pa., has been appointed Travelling Freight Agent,

P285
Morley Donaldson,
Vice President and General Manager, Grand
Trunk Pacific Ry.

there, vice A. E. Hodgins, appointed General Agent, as announced in our last issue.

A. J. ISBESTER, heretofore Assistant District Engineer, C.N.O.R., Port Arthur, Ont., has been appointed District Engineer, there, vice H. T. Hazen, resigned, to enter the Railways Department service.

Canadian Northern Steamships, Ltd.—JAS. MORRISON, who has been appointed Assistant General Passenger Agent, Eastern Division, C.N.R., as mentioned above, has also been appointed Assistant General Passenger Agent, Canadian Northern Steamships, Ltd.

J. B. HOSEASON, heretofore in General Freight and Passenger Agent's office, lines east of Ottawa in Ontario and Quebec, has been appointed General Agent, C.N. Steamships. Office, Montreal.

Canadian Pacific Ry.—D. L. JONES, heretofore District Master Mechanic and Trainmaster, District 2, Atlantic Division, Woodstock, N.B., has been appointed District Master Mechanic, Districts 1 and 2. The position of Train-

master, District 2, has been abolished, and F. Grant, heretofore District Master Mechanic, District 1, Brownville Jct., Me., has resumed the position of locomotive driver. Office, McAdam Jct., N.B.

C. W. STACKHOUSE, heretofore Locomotive Foreman, Three Rivers, Que., has been appointed Locomotive Foreman, Sherbrooke, Que., vice G. Couture, transferred to Three Rivers, Que.

G. COUTURE, heretofore Locomotive Foreman, Sherbrooke, Que., has been appointed Locomotive Foreman, Three Rivers, Que., vice C. W. Stackhouse, transferred to Sherbrooke, Que.

L. G. ROGERS, heretofore Chief Dispatcher, District 1, Eastern Division, Farnham, Que., has been appointed acting Trainmaster, District 1, Eastern Division. Office, Farnham, Que.

J. J. MORGAN, heretofore trick dispatcher, Farnham, Que., has been appointed acting Chief Dispatcher, District 1, Eastern Division, vice L. G. Rogers, promoted. Office, Farnham, Que.

W. WOOD, heretofore Locomotive Foreman, Megantic, Que., has been appointed Locomotive Foreman, Sortin Yard, Montreal. This is a new position.

G. AITKEN, heretofore Assistant Foreman, Glen Yard, Montreal, has been appointed Locomotive Foreman, Megantic, Que., vice W. Wood, promoted.

C. A. DELANEY, heretofore fitter at North Bay, Ont., has been appointed assistant foreman, Glen Yard, Montreal, vice G. Aitken, promoted.

H. B. SPENCER, Superintendent, Ottawa, having returned to duty after absence through ill health, J. H. BOYLE, who has been acting Superintendent, has resumed the position of Assistant Superintendent there.

C. W. LOTT, heretofore Chief Dispatcher, Smiths Falls, Ont., has been appointed acting Assistant Superintendent, District 2, Eastern Division, Smiths Falls, vice T. Collins, promoted.

J. W. WANSBOROUGH, heretofore night chief dispatcher, Toronto, has been appointed Chief Dispatcher, Districts 3 and 4, Toronto.

J. B. CROSSETT, heretofore trick dispatcher, Toronto, has been appointed night chief dispatcher, there, vice J. W. Wansborough, promoted.

G. E. MURPHY has been appointed assistant foreman, West Toronto shops, vice J. H. Mitchell, resigned.

The Lake Superior Division was reorganized on June 1 into three districts, the territory of each, and the superintendents, being as follows:—

District 1—Timiskaming, Kipawa, Webbwood, Algoma, Sudbury, North Bay and Cartier subdivisions, including all terminals connected therewith, except Cartier and Muskoka. G. SPENCER, Sudbury, Ont.

District 2—Chapleau and White River subdivisions, including Cartier terminal. T. COLLINS, Chapleau, Ont.

District 3—Schreiber and Nipigon subdivisions, including White River terminal. J. H. HUGHES, Schreiber, Ont.

In consequence of the reorganization of the Lake Superior Division the headquarters of the following officials, which were formerly at White River, have been moved to Schreiber:—R. V. NICHOLSON, Bridge and Building Master; W. MASCOE, Car Foreman; R. T. MORAN, Chief Dispatcher; F. NOWELL, District Master Mechanic; J. F. GILDEA, Locomotive Foreman; M. KELLY, Resident Engineer; M. J. SHERIDAN and J. CAUGHLIN, Roadmasters.

H. B. STEVENS, heretofore Chief Dispatcher, White River, Ont., has been transferred to Sudbury, Ont.

D. BURIDGE has been appointed Car Foreman, White River, Ont., vice J. Baldwin.

A. J. WOLFE, heretofore Roadmaster, White River subdivision, Lake Superior Division, White River, Ont., has been appointed Roadmaster at Chapleau, Ont.

A. STURROCK has been appointed acting Locomotive Foreman, Fort William, Ont., on account of the serious illness of J. McArthur.

N. KEELAND has been appointed Travelling Freight Agent for Eastern Manitoba, vice J. H. Gordon, deceased. Headquarters, Winnipeg.

R. R. NEILD, General Foreman, Winnipeg shops, has resigned.

F. WALKER, heretofore Chief Dispatcher, Vancouver, B.C., has been appointed Car Service Agent, Winnipeg, vice G. B. Williams, resigned.

J. B. SHELTON, heretofore Car Foreman, G.T. Pacific Ry., Transcona, Man., has been appointed Car Foreman, C.P.R., Moose Jaw, Sask., vice C. H. Zerbach, transferred.

C. H. ZERBACH, heretofore Car Foreman, Moose Jaw, Sask., has been appointed car foreman, Estevan, Sask. This is a new position.

J. E. LETHBRIDGE, heretofore Auditor, Alberta Ry. and Irrigation Co., Lethbridge, Alta., has been appointed General Auditor, Department of Natural Resources, C.P.R., acting in a travelling capacity. Headquarters, Lethbridge, Alta.

W. W. NEELAND, heretofore Storekeeper, Alberta Ry. and Irrigation Co., Lethbridge, Alta., has been appointed Storekeeper, Department of Natural Resources, C.P.R. Office, Lethbridge, Alta.

R. SINCLAIR has been appointed Trainmaster between Laggan and Field, including Field terminals, vice A. W. G. Clark, transferred to Manitoba Division Office, Field, B.C.

W. S. HALL, heretofore Yardmaster, Cranbrook, B.C., has been appointed Trainmaster, Macleod, Alta., vice P. F. Weisbrod, promoted.

D. G. McDONALD has been appointed Locomotive Foreman, Red, Deer, Alta., vice J. A. Doig assigned to other duties.

J. H. JACKSON, heretofore acting Locomotive Foreman, Rogers Pass, B.C., has been appointed Locomotive Foreman there.

The Shuswap and Okanagan subdivisions, British Columbia Division, heretofore in charge of A. W. GRASS, Roadmaster, have been divided, and he has been appointed Roadmaster from Revelstoke to Sicamous on the Shuswap subdivision, and from Sicamous to Okanagan Landing on the Okanagan subdivision. Office, Revelstoke. W. LOFTUS, heretofore extra gang foreman, has been appointed Roadmaster from Sicamous to Kamloops, including Sicamous yard. Office, Sicamous.

H. A. KESWICK, shop foreman at Kamloops, B.C., has resigned.

J. E. BEATON, heretofore yard foreman, Cranbrook, B.C., has been appointed Yardmaster there, vice W. S. Hall, promoted.

T. MORE, heretofore trick dispatcher, Vancouver, B.C., has been appointed Chief Dispatcher, District 2, British Columbia Division, Vancouver, vice C. A. Cotterell, promoted.

Canadian Pacific Ry., Minneapolis, St. Paul and Sault Ste. Marie Ry., Duluth, South Shore and Atlantic Ry.—R. C. CLAYTON, heretofore Travelling Passenger Agent, Philadelphia, Pa., has been appointed City Passenger Agent, there, vice F. W. Huntington, deceased.

Dominion Atlantic Ry.—G. G. HARE, Engineer, Kingston and Pembroke Ry., Kingston, Ont., is reported to have been transferred to D.A.R. service.

Fort Garry Union Station, Winnipeg.—M. H. MACLEOD, General Manager and Chief Engineer, Canadian Northern Ry.; A. G. MACFARLANE, acting District Engineer, National Transcontinental Ry.; H. H. BREWER, General Superintendent, G.T. Pacific Ry., and J. R. CAMERON, Assistant General Manager, Canadian Northern Ry., Winnipeg, have been appointed members of the Terminals Board, controlling the Winnipeg Joint Terminals of the Canadian Northern,

G.T. Pacific and National Transcontinental Rys. Mr. Brewer's appointment is as an acting member.

J. A. GLASFORD, formerly General Yardmaster, C.P.R., Winnipeg, has been appointed Terminals Manager.

G. A. TEMPLEMAN, heretofore Assistant Yardmaster, Canadian Northern Ry., Fort Rouge, Man., has been appointed General Yardmaster, Winnipeg Joint Terminals.

Grand Trunk Pacific Ry.—The practice of designating the several Vice Presidents by numbers has been discontinued.

W. WAINWRIGHT, heretofore First Vice President, has been appointed Vice President, Office, Montreal.

M. M. REYNOLDS, heretofore Second Vice President, has been appointed Vice President, in charge of Financial and Accounting Departments. Office, Montreal.

MORLEY DONALDSON, M. Can. Soc. C.E., heretofore Superintendent, Ottawa Division, G.T.R., Ottawa, has been appointed Vice President and General Manager, lines west of Fort William, Ont., in charge of Construction, Transportation and Maintenance Departments, vice E. J. Chamberlin, recently appointed President. Office, Winnipeg.

J. E. DALRYMPLE, heretofore Fourth Vice President, has been appointed Vice President, in charge of traffic. Office, Montreal.

H. H. HANSARD, Assistant Solicitor, is reported to have been appointed Solicitor, G.T.P.R., Winnipeg, vice D'Arcy Tate, who resigned in April.

The following agents have been appointed:—Cabot, Man., A. Jackson; Gregg, Man., D. W. Peters; Gerald, Sask., R. W. Gibson; Tate, Sask., G. V. Nowlan; Bradwell, Sask., T. W. Fleming; Biggar, Sask., J. O'Leary; Coblenz, Sask., H. E. Henshaw; Camrose, Alta., A. McRae.

Grand Trunk Ry.—J. W. FARRELL, Trainmaster, District 1, Island Pond, Vt., has had his jurisdiction extended to include District 2, and reports from that district hitherto sent to J. J. Connelly, are now sent to him. Office, Island Pond, Vt.

J. J. CONNELLY, heretofore Trainmaster, District 2, Eastern Division, Island Pond, Vt., has been appointed Assistant Superintendent, District 4, and in charge of Montreal terminals, vice H. F. Coyle, transferred. Office, Montreal.

J. W. CANATSY has been appointed General Yardmaster, Montreal Terminals, vice X. J. Schlätze.

L. G. COLEMAN, heretofore Assistant Superintendent, Districts 6 and 7, Eastern Division, Belleville, Ont., has been appointed Superintendent, Ottawa Division, vice M. Donaldson, promoted to G.T. Pacific Ry. service as Vice President and General Manager. Office, Ottawa.

H. F. COYLE, heretofore Assistant Superintendent, District 4 and Montreal Terminals, Montreal, has been appointed Assistant Superintendent, Districts 6 and 7, Eastern Division, vice L. G. Coleman, promoted. Office, Belleville, Ont.

W. KIRKWOOD, heretofore locomotive driver, Sarnia Tunnel, has been appointed Road Foreman of Engines, Stratford, Ont., vice G. Black, deceased.

The following agents have been appointed:—Lacadie, Que., J. A. Langlois; Huntingdon, Que., E. E. Bourdon; Beauharnois, Que., E. Rheume; Keene, Ont., P. Stinson; Uthoff, Ont., R. G. Winters; Kirkfield, Ont., G. Raymes; Alliston, Ont., E. M. Ellis; Everett, Ont., E. N. Marshall; Grimsby Beach, Ont., J. A. Mitchell; Winona, Ont., S. A. Fairweather; Hespeler, Ont., N. A. Walford; Owen Sound, Ont., J. G. Heyd; Whitechurch, Ont., R. M. Patten; Ripley, Ont., W. M. Salkeld; Vankleek Hill, Ont., G. A. Cass; Kinburn, Ont., O. B. Elliott, temporarily; Wilno, Ont., G. H. Bates; Brule Lake, Ont., P. F. Madden; Sprucedale, Ont., H. W. Otto; Rose Point,

Ont., R. J. Hardy; Galt, Ont., outside, G. T. Misener.

Great Northern Ry.—L. W. HILL, heretofore President, has been appointed Chairman of the Board, vice J. J. Hill, retired.

K. J. BURNS, heretofore General Agent, Vancouver, B.C., has been appointed Assistant General Freight Agent, in direct charge of the company's freight traffic interests in British Columbia west of the 121st meridian, including Vancouver Island. Office, Vancouver.

Hudson Bay Ry.—Referring to the mention made in our last issue of a press report stating that C. J. BRUCE stated to be Chief Engineer of Surveys, had resigned, we are advised that he was an instrument man. As stated in the same paragraph, J. ARMSTRONG is Chief Engineer.

H. T. HAZEN, heretofore District Engineer, Canadian Northern Ontario Ry., Port Arthur, Ont., has received an appointment on the Dominion Government railway to Hudson Bay. It is said that he will be in charge of the railway terminals work in Hudson Bay.

Kingston and Pembroke Ry.—JAS. IRWIN, of Montreal, is reported to have been appointed Engineer, K. and P. Ry., vice G. G. Hare, transferred to Dominion Atlantic Ry. service.

Michigan Central Rd.—R. H. L'HOMMEDIEU, heretofore General Manager, has been appointed Assistant to the Operating Vice President, performing such duties as may be from time to time assigned to him. Office, Detroit, Mich.

W. H. FLYNN, heretofore Division Master Mechanic, St. Thomas, Ont., has been appointed Superintendent of Motive Power, vice E. D. Bronner, appointed General Manager, as announced in our last issue. Office, Detroit, Mich.

T. J. BURNS, heretofore Assistant to Superintendent of Motive Power, Detroit, Mich., has been appointed Assistant Superintendent of Motive Power. Office, Detroit, Mich.

E. R. WEBB, heretofore Division Master Mechanic, Michigan City, Ind., has been appointed Division Master Mechanic, St. Thomas, Ont., vice W. H. Flynn, promoted.

T. HALL, heretofore Division Foreman of Buildings, St. Thomas, Ont., has been appointed Assistant Superintendent of Buildings. Office, Jackson, Mich.

A. LESLIE, heretofore shop foreman, St. Thomas, Ont., has been appointed Division Foreman of Buildings, vice T. Hall, promoted. Office, St. Thomas, Ont.

Niagara Navigation Co.—See under "Richelieu and Ontario Navigation Co.'s absorption of three more steamboat lines" in Marine Department, further on in this issue.

Pere Marquette Rd.—E. E. CAIN, heretofore Superintendent, Cincinnati, Hamilton and Dayton Ry., Dayton, Ohio, has been appointed Superintendent, Toledo-Ludington District, P.M.R., vice A. R. Merrick, transferred. Office, Saginaw, Mich.

GLEN WARNER has been appointed Fuel Inspector, reporting to Assistant General Manager, Detroit, Mich.

Prince Edward Island Ry.—P. McQUAID, heretofore roundhouse foreman, has been appointed Master Mechanic. Office, Charlottetown, P.E.I.

Reid Newfoundland Co.—A. C. GRAY has been appointed Superintendent of Motive Power, vice W. H. Turnbull, resigned. Office, St. John's, Nfld.

Richelieu and Ontario Navigation Co.—See under R. and O.N. Co.'s absorption of three more steamboat lines in Marine Department, further on in this issue.

St. Lawrence River Steamboat Co., Thousand Island Steamboat Co.—See under "Richelieu and Ontario Navigation Co.'s absorption of three more steamboat lines" in Marine Department, further on in this issue.

Union Station, Regina, for C.P.R. & C.N.R.

The Railway and Marine World for Oct., 1911, contained a preliminary description of the station being built at Regina, Sask., by the C.P.R. for joint use with the Canadian Northern Ry. Following are fuller details:—

The main building is fireproof throughout and the wings are of slow burning construction. The main building is reinforced concrete frame construction, the foundations being also reinforced. The ground floor of the main building is designed to carry a live load of 175 lbs. per square ft., and the first and second floors 75 lbs. per square ft. The wings are designed to carry 200 lbs. live load per square ft. The building has been designed so that an additional story can be added over the main building, if required for offices.

The main portion of the structure is 105 by 64 ft. The east wing is 105 ft. long and the west wing 107 ft. long. The cost of the whole structure, including track work, platforms, fittings, etc., will be about \$200,000. The structure is being built of Bedford stone in the renaissance style. A special feature has

Entry is made from the main entrance through the vestibule to general waiting room by folding doors. This room, which is one of the features of the building, is 44 by 102 ft., and 19 ft. high. A marble terrazzo floor with dark marble border is provided around the room and between piers. The walls of the general waiting room are decorated with a panelled oak moulding 10 ft. high, supported on a verdantique marble base. The central piers and wall pilasters are finished in plaster supported on verdantique marble bases. The plaster caps of these piers are enriched with ornamental plaster shields. The piers and pilasters carry the plaster frieze, architraves and modillion cornice under the ceiling. The light well, which is between the ticket office and vestibule, is finished in oak to match the interior trim of the general waiting room. The light shaft is carried through the first and second floors and is finished on the corridor side with a brass handrail. This light shaft also serves to ventilate and light the offices on the inside of the building.

The booking office is 9 ft high and the front is octagonal in plan; it is provided with two ticket cages, each 7 x 8 ft., with interlaced wire partitions and appropriate fittings. There are a number of

with oak finish and marble work, as is also the ceiling, the latter being a light buff.

The smoking and retiring rooms, toilets, news and telegraph offices are easy of access from the general waiting room. A 15 ft. space is provided at the west end in the baggage department to provide access to the counters of the parcels, baggage transfer and checking rooms, and there is a valise room at the rear of these. The baggage master's office is situated at the side of the checking room. An entrance from the platform is provided for the use of passengers. The telegraph department is placed at the west end of the general waiting room, where there are also two private telephone boxes. Opposite the telegraph department is the news agent's office with glass silent salesmen on both sides. Besides the accommodations mentioned above, the west wing has mail transfer and customs offices; the rest of the wing, including the basement, is for the storage of baggage. An electric elevator is provided for handling baggage.

The east wing is occupied by the Dominion Express Co. and the Canadian Northern Express Co. The public entrances to these offices are from Railway St. The offices will be fitted up with

Elevation and Floor Plan of Union Station, Regina, Sask.

been made of the deep stone reveals of the door and window openings.

The principal entrance is in the centre of the main building and faces Railway St., a subway is provided under the tracks at the east end of the building on Broad St. The track side has two entrances, one on each side of the ticket office, which is placed centrally in the general waiting room opposite the main entrance.

A steel and glass marquise, suspended on heavy iron chains from lions heads bolted through the wall, runs the entire length of the main building outside the general waiting room on the track side. This marquise has ornamental copper cresting and shields, and projects 12 ft. from face of stonework over the train platform. Similar protection is provided outside the baggage and express department both on the front and track sides, but the supports consist of steel trusses bolted into the walls. A clock chamber is provided over the main entrance with self-illuminating clock dials showing from the front of the building and also in the general waiting room. The vestibule and waiting room staircase and corridors are designed in the French renaissance style.

counters, including information and ticket counters, with metal grills over them. Special fittings are provided at the back of counters to suit the requirements of the ticket agent, and a ticket room is provided in the basement for the storage of tickets.

A steel and marble staircase is provided from the general waiting room at the side of the ticket office to give access to the offices on the first and second floors. This staircase leads to the mezzanine floor over the booking office (which is finished as a gallery, with terrazzo floor and iron railings) with plaster newells supporting ornamental electric light fittings. The staircase, from the gallery to the first and second floors, is provided with wrought iron ornamental shields and oak handrails.

Ornamental plaster shields and enrichments are designed over the entrances of the general waiting room and above the pilasters of the doors and windows. The panelling of the waiting room door and windows, counters, pilasters, etc., is white oak, finished with a dull surface. The space outside the baggage department is finished to match. All the plaster work, with the ornamentation mentioned, is tinted to harmonize

quarters sawed oak counter fittings, and cages to suit the companies' requirements. The basement of this wing is used for storage purposes. The boiler room for heating the building is in the basement in the centre of the main building.

The electrical work is done by the C.P.R. electrician, and all the wiring, fittings, etc., will be of the most up-to-date description. Lights are suspended from hanging chain pendants in the general waiting room, and are supported by brackets attached to wall pilasters and fittings in the gallery. Specially designed electric light standards will be provided over stone pedestals at the sides of the principal entrance. These will be finished to harmonize with the metal grillage at entrance. The first and second floors of the main building will be used for offices by the two railway companies, and will be subdivided to suit the requirements.

The building was designed in the C.P.R. Chief Engineer's office in Winnipeg. The work is being carried out under the supervision of the C.P.R. Division Engineer at Moose Jaw, T. Martin, the contractors being the J. McDiarmid Co., Winnipeg.

The Distribution of Heat Value in Coal.

By Sydney H. Pudney, Fuel Inspector, Eastern Lines, Canadian Pacific Railway.

The subject of how the heating value in coal is distributed, and why the proportionate distribution of such heating values affect the consumption and economy of fuel is very little understood by large numbers who use coal for the production of steam power. It is also a subject that is often lost sight of by those who construct steam boilers and their settings.

The many bylaws covering the smoke nuisance in various localities cause a need for a closer study into coal and its combustion which will also add to the economical use. The idea of putting in steam sprays at various parts of the combustion chamber or smoke stacks, to overcome the smoke nuisance, is no doubt a costly one, and detrimental in many ways, especially if by careless handling an excess of steam is used. What is needed to assist in the economical use of fuel and at the same time to abate the smoke nuisance is a closer study of fuel matters, following all subjects pertaining to them, such as the percentage of volatile combustible of fixed carbon and of ash. A knowledge of the action of fuels in the process of combustion in a furnace or firebox is essential to everyone who would understand the science of fuel economy. A careful study of the nature of the ash, and its action in forming clinker, or in other ways preventing a free circulation of air through the fuel bed, is also very beneficial in the use of fuel. An elementary analysis is of the utmost value in determining the heating power of a fuel, much more so than the "proximate analysis" that is so freely used, just because it gives one the exact percentage of combustible elements and non-combustible elements which a coal contains. The usual calorimetric test of fuel is a good reliable means of ascertaining the highest power of a coal which is burned in oxygen and is usually expressed in b.t.u.

When one gets all the above information, with the b.t.u. value in each case from standard calculations, his knowledge of fuel is yet very little assistance to him in pursuing a system of economy of fuel, or lessening the smoke trouble, in anything like a scientific or business like manner. And if he goes into it only armed with such knowledge the results of his efforts are likely to fall far below his expectations. The important knowledge which he must have is that of the combustion of fuel, a subject which is nearly worn threadbare.

It is to be presumed that most men in an official capacity already know that hydrogen combines with oxygen in combustion and forms water as a product of combustion, giving up 62,000 b.t.u. in so doing, and also that carbon will unite with one part of oxygen, forming monoxide of 4,500 b.t.u. value, or will combine with two parts of oxygen, forming carbon dioxide of 14,544 b.t.u. value, therefore it would appear that as far as they are concerned the combustion of fuel is old.

There are points in connection with the burning of fuel that the practical man never learns because of his lack of scientific knowledge; and the scientific man never knows because of his lack of practice. The whole of this subject takes years of study and observation to master, and even then there are new ideas coming up continually leading one into different channels of thought. What I want to do in this paper is to give a few examples of different coals and their actions, and the distribution of their heating value.

We will take up the case of volatile combustible matter first. It is usually considered by firemen and engineers,

both of stationary engines and locomotives, that a coal that has plenty of flame and smoke is a good one to produce steam, and a great many people are influenced in the purchasing of such coals as have a high percentage of v.c.m. Nothing is farther from the truth than such ideas of engineers. As a matter of fact the higher the percentage of v.c.m. the lower the heating value of the coal. The reason will be explained later on. I may mention here that as described in the U.S. Geological Survey Bulletin, 373, Messrs. Randall and Weeks made investigation of between 400 and 500 steam boiler plants, and in their summary state that they found that high volatile matter in coal gives low efficiency and vice versa. It is only reasonable to suppose they mean high volatile combustible matter, because all steam users know that a coal which might have 10% of moisture would mean that 10% of its volatile matter was of no use in raising steam in a boiler, and that this moisture would take up heat to vaporize it and drive it off at chimney or smoke box temperature, therefore it is most likely they mean v.c.m. and not v.m.

In an analysis we usually get the percentage of moisture of v.c.m. of fixed carbon, and of ash, with b.t.u. value. In arriving at these percentages a given weight of coal is dried at about 220° F. for an hour and weighed, the loss being the percentage of moisture. The sample is then heated at high temperature by a Bunsen burner for a few minutes and then at a higher temperature by a blast lamp for about the same length of time, and after cooling in a desiccator is weighed, the loss being v.c.m. or volatile combustible matter. This is where I take exception to the rule, because this does not give the v.c.m., but the total v.c.m. and non-combustible elements such as oxygen and nitrogen as well, therefore we find that the proximate analysis is incorrect and the exact percentage of v.c.m. is not given but the total v.m. minus water or moisture. We can easily see how this would mislead us in the purchase of coal. We might buy a coal with 40% v.c.m. shown and it might have 15% of oxygen, consequently only 25% out of this 40% v.c.m. as shown would be of any use to produce steam. Again we might purchase another fuel with 35% of v.c.m. shown, with only 5% of oxygen, and in this case, though the total percentage of v.c.m. dropped 5%, the fuel value increased 5%.

Prof. Phillips, in his work on the analysis and valuation of fuel says the more organic oxygen that is present in a fuel the less heat will be given out, owing to its already being in chemical combination with the carbon and hydrogen.

In the U.S. geological survey bulletin 382, "The effect of oxygen in coal," by David White, it is stated that the result of oxygen in coal, in relation to the heating value, is just about as detrimental as the same percentage of ash would be, that is to say that a coal having 7% of ash and 13% oxygen would give about the same heating value as if the figures were reversed, i.e., 13% ash and 7% oxygen. Two special cases are cited to prove their contention, and in table 1 of the ultimate analysis of 319 American coals there are two cases shown where the ash and oxygen about equal each other in qualities that are detrimental to the heating value. No. 1, having 4.02% o. and 18.80% ash, has 12,472 b.t.u. no. 2, having 18.32% o. and 3.63% ash, has 12,519 b.t.u. These cases show conclusively that a proxi-

mate analysis as previously mentioned does not give one much reliable information of his fuel.

The calorimetric determination of the heat value of fuel is obtained by its combustion in an enclosed bomb, under a measured quantity of water, and careful readings are taken of the raise in temperature. This, multiplied by the weight of water, gives the b.t.u. value, but this is all it does give, just the heat value only; and to be able to go forward with the subject of fuel economy and smoke prevention in steam boilers it is necessary to know not only the heating value of a coal, but also how such heat value is distributed in the coal and then to devise some means whereby the ultimate value produced by its combustion may be as near as possible to the initial value in the fuel. We shall then be as near to the economy of fuel as it will be possible to be in the combustion of it.

To get at the distribution of heat values it is not necessary to have an elementary analysis, the proximate will enable us to get this information, provided we also have a b.t.u. value from calorimetric test. Take for instance a coal of 35% v.c.m., 55% of f.c., 10% ash moisture, the b.t.u. value from calorimetric test shows it to be 13,700 b.t.u. which is distributed between the 55% f.c. and 35% v.c.m. As the value of carbon is always the same, namely, 14,500 b.t.u. per lb., we find that by multiplying 14,544 by 55% and dividing by 100 we get 7,999 b.t.u. in the fixed carbon, and this subtracted from 13,700 gives us 5,701 b.t.u. in the 35% of v.c.m., this volatile combustible matter is only of 16,300 b.t.u. value per lb.

We will take two samples of coal mentioned in the U.S. Geological Survey Bulletin 402 on the utilization of fuel in locomotive practice, by W. F. M. Goss. Coal A has 31.94% v.c.m., 57.71% f.c., 14,047 b.t.u.; coal B has 15.23% v.c.m., 72.75% f.c., 14,347 b.t.u. Coal A from the above calculation has $14,544 \times 57.71\% \text{ f.c.} \div 100 = 8,393 \text{ b.t.u.}$ in fixed carbon and $5,654$ in 31.94% of v.c.m. $5,654 \times 100 \div 31.94\%$ of v.c.m. gives $17,776 \text{ b.t.u.}$ value per pound of v.c.m. Coal B, worked out on the same system, is as follows:— $14,544 \times 72.75\% \text{ f.c.} \div 100 = 10,580 \text{ b.t.u.}$ for fixed carbon and $3,767 \text{ b.t.u.}$ for 15.25% v.c.m. Again we find the heating value of the v.c.m. $3,767 \text{ b.t.u.} \times 100 \div 15.25\% = 24,000 \text{ b.t.u.}$ per pound.

These few examples are enough to show that the higher percentage of volatile combustible matter the lower the heating value of the coal, as the percentage of v.c.m. increases, the actual value of the heating equivalent decreases, and as the percentage of v.c.m. decreases the heating value increases. Not only this but the total heat value increases. Coal A has a total of 89.65% combustible 14,047 b.t.u. Coal B has a total of 87.98% combustible 14,347 b.t.u. We can easily see why the statement is made in U.S. Geological Survey Bulletin 373 that high v.c.m. gives low efficiency because the power is not there.

So far these points have brought out something definite in the distribution of heating values in fuels, but not enough to economize in fuel. As to the production of smoke we already know that the less percentage of v.c.m. the less smoke, until we may use anthracite with no smoke. But in the case of low efficiency and smoking plants and locomotives, due to high v.c.m. coals or long flame coals there are some very important facts to be considered. In all cases of smoke there is only one thing that can be said to be the reason, and that is incomplete combustion. Complete combustion produces carbonic oxide and water, and both are without color, so when volumes of smoke are

going out into the atmosphere it means loss of such fuel that makes the smoke.

There are several reasons for the incomplete combustion of the gaseous portion of coal, and it is due sometimes to the class of coal being used in a certain form of furnace. There is also a great difference, not only in the heat value of the v.c.m., but also how it is contained in the coal and how it will be evaporated or distilled from the fixed carbon in the furnace or firebox. We may take two coals having exactly the same percentage of composition, i.e., 35% v.c.m. and 55% f.c., and yet these two may be totally distinct from each other in the way they will act while going through the process of combustion, and it would be practically impossible to get the same ultimate results from both coals with the same furnace or locomotive. One will give up its volatile matter quickly while the other gives it up very slowly, usually making a dense coke, while the first kind makes no coke practically, and burns away quickly, having no body. The knowledge of the analysis or of their heat distributions does not give any intimation of their actions in the fire, and these are some of the most important things in connection with fuel combustion.

It is doubtful if any one furnace or firebox could be constructed that would give equally good results with both such fuel mentioned, without it were equipped with automatic appliances to regulate the flow of air through the fuel bed and to the combustion chamber. The free burning coal that gives off its gaseous content quickly must have a very large supply of air just at the time of the distillation, or setting free of these gases, and must have this air delivered in such a position that it will become well heated and mixed with the gases before they come near the heating surfaces of the boiler. If such a coal is used without the necessary amount of air delivered in this way, there will be large quantities of smoke and a great loss of heat value due to incomplete combustion of the v.c.m. And as far as the consumer is concerned he might have purchased his coal without an analysis on b.t.u. value except that he will have some idea as to the heat value he is losing through poor equipment.

In the case of stationary boilers that are built in brickwork it is very easy so to construct the bridge wall that there may be a supply of air distribution from it, which will be well heated and mix with the gases as they go over to the combustion chamber. If this is done it will ensure a full supply of air and perfect combustion of the gases of such free burning coal, which will mean less smoke and greater efficiency. To ensure a much greater efficiency it will be necessary to increase the travel of the hot gases over the heating surfaces. The arrangement sometimes used to assist in the combustion of quick burning coal by having holes direct from the atmosphere to a position above the fire is open to dispute, because the cold air rushing in amongst the gases being liberated does not have a chance to become heated and therefore has a cooling effect, lowering the temperature of the firebox. Such inlets are often detrimental to fuel economy. If the holes or inlets are in such a position that the air may be heated, by directing the air downwards to the fire, more benefit will be derived from them.

Poor firing is also a great drawback to good efficiency, with long flame, quick burning coal. If the fireman charges his fire by putting in large quantities at long intervals he will certainly lose a large percentage of the heating value, because it will be impossible to get sufficient air through the fuel bed to mix with the gases at the moment of their being set free from the coal.

In any plant where it is impossible to get the air arrangement in this way it is far more economical to use a slower burning coal, firing on to the dead plate and allowing the gasses to pass over the hot fuel bed while mixing with air and so ensure perfect combustion and less smoke. The only way to fire a free burning coal as described is to carry as light a body as possible, always taking care that there are no bare spots on the grates, and firing often with light charges at each time. As a rule the stationary boiler fireman is not so careful to keep his fire in condition. I remember once going to a boiler house where slack coal was being used, and asking the superintendent how they were progressing. He took me around a battery of four locomotive type boilers, and after opening the door I pointed out to him that there was a bare part of grate at each corner just inside the door fully two square feet at each corner. He promptly drew the fireman's attention to it, and told him to keep the grates covered. We found all four boilers in the same condition. I have repeatedly seen the same with all classes of hand fired stationary boilers, i.e., bare spots on the grates. If a locomotive fireman were to do this it would result in lost time for steam and leaky boiler.

The percentage of heat value in the fixed carbon can be controlled in a better manner than the gaseous content. Every effort should be made to have the coke burn to as near white heat as possible. This is a sure sign that enough air is coming in contact with it. In quick burning coal it is just as necessary to carry a very light body of coke to get the full heat value out of it as it is to carry a light fire for the perfect combustion of the gases. The coke is not solid and will combine very freely with the oxygen of the air. This is evidenced by its quick burning properties. The gases in leaving it make it very porous, so that the air can circulate through it as though it were a sponge, and if there is not sufficient air to form the CO₂ gas, CO will be formed and with only one-third of the heat production it should give.

Often quick burning coals give poor efficiency due to a lack of knowledge of their actions and properties because it is a very easy matter in both locomotive and stationary practice to lose a great deal of the initial heating value. If such coals are fired heavily, that is to say a large application at each time of firing, and the body of the fire is carried too heavy, there will be poor results and low efficiency. In the first place a large percentage of the gaseous content will escape with the chimney gases and smoke stack gases, without ever passing through the process of combustion, therefore a great loss occurs. The same thing occurs with the fixed carbon, owing to its burning so free, which, in other words, means combining with oxygen so freely. If a thick fuel bed is carried it will result in low efficiency due to the oxygen of the atmosphere combining with the lower portion of the fuel bed and forming CO₂, and in passing through the thick bed of fuel is again reduced to CO, consequently producing only 4,500 b.t.u. instead of 14,544 as it would have done if the fuel bed had been thinner.

Besides this there is another feature to be considered with this class of coal and that is its tendency to form clinkers if fired too heavily, sometimes so much so that a stop has to be made to clean the fire, whereas if fired lightly this never occurs, except slightly, causing no damage.

The subject of buying coal on a b.t.u. basis is of no use if no attempt is made to get the ultimate value as near as possible to the initial value as purchased, thereby getting the highest efficiency.

The Passenger Department of a Railway.

By W. P. Hinton, General Passenger Agent, Grand Trunk Pacific Railway.

In the beginning of rail transportation the lines were few, serving a limited territory where there was no competition and each passenger received a receipt, made out on a form duly provided and signed by the agent as his passage ticket. No general passenger agent was necessary then, but with the extension of these lines, connecting with others, forming through links in vast distances, and eventually transcontinental, a special organization was found necessary to provide means for through ticketing and making other arrangements necessary to the convenience and care of the traveller and his property, and the protection of the railway and its passenger revenue. The paralleling of the lines and the growing competition eventually required enterprising specialists to arrange to secure and hold as much of the competitive business as possible to their respective lines, and to branch out into new fields and create new business wherever practicable. Thus we have tourist, colonization, transcontinental and round the world traffic promoted in volume, where, if left to itself, the business would not develop except on natural lines and very slowly. The passenger department, in short, while looking closely after the development of business along the line, must instill the desire for travel in the minds of the public and incite them to journey, even to the extent of their resources.

To maintain and supervise the different branches of good service (and there is a constant demand for improved service on the part of the public, and growing competition) there are many subdivisions of the general passenger department, such as the district passenger agents or general agents passenger department, who direct the work of ticket or passenger agents; travelling passenger agents, and on some lines certain of the train employees. They are held accountable for the business in their respective districts, and to promote local excursions, to conduct advertising of a local nature and to examine and report on the condition of cars, their ventilation and heating, the condition of stations and offices as far as they serve the travelling public, and suggest improvements and other changes which will be beneficial to passenger traffic. There are superintendents of dining, sleeping and parlor car service, general passenger agents, tourist and colonization agents and general advertising agents, all expected to be exceedingly thorough and alive to possibilities and who serve to focus results, reports and practical improvements which may be feasible, on the general head of the department for disposition or action.

The organization of a general passenger department may be comparatively simple, as it is on a small line, or very complex, but nevertheless firmly welded together and carefully shepherded, on a large line. The department proper may be divided into the following branches:—1. Tariffs, tickets, excursions. 2. Statistics and accounts. 3. Train schedules and equipment. 4. Advertising. 5. Tourist, immigration and colonization. 6. Baggage. 7. Dining, sleeping and parlor cars.

A brief summary of these varied branches of our work will naturally follow as pertaining to the systematic arrangement and the efficiency of our duties towards the traveller, who must be constantly studied in relation to his needs and desires, which are more or less flitting; so that the unit as well as the volume may be made to move without friction or complaint, while returning the maximum revenue to the transportation company with its enormous investment, for which a capacity business is always desirable.

It may appear to be a simple matter to compile and publish a tariff, and so it would be if a line served purely local

territory, but with many intersections by competing lines, making it advisable to adopt common fares at many points, which have their effect on the majority of fares over the entire system, also owing to the extension of through ticketing arrangements between all railway points on this continent, the problem is far from simple, the work heavy and wearisome, though interesting. One tariff alone may contain 10,000 fares, and any large system has literally scores of such tariffs prepared with utmost care, scrutiny and comparison. Tickets are of many classes, and reading over as many routes, rail, inland waters and ocean, as tariffs may provide for.

Excursions must be duly arranged for, as well as the several classes of traffic for which special tariffs and tickets are provided. As special train movements must be provided for in case of excursions, the closest attention is necessary to the correctness of advices to the different departments involved, with close supervision as to the carrying out of the arrangements, as any neglect of the smallest detail is almost sure to cause inconvenience and serious consequences.

Statistics must be kept of results of train operation, including the different departments, recording revenue or expenditure, which must be scrutinized perpetually to arrest any waste or to watch developments with a view to increased revenue. In like manner the handling of department accounts affords an opportunity for careful study of the expenditure.

Advertising, in which should be included the right kind of publicity, has become one of the most important branches of passenger department work. Not only must copy be supplied for advertising space contracted for in the daily and weekly newspapers and periodicals throughout the land, but news items and stories, keeping the name of the transportation company prominent and impressively before the public, must be prepared and insertion obtained. Through this latter medium it is possible to reach a score of millions of readers or more in the course of a few months. This also creates a better understanding of the railway aims by the public, who, as a rule, never come personally in contact with the higher officials of a railway, and their impressions are more readily formed from the more or less impersonal treatment they receive while travelling with hundreds of others and imbibing adverse criticism or theories by the way.

Display posters and bills are prepared and issued, together with tons of carefully prepared and arranged public time tables. Literature attractively prepared, tastefully printed, and profusely illustrated, must be supplied the soliciting staff for distribution and to drive home the statement that this particular route is the only popular one, or that the prospect needs a change of scene. All are familiar, however, with the nature and variety of these publications.

Tourist traffic is the business that the transportation companies must create, and it really requires more careful and patient tending than any other branch of passenger traffic. There would be little tourist traffic if it were left to develop by itself. The seeds of a desire for travel or change must be sown by the passenger department, and this is the impulse of tourist travel. There is a satisfaction, however, in knowing that once interested this business increases rapidly in volume to each particular section, it becomes a very valuable addition to the local traffic, and in many cases warrants an improvement in train service, from which a large community of regular travellers benefit, and which could not be provided without the through tourist.

Off to the west the mountains rear their snow and ice capped pinnacles, a very ocean of them, and for a long time were considered a never ending detriment to the development of the coun-

try. If a cash value were placed on scenery they would be very rich, but then capitalization from a national standpoint is established alone by the efficient work of the passenger department.

Nor are the millions spent in the mountain and other resorts of Canada the only national benefit received. The tourist from other lands becomes interested in Canadian institutions and investments and where he comes to play and rest he is easily induced to own and develop property and aid through his investments the development of Canadian manufactures and prosperity.

An illustration of the benefit to a community the railway activity produces in promoting tourist travel might be instanced to advantage in the business in one of the eastern states during the summer season. Maine is a prohibition state, but tourists leave there annually in the hotels and farmers' hands over \$15,000,000. The railways glean besides a reasonable return for their efforts, while producing a satisfactory result to the tourist or health seeker and the local community. Corresponding results might be quoted in the development of travel to Florida and California

P187 W. P. Hinton,
General Passenger Agent, Grand Trunk Pacific Railway.

in the winter, the Pacific Coast and mountain resorts at other seasons, and surely the railways have been largely misunderstood by the people whose best interests are at stake, while through legislative action and otherwise, every influence has been employed to curb and restrict their operations. Happily this attitude is passing, or is being directed more and more in other directions in favor of the square deal. Possibly the public will realize, as every student of transportation economics does, that unless this, the greatest business in the world, is made the business partner of the people, neither can prosper or develop.

Immigration and colonization are closely allied, and this branch also calls for specialized work in order to be effective. It is a very important work in its relation to the freight and other industrial traffic revenue of the line. In this work a place must be found where each settler will fit, so that a very wide knowledge of the country and its needs must be acquired, as it is necessary to talk intimately of conditions in sections of the country one, two or three thou-

sand miles apart. Happily, in Canada, we have many talking points, as it is mostly good, and often I have said to a prospective agriculturist, which class is our chief concern, copying an old Chinese proverb: "If the farmer be diligent the soil will not be lazy."

Baggage and its care has received its share of study and attention in the last few years, and it is truly amazing to what perfection its transport has attained. Losses are very seldom experienced in the millions of pieces handled in the year, a result aimed at in the feeling that no matter how pleasant a journey, or what courtesies are received on the train, if baggage is not promptly produced at destination, the testimonial which the traveller has determined to insert in the newspapers on arrival is converted into a withering and sarcastic commentary of the rottenness prevailing on that particular line, and to the passenger official the missing article looks more precious and as difficult to redeem as the one mourned by the shepherd of the other ninety and nine.

Train schedules and equipment is a matter of almost daily study in the general passenger department. In the first place, the needs of the travelling public must be fairly provided for, while the trains operated must be confined to the number which will just suffice and leave terminals and important points at the most suitable hour, at the same time assuring ourselves that the revenue will be remunerative to the company. The public presents many problems in this connection, as varied almost as the number of would be travellers, and while numerous suggestions are furnished to meet peculiar personal needs, a decision must be reached which will please the majority, and the results are disastrous and expensive to the company if any mistake is made in the arrangement of these schedules. Further, when a new train is decided upon to take care of a particular traffic, while supplementing other trains, it should not impair their revenue to any extent. If poor judgment is shown, the expense is great, and it may be many months before a conclusion can be reached as to whether the train should or should not be continued.
